Tribute to Senator Talmadge

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, July 21, 1958

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine article about one of our ablest young Senators, written by the Associated Press, which appeared in the July 19 issue of the New York Herald Tribune.

The article covers the activities of our distinguished colleague, the junior Senator from Georgia [Mr. TALMADGE].

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of July 19, 1958]

WASHINGTON, July 18.—When Senator HERMAN TADMADGE, Democrat, of Georgia, rode into the Senate 2 years ago, a lot of people figured he would lose little time establishing himself as a fire-breather, particularly on racial issues.

Instead, the former Georgia governor has been quiet and modest, as befits a freshman Senator. His few speeches struck observers as well thought out and moderate. They marked him as a champion of States rights, opponent of nonmilitary foreign aid, and backer of higher support prices for farm products.

LAUDED BY RAYBURN

And in the civil rights debate in the Senate last year, Senator TALMADGE spoke with restraint, avoiding impassioned oratory and stressing constitutional points.

"HERMAN TALMADGE," says Speaker SAM RAYBURN, Democrat, of Texas, "has fooled a lot of people by turning out to be a student of government, a convincing speaker, and not a hell raiser, as some of his critics had billed him."

Some political observers say Senator TALMADGE has changed since he came to the Senate. He disagrees. He's older, he says, and "I hope I've grown some," but he insists his position on major issues has remained the same.

Foremost among these are integration and what Senator TALMADGE calls the "usurpation of power" by the Supreme Court through its segregation and other decisions.

Pending in the Senate is a bill by Senator WILLIAM E. JENNER, Republican, of Indiana, that would limit Supreme Court powers in several areas. Senator TALMADGE is expected to play a vocal role on the side of those favoring restrictions for the tribunal.

VIEW ON SUPERIORITY

Critics have often referred to Senator TALMADGE as a "white supremacy" advocate, a label he rejects.

While he's militantly prosegregationist, the Senator contends he doesn't believe in the superiority of any race. "You'll find superior white, Negro, and yellow people, depending on the character, intelligence, and initiative of the individual," he says.

Mr. TALMADGE was Governor in 1954 when the Supreme Court ruled segregated schools unconstitutional. He likes to point out that more money was spent for new schools—most of them Negro schools—during his 6 years as Governor than in all previous administrations combined.

In the face of the Supreme Court ruling, Senator TALMADGE considers a private school system to keep the races separated as the best answer to the South's problem.

ONCE PUBLISHED WEEKLY

Politically, Senator TALMADGE says speculation about a possible Southern third-party movement in 1960 is premature.

"We're going to stay in the house of our fathers as long as we can," he declared. "But if the candidate and the issues become intolerable, we'll take the best means of protecting the integrity of our people and our States."

At 44, HERMAN TALMADGE has covered a lot of ground: Governor, Senator, editor, insurance company executive, farmer.

He once published a newspaper weekly, the Statesman. And he is chairman of the board of the United American Life Insurance Co. He and his wife, Betty, whom he married in 1941, operate two farms in Georgia and a ham-curing business. They have 2 sons, Gene, 15, and Bobby, 12.

Northwest Ruralite Endorses Columbia River Regional Power Corporation Proposal

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, July 21, 1958

Mr. NEUBERGER. Mr. President, impressive editorial support for the proposal to establish a Regional Power Corporation in the Columbia River Basin has come from the July issue of the Northwest Ruralite, which is capably edited by Henry Alderman, who served for many years as assistant to Dr. Paul J. Raver, when the latter was administrator of the Bonneville Power Administration.

In a thoughtful editorial, Mr. Alderman has stressed two of the paramount purposes of a regional corporation such as we propose and regarding which hearings recently were held before a Senate Public Works Subcommittee. They are these:

First. Because the present Federal power system in the Northwest has no utility responsibility to provide sufficient energy to keep pace with growing regional requirements; and

Second. Because the present Federal power system cannot use its own very substantial and prosperous revenues for the purpose of adding new generating capacity as it is needed.

In his monthly newspaper, the Ruralite, Mr. Alderman speaks for the leaders and members of the great rural electric cooperative movement in the Pacific Northwest, which has brought the modern miracle of electricity and its attendant comforts to so many farm homes.

I ask unanimous consent that this editorial endorsement of the Regional Power Corporation, as exemplified in Senate bill S. 3114, be printed in the Appendix of the RECORD, Mr. President. Title of the editorial, appropriately, is "Corporate Idea."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CORPORATE IDEA

There appears to be growing support in the region for the bill introduced to the United States Senate by Oregon's R. L. NEUBERGER, to establish a regional power corporation, owned by the Federal Government, to take over the functions of the Bonneville Power Administration.

Many of you may remember that BPA was established by the Congress in 1937 as an agency in the Department of the Interior to sell power from Bonneville and other Federal dams.

That 1937 law clearly states that BPA was to be a provisional agency—that is, it was simply a temporary expedient to be superseded when the time is right by a permanent agency.

NEUBERGER's new regional corporation bill is a proposal for a permanent agency.

Notwithstanding its provisional status, BPA's 21 years of operation have been, in the main, highly successful.

But experience has shown two basic weaknesses:

1. The law does not grant Bonneville any utility responsibility. This means that Bonneville can initiate no new generating projects to meet local needs. Without this responsibility, Bonneville can only sell such power as the Congress, from time to time, decides to develop.

2. Bonneville has no independent financial status. Although it is a big utility business, it has no control over its own very considerable income. Although it may make huge profits, it cannot spend these profits for new dams or transmission. It must pay its profits into the United States Treasury each year and then must wait for the Congress to appropriate money for both its capital and operations needs.

These two weaknesses in the Bonneville law are serious. The membership of the Congress changes every 2 years. Some Congresses have Members who have a better understanding and sympathy for the power needs of this region than do other Congresses. The result of this continual shift in congressional sentiment makes for uneconomic and spotty development of the Columbia River, with no clear direction of utility responsibility.

NEUBERGER's new corporation bill is designed to correct this. The principal practical difference between this bill and the present Bonneville law lies in the power given to the proposed new corporation to issue and sell revenue bonds to finance new dams and transmission lines. The proposed new law would also permit the agency super-

seding Bonneville to spend its own profits, if any, for such purposes.

Several weeks ago Senator NEUBERGER'S corporation bill came up for public hearing before a Senate committee. Both the Oregon and Washington State administrations went on record favoring its passage.

Representatives of the region's electric cooperatives and public-utility districts and municipal power systems also supported it.

The power companies opposed it as socialism.

A number of conservative interests in the two States supported the bill in principle. That is, they agreed the new agency was needed in order to get the power job done but they disagreed with some of the provisions in the Neuberger bill.

Although a Senate committee has held a hearing on this measure, there is no thought in Congress that either House will pass the measure during this session.

However, a new Congress will be elected in November and will meet next January. The bill probably will be reintroduced with hope of congressional action on it sometime during the next 3 years.

Passage of Air Safety Bill—Editorial Comment

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Monday, July 21, 1958

Mr. MONRONEY. Mr. President, because of the extremely active interest of the membership of the Senate in the passage of the bill providing for air safety, and the overwhelming support of the press in the interest of passing the bill at this session, I ask unanimous consent to have printed in the Appendix of the RECORD the following editorials:

Air Safety Progress, published in the Washington Evening Star of July 19, 1958; Policing the Skyways, published in the Washington Post of July 20, 1958; New Air Agency, published in the New York Times of recent date; Consolidation for Air Safety, published in the Christian Science Monitor of June 26, 1958; Too Many Misses Too Near, published in the Memphis Commercial Appeal of June 28, 1958; Unified Plan for Air Safety, published in the Youngstown (Ohio) Vindicator of June 21, 1958; Need Swift Action on Air Agency Plan, published in the St. Paul (Minn.) Pioneer Press of June 19, 1958; New Air Safety Measures, published in the Hazleton (Pa.) Plain Speaker of June 18, 1958; Unified Air Agency, published in the Evansville (Ind.) Courier of June 22, 1958; and Toward Stronger Safeguards, published in the Mobile (Ala.) Press of June 26, 1958.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of July 19, 1958]

AIR SAFETY PROGRESS

The Senate's passage of the bill to create a Federal Aviation Agency is an important first step in the urgently needed drive to reduce traffic hazards on the Nation's airways. In this single agency would be lodged all the currently diversified governmental responsibilities for air safety, including the control and allocation of airspace for civilian and military aircraft alike. The tragic series of recent air disasters involving military and commercial planes has more than demonstrated the need for such coordinated supervision. As approved, the Senate bill effectively provides for it. We hope the House concurs, without major changes in the Senate version.

Fortunately, hearings before the House Interstate and Foreign Commerce Committee on a companion bill are virtually completed. And next week, its able chairman, Representative HARRIS, of Arkansas, intends to call a final hearing session. Time, however, is of the essence. For the period remaining before adjournment is short, and if Congress leaves without completing action this critically needed legislation will be dead. With air congestion increasing at its present alarming rates, the Nation can ill afford a delay until next year.

During the Senate hearings, witnesses proposed a large number of modifications, many of them seemingly minor in nature. In the aggregate, however, they could seriously have diminished the bill's effectiveness. Wisely, most of these proposals were rejected by the Senate committee, headed by Senator MONRONEY, of Oklahoma. We hope Mr. HARRIS' committee likewise will permit nothing to vitiate in any way the essential authority and powers of the new agency.

As congressional sponsors have enphasized, the creation of this agency cannot alone accomplish miracles in lessening the dangers of flight congestion. Many technical improvements are needed in the modernization of airway operations and control. These will take time. The important thing, however, is that the new centralized agency will provide the essential administrative direction through which these improvements can best be effected. President Eisenhower recognized the emergency nature of the problem in his strong request last month for the legislation. Its immediate approval is clearly in the national interest.

[From the Washington Post of July 20, 1958]

POLICING THE SKYWAYS

Senate approval of a bill creating a new Federal Aviation Agency promises to be a landmark in the long campaign to bring greater order into our crowded skies. If and when the House approves a similar measure, the prospects are excellent of ending the near-anarchy which now prevails in the air—a condition which has contributed to the recent grim series of mid-air collisions.

The Senate bill, introduced by Senator MONRONEY, would unite in a single Federal Aviation Agency the specific safety and traffic control functions now scattered among a half-dozen Federal instruments. Under a civilian Administrator, the new Agency would be armed with broad powers to allocate and control airspace, make and enforce safety rules, and develop a common system of air navigation facilities. For the first time, it would empower a single policeman to coordintae the traffic in the air.

Most important, these powers would be exerted over both civil and military aircraft. One grievous shortcoming of the present system is that 30,000 military planes have been, in Mr. MONRONEY'S words, "largely exempt from effective air traffic control." The Senate bill would give the Agency Administrator plenary authority over airspace, with proper allowance made for the requirements of national defense and the right of public to travel freely through the air. To insure military accountability, the bill provides that military personnel assigned to the Agency would be responsible to the civilian chief and not to their respective services.

It is a great pity that this rudimentary administrative reform has taken so long to approach realization. All too soon, commercail jet transports will be streaking through the skies at speeds of 600 miles per hour, increasing collision dangers. Because of past delays, the country lags badly in developing facilities adequate to monitor all aircraft flying in good weather. But the Monroney bill provides a framework for achieving this end in a prompt and sensible manner. The Oklahoma Senator deserves credit for his part in shaping this legislation, as do such pioneers in air safety as Edward P. Curtis, the President's special assistant on aviation. Commendably, all sectors of the aviation world cooperated in framing the bill.

Prompt passage of the House bill, sponsored by Representative OREN HARRIS, is among the most urgent business before Congress. It is unsettling to find the House Interstate and Foreign Commerce Committee delaying hearings. Surely the House will see the compelling need for action on a bill which makes the skies safer for all Americans who venture aloft.

[From the New York Times]

NEW AIR AGENCY

An encouraging step toward the long-range mastery of the complex air-traffic situation has been taken with Senate passage of the bill to create a Federal Aviation Agency. The measure is designed to consolidate in a single organ of Government the hitherto diffused responsibilities for making the best and safest use of the Nation's air space.

It is to be hoped that nothing will interfere with parallel House action at the current session. There is an immense amount of research and planning to be done to make the traffic-handling system equal to the changing character (just airline operations begin here in November) and expanding volume of air traffic. To delay modernising the governmental apparatus another year would be appallingly shortsighted.

On the other hand, if final passage does come, as expected, at the current session, no one will be justified in expecting the unsatisfactory air-traffic situation to clear up overnight. Though the agency must be created within 90 days of the bill's enactment, its main impact on traffic control will not be felt for years. It will take a long time to devise, perfect, and install radically new tools. We will have to live for a while with a more-than-minimal degree of collision hazard and economically wasteful traffic delays.

[From the Christian Science Monitor of June 26, 1958]

CONSOLIDATION FOR AIR SAFETY

Too often the answer to some urgent need in the field of government seems to be, "Create another agency." Without question, the need for better control of air traffic over the United States in the interest of safety is urgent. Fortunately, though, the remedy advanced by President Eisenhower and by Senators conversant with the problem lies not in the direction of greater government complexity but in simplification and consolidation.

A White House message now before Congress proposes establishment of a Federal Aviation Agency which would take over all the functions of the Civil Aeronautics Authority, the Airways Modernization Board, and the rulemaking powers of the Civil Aeronautics Board. This would include air traffic research, control, and modernization, airport design, and safety regulations. It would leave to the CAB only regulatory authority on routes, fares, and subsidies.

Important to the concept of the new agency is the intent that it shall be able to correlate and control use of the national airspace by military as well as civil aviation insofar as this may be necessary for safety. The President recommends that the new agency be given paramount authority except in case of military emergency.

Almost complete agreement is said to exist between the President's advisers and a large congressional group, including Senate MIKE MONRONEY, chief sponsor of a bill on the subject. We hope predictions are right which forecast enactment of the legislation and inauguration of the new agency before the end of 1958.

[From the Memphis Commercial Appeal of June 28, 1958]

TOO MANY MISSES TOO NEAR

The Congress has no pending legislation more important than the Monroney-Harris bills for promoting greater air safety and creating an independent control agency responsible to the President and Congress.

The lawmakers should not even think of adjourning until the measures have been enacted.

While the parliamentary processes are working to that end the country is getting almost daily reminders of the need for vastly improved air safety control which will prevent military and private craft from intruding on the lanes of scheduled air transports.

Scheduled air travel is as safe as any other form of transportation, and safer than most, but it will not continue so unless the checks provided by the Monroney-Harris bills are enacted and that soon. Every day of delay invites more collision tragedies.

There was another near miss Wednesday, and this time near enough for the control-tower staff at Lambert-St. Louis Field to witness it. An American Airlines plane had just taken off for Fort Worth and was at approximately a 500-foot altitude when a Navy plane appeared out of the 1,000-foot ceiling and passed over the airliner.

The Navy plane had been en route to Scott Air Force Base but had changed destination to Lambert-St. Louis Field because of bad weather. The pilot said his attempt to reach the tower there by radio was futile because of heavy radio traffic.

On June 9, the pilot of an American Airlines DC-7, with 50 persons aboard, had to make a quick dive to avoid collision with a military transport plane from Scott Air Base. Six persons on the airliner were injured in the 500-foot dive. The Air Force said it would discipline the pilot and copilot.

When 49 lives were lost as a result of an Air Force jet plane plunging into a United Air Lines scheduled transport in April, Representative HARRIS, Democrat of Arkansas, publicly asserted that military aircraft "had no business over a regular airway" and that the attitude of the Armed Forces in disregarding air safety rules was "intolerable."

It still is intolerable as a practice and from the viewpoint of scheduled air transport passengers who are the sitting ducks in too many near misses occurring too frequently.

The Monroney-Harris bills have all the authoritative backing they should require—that of the air industry, the pilots and, to a great degree, the White House. What is needed is greater legislative speed. Let's have it.

[From the Youngstown (Ohio) Vindicator of June 21, 1958]

UNIFIED PLAN FOR AIR SAFETY

Congress should take no more time than absolutely necessary in authorizing a unified Federal Aviation Agency as requested recently by President Eisenhower in the interest of greater air safety.

While the new coast-to-coast expressways plan is now in use, spokesmen for the airlines assert that it will not reduce the chances of midair collisions for the bulk of commercial planes flying the skies today. The expressways are expected to improve safety for the planes which use the 40-mile corridors at altitudes of 17,000 to 22,000 feet. However, airline experts insist that operations for most commercial flights will continue largely as before—with the same safety rules and the same hazards. These are the planes which carry passengers at altitudes below 17,000 feet.

In most respects, the President's program, based on studies which began nearly 2 years ago, is similar to the ideas now being considered by the Aviation Subcommittee of the Senate Interstate and Foreign Commerce Committee at the urging of Senator MONRONEY. For the most part the differences involve the extent of military participation and the designation of authority for rule making.

In view of public pressure as the result of tragic air collisions Congress should not permit these minor differences to delay action.

Both plans propose a combination of several Government agencies which now have authority over traffic control, air traffic research and modernization, airport construction and safety regulations. The unified agency would go directly to the President instead of through the Secretaries of Commerce and Defense. The Civil Aeronautics Administration and the Airways Modernization Board, an independent agency which was set up last August, would be absorbed outright.

As the President emphasized, air congestion has reached the point where immediate regulatory action is essential. The record of collisions and near collisions proves it. At the same time, development of airports, navigation aids, and especially the air traffic control system, has lagged behind aeronautical advancements.

For this reason the President advanced his air safety recommendations which he originally planned to submit to Congres at the next session. The shocking loss of life, Mr. Eisenhower explained, "has made it apparent that the need for an adequate control program is so urgent that the consolidation of agencies should be undertaken now."

To set up the proposed safety system and to train the personnel needed to operate it efficiently will not be an overnight job. Hence the need for speedy action by Congress. Regulations of air space should not be left indefinitely to chance or the visual abilities of pilots.

[From the St. Paul (Minn.) Pioneer-Press of June 19, 1958]

NEED SWIFT ACTION ON AIR AGENCY PLAN

Congress should act with the utmost speed on passage of the bill creating a single Federal agency with authority over air-traffic control and safety regulations.

President Eisenhower wisely urged fast action on such legislation last week when he recommended combining activities of the Civil Aeronautics Administration and the Airways Modernization Board into a Federal Aviation Agency to handle traffic, research, airport construction, and safety rules. Fortunately, there is already a bill before Congress carrying the basic essentials of the Eisenhower proposal. Called the Monroney bill (it was introduced by Senator MIKE MONRONEY, of Oklahoma), the measure differs only in two areas from the administration proposal and is now in the Aviation Subcommittee of the Senate Interstate and Foreign Commerce Committee.

Both the Monroney bill and the administration plan call for establishing one agency under a single administrator to handle air safety and related problems. The administration would like greater military participation in agency activities than that proposed by the Senator and would limit appeals of regulations to the courts. The Monroney bill would allow appeals to be made to the Civil Aeronautics Board, which will retain its basic regulatory authority over airline routes, fares, and subsidies. The President also has indicated he wants the power to transfer certain functions of the Defense Department into the new agency once it is created. He has not mentioned any specific functions as yet, but his major concern in this area is that there be no "impairment of national defense."

Since there are so few differences in the two proposals and since there is general agreement that some such agency must be developed to reduce the dangers of air travel, the matter should be handled swiftly.

There is no reason why the Federal Aviation Agency cannot be in operation this year, if Congress is truly awake to the dangers overhead.

[From the Hazleton (Pa.) Plain Speaker of June 18, 1958]

NEW AIR SAFETY MEASURES

There is no real disagreement with President Eisenhower's proposal for a new Federal Aviation Agency to promote air safety.

The ideas embodied in the President's special message to Congress do not differ in essence from those that a Senate Commerce Subcommittee has been working out in a series of hearings over the last month. Senator MONRONEY, Democrat of Oklahoma, subcommittee chairman, and 32 other Senators have drafted a bill to solve air traffic problems. MONRONEY says he is "delighted to have the President's strong statement" on the subject and his support of the objectives of the bill.

Greater urgency in consideration of the bill has resulted, of course, from the two recent disasters, one over Nevada and the other over Maryland, in which civilian airliners were involved in collisions. Air transport development has progressed more rapidly than anyone foresaw. Traffic has become so heavy that present methods of regulating it are inadequate. The imminence of the jet transport age, as well as the presence of jet military aircraft in large numbers, makes the problem still more pressing.

Mr. Eisenhower says he had not planned to send his message to Congress till next year. But, he adds, "Recent midair collisions of aircraft, occasioning tragic losses of human life, have emphasized the need for a system of air traffic management which will prevent, within the limits of human ingenuity, a recurrence of such accidents."

The President points out that overlapping of authority and duplicating of functions is one of the biggest handicaps of the present system of air traffic control. His plan, like that of the Senate subcommittee, would combine various existing agencies and centralize authority in a single agency responsible directly to the President, instead of the Secretaries of Defense and Commerce.

The new agency would take over and absorb outright the present duties of the Civil Aeronautics Authority and Airways Modernization Board. It would leave the Civil Aeronautics Board in charge of airline routes, fares and subsidies, but would take over its safety rule-making functions and its research activities.

Mr. Eisenhower urges that there be "a genuine civil-military partnership" in the new agency but is somewhat vague on how this is to be established. The White House appears to want a greater degree of military participation in the new agency than the Monroney bill would provide or than some of its sponsors want. The present CAB also objects to some of the curtailments that would be imposed upon it by the Senate bill and the President's plan.

It is to be hoped that disagreements on details such as these will not delay creation

of the new regulatory agency, since there is no real opposition to its aims. MONRONEY has pledged all possible speed on the legislation.

Meanwhile, the new program of sky superhighways connecting New York and Washington with west coast cities has been put in effect to give maximum protection under the present setup against air collisions. The new arrangement should be helpful pending the establishment of the Federal Aviation Agency.

[From the Evansville (Ind.) Courier of June 22, 1958]

UNIFIED AIR AGENCY

One of the most promising developments to emerge as a reaction to several recent midair plane collisons is the proposal that there be created a unified Federal agency to handle both civilian and military air traffic problems. A bill to create such an agency has been submitted to the Senate by Senator A. S. MIKE MONRONEY and 52 other Senators. A similar plan has been suggested by President Eisenhower.

Such an agency might be a far better vehicle than the United States now has for moving rapidly toward air traffic control adequate in the jet age. The Civil Aeronautics Administration has made progress toward this end, especially during the past few months, but it has simply not kept pace with the rising need.

The prospects that this could be done in a short time, even by a modified agency, are not at all good. One major handicap is that large quantities of complex equipment will be needed, and it is not the sort of equipment that can be purchased at the nearest department store. At best, several years probably will pass before the Nation has an air traffic control system fully up to handling demands made on it.

That is no reason for slackening the effort; quite the contrary. And the best bet is some sort of unified agency combining the present functions of both the Civil Aeronautics Administration and the Airways Modernization Board. The military should have the fair say about regulations and the kind of control system adopted. The essential thing is that with a unified agency both military and civilian flights would be subject to overall control, and the public would benefit accordingly.

[From the Mobile (Ala.) Press of June 26, 1958]

TOWARD STRONGER SAFEGUARDS

Congress has moved a step further toward more unified air traffic control to strengthen safeguards against midair collisions such as have recently occurred between military and commercial aircraft.

A bill calling for regulation of both civilian and military air traffic by a new Federal agency that would function largely in accordance with White House recommendations has been approved by a Senate aviation subcommittee headed by Senator A. S. MIKE MONRONEY, of Oklahoma.

Introduced in its original form by Mr. MONRONEY and cosponsored by 32 other Senators, the bill was revised in certain respects by the subcommittee to conform with administration views, although in other respects administration views were not adopted.

Under the subcommittee-approved version, decisions of the agency administrator on air safety regulations would be final, except for the privilege of appealing to courts. This provision was asked by the Eisenhower administration.

Congress should move without undue delay in enacting needed legislation for strengthened safeguards for air traffic.

McGregor Reports to His District, 85th Congress

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1958

Mr. McGREGOR. Mr. Speaker, I have always believed that the people I am privileged to represent in the Congress of the United States should have an opportunity to know of my activities and my position on various issues. For this reason, I am today including in the RECORD excerpts of my remarks during the 85th Congress on some of the issues in which our people are most vitally interested.

DON'T FORGET OUR ROTATION-CROP FARMERS, MARCH 6, 1957

Mr. Speaker, regardless of who is the author of a bill, regardless of whether he is a Democrat, New Dealer, or a Republican, certainly the time has arrived that we recognize the serious predicament in which the farmer finds himself. It is time that we give some consideration to the rotation crop farmer.

We must recognize, and at once, that we cannot allow the product which a farmer has to buy to continue to increase in cost and allow the product that the farmer sells to go lower and lower. Mr. Speaker, there is just too wide a spread between what the farmer received and what he has to pay out.

I sincerely hope that the membership of Congress will not delay in giving recognition to the rotation-crop farmer and give him the much needed assistance he needs so that he might again enjoy the freedoms that once were his.

TRUTH ABOUT TAX REDUCTION, MARCH 17, 1958

Mr. Speaker, I have noted with a great deal of interest that some New Deal orators have been telling the public with the usual extravagant political claims of being the party of the "little man" in tax-reduction measures.

Let us look at the record. It is factual, it will speak for itself and it will show that under New Deal philosophies the so-called "little fellow" has had to pay higher taxes. The records will show it has been the Republican Party which has cut taxes for the lower income groups. Let us not forget that it was a Democrat Congress in 1913 that put on the statute books the first income tax law. Since that time there have been 15 income tax increases. Democrat Congresses voted all but one of these increases.

The New Dealers put the low income people and wage earners on the tax roll. In 1932 there were 1,900,000 taxable Federal returns. In 1952 there were 46,800,000 such returns. Republicans did the cutting 7 out of the 10 times that income taxes have been reduced since 1913.

In 1954, during the 80th Congress, when the Republicans were in the majority, taxes were reduced by a total of $7.4 billion—the largest cut in any 1 year in history. The Republicans reduced taxes on electric-light bulbs, stoves, refrigerators, electric toasters, telephone and telegraph bills, pharmaceutical supplies, and many other excise taxes. This cut benefited all taxpayers.

During the Republican controlled Congress legislation was put into law which gave 62 cents out of each dollar of tax reduction to individuals with approximately 25 cents of this going to taxpayers with incomes under $5,000.

The New Dealers have been endeavoring to play politics with tax legislation, claiming that they want to decrease income tax exemptions. Again, I say, let's look at the record. The following chart shows the exemptions from 1931 to 1954:

	Republican	Democratic					Republican
	1925–31	1932–39	1940	1941	1942	1944	1948
Single	$1,500	$1,000	$800	$750	$500	$500	$600
Married	3,500	2,500	1,500	1,500	1,200	1,000	1,200
Dependent	400	400	400	400	350	500	600

INTERNATIONAL TRADE—LET'S KEEP IT RECIPROCAL, JUNE 10, 1958

Mr. Speaker, for several days I have listened very attentively to the debate on the so-called reciprocal trade agreements legislation. I am sure my record in Congress will justify the statement that I believe in world trade. I favor world trade and all domestic trade possible but I do not believe it is fair to our citizens of this country to create a condition of unemployment in any part of the United States and ship goods to any Member's district to provide employment to some men working in foreign countries and force local citizens to be unemployed.

I do not want unemployment anywhere in the world. I deplore it, but I am going to be honest and say that if there must be unemployment somewhere I would prefer it in some other country rather than in the United States. It is unfair to force our American people out of jobs and to increase our taxes to pay unemployment insurance when the unemployment is caused by bringing in products from foreign countries produced by low-wage-rate labor. Our American farmers, labor, and industry are certainly at least entitled to equal recognition and should not be forced to go on unemployment because of imports of products into this country far below the price at which they can be produced here.

I believe in reciprocal trade, but let us make it reciprocal.

OUR FARMERS WANT FREEDOM, JUNE 27, 1958

Mr. Speaker, fortunately for the American farmer, the House of Representatives has defeated the attempt to force through the passage of a bill which Secretary of Agriculture Ezra Benson himself called a political hodgepodge, and which Charles B. Shuman, president of the American Farm Bureau, branded as a complete monstrosity.

If there is anything that the farmers in my 17th Ohio District do not want, Mr. Speaker, it is more quotas, more con-

trols, more Government regulation. In my 1958 questionnaire poll on national issues, 64 percent of all the farmers who responded voted for the removal of all Federal controls on farm products. Since then, many individual farmers have written or spoken to me about this problem of excessive Federal controls, and just this week I have received a wire from the vice president of the Ohio Farm Bureau, who farms in our district, urging that I oppose this so-called omnibus farm bill as unsound farm legislation.

I did oppose it, Mr. Speaker, as I will continue to oppose all legislation in the future which attempts to tie the hands of our farmers who have always been the strong, independent backbone of our economy. To attempt to solve the problems of the freedom-loving farmer by heaping upon him more and more Government controls will never work, Mr. Speaker. We have found that out the hard way, and I hope we have learned the lesson well.

I sincerely hope that steps will be taken immediately to get our farm program rolling in the right direction—away from Federal controls and toward freedom and prosperity for our farmers. I will certainly lend every possible support to this kind of program.

EQUAL TREATMENT FOR OUR VETERANS, JUNE 27, 1958

Mr. Speaker, the Nation's veterans, together with their families, comprise more than 40 percent of the total population of the United States. The 85th Congress has enacted legislation which, taken as a whole, will vitally affect these 22,700,000 living American veterans.

By a vote of 389 to 2, the House passed H. R. 11077 to incorporate the Veterans of World War I. Previous legislation had already incorporated Civil War veterans and Spanish-American War veterans' organizations, and under this bill, we men who fought in World War I to preserve and defend our country will be able to keep alive our own identity. The friendships that have sprung from a common experience will be strengthened. Of even greater importance, however, is the fact that we will now be represented by an organization exclusively our own in all legislation concerning veterans of 1917 and 1918, their dependents and widows. A national charter will not only bind us together, but will offer a channel through which our problems and needs can be made known and remedied.

To date, American veterans have, due to congressional legislation, received many richly deserved benefits. Approximately 6 million veterans hold GI insurance policies valued at nearly $44 billion. VA operates 173 hospitals for the care of ill and disabled veterans. On any average day, VA's patient load approached 115,000 with the yearly average running to nearly half a million. More than 10 million veterans so far have been trained under the 4 educational programs, 4 times the total enrollments in every college and university in the United States. Through this additional education, veterans have become better prepared to exercise their civic responsibility and have added to our stockpile of trained manpower.

SOCIAL SECURITY NEEDS AN OVERHAULING, JUNE 27, 1958

Mr. Speaker, for many years it has been my belief that the Congress has a solemn responsibility to see that none of our elderly citizens are forced to live out their lives in poverty, hardship, or deprivation. Yet a look at the record of our present social-security program clearly reveals that we are not facing up to the needs of millions of our citizens, and that a comprehensive and far-reaching revision of that program is long overdue.

To my way of thinking, there is absolutely no excuse for citizens of this great land to live in misery and poverty, most of which results from illness, constant decreases in purchasing power caused by inflation, and other such circumstances over which our elderly people have little or no control. Justice requires the elimination of this sorry situation. Sound economics likewise demands the raising of these substandard living conditions.

But the challenge to us is more than justice alone, and more than sound economics. We live in a critical moment in history, when our system is being totally challenged on every front. As a great freedom-loving Republic, we are championing the cause of democracy as a way of life, and during the course of the next few years, the one-third of the world's people who are as yet uncommitted will make their choice between our democratic way of life and the way of life of the totalitarians. Our fate as a Nation will depend in no small measure on the choice they make. We must, therefore, present a crystal-clear picture of a society not only able but willing to face up to the needs of all of our people, and I sincerely hope that action can be taken, and now, to remedy some of the most pressing problems of our elderly citizens.

M'GREGOR OPPOSES SOCIALIZED MEDICINE SCHEMES, JULY 16, 1958

Mr. Speaker, the hearings just completed by the Ways and Means Committee on all titles of the Social Security Act have once again focused attention on the many problems of our wage earners and retired citizens. Of all of our problems, however, none deserves more careful attention than that of adequate medical care for our people, and no one is more eager than I am to see that such medical care is available.

However, I am at the same time deeply alarmed by some of the proposals now being offered in the Congress, which, I am afraid, could easily lead to a complete socialization of medicine throughout the entire country, with a resulting deterioration in standards of medical care.

If some of this legislation is enacted, we all will become, in effect, wards of a gigantic bureaucracy which is already far too big for its own good. I am extremely fearful that under this legislation we will lose our freedom of choice in selecting doctors and dentists, and I will do everything within my power to prevent such an outcome.

Furthermore, I am just as afraid that should some of these programs be accepted, our doctors and dentists will find that their income depends on which political candidates they support, and not on their medical skill. For under these programs, not all doctors—and hospitals—would be allowed to participate, and even those who were allowed to take part in the program would have to depend on some bureaucratic Government agency for their fees.

In my opinion, Mr. Speaker, we cannot expect to find political solutions to serious health problems. We only create more serious difficulties by trying to do so. I am convinced that we can solve our medical problems, but not by imposing compulsory Government programs. Such programs, if enacted, will deprive all people, and especially the aged, of their independence, will force our doctors to rely on the whims of some bureaucratic agency for their livelihood, and will eventually result in inferior health facilities for us all. Mr. Speaker, I have always fought such programs, and I will continue to fight against socialized medicine.

M'GREGOR RECOGNIZES HIGHWAY PROBLEMS

Mr. Speaker, it has been my privilege to be a member of the Public Works Committee ever since I came to Congress. These years of service on that committee have now served to make me senior minority member on the full commitee, which handles legislation relative to public roads, public buildings and grounds, rivers and harbors, and flood control.

The records will show that I was especially active and took the initiative in provisions which will give additional Federal assistance to city streets and the farm-to-market roads. This legislation permits the State highway departments and local authorities to use Federal funds on city, county, and township roads. The specifications covering these roads can be drawn by the local county engineers, with the approval of the highway department, and need only meet the requirements of the local communities.

This means that Federal highway funds can be used on city streets and farm-to-market roads without rigid adherence to Federal specifications which often in the past, because of the exorbitant cost, have prevented the construction of needed streets and roads in many sections of our cities and rural areas.

I greatly appreciate the many letters and words of commendation I have received because of my activities on this legislation.

M'GREGOR URGES MAIL SERVICE TO ALL

Mr. Speaker, I am again calling attention to the proper committee of Congress and am asking for action on H. R. 766, a bill which I introduced that would give rural mail delivery as nearly as practicable to the entire rural population of the United States.

I am in receipt of a letter from the Post Office Department in which they advise that they have no objections to the bill and in reality favor its passage. I have long believed that all citizens are entitled to mail service either by rural carrier or door-to-door delivery. With the Post Office Department in accord

with this view, I respectfully urge that hearings be held immediately so that the legislation can be put into effect prior to the adjournment of Congress.

M'GREGOR URGES ALL TO EXERCISE RIGHT TO VOTE

Mr. Speaker, a day of decision will be election day, November 4, 1958. We have become a great Nation because our citizens are interested, and each and every one play an important part in our Government. We can continue to be a great Nation only if every qualified voter regards it as his duty to exercise his franchise and prove to the world that Americans value their right to take part directly in the election of Government officials and in the management and control of our Republic. The number of ballots cast will demonstrate to the world how much we value that privilege, and will emphasize that the American form of Government marches forward with determination, vigor, and strength. Everyone should carefully analyze the candidates to determine whether or not they believe in the philosophy of Government that has made America a great Nation. Every candidate should make known his position on the issues confronting us, and also make known his record. My record is public and I invite your investigation. The record will show that we are winning the greatest battle of all time in preserving our form of Government. The continuation of this program calls for outstanding leadership, honesty, integrity, careful planning, and judicial administration of the law. You will be assuming your proportionate share of this responsibility when you go to the polls on Tuesday, November 4, and vote for the candidate of your choice.

Be sure and vote Tuesday, November 4,

Detroit Starts Recovery From Recession

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the text of the following article by John R. Stewart entitled "Detroit Starts Recovery From Recession" and which appeared in the July 14, 1958, issue of the Detroiter, a weekly publication of the Board of Commerce:

DETROIT STARTS RECOVERY FROM RECESSION
(By John R. Stewart)

Business and industrial activity in the Detroit area has passed the low point of the current recession and is now headed upward. The fact that all phases of local activity improved in June over May is highly encouraging. Also encouraging is the contraseasonal nature of most of these gains and the fact that many of them follow April to May increases.

The largest June gain recorded was in value of new building for which permits were issued. At $9,223,232, the June figure for Detroit was 61 percent over May and 58 percent over April, previously the best month of 1958. Local steel mills operated at 67 percent of capacity, this year's best level. Industrial power consumption rose for the second consecutive month with June topping May by 20 percent.

Employment totaled 1,240,000 on June 15 as compared with 1,229,000 in May. This rise, while small, is significant in that it marks an end to the steady downtrend of the previous 6 months. Unemployment, likewise, broke the adverse trend of earlier months as it recorded its first month-to-month decline in 1958. The May to June increase in bank debits was only 2 percent. This gain, however, becomes more impressive when it is noted that Detroit bank debits usually decline substantally over that period. Both department store sales and new passenger car sales—the only indexes of retail sales currently available—showed a May to June increase.

Comparisons on a year-to-year basis showed a marked improvement between May and June and between April and June. Industrial power consumption rose from 32 percent below a year ago in May to 20 percent below in June and bank debits were only 6 percent below a year ago in June as compared with 15 percent below in May. The value of new buildings started in Detroit changed from a minus 51 percent to a plus 9 percent between May and June on the year-to-year comparison.

Outlook for the remainder of 1953 is clouded by the unsettled labor situation in the automobile industry. A strike, especially at Ford or Chrysler, during the preparations for new model introductions would seriously hamper Detroit's comback. Barring strikes, economic conditions in Detroit should show some improvement in the current quarter, after adjustment for model change shutdowns and other seasonal factors. Fourth quarter improvement should be more marked with earlier introduction of new automobile models adding substantially to October's factory payroll. Business and industrial activity in the Detroit area should be closer in 1957 levels than in any previous quarter of this year.

Only confidence is needed to bring Detroit out of this recession. Bank savings have skyrocketed over the past 4 months and are now at an all-time peake, approximately $100 million higher than at any time prior to last February. Some of the hesitancy to spend has been due to fears engendered by the possibility of strikes in the motor vehicle industry. An immediate, peaceful settlement of contract negotiations would remove one of the factors depressing Detroit's economy and go far to insure continued recovery in coming months.

Detroit area business barometers	June 1958	Change from May	Year-to-year change

Ideal Aid

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New Orleans Times-Picayune of July 21, 1958:

IDEAL AID

One example of United States activity which is strengthening this Nation's ties with a neighbor to the south, and at the same time helping the neighbor's economy, was pointed up in the capture by Cuban rebels of several United States mining officials. Representative HALE BOGGS, of Louisiana, entered some observations in the CONGRESSIONAL RECORD after the men, employes of Cuban American Nickel Co., a subsidiary of Freeport Sulphur Co., were released.

The mining project, Representative BOGGS said, currently employs some 2,500 Cubans in construction jobs. After the $75 million investment it completed to the operational stage, it will employ more than 1,000 natives the year around. The project at Moa Bay is converting a wilderness into a source of stable employment. Service industries, tax payments and increased purchases will further enrich the Cubans, Representative BOGGS pointed out.

That the Cubans generally appreciate the value of the project, according to Representative BOGGS, was indicated at the height of the rebel activity. Although the top management had been spirited away, Cuban construction crews kept the work on schedule. A group of native foremen, stranded in Santiago during the trouble undertook to charter a plane to the job site in order that the work would not lag.

But Cubans are not the only ones who will benefit from the investment, the Representative added. It will provide some 600 jobs in Louisiana and will give the United States a new source of strategic nickel. The conclusion is that solid, businesslike ventures of mutual benefit to the governments and to the people of both nations is the most effective form of "foreign aid."

Diplomatic Blunder in the Middle East

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, July 21, 1958

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an edito-

rial entitled "A Tragic Diplomatic Blunder," which relates to the current situation in the Middle East, and which was published in the Tucson (Ariz.) Daily Star of July 16, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A TRAGIC DIPLOMATIC BLUNDER

The sudden landing of the United States Marines in the little Middle Eastern country of Lebanon constitutes a tragic diplomatic blunder that will cost dearly the future of American interests in that strategic area. As an ill-prepared act of foreign policy, with a pitifully shallow pretext to justify the action, it will serve no other purpose than to accelerate the driving of the Arabs of that area into the arms of the Soviet Union.

The Soviet Union will scarcely go to war on this matter. It does not have to. It can win what it wants by our own stupidity and reckless action. It can accuse America of the very thing America has accused it of doing—of invading militarily a little country on the invitation of a wobbly government.

Why have we acted with such haste? The people of our country had been assured that America would act through the United Nations, and now our Government asks the United Nations to support an act as lawless as that of the invasion of Egypt in 1956.

Why was this matter not taken before Congress? We did it immediately in the case of Korea. We even got the sanction of the United Nations then.

To say that American lives were in peril does not match with the daily reports that have come in. These reports have emphasized that the fanatical Moslems have rebelled against a calmer, Christian government, but a government that has only meekly been supported by its army. There has been no Communist infiltration.

Let one of the experts on this country, Cyrus Sulzberger of the New York Times, speak. As recently as last Saturday he wrote in a full column published down the center of the Times' editorial page the following:

"The United Nations has in some respects thrived on the crisis of the past few years.

"But it has demonstrated both its survival capacity and its use in preventing civilization from toppling over a series of war brinks. In doing so it has gained vigor. * * *

"Much credit for this restraining effect should go to Secretary General Hammarskjold. He has developed it into a diplomatic post of real significance.

"He has come to have the accepted right to deal directly in the name of U. N., representing this earth as a whole and no single individual nation.

"An example of how this can apply was shown in the instance of Lebanon. By persistent behind-the-scenes maneuvers Hammarskjold managed to keep the lid from blowing off until he himself could travel to Cairo and Beirut.

"During that trip he helped establish enough of a supervisory organization to check deterioration. Thereafter, merely by not becoming worse, the crisis became better."

The only thing that has happened since has been the rebellion in Iraq, which the Arizona Daily Star frequently has said would happen. The venomous hatred of nearly all Arabs, primarily against Israel, but also increasingly against the United States for its support of Israel, is deep and widespread. No amount of military support or occupation of this vast area will ever be able to subdue permanently this basic hatred. We soon will turn Lebanon into a hornet's nest of grassroots stings of continuous undercover rebellion.

American policy should be one of standing by Israel, but also one of giving equal assurance that Israel would not be permitted to attack any Arab nation. It should be one of an interested observer of an Arab revolt that has a long time and a long way to go. It should be our policy to be friends with the Arabs, but never allow them, or any other nation, to blackmail us on account of the friends we have.

Now all of this has been lost. Arab hatred of Americans will be intensified. Confronted with no other place to look for help, they will do what Mr. Churchill did when, in those dark hours of Britain in 1941, he frankly said he would make and alliance with the devil, the Soviet Union, in order to defeat Germany. That working alliance did not mean that the Soviet Union was taking over Britain. Neither will it mean that the Soviet Union will be taking over the Middle East. It does mean that we have lost the friendship and confidence of what should be the growing United Arab Republic.

It would be to our interest to see such a country grow and prosper, and thus provide a buffer zone between the West and the Soviet Union. Now it means we have extended the active American military frontier to a little enclave in that area amid a population that will grow more and more hostile.

We will pay dearly for such an unfortunate and unnecessary mistake. A government that lands marines in that remote place on such a shallow excuse, yet allows its citizens to be kidnaped, and held prisoner by a rebel government in Cuba, cannot expect or deserve the confidence of law-abiding Americans or other people anywhere.

It negates completely a basic American principle of promoting the worldwide rule of law among nations, which requires that those who sponsor such a movement set an example by living by it.

Proposed Humane Slaughter Legislation

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, July 21, 1958

Mr. JACKSON. I ask unanimous consent to have printed in the Appendix of the RECORD, at the request of Mr. Lloyd Stacy, president of the Washington State Federation of Humane Societies, two editorials from the Tacoma News Tribune and the Seattle Post-Intelligencer concerning humane slaughter legislation.

There being no objection the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington News Tribune of June 30, 1958]

THE HUMANE SLAUGHTER BILLS

More than a half century ago, the novelist Upton Sinclair wrote a potent book called The Jungle. Potent is the word. He portrayed so vividly the unsanitary conditions in the meat packing industry that a Government commission was named to investigate. The upshot of it all was that on June 30, 1906, President Theodore Roosevelt signed the Meat Inspection Act, which brought tremendous reform.

Since that time the meatpacking industry has remarkably improved its techniques. The great bulk of meat and meat products served on American tables is fresh, sanitary, and wholesome.

Yet though the situation today bears almost no resemblance to that which aroused Upton Sinclair's angry scorn decades ago, it must be said that the industry has lagged in one important respect. With exceptions in some of the modern plants, methods of slaughter are not much more humane than they were at the turn of the century. The public apparently has become more aware of this in 1958 than in any previous year. In consequence legislation has passed the lower House of Congress which provides that the Federal Government will not, after the end of 1959, buy meat from packers who do not use the humane methods of slaughter prescribed by the Secretary of Agriculture. A companion bill reposes in the Senate Agriculture Committee, as well as another bill which merely calls for a 2-year study by the Department. Recently the committee indicated it will ask the Senate to go for the study bill.

Those persons who believe animals should be rendered unconscious before slaughter and who believe there already has been plenty of study are pressing to have the humane slaughter bill passed. They would like to see it done by June 30, the anniversary of the Meat Inspection Act. The packing industry, however, has raised the question of discrimination. "How about the branding of animals?" it asks. "The bill makes no mention of that, yet it is more inhumane than the old slaughter methods." Will the law be made to apply to farmers who slaughter on their farms? Industry spokesmen pointed out that some plants have installed carbon dioxide anaesthesia for the smaller animals, captive-bolt pistols for beef animals, and that modernization will spread through the industry. Apparently they convinced two-thirds of the Senate committee more study is required to make the law apply to everyone.

There can be no doubt that committees are necessary in the workings of Congress. But in this instance we see again how a committee can prevent a bill favored by a large section of the public from even coming to a vote, depriving the public from knowing how its Senators stand on the subject.

[From the Seattle (Wash.) Post-Intelligencer of June 30, 1958]

AROUND AND AROUND

It is unnecessary to point out the merits of the humane slaughter bill which would forbid United States Government agencies to buy meat from packers not using humane methods of killing meat animals.

Elimination of needless suffering by these animals in the slaughterhouse should make this legislation acceptable to any person who considers himself civilized.

Yes, the humane slaughter bill, already passed by the House, has been kicked around for some time now by the Senate Agricultural Committee.

And it may be doomed, since the committee has approved a substitute bill directing the Secretary of Agriculture to study the subject for 2 years and submit a proposal to Congress.

We don't quite get this. The Secretary will study the subject for 2 years and resubmit the same proposals to Congress which are already before it. And around and around we go.

Surely, the successful use of humane slaughtering methods by some packers for many years should be proof enough that such legislation should be passed without any drawn out, expensive and wholly unnecessary studies.

The Senate should disregard this conscience-saving substitute measure and pass the humane slaughter bill without delay.

Record and Experience of State of Oregon in Programs for Mentally Retarded Children

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, July 21, 1958

Mr. NEUBERGER. Mr. President, as we become civilized and enlightened, our approach to the problem of mentally retarded people—and especially children who are mentally retarded—is a matter of increasing concern to an ever larger number of citizens. My own State of Oregon has demonstrated commendable and urgent interest in this field. The Fairview Home for mentally retarded children, near Salem, is a model for the Nation in progressive therapy under its able medical director, Dr. Irvin Hill—although we might wish that it had more beds and other facilities available. Dr. Hill has distinguished himself in the pioneering use of drugs which offer some hope and promise in the field of mental disturbances.

This realm has been especially significant for me, because my wife, Maurine, as a member of Oregon's State Legislature, was the author of the first legislation in Oregon history to establish pilot courses for the teaching and aid of mentally retarded children. This program has since been expanded and enlarged, fortunately. Indeed, when Mrs. Neuberger and I were participants in a nationally televised entertainment show, we asked that the so-called prize fund from our appearance be designated for the Oregon Society for Retarded Children.

My interest in the question does not stop at the State boundary of Oregon, of course. On February 7, 1957, I introduced in the Senate a bill to provide for the expansion of teaching and research in the education of mentally retarded children, through the programs of the Department of Health, Education, and Welfare. This bill is S. 1092. It is my opinion—and that of others—that it already has helped to encourage expansion of Federal appropriations for such purposes, although not on the scale we hope for and for which we will continue to work and agitate.

Because this issue very much confronts us of the Senate and the House, I desire that my colleagues shall know of Oregon's specific efforts to assist retarded children and their parents. Our State legislature has created a special interim committee on mentally retarded problems, and it is headed by two legislators of enlightenment and of broad humanitarian views regarding social-welfare matters; they are State Senator Carl Francis, Republican of Yamhill County, and State Representative Grace O. Peck, Democrat of Multnomah County. The membership of the committee also includes some outstanding Oregon citizens who have dedicated their careers to the improvement of mentally retarded children, and these people owe their presence on the committee to the discriminating and careful choices made for membership by our Governor, the Honorable Robert D. Holmes.

In the issue of the Oregon Daily Journal of Portland, of July 10, 1958, appeared a most thorough and comprehensive article describing the work of the Oregon Legislative Interim Committee on Mentally Retarded Children. The author of the article is Mrs. Dorothy Lois Smith, capable staff writer of the Journal. I ask unanimous consent, Mr. President, that this article, entitled "Oregon's Approach to Mentally Retarded—Shall We Build a Fence?" be printed in the Appendix of the RECORD, for the information of my colleagues.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OREGON'S APPROACH TO MENTALLY RETARDED—SHALL WE BUILD A FENCE?

(By Dorothy Lois Smith)

(This is the first of two articles reporting findings and impressions of the Oregon interim committee on mental retardation and emotional disturbance.)

Will Oregon "build a fence on the cliff rather than maintain an ambulance down in the valley" in handling its responsibility toward the mentally retarded or emotionally disturbed? Will the State gain distinction as a leader in the challenging field or attempt to meet the challenge by a hit-and-miss, trial-and-error method?

The legislative interim committee is attempting to find a formula that will care for these citizens in the most effective manner possible, both from the standpoint of humanity and economics. It is attempting to determine the extent of the responsibility of the State, and plan that methods to meet this responsibility may be in keeping with long-range interests of the retarded and disturbed and be in accordance with the resources of the State. When the committee refers to "the State" the term includes the political subdivisions—statewide and on county and local levels.

Fairview Home near Salem is the chief refuge and hope for these persons and their families, but the figures concerning its accommodations and waiting list are staggering.

On June 30, 1956, there were 1,977 mentally retarded persons being cared for at the home, and an additional 324 who had been committed and whose names were on the waiting list for admission but for whom no facilities were available. On February 20, 1958, there were 2,034 resident-patients, 85 on parole, escaped, etc., and the waiting list stood at 388.

It is estimated that by July 1, 1959, the number of persons committed to Fairview—in residence and on the waiting list—will be 2,919. This figure—according to the scientific estimate—will increase to 3,372 by July 1, 1961, and to 3,852 by July 1, 1963. By July 1, 1965, facilities will be needed for the institutional care of some 4,358 mentally retarded persons in this State. These are the most accurate—though alarming—estimates available. And in addition to these figures, many other persons will require supervision, special care and other special services.

By 1965, then, approximately 2,500 more beds will be needed at Fairview Home than are now existent. The 1957 State legislature appropriated funds for construction to accommodate 400 additional patients at the home. This construction will be completed within the next 13 months.

Just what proportion of care to meet these staggering demands should be met by the State, county, and local community. Should it be partially cared for by centers located in various areas of the State? Should Fairview Home itself be the center of all expansion, or should another such home be founded?

Senator Carl H. Francis, of Dayton, is chairman of the committee studying these vital questions, and Representative Grace Peck, of Portland, is vice chairman. Other members are Gerson Goldsmith, Dr. Forrest E. Rieke, Mrs. Sylvia Capper, Senator Jean L. Lewis, Mrs. John Myles, and Representative William A. Grenfell, all of Portland; Don Dawson, Fairview home staff representative; Mrs. Elisabeth Waechter, Eugene; Mrs. Joy Hills Gubser, Representative Sidney Schlesinger, and Dr. James H. Stewart, all of Salem; Representative Jess Savage, Albany, and Mrs. Lewis D. Reavis, McMinnville. Executive secretary is Dr. John O'Donahue of Eugene.

Senator Francis reports that "it is good to see the various professional disciplines exhibiting a willingness to share responsibility."

"An example," he says, "is the suggestion of multipurpose regional centers that would offer—among other things—diagnostic and treatment services. To such centers referrals could be made by any agency concerned with children, and here the different professions working with these problems would work in teamwork fashion. Importantly, the home also would be playing a role in this approach."

A program for child service centers might be set up on an exploratory basis to determine whether aid from such centers is a feasible program. "Certainly," he points out, "the expenditure of preventative dollars would be both humanitarian and good economics; it is like the old comparison of building the fence on the cliff rather than maintain the ambulance down in the valley. Some way should be developed by the legislature for more coordination of the several groups in State government sincerely—but to a degree independently working in these fields."

Mrs. Peck is vice chairman of the committee and chairman of 2 subcommittees—1 on commitment procedures and institutions, and 1 which is investigating the possibility of using whichever of the State's tuberculosis hospitals is abandoned (the hospitals are located at Salem and The Dalles) as quarters to care for the long list of persons needing special treatment.

"We will recommend a voluntary commitment, which would mean that instead of going through the courts—as is now the method—parents or guardians of the individual could get a physician's recommendation and go directly to Fairview Home or whatever place they wish to commit the person and place him there. The same procedure would apply in removing them from their place of care.

"At present," Mrs. Peck explained, "we have the court commitment in which judicial procedure is used, and some persons feel a stigma in taking youngsters, particularly, to court.

"Court commitment in Oregon is a life commitment," she added. "This is really for the protection of the child, for in many instances he could really suffer if removed from Fairview, for example. This could easily happen if the child were orphaned and the guardians did not understand his particular problem. We are working on as wise a commitment setup as we can draw to recommend to the next session of the State legislature."

As to the possibility of securing the grounds and buildings of the TB hospital at Salem or that at The Dalles, the committee's application for them is "at the top of the list for consideration," she reports.

"We are weighing both the efficiency and the economy of expansion at such a site or of expanding on the present Fairview where grounds will permit more buildings and where the core of operations is already established."

In a recent session of the interim committee it was agreed to recommend that an Interdepartmental Resources Board, with a limited life of no more than 4 years, be appointed to study the child-service-centers question. The Board would have representatives of the State health, education, and welfare departments, plus a superintendent of the State hospital and the superintendent of Fairview Home as members.

The interim committee will recommend that the Board set up no more than two child-service centers on a pilot-study basis and a child-care center for severely retarded youngsters on the same basis. The Board will serve as a coordinating body between departments and between the State and communities in which centers are founded. These centers would be operated by the local communities and would be eligible for State matching funds.

Psychiatric, psychological, general medical, nursing, and social-worker services would be offered. It is estimated that such a center could be operated at no less cost than $50,000 a year.

The Juvenile Courts Association has recommended the establishment of these centers for diagnostic, treatment, and detention services. The Oregon Psychological Association, the Oregon Guidance Clinics Association, and the Eugene Representative Council for Special Services to Children support the committee's recommendations on "the level of generality in which they are now stated," the committee reports.

The committee has 1 of 2 recommendations to make concerning the much-debated question of whether special education classes for the educable mentally retarded being held in public schools: (1) Such classes should be mandatory after a 5-year planning period, or (2) such classes should not be made mandatory. Another prime point the committee is trying to determine is whether the services for the trainable mentally retarded (the severely retarded) are legitimately a responsibility of the public schools or should be vested elsewhere.

Protest by States Against Over-Centralization of Government

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, July 21, 1958

Mr. THURMOND. Mr. President, last week the House of Representatives passed H. R. 3, a bill to prevent the Congress from unintentionally usurping the rights and powers of the States.

The bill is one of great importance in maintaining the proper balance of power between the States and the Federal Government, and I hope that it will be brought to a vote in the Senate at an early date.

I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial from the State, of Columbia, S. C., for July 16, 1958, entitled "States Versus Federal." The editorial discusses the bill in a clear and candid manner, and it should be of interest to every Senator.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STATE VERSUS FEDERAL

An act introduced by Virginia's Chairman SMITH, of the House Rules Committee, apparently intended to limit the scope of Federal legislation as applied to State laws has started widespread controversy in the legislative halls. Even the meaning of the 74-word measure is controversial. Representatives are arguing over what it means. It barely cleared the committee by 1 vote—6 to 5.

Mr. SMITH says the bill means just what it says and it was intended to keep State sedition laws effective. Its introduction followed a ruling by the Supreme Court that a Federal antisedition law preempted that field and invalidated a Pennsylvania law on the subject.

Since Pennsylvania is a contender in the melee it cannot be said that the law is a part of the war between the sections. It is a part of the war between Federal predominance and State authority, in which the South has been the chief exponent throughout our history. In recent years States in other sections have also shown an interest in their own independence of thought and government, and it is good to have a powerful Commonwealth like Pennsylvania on our side.

Unfortunately opposition by the Justice and Labor Departments to the bill indicate it would be vetoed by the President even if it should survive Congress. It would therefore seem to be no more than a running skirmish. But it is an indication of how the States feel—a gesture of protest against overcentralization of Government. And if it is defeated now, there will be other battles.

Need for Housing for Unattached and Elderly Persons

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, July 21, 1958

Mr. SPARKMAN. Mr. President, there is one type of housing about which we do not hear very much—a type for which there is a definite need.

Recently there appeared in the Washington Daily News a column by Mrs. Eleanor Roosevelt pointing to this need and to the fact that it had not been sufficiently covered in legislation.

There also appeared on June 16, 1958, in the Anniston (Ala.) Star an article by Esther Tufty, the well-known newspaper woman, under the heading "Single-Unit Housing Plea of Woman Gains Attention." She discusses the same type of housing and the need for it.

I ask unanimous consent that both these articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington (D. C.) Daily News of June 12, 1958]

ELEANOR ROOSEVELT'S DAY—HOUSING BILL MISSES NEED

NEW YORK.—There is one courageous lady, I think, who deserves credit for persistence in her efforts on behalf of women's welfare. Her name is Mrs. Jency Price Houser, and for 10 years she has appeared before almost every housing committee because of her conviction that there is one need which all the housing bills overlook. This is the need for providing good but inexpensive apartments for single women, for widows living on pensions, for women no longer able to work, and for those living on social security.

Often these are women who were accustomed to greater comforts when they were young and earning high salaries, or when their husbands were alive. Now that they are left alone, they often pay prices all out of proportion to their income for even a semidecent place in which to live. They never know when the rents will be raised and they will have to move, just as they are also forced to move if the house in which they have an apartment is sold or if the management is changed and essential services are reduced to practically nothing.

These women are not all older people. Some of them are still working, but cannot meet the difficulties in finding good housing that exist in almost every city.

[From the Anniston (Ala.) Star of June 16, 1958]

SINGLE-UNIT HOUSING PLEA OF WOMAN GAINS ATTENTION

(By Esther Tufty)

WASHINGTON.—Lobbyist Jency Price Houser looks like, and is, a middle-aged, middle-income housewife. She's something different in lobbying, but maybe that's why the men in Congress listen to her plea for more housing designed for single persons, "especially business, professional, and retired women."

Just last week Alabama Congressman GEORGE HUDDLESTON, JR., of Birmingham, wrote her: "I personally appreciate your splendid efforts in behalf of this badly needed legislation to provide housing for unattached persons, and especially the elderly."

HUSBAND IS ASSOCIATED

Oddly, she isn't a single person herself, but married to Thomas Houser, a former Government official, who became so enthusiastic about her cause he is her associate.

She's met with some success. In 1950, she managed to get single individuals designated as "a family unit" in the National Housing Act, thus making them eligible for the insurance of a mortgage. But she must keep fighting, she says, "to retain the wording in every new housing bill." JOHN SPARKMAN has introduced supporting legislation.

The turn of events, plus a determined push from the gentle Jency, has at least changed the attitude of Congress toward housing for the aged. The need is recognized now.

Typically, Congressman THOMAS B. CURTIS of Missouri says: "Most older people are on fixed incomes. Pensions, social security, or retirements of some sort. These plans have been thrown out of kilter because they live longer and inflation has cruelly cut their savings in half.

Mrs. Houser took a survey of single persons and found that only 32 percent pay as little as 20 percent of their income for rent. But the single person housing envisioned by this lobbyist isn't just for the elderly.

Under the same housing development she would have one-third retired or elderly and two-thirds working persons. She calls this a "natural and happy way of living" for single people, men or women.

As an Alabama example she quotes Harold Harper, executive director of the Birmingham Housing Authority: "There are an estimated 1,300 single persons in this community who need housing: 750 of these are single women, 500 are below 60 years of age. An estimated 50 percent of the 1,300 receive less than $2,000 a year, 25 percent receive between $2,000 and $3,500, and only 25 percent over $3,500."

Troops and Policy

EXTENSION OF REMARKS
OF
HON. JOHN D. HOBLITZELL, JR.
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, July 21, 1958

Mr. HOBLITZELL. Mr. President, I ask unanimous consent to have printed in the RECORD an article under the heading "Troops and Policy," written by C. P. Ives, and published in the Baltimore Sun of July 21, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MONDAY MORNING VIEW
(By C. P. Ives)
TROOPS AND POLICY

Two points in particular are urged against the administration's Middle East policy in the wake of the marine landing. Critics say the use of troops proves the policy's failure. And they say it has failed because it ignored the aspirations of the Arab common people.

But the fact that troops are used does not mean that a policy has failed. Troops are an instrument of policy. Diplomacy is always to be preferred. But military establishments are maintained to support policy.

Certainly the ends of American policy in the Middle East are not yet lost. We have stood for the independence of the Arab peoples. That meant we were against the Communist colonialism that would turn them into eastern versions of the European satellites.

We have stood for the maintenance of the East-West oil trade on which the economies of our NATO friends—and of several Arab nations—depend. That was another application of our general stand for the independence of nations against the new Red colonialism.

But it is argued that in resisting Nasser we resist Arab nationalism. The unstated premise is that Nasser is the sole authentic nationalist in the Middle East. Yet "If I could sum up my conclusions in a single embracing simplification," Lord Birdwood wrote in the London Daily Telegraph, "I would claim that no man * * * worked more devotedly for the cause of Arab unity than did Nuri Pasha [the veteran Iraqi Premier assassinated last week].

"Insofar as friendship with the West served his cause, that friendship was to be cultivated. But Arab unity was his first loyalty and his abiding mission.

"Compared with [Nuri's] early wisdom, his tenacity and his final abhorrence of the emergence of the State of Israel as the negation of his dreams, the postures of Nasser will be seen, in the perspective of history, as only the maneuvers of a consummate opportunist.

"For Nasser the creation of Israel was a shortcut to Arab leadership. For Nuri it was the frustration of his life's work."

In sum, the question of Israel aside, where all Arabs agree, the American friendship with Nuri was a friendship with a stabler and wiser and more authentic Arab nationalism—stabler, wiser, and more authentic because it steered clear of the new Soviet form of colonialism. That Nuri is dead does not mean his kind of Arab nationalism is dead or that Mr. Dulles had any true choice in preferring his kind.

But what of the other claim—that the Americans have dealt too much with the Arab elite and too little with the common people? This is one of Senator FULBRIGHT'S favorite allegations.

Yet observers of the Middle East as well informed as Senator FULBRIGHT report that the anti-Americanism in those parts is not among the country and common people, the nomads of the old tribal communities, but among the slick young men of their Nasser generation who inhabit the feverish Arab cities.

And about these slick young men there is authoritative testimony to which Senator FULBRIGHT, a former college president and inventor of the Fulbright exchange scholarships, should pay special heed. It comes from Dr. Charles Malik, now Foreign Minister of Lebanon, who is by profession a college teacher.

"The state of mind of Asia's intellectuals today is not a happy commentary on the West's influence to date," Dr. Malik wrote 5 years ago. "Many of them, after devoting years to learning in European or American universities, returned to Asia afflicted with a great intellectual restlessness.

"Some of them sincerely thought they found solace only in Marxism; others were the clever, self-seeking radicals familiar enough in the West. In the light of all this there is reason for the universities of the West to meditate upon their failings in the past—as well as their opportunities for the future."

But if some of the more restless Arab leaders have learned their restlessness in the West, the West must still have faith that they learned other lessons as well. Certainly the teachers whom they remember as philosophical Marxoids (or worse) have been relearning other lessons—the murder of Imre Nagy only the other day shook another batch of them at least temporarily off the Marxoid bandwagon.

The main question in the Middle East and everywhere outside Sovietia is the awful shortness of time, whether miscalculation of men and doctrines can be corrected before the bombs fall, whether things like the Marine landing will slow events enough to let men un-think error and re-think elementals.

The American Exhibition at the Brussels World Fair

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, July 21, 1958

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD 2 news articles, 1 from the July 15 issue of the Star, of Chicago Heights, Ill., and the other from the July 15 issue of the Harvey Tribune, of Harvey, Ill.

Both of these articles refer to a letter written to me by a well-known businessman of Chicago Heights and a distinguished member of the Illinois State Senate, the Honorable Hayes Robertson. Senator Robertson's letter, which contained a penetrating analysis of his observations at the United States Pavilion at the Brussels Fair, was of such interest that I brought it to the personal attention of the President, who, in turn, directed Mr. George V. Allen, head of the United States Information Agency, to inspect the various exhibits at the American Pavilion and to report to the President personally.

I believe that material contained in these news articles merits the attention of Members of Congress and the public.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Chicago Heights (Ill.) Star of July 15, 1958]

LAMBASTS FAIR EXHIBIT—ATTENTION GIVEN CRITICISM AMAZING TO ROBERTSON

State Senator Hayes Robertson, whose criticism of the American exhibit at the Brussels International Fair caused the President to send a troubleshooter to the scene and drew nationwide comment, this week released the text of his letter, along with comments on its reception.

Senator Robertson, Republican, of Flossmore, who is president of Brummer Seal Company of Chicago Heights, touched off the debate with a letter to United States Senator STYLES BRIDGES, Senate GOP policy committee chairman, after a visit to the international fair during a European tour this summer.

After Senator BRIDGES read the letter to the President, the head of the United States Information Agency was sent to the fair for an official investigation.

Picked up by newspapers across the country, the letter was the subject of a critical editorial in a national magazine.

"I was amazed my letter would create so much attention," Robertson said this week.

"In my letter I tried to describe our display exactly as I remembered it, and I must have been reasonably accurate because no one I know of has denied any of the allegations of facts which I made.

"However, many have disagreed with my conclusions," he said.

"Many of the critics of my remarks have failed entirely to recognize the real purpose of the complaint," continued Robertson. "I am not nearly as concerned over the nude Indian maiden and her cannibal tribesmen, or the abstract art, or the floating orange peels as I am over the fact that the United States Information Agency doesn't seem to have the remotest idea of what the great majority of United States citizens consider American culture, or of what in our culture would be most likely to appeal to the people of Europe and the rest of the world.

"It must be remembered that Europeans are living in great fear of being caught in the middle of a shooting war between Russia and the United States. While their present governments are our allies under the NATO agreement, the people know that in every European country there is a strong Communist minority actively working in politics and with propaganda against the United States.

"The majority of Europeans want to believe that we are stronger than Russia. They know we are friendlier and less serious, but being less serious worries the farmer and common man of Europe. It may cause the intellectuals to chuckle but they are already our friends. Nevertheless, our USIA put on an exhibit, which, if it has any theme at all, is designed to show Americans as carefree, nonchalant, slaphappy folks whose only cares are internal affairs in which they admit we are not yet quite civilized.

"I have never felt that our foreign aid program was worth the cost to American taxpayers. I am now convinced that the purchasing agents we have hired to buy world friendship don't know what it is that they are supposed to be buying.

"They should be winning the friendship and admiration of the people of the world. Instead they are catering to the intellectual funny bone of the embassy staffs and the social courts of the present governments of Europe and Asia. There is a great difference."

When asked about the comments of former Postmaster General James A. Farley and

former President Herbert Hoover, in which they each expressed approval of the fair, Robertson replied, "I have the highest respect for the opinions of both Mr. Hoover and Mr. Farley, but I am sure that they each received a conducted tour which would have precluded any chance of seeing the exhibit as others see it."

Robertson added he hoped the controversy would prompt some changes in the exhibit and more important even some changes in the personnel of the USIA.

[From the Harvey (Ill.) Tribune of July 15, 1958]

LETTER TO SENATOR BRIDGES CREATES STIR IN WASHINGTON

State Senator Hayes Robertson has been in the news lately because of a letter he wrote to United States Senator STYLES BRIDGES, of New Hampshire, about the American exhibit at the Brussels Fair. Robertson, who represents the eighth district and lives in Flossmoor, visited the fair last May on a European tour.

His letter was read to President Eisenhower by Senator BRIDGES at a policy committee meeting and the President sent George V. Allen, the Director of the United States Information Agency which was responsible for the exhibit, to Brussels to inspect the fair and make a report.

This action and excerpts from Senator Robertson's letter were noted in the New York Times and many papers over the country. Time magazine carried a story on June 30 and last week Life magazine criticized Robertson's comments editorially.

Said Life: "The Robertson view of the fair is shared by many Americans who have seen it, and Allen has said he will make a few changes on the basis of his own survey. We trust he will not make too many, and none that might change the basic character of the United States exhibit. For most of its American critics, including Mr. Robertson, are way off base."

Life conceded that "some of the United States exhibits to be sure, are baffling or trivial or unimaginatively presented and there are inevitable omissions. Mr. Robertson, for instance, complains that the only American automobile shown is a 1903 model and that 'no exhibit shows how we tax ourselves to help the other people of the world.'"

Life says "these criticisms are not heard from Europeans" and agrees with former President Herbert Hoover that "the spirit of compassion spreads from every American home to all mankind," and that the exhibit portrays this compassion honestly.

"The moral," Life says, "will get across."

The tribune asked Senator Robertson what his reaction was to the controversy that arose from his letter.

"I was amazed that my letter would create so much attention. There had been many people before me who had registered their complaints of the American exhibit," said Robertson. "In my letter I tried to describe our display exactly as I remembered it, and I must have been reasonably accurate because no one I know of has denied any of the allegations which I made. However, many have disagreed with my conclusions.

"Many of my critics have failed entirely to recognize the real purpose of the complaint," continued Robertson. "I am not nearly as concerned over the nude Indian maiden and her cannibal tribesmen, or the abstract art, or the floating orange peels, as I am over the fact that the United States Information Agency doesn't seem to have the remotest idea of what the great majority of United States citizens consider American culture, or of what in our culture would be most likely to appeal to the people of Europe and the rest of the world.

"It must be remembered that Europeans are living in great fear of being caught in the middle of a shooting war between Russia and the United States. While their present Governments are our allies under the NATO agreement, the people know that in every European country there is a strong Communist minority actively working in politics and with propaganda against the United States.

"The majority of Europeans want to believe that we are stronger than Russia. They know we are friendlier and less serious, but being less serious worries the farmer and common man of Europe. It may cause the intellectuals to chuckle but they are already our friends. Nevertheless, our USIA put on an exhibit, which, if it has any theme at all, is designed to show Americans as carefree, nonchalant, slaphappy folks whose only cares are internal affairs in which the USIA admits we are not yet quite civilized.

"I have never felt that our foreign-aid program was worth the cost to American taxpayers. I am now convinced that the purchasing agents we have hired to buy world friendship don't know what it is that they are supposed to be buying.

"They should be winning the friendship and admiration of the people of the world. Instead, they are catering to the intellectual funny bone of the Embassy staffs and the social courts of the present governments of Europe and Asia. There is a great difference."

When asked about the comments of former Postmaster General James A. Farley and former President Herbert Hoover in which they each expressed approval of the fair, Robertson replied, "I have the highest respect for the opinions of both Mr. Hoover and Mr. Farley but I am sure that they each received a conducted tour which would have precluded any chance of seeing the exhibit as others see it."

Robertson added that he hoped the controversy would prompt some changes in the exhibit and, more important, even some changes in the personnel of the USIA.

Celebration by the Elbeetian Legion of the 100th Anniversary of the Birth of W. D. Boyce

---

EXTENSION OF REMARKS
OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, July 21, 1958

Mr. YARBOROUGH. Mr. President, I believe it is pretty well known that it was the late W. D. Boyce, Chicago publisher and philanthropist, who brought the idea and the organization of the Boy Scout movement to this country from England in 1909.

Several years later, on learning that the Boy Scout movement as then organized was not reaching boys on the farms and in the smaller communities, Mr. Boyce founded the Lone Scouts, a similar organization that would reach these rural youths. This new organization grew rapidly, and at the time of its merger with the Boy Scouts in 1924, it had upwards of 500,000 members. Today the adults who belonged to the Lone Scouts in their youth have perpetuated the memory of that organization in the Elbeetian Legion.

The legion is this year honoring the 100th anniversary of the birth of Mr. Boyce. To present a fuller picture of the matter I ask unanimous consent to have printed in the RECORD a letter from Mr. Jack Standard, Texas chairman of the Elbeetian Legion, to the Governor of Texas, requesting that the 100th anniversary of the birth of Mr. Boyce be recognized by appropriate proclamation, and a copy of the proclamation which was thereupon issued by the Governor.

There being no objection, the letter and proclamation were ordered to be printed in the RECORD, as follows:

TEMPLE, TEX., *May 15, 1958.*

Hon. PRICE DANIEL,
Governor of the State of Texas,
Austin, Tex.

DEAR SIR: June 16, 1958, is the 100th anniversary of the birth of W. D. Boyce, founder of the Boy Scouts of America, and the Lone Scouts of America. We are asking each governor to proclaim June 15 through June 21, 1958, as W. D. Boyce Week, to honor this man who has done so much for the youth of America.

I am sure you are familiar with the story:

In 1909, W. D. Boyce, a Chicago publisher and philanthropist, was instrumental in the founding of Boy Scouts of America because of his chance meeting when lost in the fog in London, with an English scout who guided him to his destination and then refused a tip, saying that that was his good deed for the day.

Mr. Boyce was so impressed that he contacted the founder of Boy Scouts, Baden-Powell, and on his return to Chicago, interested other men in the idea, organized the Boy Scouts of America, largely financing it himself for 2 years.

Leaving on one of his exploring trips, he returned to find that the Boy Scouts of America setup did not include the lonely farm boy or boys in the smaller communities who could not gather enough for a patrol. So, in 1915, he chartered the Lone Scouts of America, supporting it alone until it had grown to more than a half million boys by 1924 when it merged with Boy Scouts of America.

A group of old Lone Scouts, known as the Elbeetian Legion feel that William Dickson Boyce should be honored, for no single American has done a greater service for the boys of America than when he brought scouting to our country, interesting other men in the idea, helping to organize the Boy Scouts of America in 1910 and the Lone Scouts of America in 1915, largely financing both organizations himself at their start.

You know what scouting has meant to our boys the past 47 years. Had a certain unhappy Austrian lad by the name of Adolf been a Boy Scout, he might have found a joyous boyhood, full of the ideals of brotherhood, good will, and kindness. And the world would have been different. Every boy is an atom bomb in human history. Under the kind of scoutmaster we have today, a certain Russian boy might have learned the lessons of democratic cooperation, and perhaps we would never have known about Iron Curtains. Boys are the makers of history and the builders of tomorrow.

All America is grateful to the man who brought scouting and its ideals to the youth of our country. To me, as a country boy back in the hills of Lampasas County, the Lone Scouts opened up a new world. It taught patriotism, self-reliance, and as it was for country boys with no scoutmasters it instilled in us the honor system. The advancement was by degrees. There were seven degrees, and each one was designed to cover a specific phase of life in the great outdoors.

When the Lone Scouts merged with the Boy Scouts, it had a membership of about 500,000. There were thousands of Lone Scouts in Texas. Today in the ranks of the

Elbeetian Legion, which is the alumni organization of the old Lone Scouts of America, there are a representative cross section of this great Republic. From just plain citizens like myself to Senators, professors, editors, famous cartoonists, authors, and what have you.

We, therefore, respectfully request that you proclaim this week of June 15 to June 21, 1958 as W. D. Boyce Week.

Enclosed is a copy of the proclamation of Governor Griffin, of Georgia.

Sincerely,

JACK STANDARD,
Texas Chairman, National Committee To Honor W. D. Boyce, Founder of the Boy Scouts and Lone Scouts of America.

OFFICIAL MEMORANDUM BY PRICE DANIEL, GOVERNOR OF TEXAS, AUSTIN, TEX.

Greetings: June 16, 1958, marks the 100th anniversary of the birth of the late William Dickson Boyce, Chicago publisher and philanthropist whose vision and generosity made possible the organization of the Boy Scouts of America.

One evening in 1909, Boyce became lost in a London fog and a small boy led him through the fog to his destination. The boy declined a tip for his services, telling Boyce that "I am a scout, and scouts do not accept tips for courtesies." Impressed with the London scout doing his daily good turn, the American publisher went to the founder of the British Boy Scouts, Sir Richard S. S. Baden-Powell, who explained the scout movement and gave Boyce a truckload of Boy Scout pamphlets and literature.

W. D. Boyce returned to America and incorporated, with others, the Boy Scouts of America on February 10, 1910. For the first 2 years he largely financed the organization with his own funds.

In 1915, Boyce founded the Lone Scouts of America, so that scouting could be enjoyed by boys in the country and remote places. The Lone Scouts had grown to a membership of half million boys by 1924 when it merged with the Boy Scouts.

Many Texans were Lone Scouts, and today there is a large alumni group known as the Elbeetian Legion. The legion this year is sponsoring a special observance commemorating the 100th anniversary of the birth of W. D. Boyce.

Therefore, I, as Governor of Texas, do hereby designate Monday, June 16, 1958, as W. D. Boyce Day in Texas.

In official recognition whereof, I hereby affix my signature this 28th day of May 1958.

PRICE DANIEL,
Governor of Texas.

Farmers' Net Income Reveals 22 Percent Increase

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks, I wish to include the following newspaper article by Ovid A. Martin, entitled "Farmers' Net Income Reveals 22 Percent Increase":

FARMERS' NET INCOME REVEALS 22 PERCENT INCREASE

(By Ovid A. Martin)

WASHINGTON.—The Agriculture Department reported today that farmers' realized net income in the first half of 1958 was 22 percent higher than in the first half of 1957.

But in arriving at this increase, the Department revised downward previous estimates of income earned last year.

Of the 22 percent increase, about 15 percent reflected actual gains over last year's tentative figures, and 7 percent reflected revisions in last year's estimates.

The Department said realized net income—the amount available for spending after deduction of all production expenses—was at the annual rate of $13,300,000,000 the first half of this year.

It said the income during the first half of 1957 had been at the annual rate of $10,850,000,000 instead of the 11½ billions previously estimated.

This downgrading of last year's earnings, along with revisions in data supplied by the 1954 census of agriculture, as well as better information on the quantity and value of of home-consumed farm products, and some increases in production expenses.

The revised figure put the net realized income for the full year last year at $10,800,000,000 compared with 11½ billions previously estimated.

This put last year's earnings down 10 percent from the previous year instead of 4 percent reported earlier.

A part of the big increase this year over last year's revised income estimate reflected delayed marketings of some crops, such as corn and cotton, from last year's late harvests.

The Department said farm production expenses during the first half of this year were 4 percent higher than in the like period last year.

Truman Would Invite Nasser to Washington

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include an article written by the Honorable Harry S. Truman, our courageous and beloved former president, which article appeared in the Washington Star of July 20, 1958, as well as other newspapers throughout the country.

TRUMAN WOULD INVITE NASSER TO WASHINGTON—URGES SUPPORT OF LEBANON INTERVENTION; FIRM STAND AGAINST REDS SEEN VITAL

(By Harry S. Truman)

The situation in the Middle East is one of extreme danger, and the President having taken a first and necessary step, the United States and the free nations of the West must be alert, determined and exceedingly careful not to leave any room for misunderstanding as to what we are prepared to do at all stages.

Our objective is to prevent a third world war. Our aim is to insure the peace of the world, and we have devoted our wealth and energies to that end at great sacrifice.

The President has made a momentous decision and proclaimed a policy which every citizen of the United States should support.

I hope, too, that we will find a way to create an atmosphere of genuine bipartisanship in which our foreign policy can be supported by all citizens. For it is necessary that those who are trying to destroy the free world clearly understand that we will unanimously support the man who takes the leadership—and that man necessarily will have to be the President of the United States.

CONCERNED ABOUT U. N.

For some time I have been worried about the steadily worsening prospects for peace and for the arrangements and organizations we have set up to help keep the peace of the world.

I have been frankly concerned that the same fate that overtook the League of Nations of Woodrow Wilson might also befall the United Nations. This would be a great tragedy, and I expect that many anxious generations would pass before there could be built another international organization to cope with the recurring dangers of war.

It was in that troubled mood that I recently returned from a visit to the Mediterranean where I thought about the trend of events as they concerned us and the other free nations in that part of the world.

I would have preferred, as I am sure the President would, to call first upon the United Nations for action on the plea of President Chamoun, of Lebanon, for help. But under the circumstances, there was no time to deal with the emergency, because it was obvious that the Russians would have delayed any action in the Security Council until help of any kind would have been rendered futile.

KOREAN CRISIS RECALLED

At the time of the Korean crisis, we were able to get quick action in the United Nations because Russia was then boycotting the Security Council. Today, however, the situation is different, with Russia again actively present and disrupting the work of this organization for peace.

In the recent past, I have been openly critical of some of the misjudgments and the drift in the conduct of our international policies. But this is no time to dwell on the past. The President, it is now evident, has adopted a policy of positive action.

Positive action, of course, does involve certain risks, but we have learned from experience that there are far greater risks in failure to act or in hesitation to act when we have to deal with the Soviet Union.

I, therefore, believe that the President—considering all the circumstances—had no alternative than to respond to the call of the President of Lebanon to dispatch troops to that troubled country. And the British were in the same situation with regard to Jordan.

The President is right in proposing that American troops should be withdrawn as soon as the United Nations can make provision to send an international force to take their place.

FIRM STAND HELD VITAL

Having taken this action in Lebanon, I think it is necessary that we make it clear to the Soviet Government that the free world means business in its determination to stop Communist intrigue and subversion in the Mediterranean. This should be done through formal diplomatic representation in concert with our allies.

Time and again we have seen that when the Kremlin is convinced that we mean business and are determined to back it up with action, it will back down. This happened in Iran, and this happened in Greece and Turkey.

Moscow once again must be reminded that we stand ready—whatever the cost or consequences—to back up our commitments for peace.

And I think this may be a good time for a new approach in Egypt. Under proper conditions, it might prove useful to a peaceful resolution of the Middle Eastern crisis to invite President Nasser to Washington for a frank and friendly discussion.

I wish we could have invited him much earlier—during the beginning of the Middle Eastern crisis.

WOULD INVITE OTHER LEADERS

One of the things President Nasser does not seem to understand is that the hope for improvement of the lot of his people lies in his working with the West. On the other hand, if he keeps on flirting with the Russians and encourages them in their sinister campaign of indirect aggression, he stands a good change of turning his country into a Mediterranean Hungary or Poland.

Arab nationalism can have no future in the plans of Russian imperialism. Nor is there any hope for a better future for the Arabs if, on the pretense of freedom, so-called republics are set up by brutal military coups, such as occurred in Iraq.

I think we would have a better opportunity to learn from President Nasser at first hand exactly what his aims are. At the same time, we ought to invite and welcome other recognized Arab leaders to come here so as to give full and equal consideration to their aims and problems.

MANY WAYS TO HELP

There are many ways in which we could be helpful to the Arabs in their quest for security and freedom and a decent standard of living, and we ought to explore every opportunity to help.

I think we ought to make it clear to Nasser and other Arab leaders that the free nations of the world cannot be politically blackmailed because of their need for oil from the Middle East. The fact is that the free world now has access to ample oil resources outside the Middle East from which they can supply all their industrial, domestic, and strategic requirements.

It would, therefore, be foolhardy for extremist Arab nationalists to cut off the supply of oil to the West. This would result only in chaos and economic disaster to them.

Before anyone in the Middle East is tempted to risk another crisis like Suez, I hope that he will think twice, because it will not work again.

I think the times are serious, and it is dangerous to minimize the difficulties we face. But I also think we have an opportunity to clear the air of many wrong and false assumptions in our dealings with the Middle East.

We can now stand on firmer ground and seek to follow through in a policy of dealing resolutely and realistically with the Soviet challenge in that explosive part of the world.

Deterioration of Veterans' Medical Program Under Federal Policies

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, July 21, 1958

Mr. PROXMIRE. Mr. President, an article appearing in the American Legion magazine for July 1958 is a subject of proper concern for all those interested in adequate medical care for the veterans. This article points out that the Veterans' Administration is closing from daily use 850 hospital beds for 1958–59. The national executive committee of the American Legion in may of 1958 reported a waiting list of veterans waiting to get into veterans hospitals of over 28,000 This was the known list. It did not include the numberless cases where calls were made by physicians to Veterans' Administration hospitals and when being told that there is no room, no application is filed. This article points out the tremendous slash in the number of beds for tuberculosis treatment. Over 550 TB beds were eliminated. It may be that TB needs have slackened off. These same beds could be used for other pressing needs such as care of the chronically ill and the aged among our veterans.

We recently had the experience in Wisconsin of the Waukesha Veterans Hospital having its staff and its patient load drastically reduced. Waukesha is a veterans tuberculosis hospital. I asked that consideration be given to devoting the Waukesha facilities and the skill of its fine staff for other veteran medical needs.

Everywhere across the country there is a need for more bed space for the chronically ill, the mentally ill, the aged and senile cases. If Veterans' Administration can, because of progress in treatment, afford to eliminate tuberculosis beds, then certainly every effort should be made to use these facilities, on which the taxpayers have spent millions of dollars, for other types of treatment.

I ask unanimous consent that the article to which I have referred from the July issue of the American Legion magazine entitled "Dry Rot Eating Vets Program Under Hidden Federal Policies," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DRY ROT EATING VETS' PROGRAM UNDER HIDDEN FEDERAL POLICIES

The United States veterans' medical program, once the pride of the world, moves into the Government fiscal year of 1959 suffering dry rot as the result of deliberate but undeclared Federal policies of erosion and attrition of its staff, facilities, and services.

The Veterans' Administration is closing from daily use some 850 of its hospital beds for 1958–59. There is no declared policy of the Congress or the President to close the beds, simply a denial of funds to keep them open.

The use of nearly 5,000 VA hospital beds was denied eligible patients in recent years without any declared policy of the Congress or the administration to deny it.

As the beds are closed out, VA staff members who man them are discharged or transferred, without any declared policy of the Congress or the President to reduce the staff.

As some VA staff members are let out in the contining attrition, the morale of the remaining staff dwindles and they look around for new places to work before the hidden axe swung by undeclared policy catches them unprepared.

The Veterans' Administration has not recommended any policy of closing hospital beds, firing staff, or demoralizing the remaining staff. When he knew he was going to resign, the last Administrator publicly declared himself in favor of opening more beds—in the face of a waiting list of eligible patients now swelled to 27,000 of whom some 16,000 or more are mental cases.

The VA hospital system has a rated capacity of some 128,000 beds. Its daily patient load is now some 17,000 below rated capacity. The daily load is shrinking not for want of eligible patients, but through fiscal policies imposed by the Bureau of the Budget, unsanctioned by any law or any publicly declared policy of the President or the Congress.

The physical plant of the United States veterans hospitals is beginning to deteriorate, bit by bit, for lack of proper current maintenance and modernization.

There is no declared policy of the President to permit the splendid plant to deteriorate.

There is a definite policy of the Congress to maintain and modernize the physical plant of the hospitals.

Ordinary maintenance of the physical plant is suffering because of under-budgeting by the Budget Bureau.

In some instances, funds appropriated by Congress for plant improvement have gone unspent by delaying tactics of the Budget Bureau—such as quibbling from 1 year's end to the next about minor technicalities of new construction such as the width of corridors or the size of doors.

OWN POLICY

Apparently the Budget Breau has a policy of its own, which it prefers to that of the Congress. A year or so ago, Assistant Budget Director Robert Merriam, told the House Committee on Veterans Affairs that there should be 40,000 VA hospital beds, instead of the 128,000 which the Congress had provided. The present pattern smacks of outright conspiracy of the Budget Bureau to impose its own legislative policy, eroding the veterans' hospitals down to size by financial neglect, through practices completely contrary to the true purpose of a Budget Bureau. Beyond question this assumption of devious legislative powers by the Bureau must erupt in a public scandal, a congressional rebellion and possible reorganization of the Budget Bureau with tighter legal controls on its authority, given only time.

Having been denied the use of 5,000-odd available beds in recent years under budgetary pressure, the Veterans' Administration continued in May and June to close down more beds in anticipation of the 1959 budget.

The new withdrawal of operating beds was spread around the country—5 here, 10 there, 90 elsewhere.

TB beds got the biggest slash (550 more beds closing down). TB needs have slackened off, but the VA could convert the beds to more pressing needs, especially for the chronically ill and the aged. To check any such progressive step, the Budget Bureau recently ordered the VA not to convert any TB beds to other uses—in short, to compel the national investment in the TB beds to become useless.

Beds for mental patients were being cut back by 250 in the face of a waiting list of 16,000. General medical beds felt a 150 bed reduction. With the beds went more staff—doctors, nurses, technicians who had manned them.

Some national economy groups had been asking for such savings. They presumably admired the budgetary way of doing the job expeditiously without any annoying public debate or congressional sanction.

Nationally, the chamber of commerce was among those which had asked month in and month out that the Federal veterans program be cut back in some such way.

Locally, it was a different picture. When the VA began shutting down 90 beds at its Martinsburg, W. Va., hospital and laid off 48 employees, the Martinsburg Chamber of Commerce became the spokesman of many local protesting groups.

But there was small chance that the 90 beds would be restored to Martinsburg. VA Administrator Summer Whittier was there in person to explain the technicalities to the local people. Only hope seemed to be that Congress would pass specific laws to reopen the particular beds and provide money that the Budget Bureau wasn't asking for and wouldn't let the VA request. That's the

kind of legislation that amounts to congressional war with the administration. But some Congressmen were ready for it.

The citizens and businessmen of Martinsburg would feel the cutback in business lost, employed persons suddenly unemployed or gone elsewhere, Federal funds that used to be spent not being spent.

Something was said now and then about the sick veterans who would be denied care at Martinsburg, but mostly the talk was about what was good for business, how the local economy would be hurt, how little money the VA had.

SIDETRACK

Somehow, both sides of the argument revolved around the interests of everyone but the patients in need of the beds. It was a not-so-funny frame of reference for discussion of a hospital operation.

Meanwhile, not only in Martinsburg but elsewhere around the country, it seemed that the dairy and pharmaceutical businesses were being hurt, too.

Was it true that less milk was being sold to the VA hospitals? Visitors reported that patients in the remaining beds were being denied their usual glass of milk at bedtime and other rations were being curtailed.

Was it true that less medicine was being sold to the VA? Reports were going the rounds that veterans entitled to medicine from the VA were getting it slower—and slower meant less of it.

Veterans entitled to outpatient care were being cut down in the frequency of their visits, it was reported.

Those in the know confirmed some of the rumors, and said it was a helluva way to run a hospital.

They included the 23 managers of VA hospitals in 7 Western States who got up on their hind legs in March and laid it on the line.

The 23 managers said they could neither maintain the quality of medical nor the condition of their hospital buildings and facilities on the amount of money the Budget Bureau was letting the VA request to carry out its program.

By 1960, said the 23 managers, they would need $10 million more for their 23 hospitals alone than they got in 1958. It was a plain public statement which showed that the 23 managers had the guts, if not the money, to do their jobs.

But as the new budget for 1959 shaped up, they were again getting less, not more. Hence the new wave of cutbacks.

THE $64 QUESTION

Representative OLIN TEAGUE of Texas, chairman of the House Veterans' Affairs Committee, said flatly that the cutbacks and the scrimping were not the policy of Congress. They were contrary to existing law, he said, and the Budget Bureau was responsible.

On April 22 he wrote the President, cited the laws being obstructed, stated that the President's Budget Bureau was doing the obstructing, and asked the President directly if the Bureau were obstructing the law with the President's knowledge and approval.

That was the $64 question. When the executive branch of the Government pledges to carry out the laws of the land, may it abandon any laws for which it lacks enthusiasm by the ruse of not asking for the money to carry them out, or refusing the money to the responsible agency?

That is what the Budget Bureau is doing, TEAGUE told the President. The law authorizes the Veterans' Administration to put its available beds to use for the care of eligible patients. The Congress has made the beds available. The Budget Bureau, with its financial control over VA operations, has on its own initiative made about 6,000 of the beds unavailable over recent years.

TEAGUE offered to make the question clearer. He would offer bills in Congress to spell out exactly how many beds the VA would operate, but would delay introducing such drastic legislation pending an answer from the President as to his future plans.

By June 1, TEAGUE had not reported any answer from the President, and the VA was continuing to close out more beds.

THE LEGION'S POSITION

In the face of the continued erosion of VA hospital facilities and staff, the national executive committee of the American Legion passed the following resolution in May, and National Commander Gleason immediately wrote the President urging that he take appropriate action:

Resolution 37, national executive committee, May 1958:

"The certified waiting list of eligible applicants for hospitalization at VA hospitals as of April 24, 1958 has grown to more than 28,000.

"This eligible list does not reflect the true number of prospective needy applicants (seriously ill veterans) for whom local physicians call VA hospitals and no applications are filed because there are no beds available in the foreseeable future, thus increasing the burden in already overcrowded local hospitals and on the local taxpayer.

"The need for VA hospital beds is accentuated by the economic distress many veterans are suffering.

"The Budget Bureau has denied VA that latitude of action which would permit VA to utilize for the care of long-term chronic and other seriously ill patients a TB or other type bed not currently needed as such.

"The chairman of the House Veterans Affairs Committee has clearly and fully pointed out to the President that current policies being followed by the VA at the direction of the Budget Bureau have resulted in the withdrawal from use by veterans effective December 31, 1957, nearly 5,000 beds (4,974).

"One thousand six hundred eighty-two beds were closed in the VA system during fiscal year 1957.

"The Budget Bureau plans for a further decrease in the number of beds available to veterans for fiscal year 1959.

"The American Legion urges the President to reverse the Budget Bureau policy of constantly and continuously reducing the number of beds available for care and treatment of sick and disabled veterans, through the control of fiscal policy, and further; that the President use the power of his office to secure an increase, rather than a decrease, in the number of usable VA beds in fiscal year 1959."

Outrage in Moscow

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1958

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include an editorial "Outrage in Moscow," appearing in the Washington Star of July 19, 1958.

This organized outrage and dispicable attack on American prestige and sovereignty should not pass unnoticed.

To say the least, an immedite apology should be demanded, and definite assurances of no recurrence.

Unless such apology and assurances are forthwith received, and this should be the minimum of our action as well stated in the editorial "that we will withdraw our entire diplomatic delegation."

With the recent experience of American soldiers held hostages in East Germany, and the outrageous attack on our Embassy in Moscow, the time for action on our part has arrived.

OUTRAGE IN MOSCOW

From time to time in our own country and the rest of the free world, there have been demonstrations against the Soviet Union. But they have not been things sponsored or encouraged or otherwise inspired by governments. Instead, as during the Kremlin's savage attack on Hungarian freedom in 1956, they have been spontaneous outburts reflecting the stirred-up feelings of earnest people acutely sensitive to both the decencies and the indecencies of international life. Further, taken as a whole, these displays of group emotions have been small in scale, and they have been policed effectively enough to minimize or eliminate the danger of serious violence.

The same cannot be said, however, of what has just occurred in Moscow as a sort of emphasis to the Kremlin's simultaneous warning to the West on the Middle East. Actually, all the signs indicate that this mob action—involving more than 100,000 Russians—would never have taken place had not the Khrushchev government itself been a party to it. Hours in advance of the event, thorough preparations had been made for it—openly, unabashedly, without the slightest effort to cover up the prior planning, including the setting up of loudspeakers and television equipment calculated to incite and display as much anti-Americanism as possible directly in front of the Embassy of the United States.

In due course, as planned, the hooligan elements (a favorite Soviet phrase) of this immense crowd went to work. They shattered at least 275 of the Embassy's windows. They splattered the building's walls with blue and green ink. They screamed. They threatened. They screeched out vile libels against our country and its decision to answer the Lebanese Government's urgent appeal for help. And all the while, with studied aloofness, the Communist police did nothing to restrain the demonstration. They did nothing until the worst part of it, the most disgusting and most violent part of it, had been carried out. Not until then, acting quite efficiently after a great deal of deliberate inefficiency, did they put an end to it.

How are we to respond to this outrage? Should all of us in town march into 16th Street and put on a similar show in front of the Soviet Embassy? Of course not. But we ought certainly to make clear that we have neither stomach nor tolerance for the kind of thing that has taken place in Moscow. And we ought to make clear, too, in very strong and unmistakable terms, that we will withdraw our entire diplomatic delegation—which would be tantamount to a complete break in relations—unless the Kremlin puts an end to outrages of this sort.

The Future of Gold Mining

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1958

Mr. BERRY. Mr. Speaker, recent articles appearing in several of the leading publications of the Nation indicate there is more than normal interest in

gold, the problem of domestic gold production, the establishment of a price for gold commensurate with cost of production, a free market for gold, plus the very important problem of stabilizing our American currency through a return to the gold standard.

Although there has been some change in conditions since the paper was prepared, I have asked unanimous consent to insert in the RECORD the address of Dr. Donald H. McLaughlin, chairman of the gold producers committee of the American Mining Congress and president of the Homestake Mining Co., presented at the American Mining Congress in February 1958.

The paper, entitled "Gold in 1957," is as follows:

Gold mining is supposed to be prosperous in times when the economy slows down and traditionally to suffer in times of booming activity. Consequently, in a rather wry way, the miners who are still surviving in this long depressed business may take a little comfort from the growing signs of trouble in other fields and may even derive some satisfaction from the stability of their meager incomes as compared with the change from riches to poverty experienced recently by the producers of copper, lead, zinc, and most other metals. Whether or not the turn of events at the end of the year will be of much significance to them, however, is still uncertain. If we are about to enter a depression adequate to atone for the sins of inflation at their present stage, the immediate prospects for better profits from gold mining are bright; if on the other hand the feverish boom is revived by more of the same stimulants that have been used since the war, further inflation will be likely and the pinch on earnings from gold mining will be more and more painful.

Under the latter circumstances the depression may be postponed, but it will be more severe when it eventually arrives. The gold miners would have a few more lean years to sweat out until the mounting pressures created by further inflation finally bring about a truly disastrous break. If ore reserves last long enough, gold miners might stand to gain from the delay and from the more drastic devaluation resulting in a higher price for gold in smaller dollars that these conditions will bring about. But surely they would be glad to give up these hopes for distant riches and settle for a milder recession at this time with much smaller benefits to them, if it would lead to sounder monetary policies related to gold.

From these comments, some unkind critics might charge the writer with being a cheerful sort of Cassandra, actually taking satisfaction in the dire consequents predicted for others. They might even go so far as to imagine he thinks that what is bad for the country is good for the gold miner. That really isn't true, for the worst program for our country would be to continue present monetary policies and to drift further into the soft habits of an inflationary prosperity maintained by excessive spending. This has already been nearly fatal to the gold mining industry.

GOLD: A STRONG WEAPON TO FIGHT INFLATION

If the commitments of the Federal Government and the special guaranties and obligations such as social-security, pensions, housing subsidies and the like, are added to the formal debt of $275 billion, the figures that we expect coming generations to meet become truly astronimical. The social-security liability alone, partially funded only by other promises to pay, is estimated by some to be as great as $350 billion. Truly it would be in the national interest to check this freedom with the money of future citizens and to restrain the growing practice (national and personal) of living more and more on credit. If this is not done, the end will be a drastic reduction if not complete repudiation of these excessive obligations through a truly disastrous inflation.

A strong weapon in the fight against these dangers and in progress toward financial integrity is gold, and the sooner conditions develop that reveal its power and that persuade our leaders in government and finance to use it, the better the country will fare.

Consequently, it is reasonable to think that even a recession at this stage—harsh medicine though it might be—is needed to prevent greater ills in the future. Whatever improvements might come to gold miners from such an event would be small in comparison with the long-range benefits gained by the country as a whole. It is truly a satisfaction to feel that the special interests of the gold miners actually are identical with the best interests of the country, which, of course, puts us in a position that can be strongly defended morally as well as on the grounds of enlightened self-interest.

The change in business conditions toward the end of the year, however, merely suggested the possibility that the economic climate might become more favorable for gold miners in the not-too-distant future. No improvement in profits from gold mining actually occurred in 1957, though the more abundant labor supply and the more intensive competition among sales agents that were apparent in the last quarter might soon begin to have an influence on costs, if such trends continued. For the year as a whole, however, we can only record that the same discouarging increase in costs and decline of profits continued.

In spite of this, the production of gold for the free world as a whole will be greater than in 1957. This rather contrary result was due entirely to the growing output of South Arica as the new mines on the deep reefs in the Orange Free State came into full production and as the returns from uranium offset losses and postponed the closing of a number of mines on the older Rand. These extraordinary conditions will probably lift the record of gold production to a new high for these immense deposits and will more than offset the continued decline in gold production elsewhere outside of Russia. South African production for 1957 is likely to be close to a million ounces higher than in 1956. which will probably result in an increase of 300,000 to 400,000 ounces in the total output of the free world, bringing it somewhat over a billion dollars in value.

GOLD PRODUCTION DOWN IN UNITED STATES, CANADA

In Canada, the United States, and elsewhere, no new gold fields or even gold mines of any significance were found and developed to offset the growing restrictions resulting from higher wages and cost of materials. Unfortunately none of the gold ores on this continent contain uranium, though a few gold mining companies on this continent have had some success in the development of uranium properties acquired in other areas. Canada is still in a strong second place among the gold producers, even with a production that will be 100,000 oz. less than in 1956.

In the United States, the Homestake mine has held its own fairly well, with a production of around $19,300,000, very close to that for 1956. Returns from other regions fell off, however, to an extent that will probably make the final figure for national gold production well below last year's. Curtailment of production from certain of the porphyry coppers that contribute a substantial percentage of the Nation's gold will also reduce the totals somewhat.

The United States may show a decline of as much as 200,000 oz. when final figures are in. In Canada the normal troubles of the times for gold miners were aggravated by the relative weakness of the United States dollar that reduced the gross value received for their gold in the currency that had to be used to meet payrolls and expenses. Gold has declined from its proud place at the head of the list of Canada's metallic products to fifth place, and the growing output of uranium will soon put it in sixth place.

The immense output of gold from south Africa, in the last few years, has undoubtedly been a decidedly beneficial factor in the world's economy, for it has kept the discrepancy between obligations expressed in paper currencies and the available stock of monetary gold from becoming too extreme. As these basic factors now stand in relations to each other, new ratios could be set and new monetary units still could be defined in gold at figures that could be supported and that would not require an increase in price of gold too great to be easily entertained.

In spite of their inconsistencies, the present policies concerning gold are still supported and defended, by the monetary authorities in the United States. The dollar is still defined in terms of gold, for it alone has basic authority as money; but the definition loses its meaning by the restrictions imposed on convertibility that make inflationary financial practices difficult to restrain, particularly on the domestic level where the protection of gold is completely denied to the citizens. The money managers are in the strange position of trying to present a respectable front to the world by maintaining convertibility of the dollar into gold at $35 per ounce through foreign central banks, while retaining full freedom to monetize debt and depreciate the dollar domestically. Until recently, the productive strength of America in contrast with the postwar weakness of the European countries and Japan has made it possible to maintain this position, though it could not have been done without the help of immense grants of various sorts.

FOREIGN TECHNOLOGY BECOMING COMPETITIVE

Furthermore, thanks to domestic inflation and to increases in wages forced by unions at a rate faster than the dollar depreciates, the United States has become an extremely high-cost country in spite of our advanced technology, particularly in mass production Faced with the mounting and increasingly skillful competition of Europe (Germany in particular), Japan, and before long of Russia, there is clearly danger that exports will decline with possibly rather serious effect on an economy that must maintain its output and sales at high levels to attain competitive costs. Tariffs or trade restriction, now so loudly demanded by those who are already feeling the painful impact of foreign competition, are not apt to help the overall situation.

The money managers apparently want it both ways. At home, the power of gold is not denied. Abroad, it is recognized by a rate of convertibility that makes the dollar an overvalued monetary unit. Sale of American goods abroad under these conditions has been possible only by the artificial device of offsetting dollar and gold balances payable to us by grants and aid on a vast scale.

Our international trade could be sustained without grants or other support if the gold standard were restored, on the proper basis. Foreign aid could be reduced and eventually terminated, with gradual transformation to the normal procedures of a free economy in which goods are exchanged internationally under conditions beneficial to each participating trader.

Most students of the problem recognize that the effects on trade brought about by foreign aid could be accomplished as effectively but in an impartial way by an increase in the price of gold. The principal

arguments against the latter procedure are (1) that it would then not be possible to direct our aid to selected friends, for an increase in price of gold would necessarily apply to all, and (2) that such an increase would be particularly beneficial to Soviet Russia.

MONETARY STANDARD NEEDED IN INTERNATIONAL TRADE

Even if it were assumed that our program of selected beneficiaries had achieved the desired objectives—a rather extreme assumption, as a survey of the current scene will indicate—it surely is inadvisable to continue it until financial aid from us becomes regarded as an obligation on our part that can't be dropped without dire consequences. Indeed, in places it appears to have attained this standing already, when aid is continued more on account of threats of reprisal than for mutual benefits.

"Trade not aid" is a slogan which if put into practice will win more friends in the long run than gifts. Convertibility of currencies in terms of gold, however, is necessary to give it practical meaning. Interchange of goods and normal business could then be conducted with assurance and with the mutual respect that is clearly lacking when favors are offered and accepted either with suspicion as to motives or with more or less concealed contempt for the simplicity of the benefactors.

Without entering into the debate over results to date, the time is surely near for a change from aid to trade—and that can be best accomplished through establishment of currencies convertible into gold.

RUSSIA'S GOLD POSITION GROWING STRONGER

The argument that restoration of the gold standard with an increase in price of gold would be of special aid to Russia is of very doubtful validity. Russia undoubtedly has accumulated a substantial gold reserve, probably considerably less than the actual quantity of gold we hold, but possibly greater than our net balance after short-term claims against our assets are taken into account. The Russians are using it only sparingly in payment of occasional imports, presumably because other means of exchange are limited. If trade with Russia is to expand—and what better way is there to promote mutual understanding and respect?—stable currencies convertible freely into gold that would be accepted by all participating countries are essential. The devaluations of the ruble have in all probability put a valuation on gold in Russia that is in reasonable relation to domestic prices for major industrial commodities. Adjustment of the already depreciated currencies in the rest of the world to gold will have to be made before relative values suitable for mutually beneficial trade can be established.

The building up of gold reserves of the magnitude now held by Russia—or of gold mining activities on a large scale—have undoubtedly required a major effort, involving engineering and geologic talent, the use of large amounts of machinery and materials, and the employment of labor in substantial quantities. Such expenditures surely were not undertaken lightly in an economy that must have had to meet many other severe demands. Russia has undoubtedly paid a big price for its present gold position, however one may measure prices in the Soviet economy. It would be most unwise on our part to think that this was done without intent to use the power that gold alone provides in worldwide exchange of goods. A sudden announcement of a ruble convertible into gold at a fixed rate for use in international trade could bring Russia as much new prestige as their success in sending up the first satellite. This will probably be done just as soon as the Russian economy has reached a stage where exportable surpluses are available in significant quantities. Before long, the Russian competitive position in foreign markets will undoubtedly be much stronger. With the added assurance that a ruble convertible into gold would give them, the rest of the world would be in a most disadvantageous position if earlier steps had not been taken to put the dollar and European monetary systems in better order. With the free world still in possession of the largest gold reserves as well as the greatest producing gold fields, the initiative in wise employment of the basic monetary power of gold surely should not be lost.

A higher price for gold—or, more accurately, an adjustment of the already depreciated currencies to the stable value of gold—would certainly not be to the disadvantage of the West, whose combined strength in gold is far greater than the Russians'. Such a move would be to the advantage of both sides of the divided world by stabilizing currencies in terms of a generally accepted unit. The assurance of dependable and impartial settlements that this would give would surely be of immense help to multilateral trade and could well do more to promote peace and mutual respect between nations than any other means.

The complexities of specific steps to achieve these ends are formidable, but not beyond our powers if the objectives can be agreed upon. Unfortunately, little or no recognition of the seriousness of the problem is discernible on the part of those in high places in our Government or seen in banking or business circles. (American bankers, strangely enough, are rarely if ever interested in basic monetary problems.) Time unfortunately is becoming short, and it is most worrisome to think that we are probably in danger of another defeat in the international position through failure to make wise and timely use of the immense power we possess through gold.

For several years the American Mining Congress has recommended that "Congress fix the ratio at which the dollar and gold are to be made fully convertible and determine other technical procedures involved in the restoration of the gold standard, after receiving the recommendations of a Commission of its creation, to which men skilled in appraisal of the world's potential gold supplies as well as men of competence in domestic and international finance and trade should be appointed by designated Government authorities."

The urgency of the situation calls for more direct action, but without agreement on principles and procedures this cannot be expected unless forced by harsh circumstances. But perhaps it is not too much to expect that a careful study by a competent commission would bring forth a program that could be approved and adopted in time to be effective, as a means of controlling inflation, of lessening the severity of the depression that we must eventually expect, and of strengthening our position in world trade.

The Fine Headquarters That Will Soon Be Constructed for the National Wildlife Federation

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, July 21, 1958

Mr. WILEY. Mr. President, I was pleased to read in the current July 15 issue of the National Wildlife Federation's Conservation News a statement to the effect that there will soon be completed the fine new headquarters building for the federation.

The completion of this building will mark the fulfillment of a splendid dream—if one can call it that—of conservation pioneers. Long ago, they envisioned a national center which would radiate sound information on American resource preservation and management.

The American people are indebted to those conservation leaders who sensed the necessity of having a strong, effective national organization which would serve the needs of American resources.

The current issue of Conservation News contains a wide variety of news reports demonstrating how this wise dream is being carried out. I refer to news reports on preservation of timber, of wildlife, of waters, of scenic attractions.

There is news, as well, of the award by the Federation of some 30 grants to individuals in the 1958–59 academic year for undergraduate, graduate, and postgraduate studies in conservation affairs. All this is to the good.

If the 173 millions of Americans today, and the tens of millions more who are to come in the years ahead, are to be able to enjoy the outdoor resources which are our heritage, then it is essential that this Federation continue to prosper, as I am sure it will.

The federation's sale of attractive wildlife stamps represents one of the vital means of its splendid educational and self-financing work.

This particular July 15 statement, to which I have referred, regarding the federation's new building, was written by the able executive director of the federation, Mr. Ernest F. Swift.

It is no accident that Mr. Swift is a past conservation director of the State of Wisconsin, for the Badger State has graduated, so to speak, many of our greatest conservationists who have long been in the forefront of conservation of America's outdoor heritage.

Mr. Louis S. Clapper is editor and Mr. Charles H. Callison is conservation director.

I ask unanimous consent that the text of this Conservation News statement be printed at this point in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE CONSERVATION DREAM THAT BECAME A REALITY

(By Ernest Swift)

All the great moral and social values of our civilization which merit true recognition became realities because someone had a dream.

Invariably, selfless dreamers are ridiculed by a jealous and avaricious world which cannot comprehend that some men can rise above self-interest and personal profit to crusade for a cause.

While ordinary men hide their dreams, fearing to be different, the truly great will boldly follow their vision and fight to see its fulfillment.

Too often the dreamer never sees his promised land, but his dreams inspire others to carry on.

This Nation has been fortunate to have had a few men with sufficient imagination

and crusading spirit to rouse people to the need of resource preservation and sound management practices.

Such men as Fernow, Roth, Pinchot, Teddy Roosevelt, Pierson, Greeley, and "Ding" Darling qualify, to risk naming a few.

In 1936 Darling foresaw the need for a National Federation of Conservationists. He envisioned an organization that would encompass all conservation precepts. Most of all, he wanted to turn the tide of mediocre thinking that destruction of resources was inevitable; that good and evil in resource management was a matter of human determination.

An organization was created through his efforts, the National Wildlife Federation, which is now in its 22d year. Darling painted the first wildlife stamps to help finance this venture. The Federation did not develop exactly in the image that Darling conceived, but nevertheless its membership has grown and its potency for good conservation principles has been felt in every State and Territory.

One ideal which the Federation has clung to through years of growing up is the need for education in the field of conservation. Various efforts have been made along this line. One of these is the fellowship grants for worthy students and another is project grants for group training and teaching. Still another effort is culminated in the millions of pieces of literature distributed to the schools and the general public.

After long years of a struggle to survive, another milestone will soon be reached. The Federation is erecting its own building in Washington, D. C., as a more effective working tool and a base of operation for an enlarged and more comprehensive seat of conservation education.

Over and above office space for normal Federation business, here will be an auditorium, a conference room, and a library. The auditorium will seat 250 people; the smaller conference room, 60. Both visiting and local students, youth groups, teachers, and conservation organizations will be invited to use the facilities. There will be a full-time educational supervisor with assistants to cooperate by way of lectures, obtaining speakers or movies, or arranging business meetings.

The Federal seat of government at Washington, D. C., will at long last have a place where conservationists can convene and conduct their business.

The library will be built up as a depository of authentic reference for any and all who are looking for source material. It will be considered a place of study. Already, interested members have offered contributions to it.

Reference to an educational supervisor does not imply that he would spend all his time in Washington, as the Federation desires to make its influence felt in the field of conservation throughout the entire Nation.

The Federation will have an anchor point for this important work and the only one of its kind in the country. Although at considerable cost, the decision was justified.

The National Wildlife Federation wishes to express its appreciation to the thousands of people who have contributed toward making this conservation center a reality.

The McClellan Committee Hearings and Labor

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following text of an article entitled "The McClellan Committee Hearings and Labor" by Joseph Loftus, Washington correspondent of the New York Times. This article appeared in the July 1958 issue of the Michigan Business Review which is published by the School of Business Administration of the University of Michigan.

THE MCCLELLAN COMMITTEE HEARINGS AND LABOR

(By Joseph Loftus)

Organized labor, as you have observed, is going through a crisis. This is a big subject, so perhaps it's best if I give you in advance a rough outline of what I am going to talk about.

1. The labor movement and how it got that way.
2. The McClellan committee and what it is.
3. Can labor cure itself?
4. The prospects for legislation.

It is becoming increasingly hazardous to generalize about the labor movement. In fact, one might question whether there is such a thing as "a movement" any more. At least, one has to define the "movement."

The main body, of course, is the AFL–CIO. The group of unions outside the main body has been growing. They include the Coal Miners, the Longshoremen, the Teamsters, a couple of railroad unions, and some of lesser consequence like the Bakers, and the Laundry Workers, plus the groups that have always been unaffiliated.

Numerically, these are no rival of the AFL–CIO, but they have a strategic importance in our commerce and our society, and their behavior is a public-relations factor of critical consequence to all organized labor. The public tends to identify all labor with the headline characters. That happens in other segments of our society.

So, with these and other hazards in the back of my mind, I'll go ahead and talk about the labor movement without qualifying my statements every step of the way.

EVOLUTION OF THE LABOR MOVEMENT

In retrospect, one could say that what has happened to labor was inevitable. Labor has grown up in the image of business, so it has been making the same mistakes that business made. It's just a generation or two behind.

In business, we had the accumulation of wealth and power, conspicuous consumption, corruption, abuses of rights and privileges, and a public-be-damned attitude. Regulation followed.

Now why has labor grown up in the image of business? The short answer is that labor—the mass of employees—accepted the business of private enterprise as a way of life.

This is a theory of history that can be explained in 2 minutes. I assume that everybody concedes that the creation of labor unions was a response to a need. The only question then was what direction would the unions take.

The Knights of Labor, which flourished for a while, was not a union, as we have come to know unions. It was an idealistic, cooperative movement that would have altered the course of our economic system had it gone on.

So the AFL displaced the Knights of Labor. Then within the AFL a Socialist movement flourished for a while. It withered and died. Most of those old Socialist labor leaders who still survive are avid advocates of the free-enterprise system today.

In the early days of the CIO, the Communists had a threatening foothold. They were expelled. They have no influence in labor any more.

In other words, the labor movement has evolved out of a clash of ideas into what we know today as business unionism. The old ideological spirit and missionary zeal are far in the background, if not lost.

So business should not scream too loud. It didn't want the cooperative society proposed by the Knights of Labor; it didn't want socialism or communism, so it got business unionism. Sometimes it is big business. The union leaders tend to identify with business leaders, so you get good ones and bad ones.

THE IMPACT OF SUCCESS

In a sense you could say that labor is a victim of its environment; but that carries the mechanical explanation so far that it absolves the bad labor leaders. On the other hand, perhaps it is asking too much to say that the labor leaders should have studied their history and learned from their counterparts in business that excesses bring penalties.

In a narrower perspective, the labor leaders are in trouble because they did not know how to handle success. They forgot that the public had given them special privilege because they were underprivileged. In 1935, the public gave the labor leaders a one-sided law, the Wagner Act. The public blinked at sitdown strikes and violence.

Labor got strong and sassy during the war and the rehabilitation. The Taft-Hartley law in 1947 should have taught the labor leaders a lesson. It didn't. I think the labor leaders are still misreading the public's temperature.

Growing with the general prosperity, most of the unions got fat and rich. Many of the labor leaders behaved arrogantly and consumed too conspicuously. They came to be trustees for great sums of money—a job they had never been trained to handle. The temptation to dip into the till became too great. Some became greedy. The racketeers moved in and have been making a good thing of it for themselves.

Now I see nothing inherently bad in a labor leader getting $50,000 a year, a liberal expense account, and a 12-cylinder car, assuming that the members have aproved these in one way or another. That is not the trouble. The trouble is that the labor leaders forgot that when they achieved these privileges they graduated from the underprivileged class and have to accept the responsibilities of their new level in society.

THE M'CLELLAN COMMITTEE

So we come to the McClellan committee. Or rather we came to it about a year and a half ago.

The McClellan committee, as you know, is the short form for a name as long as your arm. Its correct name is the Select Committee on Improper Activities in the Labor or Management Field. Even the Congressional Directory got the name wrong.

My week-day editor doesn't recognize the name McClellan committee; insists on the full name, presumably on the theory that while MCCLELLAN's time here is limited the committee may go on forever.

Anyhow, you may remember that when the old McClellan committee—the Government Operations Committee—summoned the teamsters to a hearing in December 1956 the teamsters challenged the committee's jurisdiction.

This was an astute tactical maneuver by MCCLELLAN, who promptly appealed to the dignity of the Senate. The Senate, without a murmur of dissent, created a new, special committee, with all the jurisdiction MCCLELLAN could possibly use.

The Senate has given him over a half-million dollars, also without dissent, and there's more where that came from.

The committee has eight members; but—unlike the regular standing committees—it does not reflect the numerical party distribution in Congress. It's evenly divided between Republicans and Democrats.

On balance, however, it's conservative—McCLELLAN saw to that—although there came a time, when the Kohler strike investigation came up, that he wished he had a majority of Democrats—any kind of Democrats.

THE KOHLER CASE CRISIS

It was the even party balance of the committee that very nearly became the undoing of the committee in the Kohler case. Three of the four Republicans insisted on the Kohler hearings—right down to the order of witnesses—and the fourth went along out of party loyalty.

McCLELLAN resisted, but finally had to yield to the Republicans or see his committee wrecked. As a matter of fact, the crisis occurred over the order of witnesses. The Republicans said the first shall be last—meaning Reuther.

If McCLELLAN had not gone along, the Republicans either would have walked off the committee or despoiled it by accusations or insinuations that he was covering up for Reuther.

Now, however, the committee is back on the track, or seems to be; and, as I mentioned a moment ago, it has a conservative majority. That majority is made up of McCLELLAN, of Arkansas; ERVIN, of North Carolina; GOLDWATER, of Arizona; CURTIS of Nebraska, and MUNDT, of South Dakota.

Senator CHURCH, of Idaho, has just replaced PAT MCNAMARA as the member closest to the union leaders. IVES, of New York, a Republican, and KENNEDY, of Massachusetts, are friendly to the labor leaders, without being in their pocket, although the labor leaders don't always return the compliment.

INVESTIGATION AND EXPOSURE

There is no need to rehash the hearings of a year and a half. It is generally agreed, I believe, that the committee has done a spectacular job of investigation and exposure.

It has forced the AFL–CIO to expel some of its unions; or, it might be fairer to say, the committee helped the federation to expel some of its unions.

The federation has not put roadblocks in the committee's way, except for a couple of sharp statements.

And, of course, we have the codes of ethical practices now. What they are worth remains to be seen.

Whether labor can cleanse itself reasonably well is quite a question. I think the top leaders are more willing to do it than they are able to do it, although some are not willing to go as far as some of us would like.

On the other hand, one of these top leaders suggests privately that there ought to be such an investigation about every 4 years. I asked him why not a permanent Senate investigating committee on labor.

"No," he said, "after a while you could get to the staff."

This same man favors the administration bill that would let a Government man walk into a union office at any time, check the books, and prosecute the officers for false entries.

George Meany, in his own way, has been saying that the McClellan investigation was useful to labor, although now and then he has had to let off a blast to reassure some of his boys, as well as himself, that he was not going soft.

Meany concedes that the AFL–CIO alone could not have rooted out the evil found by McCLELLAN, because Meany and company has no power of subpena or penalties for perjury at its command.

MEANY'S POSITION

Meany is a man torn within by the pull and haul of opposing forces. On the one hand he is the honest, upstanding citizen who wants a decent world and a decent community. He led in the expulsion of the Longshoremen, the Teamsters, the Bakers, the Laundry Workers, the suspension of the AFL Auto Workers, and others. The wisecrack of the day was that if Meany wasn't careful he'd be president of the CIO. The editorial writers showered plaudits on Meany, the statesman.

On the other hand, there is the Meany with an overriding sense of loyalty to the labor movement, come hell or McCLELLAN; a Meany suspicious by experience of all editorial writers. He had fought off attackers for so many years it had become a reflex action, whenever labor was criticized, to throw a haymaker.

This fighting nature, which sometimes takes gross forms, is reinforced by pressure from many of his unions. Some of the building trades unions, for example, feeling the heat, were circulating secession threats and gossip of a slanderous nature about Meany because they thought he was too passive about the McClellan committee.

Not all this pressure on Meany has come from the old-line corrupt, or semicorrupt unions. When the McClellan committee issued its year-end report, it was Reuther who insisted on a denunciatory statement by Meany.

Reuther was then in the midst of the Kohler hearings and feeling pretty bitter. Reuther, however, as I understand it, had nothing to do with the content of the Meany statement that finally came out. Many of labor's friends found it more intemperate than the McClellan report warranted.

LABOR, ALONE, CANNOT CLEANSE ITSELF

My point was, though, that the ethical practices committee, and the federation, has trailed the McClellan committee; has never been ahead of it, although it has had more than one opportunity to move ahead.

It knew, for example, about the corruption in the United Textile Workers, but waited for the McClellan committee to bring it out in the open.

It knows of other corruption, although perhaps is not in a position to prove it.

It is easy to criticize the ethical practices committee, but it is an ugly assignment. Jury duty soon loses its novelty, especially when the man in the dock is a friend, or an amiable acquaintance, of long standing.

On the other hand, it is rather transparent for a member of the committee, or any labor leader, to argue against legislative reform on grounds that the McClellan committee has found corruption in only X number of places.

The easy answer is that the McClellan committee is still young. Give it time and it will find considerably more corruption.

So I'd have to conclude that labor, working alone, cannot cleanse itself; that investigation and legislation are necessary.

How far the legislation should go is another matter. For that matter, how far should the investigation go?

I remember when the committee's investigation of the Operating Engineers was drawing to a close, or seemed to be, I said to young Bob Kennedy, the committee's chief counsel: "How about so-and-so?"—mentioning a certain labor leader.

"What about him?" asked Kennedy.

"He's suppposed to be a millionaire," I said.

"Well, I can't be against that," said Kennedy.

OUTLOOK FOR LEGISLATION

The prospects for legislative reform are not good for this year. I wouldn't say impossible, but I'd wager odds against it.

It's an election year and many Members of Congress are skittish about a big fight with a major pressure group at this late date. They want to get away and campaign.

Oddly, it's the House that is the laggard. It used to be the other way around.

Major legislation takes a long time, and a good thing, too. If the Senate had adopted some of the undigested stuff proposed on the floor a couple of weeks ago as amendments to the welfare and pension fund bill, we would have a rather sloppy mess that should alarm even some businessmen.

The two big areas of legislative agitation in this field are financial responsibility and democratic procedures.

On this matter of democratic procedures, the spokesmen for business in Congress might be well advised to slow down. Senator KNOWLAND and Senator MCCLELLAN, for example, propose so much democracy that a tiny, dissident minority could keep a union in constant turmoil.

It's been my observation that when an employer has to do business with a union, his first concerns are stability and reasonableness. As a bargainer, he has little concern with the union's democracy, so long as the union and its agent have the other two qualities.

The coal industry is one example of that. The mine workers have no democracy, but the operators dread the day when John L. Lewis cashes in.

Union leaders must be responsive to their members, but democratic procedures can be legislated to impractical extremes, and if you think that's cockeyed, try running Detroit by the town meeting system.

I would say that next year would bring a labor reform law for sure, except that I want to see the election returns first. The political experts tell me it's a sure-fire Democratic year. If we get a big Democratic majority in Congress, the labor bill is likely to be quite moderate. And I'm not sure that's such a bad thing.

It's funny, you know, but it's the most conservative people who are demanding the most revolutionary things for the labor movement.

They ought to remember that labor is business now. Labor is going to have to submit eventually to the rules and responsibilities of business that are logically and realistically applicable to unions. For this, it might be wise to use the conservative, business approach.

How the Soviets View Intercontinental Missiles

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, July 21, 1958

Mr. WILEY. Mr. President, I was pleased to read in the July 1958, issue of the magazine Air Force, published by the Air Force Association, a series of exceedingly helpful and informative articles on man's venturing into outer space.

Among the articles was "United States Air Force Planning for the Space Age," by Maj. Gen. Bernard A. Schriever; still another, by Brig. Gen. Don Flickinger, entitled "Preparing Man for Spaceflight"; plus "Probing the Northern Radar Shield," by M. Sgt. James R. Doherty; "Scientists, Not Cultists Will Conquer Space," by Editor John F. Loosbrock; and "Man Is Here To Stay," by Lt. Gen. Donald L. Putt.

Each of these is worthy of the most serious consideration.

I believe, however, that other information also contained in that same issue is similarly important.

I refer to one article, in particular, "Missiles in Soviet Strategy." It was written by Dr. Raymond L. Garthoff, and actually is an excerpt from his book, "Soviet Strategy in the Nuclear Age," just published by Praeger.

This excerpt, drawing upon well-documented Soviet sources, gives a revealing glimpse into Soviet thinking on rocket strategy. I may say, Mr. President, that some of our military thinking on Soviet planning seems based exclusively on America's own concepts of warfare, rather than going to Soviet sources, themselves, and seeing with our own eyes exactly how the Soviets conceive the nature of future warfare may be. Fortunately, Dr. Garthoff has his eyes open to what the Soviets themselves are doing and thinking, and so we fortunately are in a better position to prepare ourselves.

I send to the desk now the text of the article, and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MISSILES IN SOVIET STRATEGY

(By Dr. Raymond L. Garthoff)

(The Soviet announcement in August 1957 of their successful tests of an intercontinental ballistic missile (ICBM) called the world's attention to the Soviet missile program. The launching of the first artificial satellite of the earth in October 1957 dramatically underscored the earlier Soviet announcement on the rocket. Both were but the latest and most publicized of many indications of the extensive and advanced character of Soviet rocket and missile development. What is the role of missiles—in particular, of long-range ballistic missiles, the IRBM and ICBM—in Soviet military strategy?)

Long-range ballistic rockets are, as the Soviets recognize, "intended for firing against strategic targets disposed in the deep rear of the enemy. . . ."

More specifically, enemy air bases and missile-launching bases are indicated to be in the category of strategic targets considered particularly appropriate for rocket attack. The strategic role of missiles is, thus, to an extent merely assignment of an additional capability to implement the strategic concept of achieving military victory by destroying the enemy's military forces located at distant and intercontinental ranges. But there is also a peculiar role of long-range missiles extending beyond that of other weapon systems. It is this distinctive mission which makes it useful to consider the role of missiles in Soviet strategy separately from land, air, and seapower (each of which employs appropriate guided missiles and rockets in defensive and offensive forms as a part of their now "conventional" armament).

Deterrence is the mission to which the Soviet leaders have "assigned" long-range ballistic rockets (and also, apparently, part of the submarine missile-launching capability). Soviet commentaries on their ICBM, including remarks of Khrushchev, have reflected clearly this Soviet concern for a "deterrent" against the United States, and their reliance on ballistic rockets as such a deterrent. There are of course, no hard and fast separations of missions, and in a very real sense all the Soviet armed forces serve in part as a deterrent.

Likewise, the military forces in general, but the long-range ballistic missiles in particular, serve as the basis for actions to deter and to pressure others, that is, for blackmail. This offensive political use of the new missile capability thus complements the defensive value of the weapons for deterrence. But the reasons behind the special role for long range ballistic rockets in these nonhostilities "cold war" missions lie in the peculiar advantages—and limitations—of the weapons system. Both for this reason, and to delimit more clearly the role of long-range missiles from that of long-range aviation, it is desirable to note the Soviet views on the relative advantages of each.

In a number of public statements in the fall of 1957, most notably those of Khrushchev and Marshal of Aviation Vershinin, the Soviets claimed that ballistic rockets make bombers "obsolete." Khrushchev used the term "obsolete," and declared that: "The present period is something of a turning point. Military specialists believe that airplanes, bombers, and fighters are in their decline. Bombers have such speeds and altitudes that they are vulnerable to attack by contemporary rockets." He also declared: "Fighter and bomber airplanes can now be put into museums."

Marshal of Aviation Vershinin more soberly presented the military evaluation which Khrushchev characteristically exaggerated. Vershinin, after noting the abilities of the ICBM to strike any point on the globe, declared: "Under contemporary conditions, of course, bombers also are being built. The United States of America especially is basing itself on that form of weapon. But rocket weapons now impugn the expediency of development of bomber aviation, since rocket weapons are more reliable and more certain." In particular, Vershinin points out, "For rockets it is almost excluded that they would not get to their targets. Contemporary means of air defense are ineffective in combating these rockets."

The theme that bombers are vulnerable to air defenses, while ballistic rockets are not, runs through the various military and political commentaries which have followed the Soviet ICBM development and announcement. In part, of course, this view is disseminated because of the advantage to Soviet propaganda of claiming superiority in a weapon which, it is said, makes obsolete the weapon in which the United States is admittedly stronger. In fact, it is probable that the actual evaluation of the Soviet military leadership is less extreme. For there has been a definite recognition by competent Soviet military technicians and specialists of the continuing importance for some time of manned and unmanned bombers as well as ballistic missiles.

Beyond the statements stressing deterrence, the Soviets have revealed their evaluation of the specific military advantages—and limitations—of ballistic missiles. Thus, for example, Lieutenant Colonel Tiurnin noted (in early 1957) four particular advantages of guided and ballistic missiles over bomber aviation: (1) the possibility of using mobile launchers, (2) the all-weather capability of guided missiles, (3) the opportunity for the use of missiles even under conditions of hostile general air superiority, and (4) the possibility of launching surprise blows from concealed launching points.

In the general Soviet view, at least as expressed prior to the definite Soviet acquisition of the ICBM (and hence as uncolored by the present propaganda emphasis on the rockets), the role of bombers will decline for certain missions but remain for others. The ICBM and IRBM will assume the burden of attacks on stationary strategic targets such as cities and industrial complexes, and operational targets such as known enemy airbases. Thus major general of the Engineering Technical Services G. I. Pokrovsky, an authoritative military technologist, as early as March 1955, wrote in the semiclassified general staff organ Military Thought that "the destruction of targets the coordinates of which are known in advance will more and more be accomplished by pilotless weapons armed with atomic and thermonuclear warheads."

Again, in the fall of 1956, General Pokrovsky spoke of this new important role for ballistic rockets in particular. But he also noted that for some important missions the ballistic missiles were not suitable, and that guided missiles and conventional bombers would continue to be necessary for these roles. In his words: "Long-range rockets can only destroy targets the coordinates of which are known in advance. They cannot destroy mobile targets. For this, self-seeking guided missiles or piloted weapons are needed, since a man can pilot or guide by remote control, observing combat targets beyond the battlefield with the aid of television." General Pokrovsky has subsequently (in 1957) reiterated that the future employment of ballistic missiles will be against "targets previously known and precisely located on the map."

Bomber aviation, and guided missiles or pilotless bombers, will in the Soviet view thus continue to have important roles. Again, Major General Pokrovsky has stressed this is a commentary made after the Soviet ICBM. The main role of bombers will probably be to find and attack targets not previously identified or precisely located: the traditional mission of armed reconnaissance. And probably still considered valid, in manned bomber systems: "Aviation guided missiles (air-to-surface missiles) can be employed for operations against strategically important targets having strong air defenses."

On the whole, however, the role of long-range bombers will probably be what it has been in the past; to serve as the far-reaching military arm to be employed, in conjunction with all other arms of the military forces, against the armed forces of the enemy.

In discussing the current Soviet evaluation of the relative roles of the ICBM and bomber aviation, it may be useful to note that the apparently continuing Soviet evaluation was first made in the immediate postwar period, prior to the virtual ban on discussion of missiles which prevailed from 1947 until late 1953. Major General of Aviation Tatarchenko was the first to raise the question, in an article in the official air forces' journal, in 1946. He posed the issue flatly: "Can long-range rockets replace bomber aviation?" And he answered:

"An underestimation of this new mighty means of missile warfare would be a fatal mistake. To even a moderately educated person it must be clear that this new weapon in 1944–45 appeared in an extremely primitive early form. One can hardly doubt that it will in the future develop significantly further. But does that mean that long-range bombs will completely replace the bomber in the air? Of course not. As the battleship did not replace the cruiser, nor the minelayer, nor the cutter, nor even the rowboat, similarly even the most grandiose development of rockets will not eliminate the necessity for any class of aircraft, least of all high-speed giant aircraft, bomber and transport.

"High-speed giant aircraft are the foundation of strategic aviation. Missions of this form of aviation are extremely varied and cannot be accomplished with rocket bombs alone. Rocket missiles are a means for destroying stationary targets which occupy considerable area. The realm of use of rocket missiles is fairly specific. Strategic aviation resolves many times more universal missions."

While these may have been Tatarchenko's own ideas, there are indications that these views in general probably represented the attitude of the Soviet Long-Range Air Force

staff at that time. Marshal of Aviation Skripko, then Deputy Commander of the Long-Range Air Force, stated in Red Star later in 1946: "It is entirely obvious that with the contemporary level of technology the operation of formations of long-range aircraft with well-trained crews will without doubt be more effective than the dispatch of blind missiles alone. Strategic aviation will develop along with the appearance of new weapons." In part, of course, the Soviets may not have foreseen the potentialities of rockets in 1946 (though Tatarchenko was one of the very few who at least attempted to.) Even as late as the fall of 1954, Engineer Lieutenant Colonel Safonov noted in the Air Forces' journal, without giving any sign of disagreement, that foreign sources had said that "even in 1960" ballistic missiles "will have a range not exceeding 500–600 kilometers," and cruise-type guided missiles "not over 1,000 kilometer" range.

The fact that this statement was so obviously a gross understatement is curious and interesting, especially in view of its appearance in late 1954. Colonel Safonov then concluded with a statement which would appear to be at variance with Western calculations of the implications of high-yield weapons for requirements of accuracy, unless gross errors indeed are expected: "An atomic missile, as a big expensive weapon, must be delivered accurately on the target."

But still more curious was the appearance as late as January 1957 of a repetition of the idea that "nuclear, and especially hydrogen, weapons" are so expensive that they must be accurately delivered. Nonetheless, Soviet advances both in rocketry and in nuclear weapons design had evidently led them by late 1957 to conclude that for stationary, known targets ballistic missiles are sufficiently accurate to be the most expedient weapon. Bomber aviation will continue, even after ballistic rockets are available in sufficient operational quantities, to play an important role in attacking untriangulated, mobile, and fleeting targets, particularly the enemy's military forces.

How the Middle East Mess Developed in Last 4 Years

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, July 21, 1958

Mr. PROXMIRE. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD the extremely competent and brilliant analysis by the Milwaukee Journal of the Middle East threat to peace and how it developed.

There being no objection, the article was ordered to be printed in the Appendix to the RECORD as follows:

HOW THE MIDDLE EAST MESS DEVELOPED IN LAST 4 YEARS

The Senate Foreign Relations Committee is preparing to study our middle eastern policy and ask: Where do we go from here? It can't avoid asking how we got into our present mess. A review of our Middle East policies, especially as they affect Egypt, is vital. It is not a reassuring story.

The United States had no imperialist record in the Middle East. It benefited from a reservoir of good will. Some of that good will was lost among the Arabs when we backed the creation of Israel in an area the Arabs considered Arab. But the great fall in our stock in Arab lands has come in the last 4 years.

The President says of Lebanon that it is our duty to help preserve a legally constituted government. We felt no such compulsion when King Farouk of Egypt asked our help in putting down a revolution in 1952. We refused.

When Mohammed Naguib and Col. Gamal Abdel Nasser kicked out Farouk, our Government gave them every reason to feel we were sympathetic. The Naguib-Nasser government started out immediately on welcome and much needed reforms. We sent experts to help. Secretary Dulles visited Cairo and gave Naguib a silver-plated pistol—a fine symbol of peace and tranquillity—to show our esteem.

The Egyptians asked financial help. Our Government showed interest. But—as Nasser said with bitterness (and some exaggeration) to a Journal staff correspondent in 1954—nothing was forthcoming except "a few sick chickens." Without sufficient aid, the reforms slowed almost to a halt.

In 1954 Nasser, who had ousted Naguib, sought American arms. These were promised on condition that agreement was reached on evacuation of British troops in the Suez Canal zone. Arms were not furnished, although agreement was reached on British troops. Nasser sought arms again after Israel attacked the Gaza strip in 1955. Our Government offered two propositions—arms for dollars that Nasser did not have or arms accompanied by a military mission. Nasser felt politically unable to accept a Western military mission. He turned to Russia and got Communist bloc arms for cotton.

Our reaction was a new arms offer. It failed, but it showed to Nasser's satisfaction that he could play us off against Russia. He has ever since.

The Egyptians claimed, probably falsely, that Russia had promised to help build the Aswan Dam. The claim worked. We rushed in with the British to offer to do the job. We soon believed Russia had made no such offer. And Dulles rejected the dam plan abruptly in a manner that Nasser took as a personal insult. Our Government went out of its way to say that Nasser couldn't afford the dam because he spent too much for arms.

Nasser's reaction was immediate. He seized the Suez Canal. Our Government said navigation would be endangered by control of the waterway by one nation. "How about Panama?" the Arabs asked. We said Egypt couldn't run the canal. It has, successfully.

In 1956 America regained much prestige by forcing Israel, France, and Britain to withdraw after invading Egypt. But much of the gain was lost when this country froze $40 million in Egyptian funds. We rejected Nasser's urgent request to buy $14,000 worth of medicines for refugees, at a time we were pulling all stops to help Hungarian refugees. We refused wheat needed by hungry Egyptians, in spite of our huge surpluses. We stopped the CARE program that was feeding 3 million Egyptian children. The Arabs were bitter—and again turned to Russia for help.

The Eisenhower doctrine, promising intervention in case of Middle East invasion by Communist forces, far from being welcomed by the Arabs, was looked upon as imperialism and unwarranted interference.

When Syria got Soviet arms in 1957 an American emissary rushed to the Middle East to confer with all but Syrians and Egyptians. Arms were rushed to Jordan. Dulles told the U. N. that Turkey was threatened by Soviet arms in the hands of the tiny and inept Syrian Army. Turkish troops, with Americans present, stood on Syria's borders.

Through these years Nasser made repeated efforts to deal with the United States. He was rebuffed.

Now we are in Lebanon, where U. N. officials and even many prowestern Lebanese say we are not needed. Again we insist on status quo in an area where change and unity are considered the only hope by Arabs.

We have failed in the Middle East because our Government has ignored a basic fact: Foreign policy must take into account the aspirations and opinions of the people in the area if it is to work.

The Senate committee should have no trouble finding out how the mess we are in developed in the Middle East.

How to solve it now is another—and far more complex—matter.

An Oregon Editor Discusses Social Security

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the July 12, 1958, issue of the Grants Pass (Oreg.) Courier, a daily newspaper published in my district. Editor Kenneth Hicks offers some pertinent observations on the present Social Security Act, as amended, and some changes which have been proposed and others which are being considered.

INCREASED SOCIAL SECURITY

"Show me one person receiving the top social security benefit of $108.50, and I will show you a thousand receiving only the average of $67.50 or less. There seems to be only one way for the common people to get legislation through Congress to increase benefits, and that's by combined organization of the people until there are enough voters behind such a movement to force the issue."

The above quotation is from a letter published recently in the Eugene Register Guard by a member of the Social Security Clubs of America, Grover S. Slayter. He discloses that the goal of his organization is a schedule of social security payments providing $150 for men at the age of 60, and the same amount for women at the age of 55.

Obviously such payments would be impossible, without imposing a schedule of taxes that would be prohibitive both to the employer and the employee. At present 2¼ percent of every worker's paycheck is taken out, up to a maximum of $4,200 a year, for social security. The employer must match this payment. In 1960 the rate will go up to 2¾ percent; in 1965 to 3¼ percent; in 1970 to 3¾ percent and in 1975 and thereafter—unless there is a change in the meantime—the rate will be 4¼ percent.

These figures may not mean much to persons at or approaching the retirement age, but to young people just starting out in life they are formidable. Many of them will have to pay these taxes for 40 or 45 years before they are eligible for benefits—if the system indeed still is functioning at that time.

Already the fund is paying out more than it is receiving, although the deficit is offset by interest from sinking-fund investments in Government securities. Pile heavy addi-

tional payments onto the fund, without compensating tax increases, and its actuarial solvency will be menaced.

The present Congress is considering a bill that would increase social security payments, probably by a flat 10 percent across the board. This will be financed, if the bill passes, by increasing to $4,800 the amount on which social security taxes will be assessed, judging from present reports.

This type of increase is sound, and undoubtedly needed in view of the inroads made by inflation. Actually, to be equitable, the increase probably should be higher in the lower brackets, and only nominal in the case of persons receiving the social security maximum. This probably would be politically unpalatable, however.

Many persons are losing sight of the fact that social security never was intended to be adequate for complete maintenance of people in their declining years. It was designed to supplement savings and possibly augment pensions paid by private industry.

The whole setup will be thrown into jeopardy if organized oldsters attempt to change it into another Townsend plan.

Resolutions Adopted by the National Rivers and Harbors Congress

EXTENSION OF REMARKS

OF

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1958

Mr. ROGERS of Florida. Mr. Speaker, under authority granted to extend my remarks in the RECORD, I wish to submit the report of the resolutions committee which was adopted by the 45th convention of the National Rivers and Harbors Congress held in Washington, D. C., recently.

The resolutions committee, of which I had the honor and pleasure of again serving as chairman, consisted of one delegate from each State, Territory, island possession, and the District of Columbia. The members gave careful and painstaking consideration to the matters before them, made many constructive suggestions, proposed numerous changes in the draft of the resolutions presented to them, and reached agreement thereon.

The convention was attended by registered delegates from 45 States, Hawaii, Puerto Rico, and the District of Columbia, in addition to several hundred who failed to register, guests, visitors, representatives of the press, and so forth. Texas sent the largest delegation, 37; Louisiana was next with 24; while Michigan was third with 17.

These delegates were from all sections of the country, representing both legislative and executive branches of the Federal Government; State, city, county, and other local governmental agencies and interested groups; commercial, waterway, flood control, and reclamation associations; agricultural, labor, industrial, and trade organizations, and transportation interests; with memberships totaling several million.

We believe this expression of representatives of such different interests and pursuits is strong evidence of the general sentiment of the people of the United States concerning the matters dealt with in these resolutions:

REPORT OF THE RESOLUTIONS COMMITTEE TO THE 45TH NATIONAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS, MAY 16, 1958

FOREWORD

For 56 years the National Rivers and Harbors Congress has played an important role in the development of our water resources. We intend to continue to devote our efforts toward the further development of such resources. Our quasi-official status and our membership of Federal, State, and local officials gives us the impetus and firsthand knowledge of the problems involved and their solution. In the years to come our dedicated purpose will be to bring about results that will reflect in the safety of our people and in the economic well-being of our Nation.

STUDY BACKLOG

The National Rivers and Harbors Congress notes that there is a substantial backlog of studies in the program of the United States Army Corps of Engineers and that new studies are constantly being authorized by Congress. A reduction of this backlog is dependent upon adequate appropriations and retention of highly qualified manpower. In order to build up an adequate staff of engineers and assistants to conduct these studies efficiently and to improve the quality of water resource studies, it is necessary for the corps to anticipate a consistent and higher level of appropriations. It is urged that these appropriations be gradually increased for 2 or 3 years and then not permit fluctuations to adversely affect the program.

TOLLS ON WATERWAYS

We reaffirm our long standing opposition to the imposition of tolls on inland waterways. Except in the case of international waterways, the imposition of tolls is contrary to and incompatible with the historic development and use of our waterways for the Nation's commerce. Tolls would be ruinous to many operators on existing waterways, thus rendering the Federal Government's investment in these waterways a waste. Further, the imposition of tolls on waterways would be inimical to the future development of waterways, an activity that is essential and vital to the continued development of the economy of this country. The investment of the Federal Government in the development of waterways is already amply repaid under the existing system through the returns to the Treasury from a vigorous commerce and economy that is made possible by waterway development.

RECREATION

The benefits from recreation at public works projects throughout the Nation are definitely on the increase. The attendance records show this and the national and local treasuries and local economies are benefited from such attendance. A word of caution is appropriate. The basic facilities are not adequate to serve a public accustomed to better than primitive ones. Funds to provide what is required are not excessive in amount and should be made available to the agencies now, in order that the situation may not become worse. The fact that attendance totaled 84 million visitor-days at Corps of Engineers installations in 1957 alone indicates the magnitude of the recreational resource and emphasizes the need for immediate action.

THE AMERICAN MERCHANT MARINE

This Congress for many years has made known its belief in the great economic value of the American merchant marine and its importance as a defense arm. The fleet that has made us a leader in the trade of the free world must be strongly supported to offset low-cost foreign competition. The survival of our fleet depends on subsidies and our national survival could depend on sea transportation for food and material in the absence of land transportation destroyed or damaged by nuclear attack. We favor continuation of these subsidies in order to provide an efficient fleet.

MAINTENANCE OF PROJECTS

This National Rivers and Harbors Congress recognizes and commends the attitude that Congress has adopted respecting waterway and flood-control maintenance by increasing appropriations therefor. This attitude is consistent with the contention of this body that if there is justification for building a waterway or a structure for flood control there is certainly justification for proper maintenance to permit their use to the fullest extent.

A large backlog of deferred maintenance has accumulated in many of the harbors and waterways of the Nation. Until this is overcome, the full potential of such projects cannot be realized.

We urge Congress to reassert its policy of providing adequate maintenance funds for current maintenance and additional funds for the elimination of the backlog of deferred maintenance.

ARMY ENGINEERS

Over a period of many years the Corps of Engineers of the United States Army has been trained in public works for flood control and rivers and harbors development. On the whole, the engineers have done a magnificent job, and the country properly applauds their effort and their successes in taming the turbulent streams and making the water which they channel subservient and useful to the pursuits of mankind.

It is the sense of the National Rivers and Harbors Congress, in annual convention assembled, that the Army engineers have done and are doing a magnificent job for flood control and for the development of our inland waterways and rivers and harbors.

This organization petitions the United States Congress to support the engineers in the continuation of their natural and normal work as the peacetime governmental agency to develop civil works along our waterways.

INCREASING APPROPRIATIONS FOR PROJECTS UNDER CONSTRUCTION

The rivers and harbors public works projects under construction throughout the Nation are recognized as an important asset in combating adverse economic tendencies.

There exists a sizable number of such projects now under construction which, if given funds in addition to those presently budgeted, could be completed and implemented at an earlier date than presently scheduled and would strengthen the economy of the Nation.

The Congress of the United States is urged to make additional appropriations above those budgeted on all projects under construction where such additional funds can be reasonably used for accelerated construction, land acquisition, and other such purposes.

EXPENDITURE CEILINGS

The National Rivers and Harbors Congress has been deeply concerned by the fact that the Bureau of the Budget had imposed a ceiling on the current river and harbor and flood control appropriations.

Although this ceiling was subsequently removed, the imposition of such ceilings was clearly in violation of congressional prerogative and of doubtful legal validity.

We therefore urge the Congress of the United States to take appropriate action to preserve its control of appropriations.

VETO OF OMNIBUS BILL (S. 497)

The National Rivers and Harbors Congress is greatly disturbed over the recent veto of

Senate bill 497 which would authorize river and harbor and flood control projects affecting the large segment of the American people who have expressed a desire for such projects.

The stalemate between the Congress and the President is a deterrent to the orderly development of our water resources at a time when favorable action would be of major importance to the national economy and welfare.

Important projects approved by both the President and Congress are being held up. The situation is not a healthy one, and we urge the Congress to override the veto.

NO NEW STARTS ON PUBLIC WORKS

The National Rivers and Harbors Congress considers that construction should be started each year on a substantial number of authorized rivers and harbors and flood-control projects. Such a program will strengthen the economy of the Nation and add to the general welfare of its people and, in addition, will keep the development of the natural resources of our country abreast of the other nations of the world.

Therefore the National Rivers and Harbors Congress disapproves of any administrative directive which restricts the Corps of Engineers, United States Army, from budgeting funds for the beginning of construction of new public-works projects. We further assert that any administrative directive which prohibits beginning of construction of new projects after funds for such purpose have been appropriated by the Congress is an unwarranted invasion of the legislative powers of Congress and should be restrained by appropriate action of the Congress.

We respectfully urge the administration to refrain from such a policy.

CONSERVATION STORAGE IN FEDERAL RESERVOIRS

Sites for dams and reservoirs are among our most valuable natural resources. In planning and authorizing the construction of dams and reservoirs on the Nation's rivers consideration should be given to the full development of the sites, particularly as to the provision for adequate conservation storage.

The National Rivers and Harbors Congress approves in principle section 205 of S. 497 (the omnibus rivers and harbors bill recently vetoed), which provided that the Corps of Engineers were authorized to include conservation storage in reservoir projects constructed or to be constructed by them. Such conservation storage to be for present or anticipated future demand or need for municipal or industrial or other beneficial use; and the reasonable value thereof may be taken into account in estimating the economic value of the entire project, and that when contract is made for use of such storage it shall be on the basis that will provide reimbursement to the United States as determined by the Secretary of the Army.

We therefore respectfully petition the Congress to reenact similar legislation to the above at the earliest possible date.

New Peach Orchards Laid Out To Conserve Soil and Water

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Greenville News, Greenville, S. C., of July 18, 1958, by Mr. W. D. Workman, Jr., one of the ablest newspapermen in this country today. This story is the story of South Carolina in connection with the famous South Carolina peaches in particular, the contribution made by Mr. Lewis Caggiano, who operates Sunny Slope Farms, near Gaffney, S. C., in my district. The article is as follows:

NEW PEACH ORCHARDS LAID OUT TO CONSERVE SOIL AND WATER

(By W. D. Workman, Jr.)

GAFFNEY.—South Carolina peaches mean profit for producers (at least in good years) and good eating for consumers, but they also bring problems to soil conservationists.

Fortunately, the picture is changing rapidly for the better as new orchards are laid out, but in years past peach orchards have contributed more than their share to the silting of streams, the eroding of hillsides, and the washing away of good topsoil. For one thing, peach orchards are semipermanent in nature, and mistakes made in planning and planting are perpetuated for periods as long as 20 to 25 years. They are not like row crops, which can be replowed in better fashion for next year's crop.

Consequently, the peachgrowing regions of the upcountry, particularly Spartanburg and Cherokee Counties, have been less adaptable to rapid change then other sections where farming practices improved with the spread of knowledge on land and water use. A peach orchard represents a major investment of time and money, and its return is spread over a long period of years. Not until an orchard approaches the end of its usefulness do many producers feel justified in completely revising the pattern of the peach trees.

Changes for the better are more and more noticeable, however, as new orchards come into existence, either through the replacement of old ones or the entry of new producers into the peach field as they divert acreage from cotton and other crops. Cherokee County in many respects is coming to be a showplace of proper peach practices, and technicians of the Soil Conservation Service have their hands full in meeting the demand for assistance and advice.

One example, among many, is the sizable cluster of peach orchards operated by the Caggiano family as Sunny Slope Farms. Each of these orchards, like those of neighboring Lawrence B. Clary and other peach producers, was laid off only after detailed study of aerial photographs, stream lines, ridge lines, and soil maps.

The peach trees are planted along contour lines, with only enough slope to let the water drain evenly and slowly from the rows of trees. The orchards are interspersed with meadow strips which serve the dual function of providing a covered runoff for draining water and a turnaround for the mechanized equipment used in spraying, cultivating, and harvesting peaches. Similar strips border the orchards.

Many of the meadow strips themselves drain into farm ponds, which are in turn used as sources of water for the irrigation of peaches. Thus, best results are being obtained by controlling the water which falls naturally on the orchards and by artificially applying water (by spray irrigation) when natural rainfall is deficient. Peach irrigation has come to be the general order of business in Cherokee, Spartanburg, and Edgefield Counties, with producers in several other areas likewise banking heavily on the same practice.

Lawrence Clary sums up the feeling of many producers when he says flatly that the peachgrower who doesn't irrigate is "on his way out." Peaches get both their color and size from adequate water at critical growing periods and when Mother Nature doesn't provide the moisture, irrigation can.

Soil conservationists contribute technical knowledge and assistance in devising proper irrigation practices, which benefit both producer and consumer. Their greatest contribution to the public good, however, lies in the work they do toward stabilizing the soil and keeping it in place, safe from the ravages of uncontrolled water action. Success in that undertaking pays dividends all the way from the hills of the Piedmont to the coasts of the low country.

Clear waters simplify the expensive task of providing cities with drinking water, they enhance the State's attractiveness to industry, they help conserve and propagate wildlife in field and stream, and they ease the task of harbor dredging at the State's ports.

Progress is being made toward the goal of clear streams, but even a passing glance at the muddy waters of the Pacolet, Tyger, Enoree, and other tributaries of the Broad River show that there is a long road ahead for soil-conservation practices. Peachgrowers, however, are doing their part in ever-increasing measure.

Senator Richard L. Neuberger

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. PORTER. Mr. Speaker, on July 10, 1958, the Vice President named 4 Members of the United States Senate to be members of the 15-man National Outdoor Recreational Resources Review Commission. The work before the Commission and its 25-man advisory council is monumental.

On December 31, 1959, it will recommend what outdoor recreation needs the United States will have by 1976 and the year 2000 and will recommend how these needs should best be met.

Senators from Utah, ARTHUR WATKINS; New Mexico, CLINTON ANDERSON; Wyoming, FRANK BARRETT; and Oregon, RICHARD L. NEUBERGER, were appointed.

It is a privilege for me today to enumerate a few of the particular qualifications my colleague in the other body, the junior Senator from Oregon, Mr. NEUBERGER, has for this work.

He is a leading writer and scholar in the field of conservation and outdoor living. An ardent hiker and camper, DICK NEUBERGER has traveled through most of the wilderness areas in the West, from California through Oregon and Washington and into Canada and Alaska. He is a member of the Portland chapter of the Izaak Walton League of America.

His appointment to the Commission has not gone unnoticed in Oregon. I should like to include in the RECORD at this point an editorial which appeared in the July 14, 1958, issue of the Eugene, (Oreg.) Register-Guard which says, in part:

Vice President RICHARD NIXON, acting for President Eisenhower, showed exceedingly good judgment in appointing Senator RICHARD L. NEUBERGER to the 15-member National Outdoor Recreational Resources Review Commission.

I also include an article from Magazine Index—April 24, 1958—telling of Senator NEUBERGER'S outstanding success as a writer:

[From the Eugene (Oreg.) Register Guard of July 14, 1958]

GOOD CHOICE

Vice President RICHARD NIXON, acting for President Eisenhower, showed exceedingly good judgment in appointing Senator RICHARD L. NEUBERGER to the 15-man member National Outdoor Recreational Resources Review Commission. The Senator, who has been deeply interested in conservation for many years, will be a trenchant spokesman for those who fear the day that the recreational potential of America's great outdoors is exhausted.

Interestingly enough, the board of directors of the Eugene obsidians the middle of last week went on record favoring appointment of the Senator as one of the members of this 15-man commission. It was felt he would be an outstanding representative both from the Senate and from this corner of the Nation. Still to be appointed are 4 members of the House of Representatives and 7 citizens who are not Congressmen. Other Senators who will serve with Mr. NEUBERGER are WATKINS, of Utah; BARRETT, of Wyoming; and ANDERSON, of New Mexico.

The commission's job is large and important. It will report, three years hence, on the expected outdoor recreational needs of the country in 1976 and 2000, and will recommend how those needs should be met. The report could be as significant a milestone as creation of the national park system and the forest preserves. Senator NEUBERGER, who has written widely about these developments, now has an opportunity to make history of the type he has so often written about.

[From Magazine Index of April 24, 1958]

SENATOR RICHARD L. NEUBERGER: A MAGAZINE INDEX PERSONALITY

"My faith in democracy doubled the day DICK NEUBERGER was elected Senator," said a longtime Oregon friend.

"That a man who had dedicated his life to helping his neighbors through writing about them should so earn their respect and gratitude shows our American system at its best."

It shows, too, the role of the magazines of America in educating our citizens, and the thought-molding power which a gifted writer can exert.

For RICHARD L. NEUBERGER, although his name meant little to the casual reader until his senatorial election in 1954 has been more successful than any other American writer in bringing his State, his section, and his political ideas to the continuous attention of our entire magazine-reading community.

We may have overlooked his byline, but no one can have avoided the impact of his nearly 300 magazine articles (most on the great Northwest) which have been in the top magazines since 1933. In 1942 18 Neuberger articles appeared on such subjects as Alaska, Justice William O. Douglas, Hells Canyon, Grand Coulee, the American Indian in such magazines as Colliers, Saturday Evening Post, Harpers, Nation, Reader's Digest, the New York Times Magazine, and Survey.

Six years later, after an army enlistment slow-down, 28 Neubergers were published in 12 months—meaning that there was scarcely a week in 1948 that the American people were not absorbing some of DICK NEUBERGER's thoughts about Oregon, or the Northwest, or Western liberalism. And this heavy program continued right up to his election campaign.

RICHARD LEWIS NEUBERGER was born in 1912. He took his first journalistic job—as copy boy on the Portland Oregonian—in 1928, and was editor of the University of Oregon Emerald in his sophomore year.

A trip to Nazi Germany provided the material for the first Neuberger articles: The New Germany, the Nation, October 4, 1933, and German Under the Choke Bit, the New Republic, November 15, 1933. Since then he has stuck reasonably close to home. His three 1934 titles: Hooverism in the Funnies, The Northwest Goes Leftish, and The President Comes to Our Town show the course which he as to follow in his writing and his political life.

In 1945 DICK married Maurine Brown whose own successful political career in Oregon has been a part of the Neuberger combination. He likes golfing, hiking, camping, and all that goes with the good life in the West.

NEUBERGER now devotes himself to his big job in Washington. He is reached what most writers would consider the peak of fame: the Reader's Guide to Periodical Literature lists almost as many articles about him as by him. Yet his typewriter never stays covered for long. His latest article Power Struggle Along the Canadian Border was in the December Harper's. The words change, his purpose of helping the Northwest by informing the world about it remains.

Old-Age Security

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include part of my statement at the annual outing of the Senior Citizens and Associates of America, at Salem Willows, Mass., on Sunday, July 20, 1958:

When people are tired, they must relax, as we are doing on this Sunday afternoon.

Nature not only requires these periodic days of rest during our working years, but insists that we take it easy after we pass a certain age, when the wear and tear of life catches up with us.

Relaxation means far more than doing nothing. To sit in a chair for most of the day, or to sleep a few hours longer than we did in our youth, may be necessary to conserve our physical energy.

But what about our peace of mind?

How can we relax when we reach the age of retirement and still have to worry about paying the landlord, the grocer, and the doctor?

In the unstable world of today there is a great longing for security.

It was only in the last century that insurance companies were organized on the principle of sharing the cost and spreading the risk. Disaster can happen to any of us. However, it only strikes a few at any one time. If a small amount could be collected from the many who are subject to the risk, a fund could be built for payment of benefits to the few whom misfortune or disaster has struck.

By paying premiums on a voluntary basis, people acquired protection against loss of life, against accidents, sickness, fires, theft, and other hazards. But there was no protection against unemployment, or cessation of earnings in old age.

The Social Security Act came into being as a result of the painful lessons we learned during the severe depression of the 1930's. For generations the United States had evaded this problem. But when 10 million workers became unemployed, and some 18 million people were dependent for subsistence on relief, the emergency forced us to develop bold, new programs to save our Nation and its people from economic collapse.

President Roosevelt set up a Committee on Economic Security to study the problem of destitution and to make recommendations.

At last we were facing up to the central problem.

The Committee found that, whenever earnings are cut off, destitution is near. The Committee searched for an answer to this question: How to spread earnings over a lifetime, over periods when the breadwinner is working and periods when he is not, how to provide an income throughout the whole cycle of life—in childhood, youth, middle, and old age.

They discovered that few people, as individuals, can save enough out of their income to take care of emergency needs. They were too busy trying to pay for their day-to-day obligations to set aside enough for a rainy day.

The only protection that people had was life insurance, which eased the burden for their survivors, but this was of no help to the insured themselves during the declining years of their lives. It provided no income for retirement.

The only possible answer to this problem was through savings on a social or group basis, called social insurance.

Of course, it is not possible to establish social security on the basis of social insurance alone. These programs apply only to workers and their families. Many persons can't work. There are those who were too young, and those who were physically handicapped, and those who were already old when the program of social insurance began. Although they had not contributed to the system, or bad not contributed enough, they must be assured the basic needs of life. For this reason the Committee recommended also a program of noncontributory payments to needy persons.

It is this last factor that your organization is concentrating on.

We cannot have a genuine social security program of varying benefits, and depending exclusively on a person's contributions to the fund, matched by that of his employer.

If one person is getting $78.50 a month as old-age retirement and his next-door neighbor is getting $108.50, it seems to me that there is too much of a gap between the two.

Of course the person who worked longer and paid more in social security taxes is entitled to larger benefits, but not by such a margin.

There must be a higher minimum for all.

I never heard a person complain because he has paid into Blue Cross-Blue Shield, or any other form of contributory insurance for years without getting his money back, as it were; while some other person had his hospital and surgical bills amounting to hundreds of dollars paid for even though he has paid in only a fraction of that sum in premiums.

As this is a group effort, we must share the responsibilities and not quibble over the benefits paid to those who are more unfortunate than ourselves.

Congress passed the Social Security Act in 1935 and has amended it in 1939, 1950, 1952, 1954, and 1956.

Gradually we are broadening the coverage and increasing the benefits.

To pay for this program it is necessary to increase the social-security taxes as well, until, by 1975, they will rise to 4¼ percent for employer and employee alike.

This schedule is designed to meet the future obligations of the program and to keep it on a self-supporting basis.

There has been much criticism that the Old-Age and Survivors Insurance System has not kept up with the times. Whether a person is getting old-age insurance or old-age assistance, the benefits he receives fail to

pay for the creeping inflation in the cost of living.

Your representatives in Congress are aware of your need.

At the moment it is hard to predict for sure to what degree they will be able to improve the social-security system before Congress adjourns.

Last Tuesday the House Democratic leaders decided to try for an 8- to 10-percent across-the-board increase in social-security benefits.

It is likely that the House will pass this measure. If it manages to get through the Senate, and it is not vetoed by the White House, it would benefit more than 11 million people.

There would be a minimum boost of $5 per month, with an increase of $10.85 for those who are now getting $108.50 each month.

Although I shall vote for these increases because I believe in them, I cannot guarantee what the Congress as a whole will do. It is well to bear in mind, however, that Congress has liberalized social-security benefits in every election year since 1948.

For some time now I have been convinced that it would be better to provide a direct national pension of at least $150 per month to all Americans who reach the qualifying age to be financed through Federal taxes.

It would provide equal benefits, and it would eliminate redtape and overhead expenses in the administration of such a program.

We in the United States got a late start on social legislation.

There is much more work to be done before we achieve a complete social-security program that will be worthy of the name.

In addition to monthly cash benefits to cover rent, food, clothing, and incidentals, we should make provision for the health care of the aged.

As the American Public Welfare Association, in its 1957 Federal legislative objectives, stated, and I quote: "Study should be given to ways of meeting the medical and hospital care costs of old-age, survivors, and disability insurance beneficiaries, through the insurance program."

Most of the younger people are covered by this type of group insurance, but we have neglected to provide similar protection for the aged.

Either we credit retired people with paid-up hospital, nursing-home, and surgical-service benefits or we must legislate a national pension of at least $150 per month so that they can afford such care.

In any event, our present program for the aged cannot stand still.

Most of our older people have contributed more to the progress of the United States than we can ever repay.

It is the duty of the Nation to build a social-security program that will honor the aged in the harvest time of their lives by providing for their physical needs and contributing to their happiness and peace of mind.

The senior citizens and associates of America deserve this and more from a grateful Nation.

Clean-Politics Legislation

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 10, 1958

Mr. PELLY. Mr. Speaker, I was happy to note that our distinguished colleague from California [Mr. BALDWIN] had introduced a bill providing that legislators and public officials fully disclose their personal financial affairs each year including a statement of gifts. I wish to commend the gentleman from California [Mr. BALDWIN] for his comprehensive approach toward reform legislation.

Mr. Speaker, I cannot go home and honestly report to my constituents that the code of ethics which recently was passed by the Congress is anything more than a well-worded exposition of fine principles without any effective means of controlling conflicts of interest or improper practices.

It is very much to be hoped that bills such as Mr. BALDWIN's and my own bill, H. R. 10631, will be given a full and serious hearing in the next Congress, and in this connection, under unanimous consent, I include an editorial of July 10, 1958, from the Seattle Times which suggests an urgent need in new regulations covering campaign expenses:

TO CURB HIGH CAMPAIGN COSTS

The Adams-Goldfine affair touches on issues affecting the basic workability of our democratic processes. These are issues which should be kept alive long after the furor over one man's imprudence has subsided.

We refer of course to the whole complicated and disturbing question of gifts to men in public life.

Certainly, cases of outright bribery, of the direct purchase of specific favors, are rare in American political life.

And yet informed observers agree that the elected public official who is not under some sort of obligation to private and fund-or-favor givers (individuals, businesses, labor unions or other organizations) also is a rarity. Many nonelected public officials are under similar pressures.

There have been several unsuccessful attempts in recent years to solve this problem by legislation.

In the wake of the Adams-Goldfine disclosures, a California Republican Congressman, JOHN F. BALDWIN, this week introduced a new clean-politics bill.

The Baldwin measure would require Congressmen and top Government and White House officials to disclose yearly all financial transactions, including receipt of gifts valued at more than $10. An annual statement of assets also would be required.

Top Presidential appointees requiring Senate confirmation are given a very stiff going-over, at least by members of the opposition political party, regarding their financial holdings and possible conflicts of interest because of their private assets.

Washington observers long have maintained that Senators and Representatives should be subject to the same conditions, as regards their private finances, which they impose on Cabinet officers.

The Baldwin bill appears to a well-intentioned effort at needed reform, but the area—insofar as Congressmen are concerned—where new ground rules are most urgently needed is that of campaign expenses.

Legislation in this area presently on the books—the Federal Corrupt Practices Act of 1925—is widely circumvented by both major political parties. The act's limits on campaign contributions are, for all practical purposes, meaningless, and the measure has served only to introduce an element of hypocrisy into high levels of national politics.

The fantastic cost of campaigning for major political office can be expected to continue to soar—forcing candidates to ever greater dependence upon large contributors—until realistic, enforceable, workable legislation to curb them is enacted.

One attempt to at least take much of the hypocrisy out of present campaign-fund practices got surprisingly far in the last session of Congress.

This bill would have raised the authorized limits on spending by national party committees and by candidates for Congress, but also would have closed some of the loopholes through which existing laws are circumvented.

Many leading figures in both parties are, of course, reluctant to tamper with the established practices through which they have achieved office.

Continued public demand is needed to bring about the reforms necessary to the health of our democratic system.

Marines Fear Abolition

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles from the Los Angeles Examiner:

[From the Los Angeles Examiner of July 15, 1958]

MARINES FEAR ABOLITION UNDER TERMS OF PLAN

(First in a series of two articles)

(By E. F. Tompkins)

Congress has been hearing from the Marine Corps on the proposed reorganization of the Pentagon.

There are two reasons for the Marine Corps' legislative offensive. First, the Marine Corps is not against a Pentagon reform, but it opposes when it seems to be dangerous errors in the official plan. Second, the Marine Corps does not want to be organized out of existence; and the official plan, according to some analysts, would permit that to happen. Consequently, for the third time in recent years the Marine Corps, or rather its veterans of overseas service, are fighting to avert its abolition.

The Marines have no quarrel with the main objectives of the reorganization proposal.

The vast and victorious campaigns of World War II, in the Mediterranean, in Europe and in the wide Pacific, dramatized the necessity for unified commands in combat.

Controversies among the Armed Forces, particularly in aviation and atomic weaponry, have proved the importance and value of closer unification than has been attained under the Joint Chiefs of Staff system.

But, Marine observers contend, no exigency can require that one service absorb another, while under any system, each service must have its own staff structure to direct its personnel and accomplish its missions.

The basic ideas justifying President Eisenhower's recommendations for a new reorganization of the Defense Department were set forth in his message to Congress on April 3.

Accompanying the message was the administration draft of a bill—prepared in the Pentagon, mainly by the Army—to carry out the President's policy.

This bill—as dissected by Marine Corps specialists and others—contains a number of provisions that are severely questioned, but that can be removed or modified by

amendment without detriment to the great work itself.

According to these analyses presented to the congressional committees, the official bill as it emerged from the Pentagon would tend to destroy the principle of civil control of the Military Establishment by—

1. Substituting a general staff system for the Joint Chiefs of Staff;

2. Authorizing arbitrary mergers or extinguishment of branches of the Armed Services created by Congress; and

3. Transferring to the executive duties and powers relating to national defense which, under the Constitution, belong exclusively to Congress.

The House Armed Services committee under the chairmanship of Representative VINSON, Georgia, wrote into the reorganization bill various provisions and prohibitions to preserve the Joint Chiefs of Staff system and protect the statutory integrity of the separated Armed Forces.

[From the Los Angeles Examiner of July 16, 1958]

CHANGES URGED TO SAVE MARINES

(Last of a series of two articles)

(By E. F. Tompkins)

As presented to Congress, the administration bill for reorganization of the Pentagon would have bestowed upon the Secretary of Defense unlimited power "to transfer, reassign, abolish, or consolidate" any function of the Armed Forces, including "combat functions."

Precedent was sought in the recommendations of the Hoover Commissions. Hoover reforms authorized the President to streamline or abolish civil bureaus, with the assent of Congress. The Pentagon bill would have given the Secretary of Defense dictatorial authority over the military branch, and enabled the President to veto corrective action by Congress.

Thus the Secretary could abolish the Marine Corps or alter the National Guard, belonging actually to the States.

SPECIFIC

The Vinson committee's report on its amended version of the bill deals with this proposal. It notes especially that the proposal would permit the Secretary to contravene existing statutes, which only Congress may repeal.

Congress, the committee observes, has by law itself "prescribed the broad rules and missions of the four major services"—the Army, Navy, Air Force, and Marine Corps. And, the committee comments, "the language with a respect to the Marine Corps is more specific" than with respect to the others.

The committee recalls the special qualifications of the marines as an amphibious combat element, and the history of their long experience in little wars. It refers to an attempt in 1947 to abolish naval aviation and to reduce the Marine Corps to a ceremonial organization. Hence—

"Congress wisely inserted provisions in the National Security Act to insure the continuation of naval aviation and the continued existence of the Marine Corps as a meaningful force in readiness."

DREAD RECOGNIZED

Reassertion of the principle recognizes the continuous need for a defense system prepared to meet any type of aggression, not merely one type.

The committee began its revisionary work with the firm conviction that changes in the organization of the Department of Defense were necessary.

Accordingly, it yields to the Pentagon wide authorizations to make changes which do not impair combat functions, and which Congress may cancel by concurrent resolution, not subject to executive veto.

And, in war emergencies, the President, as Commander in Chief, would have temporarily absolute power, without restrictions, to assign and direct the Armed Forces.

IN ACCORD

On one point the President and the House committee were in full accord—establishment in the Pentagon of a Director of Defense Research and Engineering to prevent unwise service competition and make the best use of our scientific and technological resources.

In his congressional message, also, the President said:

"We must continue the three military departments (Army, Navy, Air Force) as agencies * * * to administer a wide range of functions."

With that, the House committee agrees completely.

Representative Hoffman's Record as Fearless Scrapper in Congress Cited in Press

EXTENSION OF REMARKS

OF

HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1958

Mr. CEDERBERG. Mr. Speaker, our colleague and dean of the Michigan Republican delegation in the House [Mr. HOFFMAN] has recently received well-earned recognition in the press for his fearless and untiring devotion to his duties. Not only did the Chicago Tribune recently devote much space to his activities but the News-Palladium, published in Benton Harbor, Mich., in the district represented by the gentleman from Michigan [Mr. HOFFMAN] called attention of its readers to the compliments being paid our colleague.

That article, entitled "HOFFMAN Is Envy of His Colleagues" follows:

"You lucky dog. Here it is election year and you have had no chance to campaign, and you are the subject of a fine article by a big metropolitan newspaper that covers your district."

That's about the way comment is running among Congressman CLARE E. HOFFMAN's fellow Members of the House, Republican and Democrat.

What Mr. HOFFMAN's friends are referring to is the recent Chicago Tribune story that highlighted this particular Michigan solon's long career in the House as a fearless scrapper and a dyed-in-the-wool Republican partisan.

HOFFMAN is getting some fine compliments, too, from the high command of the Republican National Committee.

ALCORN IS ELATED

National Chairman Meade Alcorn, chairman of the GOP National Committee, has just written him:

"Congratulations for the splendid job you have done on the floor of the House in focusing the Nation's attention on some of the abuses which have emerged from the Harris committee hearings. We need more forthright and hard-hitting statements such as yours. You have rendered a real service to the country and to the party."

Director of Public Relations, W. C. Strand, of the national committee, wrote HOFFMAN:

"This note gives me an opportunity to tell you that I have been following with pleasure your recent speeches in the CONGRESSIONAL RECORD on the Harris committee. I have never read finer expressions in the field of civil liberties with particular reference to the rights of citizens in their relations with their elected representatives."

CAN'T CAMPAIGN

HOFFMAN said today that it was impossible for him to make any extended primary campaign before now and the primary election which is only 2½ weeks away, August 6.

Even though he will be opposed by two candidates, Luther I. Daines of Van Buren County, and Dale Douthett, of Berrien, he says it's impossible to get away in these final weeks before adjournment.

This weekend he has promised to make a hurried trip home for an appearance at Kalamazoo, on Monday, before a meeting of supervisors of the Third and Fourth Congressional Districts. He may also fill a date in Berrien.

"Congress is hoping to wind up its session in August," said HOFFMAN today. "But the Middle East crisis is serious. Who knows what is going to develop with our Marines now in Lebanon? Adjournment may be postponed in view of the situation. The voters of the Fourth District have sent me here to do a job. If they don't know where I stand by this time, they never will know. I've said over and over, I'm nothing but a hired man for my district. They've paid me to be on the job. And here's where I'm going to stick while there's a job to do, primary or no primary."

Michigan's Labor Market

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the text of the following report dated June 1958 issued by the Michigan Employment Security Commission in connection with Michigan's labor market:

It has become increasingly likely since May 15 that the relatively small increase in unemployment during the preceding 30 days may have been the beginning of a change in the trend.

If it were not for the coming automobile model changeover period, there would be several reasons to hope that we have reached a peak in unemployment. Most important of these is the fact that the volume of claims activity in our branch offices had declined. In mid-April, claims of all types totaled 358,653. By the week of May 22, the claims load had dropped to 307,265 and by June 12, claims of all types were down to 302,209. Although the number of persons exhausting their right to benefits has increased sharply during the same time, it has not been great enough to make up for the difference in the claims total. Another reason for optimism is the fact that daily placement activity in the branch offices of the commission increased 17 percent during the past month. All of the increase was seasonal, and in the non-manufacturing industries, reflecting the efforts of the commission's intensive hire-now campaign. However, the fact that there was any gain at all is encouraging. Placements in manufacturing industries were unchanged and that was a definite improvement compared with the sharp downtrend of recent months. More satisfaction may also

be found in the recent settlement of labor disputes which had delayed the normal seasonal upturn in two industries.

Although the employment downtrend may have leveled off, we know that there will be temporary cutbacks this summer. Seasonal uptrends will undoubtedly continue during the summer months. But manufacturing employment is likely to decline because of the impending model changeover in the automobile industry. When the changeover occurs, more workers will be laid off and the uptrend in unemployment will be resumed. Employment will rise after the 1959 models go into production.

Michigan's labor market during the current period was characterized by small changes, with industrial unemployment edging upward. Improvement in employment was held back by a lack of seasonal jobs for vacationing students. Automobile production remained low. Unemployment was 15.8 percent of the total labor force on May 15.

Nonfarm employment, May 15, 1958	2,296,000
Net change from 1 month ago	−21,000
Net change from 1 year ago	−283,000
Manufacturing employment, May 15, 1958	819,000
Net change from 1 month ago	−22,000
Net change from 1 year ago	−239,000
Unemployment, May 15, 1958	462,000
Net change from 1 month ago	+2,000
Net change from 1 year ago	+275,000

The Midwesterner

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. ADAIR. Mr. Speaker, as a middle westerner, I was particularly interested in an article written by Hal Boyle concerning the people who live in that great part of our country. I thought it might be interesting also to others and, under leave, include it herewith:

[From the Fort Wayne (Ind.) News-Sentinel of July 17, 1958]

(By Hal Boyle)

KANSAS CITY, MO.—What makes the midwesterner different?

There is no doubt he is.

Coming from the East to the Midwest you are aware of a difference in the people who dwell in the great heartland of America. But it takes you some time to puzzle out what that difference is.

Here are a few things you may observe:

The midwesterner seems to get as much done as anybody else, but he never seems to be in a great hurry about it. He feels that every day is long enough for the work that has to be done in it.

The midwesterner loves to talk, but he prefers small talk to big talk. He seems to have an innate understanding of the fact that time has a way of punishing braggarts.

The midwesterner doesn't believe much in hysteria. The periodic panics and alarms that sweep people in coastal areas rarely touch him. He still retains a kind of wonderful 19th century feeling of security in both himself and his section of the country.

WRY SENSE OF HUMOR

The midwesterner has a wry sense of humor based on a sound set of normal values. To him nothing is funnier than anyone or anything that lets itself get out of perspective, or, as he puts it, "too big for its britches."

The midwesterner is self-confident in peace and makes a good soldier in wartime because he learns early to adjust to life, not as he might want it, but life as it is. He knows each winter probably will be long and cold, and each summer long and hot.

The midwesterner, like the southerner, is instinctively polite—although perhaps in a more informal way. He prefers to take the other fellow at his own estimate as long as possible.

The midwesterner is automatically friendly to everyone he meets. He enjoys doing small favors. But he can also be a long hater if he feels his friendship is imposed upon.

The midwesterner is endlessly curious. He likes to hear about how other people live, but he is slow to change his own ways—and won't be stampeded into doing so.

Weather rules his existence from birth, and is always there ready to ruin or enrich him. To a midwesterner probably the most important things in life are the weather and his home. He's a great weather watcher and a great homebody. No other American takes a deeper pride in his home—or works harder at keeping it up.

To the average midwesterner a steak sizzling in the barbecue pit in his backyard holds a finer music than any sonata by Beethoven; tomorrow's weather forecast is more meaningful to him than anything Khrushchev may have said yesterday about the international political climate.

Come up sunshine or a storm, there is one thing the midwesterner can't quite understand: Why anyone would possibly want to live anywhere else in the wide world except where he does.

A Queen Returns

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. McGREGOR. Mr. Speaker, last week the citizens of Mansfield, Ohio, celebrated the 150th anniversary of its founding. It was my great privilege to join with Governor O'Neill, Senator Bricker, and Senator Lausche in paying tribute to this thriving community, one that serves adjacent farms and towns and contributes so much to the economy of our Nation through its many industries.

Founded in 1808, Mansfield, with its excellent location, rich soil, and fine climate was potentially strong. But the growth of a community depends upon the intelligent foresight and planning of its citizens and leaders. It has only been through the combined efforts of citizens from all walks of life, past and present, that this tremendous growth has been realized. With the historic strides made thus far, Mansfield can surely look to the future with confidence.

Among the honored guests at this year's sesquicentennial celebration was the wonderful lady who 50 years ago reigned as queen of the city's 100th anniversary celebration. It was a rare privilege and pleasure for me to spend a few short minutes with this queen of yesteryear, and it gives me equal pleasure to include in today RECORD an article by Ken Woodman, editor of the Mansfield News-Journal about this lovely lady—his mother-in-law:

A QUEEN RETURNS

(By Ken Woodman, editor, Mansfield News-Journal)

Not often does a queen who has reigned at a city's centennial celebration return to duplicate her sovereign honor when the city has reached its 150th milestone. But that is exactly what has happened in Mansfield, Ohio.

Fifty years ago, in 1908, Miss Nellie Lawrence, then 18, was chosen as the Goddess of Ceres for the city's 100th anniversary. She rode through the streets enthroned on a wagon drawn by four white horses.

Saturday, June 12, 1958, she returned to Mansfield to participate in the city's week-long sesquicentennial. She is now Mrs. Nellie Gerkan of Cincinnati.

After participating in the opening ceremonies she lunched with Congressman J. HARRY MCGREGOR (17th Ohio District), Ohio Gov. C. William O'Neill, and Edward Sutter, managing director of the sesquicentennial.

At 4 p. m. she was given a seat of honor in an old-time carriage drawn by four white horses and, following a cavalcade of notables, she led the main section of the parade down Park Avenue West, a distance of more than a mile, to open a review of bands and decorated floats that moved past the reviewing stand for more than 2 hours.

An estimated 120,000 persons watched the parade.

In the evening, Mrs. Gerkan was introduced to a crowd of 5,000 spectators who went to Arlin Field to witness the first of six evening performances of the pageant, Stockades to Satellites, commemorating the city's growth over 150 years.

For the celebration a part of Mansfield's Central Park was transformed into a replica of old Market Street with buildings copied from 19th century structures.

Visitors from all over the United States came back to Mansfield Monday, for bus tours and a homecoming dinner. The tours included visits to Malabar Farm, home of the late Louis Bromfield, and Kingwood Center, the multi-million-dollar cultural and horticultural center established for Mansfield by the late C. K. King.

Tuesday was Children's Day, featuring a youth parade. On Wednesday women white collar workers picnicked in the center of the city. Thursday brought a public shaving of beards to climax a beard-growing contest. Friday was devoted to looking toward Mansfield's future growth and Saturday was Agriculture Day.

As part of the celebration the Mansfield News-Journal issued a 208-page historical sesquicentennial edition. The total press run of 40,000 copies was completely sold out within 6 hours.

Arabs and Communism

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. SILER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to insert an article recently published in the Cincinnati En-

quirer of Cincinnati, Ohio. This article deals with the basic nationalism of the Arab people and their fundamental desire to remain aloof from communistic influences. The Arab doctor who expressed the opinions contained in the article is evidently a very intelligent man and being an Arab himself he should know whereof he speaks. The article mentioned is as follows:

ARABS COULD BE BULWARK AGAINST REDS, SAYS IRANIAN DOCTOR, HERE 5 YEARS

(EDITOR'S NOTE.—The views expressed here by Dr. Niroomand are those of partisan Arab nationalism. The Enquirer presents them as points which deserve expression though in opposition to present United States policy.)

(By George Amick)

An earnest young Iranian doctor declared here yesterday that Americans should be encouraging the Arab nationalists instead of sending marines against them.

And if the American Government "practiced what it preached," he said, the marines now in Lebanon would call free elections "to see just what kind of government the people there really want."

Dr. Iraj Niroomand, 28-year-old Tehranian interning at Children's Hospital, said he has found Americans to be "the best people in the world" during his 5 years of study in this country.

But he doesn't think American policy toward the Arab countries reflects the real wishes of the taxpayers who pay for it.

"The American Government has sent a lot of money to these countries. But it's not used as it's meant to be," he said feelingly.

"Most of it goes to the heads of government. It buys Cadillacs for Ibn Saud and Swiss chalets as wedding presents for premiers. It doesn't have any effect on the poverty of the people."

In his own Iran, people live in a sad situation not imaginable to Americans, Dr. Niroomand declared.

"In Tehran there are 2 million, and 500,000 of them live in holes and hovels," he said.

"Is it fair for countries to be oil-rich like ours are—and the people be so poor?"

Dr. Niroomand said Americans make a "big noise here because Mr. Goldfine paid some hotel bills.

"We Arabs hate corruption, too, but we can't do anything about it because we don't have freedom," he said. "Now we have a little chance, because of a nationalistic movement, to get some freedom.

"The American people should support this movement. Americans stand for the very things these men are fighting for."

Nasser is looked on as a savior by the Arab people, Dr. Niroomand explained, because he is almost the only leader who has spoken out against the British.

"You must realize that Arabs have been under British influence for more than two centuries. They have never had freedom. Now, they want it," he said.

Dr. Niroomand denied emphatically that Nasser or the Arab rebels were Communists.

"It isn't their fault that there is a cold war, and that when they act against the West they appear to be cooperating with the Russians.

"Why, in Egypt, the Communist Party is outlawed. But in Britain it isn't.

"When Nasser visits Yugoslavia or Moscow he just wants to bluff you and use this situation to Arab benefit. Arabs try this bluff because they feel they have no other way to turn. I know the Arabs, and, believe me, they are never going to turn Communist. Their religious beliefs are to strong."

Now that America has landed marines in Lebanon—"whether this is right or wrong, the troops are there"—they should be used to conduct a free election, Dr. Niroomand said.

"If the United States showed she was really for freedom and democramy, as she says, she would win the love of the Arabs.

"You work hard to make a United Europe. Why not help make a United Arab Republic? And if you really help these people and show you are sincerely their friends, they will be a much stronger ally to you than the Baghdad Pact nations.

"They will make a chain from India to north Africa—a whole belt around the world against communism. The Arab people would love you—they would give their lives for you."

Dr. Niroomand came to the United States in 1949. He attended University of California at Los Angeles, Concordia College in Minnesota, and the University of Minnesota before going abroad to Heidelberg, Germany, for his medical degree.

He wants to return to Iran as a general practitioner. He has no interest in specialization.

"We don't need specialists in Iran," he said wryly. "There are few enough general doctors."

The Necessity for Maintaining and Implementing the Marine Corps

EXTENSION OF REMARKS

OF

HON. HERBERT ZELENKO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1958

Mr. ZELENKO. Mr. Speaker, recent events in the Middle East have pointed up the necessity for maintaining and implementing the Marine Corps both in personnel and equipment.

Despite the warnings of many of my informed colleagues and myself on this vital matter, the Defense Department has heretofore disregarded this obvious fact.

Within the past several months I have spoken of this and had intended to address the House once more. I have just read an article by Walter Winchell, one of America's great journalists, which is most eloquent on this subject.

The article appears in the New York Daily Mirror of July 18, 1958, and under unanimous consent I make it a part of the RECORD.

(By Walter Winchell)

Mr. and Mrs. United States, as the clouds of war gather from Cairo and the Euphrates and from Suez to Yemen, it is obvious that additional heavy burdens are being placed upon the Marines. Our international responsibilities have increased by thousands of miles—while the Department of Defense has cut down the Marines by thousands of men.—From this column March 20, 1958.

The Congress is in an uproar because, they say, Central Intelligence was caught flatfooted in Iraq. This is, of course, pure bunk. The CIA warned again and again that our whole diplomatic arch in the Middle East was falling—but the business-as-usual bunch teamed up with the Pollyannas and a good time was had by all until the house of cards collapsed. Since, by policy, Central Intelligence can neither affirm nor deny, Allen Dulles makes the ideal political scapegoat. It's as simple as fighting a man whose hands are tied behind his back. Unfortunately, this won't solve the problem abroad, though it does offer a plausible political explanation for the folks back home.

For 10 years, in the 1930's, this reporter attempted to warn the American people of the gathering Nazi warclouds. For the last 15, he has tried to point out the coming Communist cyclone, for which he has been variously called an hysterical warmonger and a member of the lunatic fringe. Unfortunately, I was far too right. All you have to do is look at the map. Not only the Middle East, but North Africa also, is a seething volcano. It not only fits together like a jigsaw puzzle; once the pieces are in place our jig is going to be up.

Asia is gone, the Middle East and Suez are breached, and North Africa is going. The Nazis knew what ancient Rome learned the hard way—who controls North Africa controls Europe. For repeatedly stating this, Allen Dulles was regarded as a Cassandra, at best, and a political nuisance, at worst. Having drunk the heady wine of phony security, the lads who wouldn't listen are now trying to blame Dulles for their hangovers. Just to get right to the bottom: London was caught far more flatfooted than Washington, which is neither here nor there. What's here is this: The world is closer to World War III than even the crisis of the Berlin blockade or of Korea.

Again, ironically, if war is prevented it is because the Marines have landed. But thanks to the myopic eyesight along the Potomac, the Marines have been cut to such a point that Commandant Randolph Pate testified only a month ago that they were in perilous shape. If this be true, Secretary McElroy owes an apology—and a resignation—to the Nation. The Congress appropriated the money for the Marines, and the Defense Department simply appropriated the money for themselves. Senator RUSSELL has thundered against this unconstitutional procedure, but the Pentagon is a law unto itself, apparently. The real irony for Commandant Pate is that just 40 years ago today—the 5th Marines broke the Kaiser's own regiment and the Hindenburg Line.

The United States Marines are on more than the shores of Lebanon. They are on the conscience of every American capable of writing to the White House. Instead of 4 divisions and 4 wings, they have 3 skeletonized wings and 3 lean divisions. They may lack strength on Capitol Hill, but we can thank the 49 stars they have it in the Mediterranean.

In this writer's considered opinion, unless the United States Marines are brought up to a minimum of 5 divisions and 5 wings, the Mediterranean is in for its most hectic days since Hannibal. Even as Allen Dulles warned of the hurricane, the wiseacres were cutting down our ability to do something about it. There is only one thing in American history more stupid than sending scrap iron to Japan. That is cutting the only ready force we have—the Marines—to the danger point. Unless this is remedied, even the men who made this tragic mistake won't have to answer for it—because we will have lost a war without even being able to fight it. You don't answer to the Reds: They tell you. In the meantime, all politicos will kick Allen Dulles in the shins because it doesn't cost anything. He's not running for anything and he can't answer back.

There has been a great deal of talk about a summit conference. The reason is that a large number of people believe it could bring peace. But an analysis of the facts indicates the exact opposite. The Geneva Conference was in session when the Reds barged into the Near East. The Berlin blockade was used as a cover for the attack on Korea. The Peace Conference on Korea was used as a cover for the seizure of Indo-China. Every conference to date has been a front for a new basic attack. Suppose the conference reached an agreement. By actual count, Moscow has broken 72 to date. This means it is 72 to 1 that they would break the next one. That's a long shot to take when the country's life is at stake.

It is an axiom that words repeated enough lose their meaning, but facts do not. The 20th century is punch drunk on war headlines—but that doesn't lessen the enemy's wallop. There was a time when the placing of all Armed Forces on Alert No. 1 would have aroused the country to its danger. But even the notice that the Marines have landed, that the Atlantic Battle Force is rushing reinforcements to the 6th American Fleet and that heavy units of Her Majesty's Home Fleet have been moved up in reserve—has failed to awaken the Pollyannas from their dream world. The Commander in Chief has told the Nation we will accept our responsibilities come what may. If that isn't plain American language, what is?

In March of this year, this reporter wrote that the Near and Middle East was reaching the explosion point. If I knew, you can bet Allen Dulles knew and if Allen Dulles knew, so did the High Command. This writer remembers President Roosevelt, under similar attack, exhibiting a letter to him. It was from one of F. D. R's sons, who wrote from the battlefield that he hoped he'd fall in action—so they would stop criticizing his father. Well, Allen Dulles' son is only now recovering from his severe Korean wounds as a result of magnificent courage on the battlefield. What FDR's son offered, Allen Dulles' son paid. That alone should stop the cowardly attacks on the CIA Director. But if that isn't enough, at great risk to his own life, Allen Dulles caused the early surrender of the Nazi armies in Italy—thus saving tens of thousands of American lives.

In any event, it is too late for blame, even if there were any place to put it. The crisis is far beyond an examination of its cause. What we should worry about is its effect. The first lines of defense for this country are Central Intelligence and the United States Marines. Unless they are backed to our hilt, the enemy's hilt will be in our back. It is time the country awakened and armed—really armed. The choice is simple. For America—it's reveille—or taps.

Congress and the Stars

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include an editorial, Congress and the Stars, relating to the new outer-space bill that recently passed the Congress, appearing in the Washington Star of July 18, 1958.

Also an editorial, Up We Go, appearing in the Boston Traveler of July 18, 1958:

[From the Washington Evening Star of July 18, 1958]

CONGRESS AND THE STARS

Now that Congress has unanimously approved the necessary legislation, our country soon will have in operation the kind of organization it needs to carry out, on a high-priority basis, what President Eisenhower has described as "an imaginative and well-conceived space program."

This program will have the following objectives, among others: (1) Increasing human knowledge of the phenomena in the heavens above us; (2) improving the safety, design, and efficiency of aircraft; (3) developing vehicles, manned as well as unmanned, for spatial exploration aimed at promoting the peaceful, scientific progress of mankind; (4) maintaining our country's role as a leader in all such ventures; and (5) cooperating with other nations engaged in the same sort of activities.

As set forth in the new legislation, which contains the substance of Mr. Eisenhower's recommendations, the Federal body in charge of all this will be called the National Aeronautics and Space Agency. It will absorb the existing National Advisory Committee for Aeronautics, and it will continue—and greatly expand upon—the committee's current projects. It will do so under a single Administrator, who is expected to be Dr. Hugh L. Dryden, the NACA's present Director. Working closely with it, in addition to a Pentagon liaison group, will be a nine-man advisory council, including the President, whose decision will be final in any civilian-military dispute as regards the direction and supervision of certain types of spatial undertakings.

Moreover, although the organizational setup of the new agency will have the effect of establishing firm civilian control over such undertakings as a whole, the law specifically provides that the Defense Department will be the boss of all activities peculiar to or primarily associated with development of weapons systems, military operations, or defense of the United States. As far as some projects are concerned, this leaves room for possible controversy between the Pentagon and the projected NASA, but the President's overriding power as arbiter safeguards against disputes of a kind that could seriously impede progress.

Everything considered, therefore, Congress seems to have done an excellent job in legislating to create the new agency and lay the groundwork for far-reaching activity in this all-important field. If the agency itself acts with vision and vigor, our country should be able to hold its own in space as a power second to none.

[From the Boston Traveler of July 18, 1958]

UP WE GO

Congress has cleared the way for United States leadership in the space age this week by creating a new civilian space agency.

It will be known as the National Aeronautics and Space Administration. It will have a nine-man advisory council headed by the President. And its immediate objective will be to propel this country ahead of Soviet Russia in the race for the conquest of outer space.

This was badly needed. Without such an agency, there would be overlapping and conflict between military and civilian space projects, attended by costly duplication of effort.

Now we can move ahead with a minimum of confusion.

House and Senate alike deserve a word of commendation for swift and intelligent action on this.

Arkansas Good Place for Industry

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. GATHINGS. Mr. Speaker, the work of the Arkansas Industrial Development Commission in a growing and expanding State is justly famous throughout the Nation. Arkansas citizens, working from a program expertly devised and operated by dedicated and devoted officials, have joined together to utilize the resources of the wonder State in strengthening the economy of the South by bringing industry into areas originally dependent on agriculture.

The success of this program is indicated by ceremonies recently held in Helena and West Helena to retire some $755,362.70 in bonds provided by the Arkansas Industrial Development Commission in assisting the Mohawk Rubber Co. to establish a plant in the twin cities.

This is but one instance of the work of AIDC. In the first half of 1958 over 32 industrial plants, representing 1 investment of $10 million, have been located in Arkansas.

It is a pleasure to place into the CONGRESSIONAL RECORD the estimate of Arkansas as a site for an industrial plant as stated by Mr. Henry W. Fawcett, president of the Mohawk Rubber Co. Says Mr. Fawcett:

Arkansas is the best State in the Nation for producing consumer goods.

The full story of this impressive ceremony and the rise of industry in Arkansas is well written in the July 16 issue of the Helena World. It is a pleasure to call to the attention of Members the article written by Mr. Jack M. Young, editor of the World. These citizens are building a better State and deserve our commendations.

ARKANSAS GOOD PLACE FOR INDUSTRY, PRESIDENT OF MOHAWK RUBBER SAYS

(By Jack M. Young)

"Arkansas is the best State in the Nation for producing consumer goods," Henry W. Fawcett, president of the Mohawk Rubber Co., told a luncheon meeting at the Helena Country Club yesterday afternoon.

Purpose of the meeting was to hand over a check for $755,362.70 to Withrop Rockefeller to retire a bond issue which helped the company establish its West Helena plant back in 1956.

"I think the members of the Arkansas Industrial Development Commission and those of the Helena-West Helena Industrial Development Corporation are the most dedicated and unselfish men I have ever met," Mr. Fawcett stated.

"When they came to see us in Akron about putting a plant in Arkansas we were greatly impressed and I want to say that the Helena plant has worked out wonderfully for our company.

"We hope to become better citizens of the community and State in the months to come. As of June sales from the local plants totaled over $1,200,000," he added.

Mr. Fawcett then announced that $500,000 worth of new equipment has already been ordered for the West Helena plant and that another million dollars' worth would be installed early in 1959. That would bring the plant to peak production with existing facilities and any future growth would call for additional buildings.

We are calling in the bonds today not because we have refinanced them at a lower rate of interest, but because of our Mohawk wants to make a small contribution to help further Arkansas industry.

Mr. Rockefeller said Mohawk's early payment of its bonds would make the money available for assisting other industries in locating plants in Arkansas.

The check included $368,000 plus interest in bonds purchased by the State board of finance. A $2 million fund established by the legislature for industrial development

loans was all but depleted before Mohawk's payment was made.

In accepting the check, Mr. Rockefeller pointed out that the Arkansas Industrial Development Commission is a continuing cooperative program. "Unfortunately, a lot of towns haven't realized, as you have, that the Arkansas Industrial Development Commission is a cooperative venture. A lot of towns are sitting back and waiting for us to bring them an industry.

"The people of Helena and West Helena saw the problem and did something about it," he continued.

Rockefeller also said he thought the State's population was stabilizing because people like you are providing jobs for young people.

"In talks before university, college, and high-school groups, I tell them that it is worth taking a gamble to stay in Arkansas because we have a great State and the potential is tremendous," he continued.

While praising the work of the Arkansas Industrial Development Commission and of the Helena-West Helena Industrial Development Commission, Mr. Rockefeller said that Jack Taylor, of the Missouri Pacific office in St. Louis is the one who deserves most of the credit for starting the ball rolling on the Mohawk plant. Mr. Taylor was a guest at the luncheon.

Gov. Orval Faubus made a brief talk to open the meeting and pointed out that this area has benefited appreciably from the Arkansas Industrial Development Commission program.

He was high in his praise of State Senator James P. "Doc" Baker, Jr., master of ceremonies, for his work in establishing the Arkansas Industrial Development Commission.

The governor said that as a member of a subcommittee of the Southern Governor's Conference on industrial expansion, he had found out that the Arkansas program was the envy of all the other Southern States.

"The Arkansas Industrial Development Commission and such groups as yours are doing a great job. Some folks say I want to take over all the commissions in the State, but I don't know how I can take over the Arkansas Industrial Development Commission since I appointed all its members," he said in an aside in a political reference to the current governor's campaign.

Governor Faubus then presented Arkansas Traveler Certificates to Mr. Fawcett, Edwin J. Howe and William F. Irvin, all of the Akron office of Mohawk.

Other distinguished guests present included Lawrence W. Angst, plant manager; W. P. Rock, executive secretary, and Charles Shapiro of the Arkansas Industrial Development Commission; Mayor C. Sheffield of Helena and Mayor Walter Shannon of West Helena, local chamber of commerce officials and representatives of press, radio, and TV.

In introducing the guests, Mr. Baker called attention to the work done by Harry J. McCarty, who handled the negotiations with Mohawk, and added that what every Arkansas city needed "is Harry McCarty." Mr. Rockefeller and Mr. Fawcett jointly added an "Amen."

Vain Hopes?

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. ABBITT. Mr. Speaker, the editor of the Richmond News Leader, Mr. James J. Kilpatrick, on Tuesday, July 15, 1958, wrote a very cogent and revealing editorial regarding the present crisis facing the Virginia schools this September. Mr. Kilpatrick is an outstanding editorial writer and has done much to arouse our people to a realization of what is happening to them through Government usurpation of power, including particularly the judicial arm thereof.

Under leave to extend my remarks, I desire to include the editorial which was published in the Richmond News Leader on Tuesday, July 15, 1958:

VAIN HOPES?

In today's Forum, a Negro attorney, in tones of mixed contempt and satisfaction, tells the South to abandon all hope that the Supreme Court's opinion in the school segregation cases ever will be reversed. He charges us with distortion in falling recently to mention a fact so well known that we had not imagined it needed reiteration, that *Brown* v. *Board of Education* was decided by a unanimous court. In the light of that fact, the hope of ultimate reversal, he says, is mere whistling in the dark.

It may be so. But in more optimistic moments (and we have an occasional optimistic moment, despite some dyspeptic opinion to the contrary), we draw hope from example and precept. There is the example of the 18th amendment.

This misguided social experiment was submitted to the States on December 17, 1917. Mississippi became the first State to ratify on January 8, 1918. Within little more than a year, on January 16, 1919, the requisite 36 States had approved the amendment, and it became in actual fact a part of the Constitution of the United States, the supreme law of the land. Subsequently 10 other States accepted the amendment. An industrious statistician, adding up the votes State by State, discovered that in State senates, the vote for the 18th amendment was 1,310 for, 237 against; and in the various lower chambers, it was 3,782 for, 1,035 against—a preponderance of 78.5 percent dry.

The last State to ratify was New Jersey in March of 1922, 4 years after Mississippi had been the first. And we remember once coming across a despairing tract written about this time by an antiprohibitionist, a judge who loved his toddy, who lamented the deplorable truth that now only Rhode Island and Connecticut remained as small islands of hope for the wet. His essay began something like this: "It is absolute folly to imagine that the 18th amendment ever will be repealed. It is supported by overwhelming public sentiment, evidenced by the ratification of no fewer than 46 of the 48 States. Churches, schools, political parties, newspapers, and magazines are universally aligned in its support. This tide of opinion is not to be reversed."

Of course, it was reversed. Over the next 10 years, the people discovered that prohibition would not work; public sentiment shifted completely, and when the Congress submitted a repeal amendment in 1933, the States took only 10 months to wipe the 18th amendment off the books. The count among the States had been 46 to 2 in favor of prohibition in 1922; today the States stand 46 to 2 against it. So when Mr. Martin, 4 years after *Brown* v. *Board of Education*, asserts that it is folly ever to imagine this opinion will be reversed, we say maybe so, and maybe not.

And as for precept, the foes of compulsory integration can seek no brighter example than the precept established by their enemies themselves, the advocates of integration. In 1899, the Supreme Court of the United States, in a unanimous opinion by the former Mr. Justice Harlan, approved the concept of separate but equal schools. Did the proponents of integration give up? Not they. They kept hammering away. But in 1927, in another unanimous opinion, the Supreme Court of the United States bounced them down again. Did they give up? Not they. They felt the court was unanimously wrong, and they kept probing, testing, challenging, litigating; and little by little, in Gaines, in Sipuel, in the McLaurin case in Oklahoma, in the Sweatt case in Texas, their siege tactics proved effective. On May 17, 1954, they claimed a unanimous court for their side.

The NAACP saw no reason to give up after *Gong Lum* v. *Rice* in 1927; they kept up their hopes in a discouraging hour. Well, we see no greater reason for the South to abandon hope after *Brown* v. *Board of Education* in 1954. The South is right in this great struggle, right constitutionally, right morally, right ethnically. In time this right will prevail.

Abandon hope? Give up the battle? Not yet, Brother Martain, not yet. Why, the South has been fighting this opinion for just barely 4 years. It isn't even breakfast time yet. After a while, when the sun gets up, we'll settle down to some real massive resistance.

Determining Contempt

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of July 16, 1958:

DETERMINING CONTEMPT

It is not surprising that the Harris subcommittee rejected Bernard Goldfine's suggestion yesterday that it suspend its hearings until a United States district court decides whether he is required under the law to answer certain questions of the subcommittee which he deems irrelevant. Seeking an advisory opinion of this sort is not the practice among congressional investigating bodies; and a proposal put forward a couple of years ago by Representative KEATING to make it a regular practice was not adopted by either House of Congress. Nevertheless, we do not by any means share Chairman HARRIS' view that the Goldfine suggestion is not reasonable or that it would amount to abrogating the responsibilities of his subcommittee.

In most situations of this sort—in an administrative proceeding or in a grand jury interrogation or in connection with most State legislative investigations—the question whether a witness is required to answer is submitted to a court for adjudication. In point of fact it seems altogether unreasonable to force a man to run the risk of a term in jail for contempt when his refusal to answer is based on an honest conviction that the questions put to him are improper. Mr. Goldfine cannot yield to the Harris subcommittee without waiving his indubitable right to refuse an answer to irrelevant questions; and he cannot resist the subcommittee without placing himself in very serious jeopardy. He ought, we think, to have a definitive determination of the law as it applies to his situation so that he can know what to do.

Since Congress never adopted the Keating bill for advisory court decisions on issues of this kind, it is very doubtful indeed that

the Harris subcommittee could accede to Mr. Goldfine's request even if it wanted to. We do not know how it could submit the question to a Federal court. But the situation simply underscores more clearly than ever, it seems to us, the need for legislation along the lines of Mr. KEATING's proposal. Only a court can make the decision; and only a court is qualified to do so.

The Political and Governmental Situation in Italy

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. SPRINGER. Mr. Speaker, for a number of years Michael Chinigo, a top reporter on international affairs, has been analyzing the political and governmental situation in Italy. No one I know of is better fitted to write on such a subject. He has spent a good portion of his life in Italy and areas adjacent thereto. His analysis of the present situation in Italy is excellent. His acquaintance with Amintore Fanfani gives him an inside picture of not only the personality of this man, but also his psychological approach to the entire question of communism. I felt the House would be interested in having these views of an expert in this field in view of the fact that we are constantly faced with problems with Italy. I append herewith the article in full from the July 13, 1958, issue of the Champaign-Urbana News-Gazette:

FRONT ROW
(By Michael Chinigo)

ROME.—Italy has just tiptoed into phase 3 of her postwar existence.

It could be a momentous phase if successful.

The goal: compression of communism within Italy's borders.

The responsibility, one way or another, rests on the shoulders of Amintore Fanfani, a man big in brains and of even bigger heart. He heads Italy's 19th postwar government.

Fanfani has for years fought alongside such men as Alcide De Gasperi, Mario Scelba, Giuseppe Pella, and Antonio Segni—all Prime Ministers before him—to contain communism.

In the postwar period he so excelled in the diverse ministerial posts that Alcide De Gasperi often pointed to him as the logical successor.

And, when Fanfani was denied parliamentary approval in his first try at the premiership 4 years ago, it was De Gasperi who turned over to him the direction of the Christian Democratic Party which had just emerged from the 1953 general elections defeated and divided.

In the role of general secretary he showered the initiative and energy all Italians recognize to be his in reorganizing the party, building it up into a formidable political instrument and preparing for the general elections of this year in which he won a resounding and unexpected victory.

HAD DESPAIRED OF VICTORY

On the eve of the elections, the fiery Christian Democratic leader, who had visited Adenauer to learn how the German sister party had spun its success, despaired in a victory. Most Italians concurred that a decade and more in power had whittled the popularity of the Italian Christian Democrats and that a slight recession should be expected.

The dramatic turn of events in France produced an amazing shift in the thinking of the impressionable Italian people and a consequent victory for the Christian Democrats in Italy.

Fanfani's campaign platform rested solidly on the slogan: "Progress without adventure."

Translated into simple language that meant that the nationalization of Italian industry would not be undertaken at the expense of private enterprise but only as a complement and catalyst of private enterprise.

The election victory, while surprising, fell short of what it would have taken to give the Christian Democrats absolute majorities in both Houses of Parliament.

Therefore, Fanfani who, as the political strategist of his party's victory, was chosen by the President of the Italian Republic to form the 19th government and had to find allies for a "coalition."

He found his partner in Giuseppe Saragat, leader of the Italian Democratic Socialist party, who has resisted against pressure from many sides to keep his party solidly democratic and supporting the development of democratic processes in Italy.

Though ideologically a Marxist, Saragat has been a frontline fighter of communism and of parties allied to the Red terror.

HOPES TO REALIZE DREAM

Compression of communism has been Fanfani's dream for years.

Now, as premier of Italy, he may be expected to attempt to realize this dream.

That he intends to act in this direction is evident both by his partner in government and the basic lines of his government program which involves further land reforms, huge public works and cheap housing programs, low-cost education to eliminate illiteracy, and other social reforms to give dignity to every Italian.

It appears clear that Fanfani will fight communism not by legal suppression but on the economic front, in which he is a recognized expert.

The reason why his government is labeled as going into phase 3 is because the Italian picture, to date, has been popularly divided into phase 1—that of reconstruction in the immediate postwar years—and phase 2 which involved the disintegration of the conservative parties, climaxed by defeat at the polls last month.

Almost immediate repercussions on the huge Italian labor front have been registered by the naming of anti-Communist Italian labor syndicate's top man Giulio Pastore to the post of minister for the south of Italy and other depressed areas.

It is the first time in Italy's history that a labor union leader has been given government responsibility.

It is obvious that the anti-Communist war will find action on the labor front where communism has its mammoth strength.

Parallel with action on the labor front will be moves to cause the Italian Socialist Party to break completely away from the Italian Communist Party and unequivocally declare itself for democratic processes of government.

This Italian Socialist Party, headed by Pietro Nenni, has been a sore-making thorn on the growth and stability of Italian democracy since the end of World War II.

RETURNED STALIN PEACE PRIZE

Nenni has flirted with the idea of breaking with communism several times. At one point, after the Hungarian bloodbath, he returned the Stalin Peace Prize which had been given him shortly before Stalin died. But when the chips were down, Nenni always seemed to fear the reaction of what he calls "the masses of labor" and he always returned to the fold of pacts and fellow-traveling collaboration with the Italian Communists.

If the action on the labor front by Minister Pastore is successful, Nenni's residual hesitancy may fall and he may break with local Reds and consequently strengthen the anti-Communist democratic forces.

The public-works, low-housing and other programs scheduled by the Fanfani government are going to cost money. The conservative Liberty Party is already saying that Fanfani will have to float a national loan, seek a foreign loan * * * or both.

The Eisenhower administration and the United States Congress is offered an opportunity to support the efforts of Amintore Fanfani and his coalition government.

Fanfani has elected to retain for himself the Ministry of Foreign Affairs.

This, first of all, is intended to assure the Western powers that Italy will continue its full solidarity with the West.

It is meant to serve notice, however, that Italy will expect a more important role in international councils.

CHOOSE SEGNI AS AID

Fanfani has chosen to have as his closest collaborator former Premier Antonio Segni who has the Defense Ministry as well as the title of Vice Premier.

This will enable Fanfani to dedicate a good deal of his time and energy to international affairs and make visits to the principal western capitals.

Washington should lose no time in inviting Fanfani to visit the United States officially.

He was invited by both the Republican and Democratic Parties and attended their conventions before the last American elections.

To his closest friends Fanfani admits he "learned much" about political party organization and political moves in his United States stay. Lessons he put to good use in his own party and in the Italian political arena resulted in his recent electoral success.

Proud Italian, Fanfani will not be a beggar. But he will appreciate moral and financial support.

Outspoken champion for a United Europe, he may be expected to speed the rusty gears of nationalism with the oil of intelligence and enthusiasm and help build up the European defense against communism.

Establishing Rules of Interpretation for Federal Courts Involving the Doctrine of Federal Preemption

SPEECH
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1958

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 3) to establish rules of interpretation governing questions of the effect of acts of Congress on State laws.

Mr. JACKSON. Mr. Chairman, I repeat again today what I said on yesterday, that it is perhaps presumptuous for a layman to enter into a legal contro-

versy such as the one we are hearing on bill H. R. 3. However, I suspect there are a lot of laymen in this country who have an intense interest in the measure and who are very much concerned over many things of a judicial nature which have transpired in the recent past.

There has been and is an increasing and massive concern throughout this country relative to some of the recent decisions of the Supreme Court. I agree that the Supreme Court, as an institution, is deserving of the respect and the reverence of the American people. However, I do not agree that everything done by the Supreme Court is per se perfect. One need not stand in wondrous awe at every decision that is handed down by that esteemed body to reflect respect for the institution. Recent decisions of the Court have, in the opinion of many, struck at the very fundamentals of State government.

I propose to discuss briefly two instances, without respect to whatever constitutional issues may have been involved because, in my opinion, this entire matter must be taken in context of the whole rather than in its separate parts.

I certainly agree with the gentleman from Georgia [Mr. FORRESTER] that we cannot take a piecemeal approach to a problem which is not piecemeal in its essential nature. I, too, am interested in Pennsylvania. I am interested in New York, New Hampshire, and in the several other States which have been made the subject of some of the recent decisions of the Supreme Court. But I am, however, primarily and fundamentally interested in California. I want to discuss two cases very briefly and you will forgive me if I do not do so in the proper legal terms. I shall not quote precedents. I shall not quote many of the things a lawyer would quote. But, I think in discussing these cases, I will quote only the concern which has been evidenced to me by many hundreds of the people I represent.

Mr. COLMER. Will the gentleman yield at this point?

Mr. JACKSON. I am very happy to yield to the gentleman from Mississippi.

Mr. COLMER. I was interested in the gentleman's observation to the effect that he was interested in all these States, but that he was particularly interested in the State of California. I do not think it is a secret that an attempt will be made under the 5-minute rule to limit this bill to take care of just 1 case in 1 State. I am sure, in view of the gentleman's statement, that he agrees with me that the bill should be left intact so that it would cover all of these situations; and that will dispose of the broad question in one bill rather than having to take a half dozen bites at this problem.

Mr. JACKSON. I am in complete agreement with the statement made by the gentleman from Mississippi. I will most reluctantly oppose the amendment, which I understand is to be offered in due course. I say again—this is not a piecemeal problem, and we must seek an answer which will deal with the problems of tomorrow. The answer must meet situations which have not yet developed and decisions which have not yet been handed down. I am in complete accord with the premise contained in the amendment which I understand is to be offered by the gentleman from Pennsylvania [Mr. WALTER]. I think the Congress should do something with respect to the Steve Nelson case. However, I do not believe that the proper place for that action is in the legislation presently under consideration.

A few months ago in the State of California, an applicant appeared before a committee of the bar examiners of the State of California; a group delegated by statute the authority to inquire into the moral character of applicants for the California bar. The man's name was Raphael Konigsberg. Mr. Konigsberg first came to the attention of the House Committee on Un-American Activities when he was identified under oath by two witnesses—one in open hearings and one in executive session—as a past member of the Communist Party. He refused to answer any questions as to his alleged membership and availed himself of the provisions of the Fifth Amendment. Mr. Konigsberg subsequently made application for admission to the California bar and after the most careful and searching inquiry by the committee of bar examiners, it was held that he had not established the proper moral character for admission to the bar in light of his declination to answer any questions put to him by the bar examiners relative to his alleged membership in the Communist Party.

In a very excellent dissent to the majority of opinion of the Supreme Court the point was made by Mr. Justice Harlan, who was joined by Mr. Justice Clark, that the action of the majority, struck down the right of a State to establish certain criteria for admission to the bar.

Perhaps this is only on the fringe of preemption, but certainly there is an element of preemption when the Federal Government or when a Federal court restricts in that manner the capacity of a State agency operating under the laws of the State to establish the criteria for membership in the bar association.

Obviously, this doctrine if carried further, and it could logically be carried further, would make it impossible for a private employer to refuse to employ a man who declined to tell him whether or not he was a member of the Communist Party. Here, I think, is inherent the proposition that the State as a community must have the right to protect itself, to protect its institutions, and to protect those things which have traditionally fallen within the area of State jurisdiction.

Mr. ROOSEVELT. Mr. Chairman, will the gentleman yield?

Mr. JACKSON. I yield.

Mr. ROOSEVELT. I am not a lawyer, but I would like to know whether in the gentleman's opinion that decision would be affected by H. R. 3, which we are now considering?

Mr. JACKSON. I would say to the gentleman that perhaps it does not go directly to it, but I think it is on the fringe. Certainly there is a preemptive process when longstanding custom and usage have been struck down.

Mr. ROOSEVELT. The reason I raise that point is that it seems to me the case the gentleman cited bears upon a constitutional right which is not inherent in H. R. 3. I would appreciate it if one of the lawyers here would enlighten me.

Mr. KEATING. Mr. Chairman, will the gentleman yield?

Mr. JACKSON. I yield.

Mr. KEATING. On that I would like to say to the gentlemen from California, whose districts adjoin, and who may from time to time differ in their ideologies, but who, I understand, hold each other in high regard, as I do both of those gentlemen, that this bill would in no way affect the decision which the gentleman from California is now talking about.

Mr. JACKSON. I suggested the possibility that it was on the fringe.

Mr. KEATING. The gentleman said it was only on the fringe. I would suggest the outer fringe of this legislation.

Mr. JACKSON. Outer or inner fringe, the fringes are also of concern to the people.

Mr. SMITH of Virginia. Mr. Chairman, will the gentleman yield?

Mr. JACKSON. I yield to the gentleman from Virginia.

Mr. SMITH of Virginia. I would like to say to the gentleman from California that I have had communications from citizens of California who are very much disturbed, who are interested in the passage of this bill as is, to care of their water rights, because they are disturbed about what is going to happen unless such legislation is passed with respect to their water rights in the State of California.

Mr. JACKSON. I think that aspect of the entire matter is a very important one indeed, not only to the people of California but also to the people of all the western States who are confronted, and have been confronted, with these tremendous problems with regard to water.

The second case, and I will preface this for the benefit of my colleagues, may also not be precisely to the point of the legislation under consideration; but again it demonstrates what I, for one, consider to be a dangerous doctrine, the doctrine that the civil rights of an individual who is or has been close to the Communist conspiracy, that his civil liberties and his civil rights are more important that the collective security of the American people. I submit that is a dangerous concept.

The second case recently decided in the Supreme Court—reversed—grew from an act of the California legislature requiring a loyalty oath, requiring organizations and individuals who were to obtain certain tax exemptions to submit an affirmative statement that the organizations were not dominated or controlled by the Communist Party; and wrote the same obligations substantially on an individual. Several organizations including, I regret to say, the First Unitarian Church of the city of Los Angeles, refused to sign the loyalty oath and the matter entered into litigation.

Before I go further with this case, I should like also to point out that the minister of the First Unitarian Church of Los Angeles appeared before the House Committee on Un-American Activities on September 12, 1951, and refused to answer any questions having to do with his alleged participation in the Communist conspiracy.

In answer to a question by Mr. Wheeler, staff investigator:

Are you a member of the Communist Party, Reverend Fritchman?

Reverend Fritchman answered:

I decline to answer on the ground that it may tend to incriminate or degrade me and violate my privilege under the Constitution, and especially under the fifth amendment. I have answered this question previously.

Mr. Chairman, this church was one of those refusing to sign the oath. It went through several courts and in due course reached the Supreme Court. The Supreme Court, in reversing the lower court, stated that it was not proper for the State of California to grant these tax privileges to certain groups and to refuse to grant them to others only because certain questions of this kind were not answered. I contend this very definitely is an infringement on the right of the State and the State legislature to set up certain standards in granting a privilege, the privilege of a tax exemption.

These 2 cases are only 2 of a great many which have recently served to cause consternation, concern, and alarm from one end of the country to the other.

H. R. 3 was started on its way through the legislative processes. I said on yesterday that the progress has been a reluctant one as the bill has inched its way forward from the time of its introduction to the present time. It is not a popular bill, it is not a bill which can be hailed with great enthusiasm; it is a bill which many of us regret, that finds itself before us today. But the stern realities of a world in turmoil and dissension, the continued aggression of the Communist conspiracy on all fronts, have dictated again to us the responsibility to meet realities with appropriate action as necessity dictates. This slow progress of H. R. 3 has been given the needed emphasis and impetus by criticisms from the American Bar Association and other legal advisers.

National 4–H Group Has Served 2 Million

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. McINTIRE. Mr. Speaker, in insert in the RECORD an article on the National Committee on Boys and Girls Club Work, which appeared in a recent issue of the Aroostook Republican, a weekly newspaper in my congressional district.

This article is important to me because 4–H Club work in the State of Maine is truly a dynamic function, as is borne out by the following details on 4–H performance in my State for 1957. As a former 4–H Club leader, I am indeed proud of Maine's record:

Participating 4–H Club members produced over $500,000 worth of goods in various operating projects, with a Nation-leading project completion rating of 97.7 percent.

During the State of Maine dairy show, 445 4–H cattle were exhibited, and this program continues to expand each year.

Under the 4–H poultry program, 7,250 broilers were raised, an increase of 1,150 over the previous year.

There were 5,442 4–H Club meetings held in the State, with 70,296 persons in attendance.

Public demonstrations were given by 2,399 4–H teams.

A total of 10,074 exhibits was given at fairs, and fair associations awarded $19,795.85 to 4–H boys and girls.

Four of Maine's 4–H Club members won national 4–H scholarships of $400 each.

The article initially referred to follows:

[From the Aroostook Republican]

NATIONAL 4–H GROUP HAS SERVED 2 MILLION

The only organization of its kind in the Nation has completed 36 years of service to 2 million boys and girls enrolled in more than 90,000 4–H clubs throughout the 48 States, Alaska, Hawaii, and Puerto Rico, according to the annual report.

This unique nonprofit agency is the National Committee on Boys and Girls Club Work with headquarters in Chicago. President Dwight D. Eisenhower is honorary chairman. Up until May 1 of this year, the committee had been headed by Guy L. Noble, one of the founders who is now retired. His successor is Norman C. Mindrum, former director of the National 4–H Club Foundation. Kenneth H. Anderson is associate director.

The committee's principal function is to assist in furthering 4–H Club work through cooperation with State and Federal extension services of the USDA. Over the years it has obtained financial support of business and philanthropic interests that has provided funds for 4–H awards and expenses involved in program operations.

During the last fiscal year an all-time high of $900,000 was dispersed by the committee, the report announces. A total of $123,782 was used for training 15,851 adult 4–H leaders. College fellowships and scholarships totaling around $93,000, plus more than 1,000 expense-paid trips to the annual 4–H Club Congress in Chicago, were awarded to State and national champions.

The report also points out that the committee produced and supplied free of charge to State 4–H Club offices nearly 4 million copies of printed educational material pertaining to 52 national and regional 4–H award programs.

In addition, the committee publishes a monthly 4–H Club magazine, and maintains an information department which handles 4–H publicity on a nationwise basis. Through the mail-order supply service, the committee sells 800 different 4–H items to club members.

A 12-member board of directors backed by 19 official members of the committee are responsible for the corporate affairs. These are public-spirited citizens who volunteer their time and talents. Besides the director and associate director, the committee has on its staff 14 professional men and women assigned to specific jobs. Total employees number around 50.

Freedom of the Press and Reciprocal Trade

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to include, for the information of my colleagues, an article by O. R. Strackbein, chairman of the Nationwide Committee on Import-Export Policy, on the recent legislative battle to amend our trade policy.

The article has to do with the part the press of the Nation played in their biased judgment of the need for facts not propaganda in presenting the purpose of this legislation which would revise our trade policies.

Mr. Strackbein's article follows:

FREEDOM OF THE PRESS AND RECIPROCAL TRADE

(Statement of O. R. Strackbein, chairman, the Nationwide Committee on Import-Export Policy)

Freedom of the press, a principle that nurtures the very heart of democracy and is the hope of free people, has been sullied and subverted ignominiously by the great metropolitan press of this country in the congressional battle over the reciprocal trade program.

Never was this fact made more obvious and obtrusive than during the current legislative battle that began nearly 6 months ago. It has been a shameful thing to behold, a cynical negation of the very principle that gives the press any reason for being other than moneymaking and shallow entertainment, on the level of a noisy merry-go-round.

Freedom of the press is presumed to offer a medium for the spreading of truth rather than its suppression, for balanced presentation of public issues that divide the people rather than biased and distorted versions of what is said or written.

Freedom of the press becomes nothing better and indeed something much more dangerous than sordid commercialism in politics if it is debased and used as an instrument of out-and-out propaganda or a medium for blinding the public rather than enlightening it.

The predominant press of this country has been guilty of exactly this sundering sin in presentation to the Nation of the issues involved in the extension of the reciprocal trade program.

It has—

(1) succeeded in withholding almost completely from the public the facts and the reasoning that support the opposition to the particular bill proposed by the executive branch of the Government;

(2) accepted and disseminated uncritically exaggerated estimates and highly dubious declarations from public figures, Cabinet members, subcabinet officials, and other spokesmen who favor the program's extension, perilously close as these exponents of the program have come in point of integrity and dignity to the level of carnival barkers and racetrack touts;

(3) given currency to speeches, handouts, and opinions that support the Government's position, after the manner of a subservient press in a dictatorship, while failing to report what has been said or written by the opposition, except in fragmentary form, with sentences often set out of context to give them absurdity or a color of extremism, with

the undoubtable purpose of discrediting the sources;

(4) displayed on front pages and in slanted headlines the proclamations and arguments and interpretations of supporters of the trade program, or highlighted favorable events and buried others, engaging for the purpose of promoting the trade program the highest talents of cartoonists and virtue-breathing editors, while perverting news columns into veritable replicas of the cartoons and caricatures;

(5) dissolved the faith of many who had regarded the press with respect and pride and replaced it with shame and the deepest reget;

(6) and perhaps worst of all has used its concealed position as a party in interest as a base from which to launch its poison-gas attack.

The importation free of duty of the many hundreds of millions of dollars' worth of newsprint and woodpulp used by the newspapers in this country is something that the newspapers owe, for its preservation, to a duty-free binding agreed to in two trade agreements; and the gratitude shown by the press for this favor engineered by the State Department 20 years ago is a wondrous tribute to the power that government can gain over the souls of men, purportedly free and honorable, when it knows the chemistry and biology of gratitude.

It is obviously a matter of the bleakest indifference to the great metropolitan newspapers, beneficiaries of the favor, that neither the President nor the State Department can properly bind any item on the free list, since determination of the free list is a function of Congress. To agree with a foreign country that no duty will be levied henceforth is to place Congress in a position of international outlawry if it nevertheless legislates its will and breaks the agreement.

That this conflict between the Congress and the Executive is at the very heart of the present battle over the trade-agreements program has in no understandable way been given to the public by the press—not that the facts have not been given directly to the press or before congressional committees where the press was present in profusion.

Not at all. The selectivity of the press in deciding what is news is the greatest loophole for escape from principle and impartiality yet invented by a self-serving and self-justifying estate. Through that loophole, anything can crawl, and when pressed usually does.

It is evident that the great metropolitan press cares for the Constitution only (1) when its invocation is expected to help or promote or defend the press; (2) when it can use the Constitution in behalf of an editorial position or against someone in opposition.

It quickly forgets that document and reacts with annoyed silence when its invocation would be inconvenient or would aid and abet the position of any group or cause regarded as contrary to the aspirations of the editor and/or publisher.

In the matter of the trade-agreements extension bill currently before Congress, the great metropolitan press has shrieked, not only editorially and through caricatures, but newswise, against sensible and moderate alterations of the program honestly designed to bring its administration back within the channels of the Constitution. It has embiazoned the intemperate words of those who purport to be appalled by the action of the Senate Finance Committee and virtually smothers all that has been said in good reason for the committee's amendments. It has thus presented to the American people a profoundly false image, a distortion and blurring of reality so gross that only dismay and shame can respond to the degradation of the noble principle to which the great metropolitan press professes so cynically to adhere.

The blame does not fall upon the newswriters. They owe their employment and, therefore, their livelihood to carrying out assignments and orders. What they write is not always printed or printed as written.

The sin, profound and inexcusable, except on the theory of almost complete ego blindness, lies predominantly elsewhere. For the good of the country, a diffuse goal so often and, oh, so feelingly invoked by the great editors, this sin should be rooted out. It is unbecoming of any newspaper that lays claim to the least effort to be worthy of the freedom that is so fundamental to the yet broader freedom of all,

Landing of Marines Holds No Cure for Mid-East Ills

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including a very fine editorial which appeared in the Nashville Tennessean under date of July 16, 1958, concerning the Middle East situation and the necessity for President Eisenhower to fall back on the United States Marines.

On July 18 I placed in the RECORD an editorial which appeared in this same newspaper with regard to the Iraq coup and the grave decision which faced our President. The following editorial, concerning the President's decision to call on the Marines, points out very clearly the need for a new outlook of our Middle East policy.

The editorial follows:

LANDING OF MARINES HOLDS NO CURE FOR MIDEAST ILLS

Faced with the collapse of his self-defeating Middle Eastern policy, President Eisenhower has fallen back on the United States Marines.

Five thousand of these fighting men have been landed on the shore of Lebanon as a result of the Iraq nationalist coup, for the avowed purpose of safeguarding that country and protecting American lives. In addition to this the great Atlantic Fleet is in a state of alert.

Marine diplomacy is all that is left when statesmanship fails, but there is a realization in Congress and throughout the Nation that it is only a stopgap and not the answer to the surging tide of Arab nationalism which the Eisenhower administration has misjudged and mishandled.

In the light of the situation which now confronts him, the President has chosen to bolster up a friendly Arab Government whose people could be expected to follow Iraq's example, thereby precipitating a rush by other nations to join the movement.

The marines, it is said, will hold on until the United Nations takes over, which recalls the opening phase of the Korean war, but there will naturally be strong opposition, by Russia and others, to United Nations participation in this crisis. In any event, the future is uncertain, and the President will be fortunate if he is able to withdraw these forces within a reasonable time and before more damage is done.

Before any progress can be made, negotiations with President Nasser will be necessary. And they will hardly be successful unless the Eisenhower administration, whose mistakes catapulted Nasser into his present position of power, alters its present divisive stand as related to the Arab world.

Assuredly, we in the United States do not want to see the Middle East move fully into the Soviet Russian orbit, but signs point to the fact that this Moslem population has not yet done so. To push it in that direction would be a terrible blunder.

There is abundant proof that Arab nationalism and Arab aspirations are very real, and it is a matter of regret that the United States did not take this into consideration before the curt withdrawal of aid for the Aswan Dam in Egypt. At that time, the State Department, influenced by Mr. Herbert Hoover, Jr., who was then Under Secretary of State, decided to teach Mr. Nasser a lesson by repudiating the promise of aid for construction of the dam.

So brutal was the manner in which this was done that the Egyptian leader defied the West and seized the Suez Canal, thereby becoming the Arab world's hero. And ever since, in defiance of its own Middle East experts, the State Department has confounded its folly.

No wonder, then, that the cry arises anew from sober leaders in Congress for new policies which will embrace the understanding that the tide of Arab nationalism cannot be dealt with in a negative way, and that the original program of dealing with it in an understanding manner must be restored.

As a matter of fact we cannot hope to make Arab nations stand up and be counted on our side, and we cannot afford to be put in a position of justifying the term "imperialists" in many quarters.

Nationalism is an idea which is not going to be suppressed by armies or fleets or airships.

We cannot control events in the Middle East by force or dollars, but we may influence them by wise policies which have been so noticeable by their absence in late years.

In this crisis the Baghdad Pact, of which we are not a member although Mr. Dulles was a leading figure in its organization, has not been invoked because the pact is as dead as a doornail. Nor has the famous Eisenhower doctrine played any part, for it is not applicable.

So we call on the able marines as we face the need of a fresh outlook, as it is termed by Chairman FRANCIS GREEN, of the Senate Foreign Relations Committee. Other thoughtful Senators of both parties see this immediate need, and are willing to help.

The Eisenhower administration, as it gropes for a way out of the dismal fog which has enveloped its handling of the changing Middle East, should welcome such assistance and enlightenment.

Enemy Assets Seizure During World War II

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. CUNNINGHAM of Nebraska. Mr. Speaker, it is time for Congress to act in the matter of enemy assets seized during World War II. The administration has

proposed action by Congress giving primary attention to the small assets. There are many German nationals who are living on relief because this Nation has failed to act—in 13 years since the end of World War II—on this basic question.

It is time for this Nation to set the record straight and let the world know that we do not condone seizure of foreign assets by this Nation or any other nation. We are joined now in our efforts to contain communism by the people of Western Germany yet we continue to hold the assets of many of these people who desperately need what income they might get from these holdings.

We can note that it has been a year since West German Chancellor Konrad Adenauer had discussions at the White House on this and other subjects. Following that conference, the White House issued a statement expressing deep concern over this problem of disposal of enemy assets seized during World War II. The statement pointed to the historic American policy of maintaining the sanctity of private property even in wartime.

There are many proposals before Congress for the return of these seized assets. This matter is a strain on our relations with the people of West Germany, who stand with us now in fighting communism and in opposing those nations who espouse seizure of private property.

Indicative of the feeling of the people of West Germany toward this problem is the following resolution, which was passed by the Bundestag on an appropriate day—July 4, 1958.

This resolution urges the Federal—Adenauer—Government as follows:

First. In the settlement of the problem of restoration of German private property confiscated in the United States of America, to continue emphatically to aim at the preservation of the principles of the White House declaration of July 31, 1957, according to which private property should be inviolable even in time of war.

Second. Bearing this point in mind, to turn its special attention to the bill announced on July 3, 1958, under which the confiscated German assets should be used only to satisfy American claims for war damages. The passage of such a bill by the American Congress would constitute a complete breach of the promise made on July 31, 1957, of a just and fair compensation of German property owners.

False Economy

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. NEAL. Mr. Speaker, why should the Army convert heating plants at Fort Eustis, Va., for use of oil in preference to coal at a cost of $800,000 or more when available coal is abundant at reasonable cost, when American miners and transportation employees are losing their jobs, and when a great part of the fuel oil has to be imported from abroad?

The unfortunate impact of imported residual fuel oil in the amount of 93,822,000 barrels during the first half of 1958 has displaced the equivalent of 22,514,900 tons of American coal.

Without coal, World Wars I and II would have been lost. Without markets to keep mines in condition to produce America's fuel supply in case of national emergency, the country will suffer.

Federal agencies and the Defense Department, by converting coal burners to oil, are encouraging the risk of fuel shortages that may result at any time from unpredicted developments abroad. The Nation's security dictates that coal mines be kept in condition to meet emergencies.

The Federal Government should cease to tolerate excessive imports of fuel oil to compete dangerously with coal. When the coal industry is hanging by a thread, it is obvious that further inroads on coal's markets should be avoided. Conversion of defense plants to fuel oil is not only unjustified but untimely.

On a High Plane

EXTENSION OF REMARKS
OF
HON. A. D. BAUMHART, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. BAUMHART. Mr. Speaker, under the leave to extend my remarks, I would like to place in the RECORD an editorial which appeared in the June 20 issue of the Lorain Journal, an outstanding daily newspaper located in the 13th Congressional District of Ohio. As a preface to this editorial, I desire to make a few personal observations.

First, I feel that the subject is timely in light of the labor legislation presently under consideration in Congress. Secondly, it appears that many people are all too eager, as a result of recent disclosures of elements of corruption in certain national unions, to label any form of unionism and union activity as corrupt.

Labor unions since their beginning have played a vital and ever increasing role in our American economy, and like any other similar organization, government or industry whose existence is based on human endeavors, they are subject to the same elements of human frailties. I firmly believe, and have indicated on many occasions, that wherever corrupt and illegal procedures are uncovered in union operations, they should immediately and effectively be stamped out. However, when we witness a sterling example of efficient and democratic union activity, I feel it is no more than proper that it should receive equal recognition.

Another message of corresponding importance conveyed by the editorial is the example of active participation on the part of this union's membership. Operating under the same democratic election principles that are employed throughout our country, the majority of the union's members turned out to support the candidate of their choice. A similar percentage of expressed convictions on the part of our Nation's electorate in local, State, and National elections would be gratifying indeed.

The editorial from the Journal follows:

ON A HIGH PLANE

To members of United Steel Workers, local 1104, the change in the union's leadership brought about by the voting on Tuesday rates as the outstanding feature of the election.

To others, who have no connection with the union, the most impressive feature was the orderly, democratic manner in which the election was conducted.

Campaigning by three slates of candidates was spirited, rivalry was intense and at times tempers ran high.

Yet in spite of the keen competition in a voting contest that was almost as large as some city elections, there was never at any time before or during the balloting the slightest hint of intimidation or misconduct. Union members went to the polls confident that their vote would be counted as cast.

Out of 9,700 eligible, 5,035 union members voted. This compares with a total vote of 5,702 on an important public issue, the 6-mill school levy, in the recent primary election.

Lest the supposition might be raised by this comment that the orderliness of the union balloting this week was unusual, it should be pointed out that fair, democratic elections by local 1104 are the rule, not the exception.

Comparison Between State and Federal Taxes

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 12, 1958

Mr. BOW. Mr. Speaker, under leave to extend my remarks, I offer an address on taxes delivered by Jack S. Roesch, of Massillon, Ohio, over radio station WTIG in that city. He offers an interesting comparison between State and Federal taxes and a very reasonable conclusion.

Today, I am going to talk about an unpleasant subject.

I believe most of you will agree it is unpleasant.

The subject is taxes.

Every one of us has to pay taxes, and no matter how patriotic we may be—no matter how civic minded we may be—we are never exactly overjoyed at the prospect of paying them.

I don't intend to complain about taxes.

I'm not even going to say they are too high.

But I am going to make some comparisons between the taxes we pay to the Federal Government and the taxes we pay to our State and local governments.

I think we all know that it is impossible to make exact comparisons.

This is because there are so many so-called hidden taxes.

Taxes that are concealed in the price of almost everything we buy.

I think we can leave these hidden taxes out of our comparison—partly because we are not conscious of paying them and partly because they probably tend to cancel each other out—since some are State and some are Federal.

We have to start somewhere with our comparison, so I am going to assume that the man we are talking about has a wife and two children and that this family's income is $6,000 a year.

This family will pay Federal income tax of $600 per year under present rates.

Now, let us try to figure out what this same man pays in State and local taxes.

This is not quite so easy to figure.

Maybe we can arrive at it this way.

There is an old rule which says that a man should not buy a house which costs more than 2½ times his annual income.

Our imaginary man makes $6,000 a year and 2½ times this amount is $15,000. So let's say his home cost $15,000. This means—at least in Stark County—that his home would have a valuation for tax purposes of about $7,000.

But let's make it high so nobody can say we have deliberately made the local taxes seem low.

Let's say his home has a tax value of $10,000.

The real-estate-tax rate this year in Massillon is $25 per $1,000 of valuation, so this man's real-estate taxes would be $250.

But he also pays other State and local taxes.

The most important of these is the sales tax. This amounts to 3 percent.

If we assume that this man spends half his income—or $3,000—for things subject to sales tax, he would be paying $90 sales tax each year.

Actually, this figure is probably high because the Internal Revenue Service figures that a man spends only an average of one-third of his income on merchandise subject to sales tax instead of the one-half we have estimated.

So let's add $90 to the $250 we already have for real-estate taxes—making a total of $340—and we are still being generous.

Now just to be on the safe side let's add another $60 to take care of miscellaneous State and local taxes like gas tax, cigarette tax, auto license tax, and so forth. By doing this we are being more than fair because the Federal Government gets more taxes from cigarettes than the State and it also taxes gasoline, cosmetics, jewelry, liquor and a host of other things a great many of us buy and use—and at a rate usually better than three times as much as our Ohio sales tax of 3 percent.

So let's add $60 more to the local and State tax bill and this gives us a grand total of $400.

Four hundred dollars for State and local taxes compared to $600 for Federal income tax alone.

As I said before, this is only a rough comparison. A man with a lower income or more dependents would pay less Federal income tax, of course, but his local and State taxes would also decrease.

As a man's income increases, however, his Federal taxes will increase, but this increase in most cases will be much greater in proportion to his increases in local taxes.

A man in business, of course, would have a different comparison, but I don't think we can be accused of being unfair if we say that on an average most people, like our imaginary man, pay about $3 in Federal taxes to every $2 they pay in State and local taxes.

I can almost hear some of you asking, so what?

So I'll ask the question myself, so what?

So what if we do pay half again as much for Federal taxes as we do for State and local taxes.

I don't say that I can give you a completely satisfactory answer to the question, but I believe I can give you a few things to think about.

Let's start out by considering what we get for our tax dollars in each case.

In the case of Federal taxes our dollars are being spent for national defense—over half goes for this purpose or things related to it.

They are being for foreign aid.

They are being spent for surplus farm commodities.

They are being spent for interest on the national debt.

They are being spent for flood control and reclamation projects.

I could spend a half hour going into detail about what we get for our Federal tax dollars.

Now what do we get for our State and local taxes?

First of all we get schools—and we get good schools. I shall spend some time telling you how good they are in a later broadcast. They many need some changes, but in spite of all we've been hearing I still think we're doing a better job of education than the Russians.

We also get police and fire protection, streets and roads, health protection, traffic control, sewers, parks, playgrounds, and many other things which are important to us in our daily lives.

Now I don't want to give you the wrong impression.

I'm not trying to tell you that the things we get for our Federal taxes are less necessary than what we get for our local taxes.

Many of the things we get for our Federal taxes are absolutely necessary.

But so are the things we get for our local taxes, and these things affect us more in our everyday lives.

The peculiar thing about it is that even though we probably spend $3 in Federal taxes to every $2 we spend for local taxes—we do much less—as individuals—to try to lower our Federal taxes than we do to try to lower our local taxes.

How many of us ever complain to our Congressmen or Senators about Federal spending. Oh, yes, we grumble in a general way, but how many of us wrote to Congressman FRANK BOW to congratulate him for helping to save millions of dollars in foreign aid expenditures recently. Yet in the same week I saw an editorial congratulating our city council for saving $300 by not sending the fire chief to a convention. As a matter of fact the fire chief might learn quite a bit about new methods of saving lives and property at that convention.

Many of us scream to high heaven at the mention of a city income tax, which in no case could cost our imaginary average taxpayer more than $60 a year on a $6,000 income and more often than not we vote against tax levies and bond issues for schools and for necessary city expenditures.

A couple of years ago we almost defeated a renewal of a recreation levy which costs our imaginary average taxpayer about $2 a year, but we scarcely give a second thought to a proposal to increase Federal expenditures by a billion dollars, and a billion dollars means more than $6 for every man, woman, and child in the whole United States.

I wonder if it isn't about time for us to get our thinking straightened out.

Even if we can't get those obnoxious taxes reduced, I'm willing to bet that if we could shift things around to where we were paying $3 for local taxes to every $2 we spend for Federal taxes we'd be getting a great deal more for our money and we'd have a whole lot more say-so about how those tax dollars are being spent.

Congress Should Establish Ground Rules for Admission of Alaska Into Union

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1958

Mr. DENT. Mr. Speaker, the time has come for the President and Congress to establish some ground rules for admission of Alaska into the Union; the design of the new American flag is of utmost importance.

The President, both political party platforms and many of the congressional bodies have expressed themselves in favor of Hawaiian statehood.

With this in mind, we can ill afford millions of dollars in new flags with 49 stars if there is a reasonable assurance that within the next few years—2-year period—we will have to add another star.

In my humble opinion, we should add a star to the present constellation in our flag as a temporary yet authentic recognition of our newest and potentially one of our brightest stars.

I would simply provide for the sale and distribution of a single star to be added to the top red bar next to the field of blue. It could be sewn or ironed on every flag in America in the matter of minutes.

This could be official and remain so for a period of a few years, giving the next Congress and the next President time for a decision on Hawaii.

As a further thought I would suggest an immediate program of construction and repair to the Alaskan Highway and Government-sponsored ship and airline excursions for the period between now and the day of the official admission ceremonies.

The entrance of Alaska as a sister State into the Union is no small matter. It is a matter of great importance to this Nation, and the whole world; militarily, economically, and geographically it spells a milestone in world history. This Nation, the United States, has for the first time become a united yet detached Nation. The future alone can tell how far this will carry us in our search for peace, prosperity, and the welfare of not alone our northern country, but in fact, the nations of all the world.

With all of the empire nations of the world contracting and troubled with demands for colonial freedom and independence, this Nation finds itself beseeched and petitioned by our protectorates and Territories by demands and prayers for admission to the mother family politic.

In this age of materialistic greed and atomic pitfalls this represents a modern phenomena.

Why? I have not the full answer and maybe my answer is no answer at all, but I believe that it is because here in the United States, we have found a way of life in which all of the peoples, the creeds, the religions, the colors and nationalities can live together, sharing our

prosperity and recessions, our joys and sorrows, our smiles and tears.

I know the propaganda of our communistic counterparts in government. They point to our problem of integration and segregation.

Can anyone observing as an impartial observer fail to realize that in this country in spite of some regional differences in method and approach the American Negro has achieved through efforts greater franchise, greater recognition of their demand for personal liberty, and true equality, more than even the highest-born Communist in Russia or any of its satellites?

Could a Russian Communist condemn, criticize publicly his elected officials, his government? Could he make demands for better working conditions, better schools, better housing and equality in the polling place?

We admit to many imperfections and yet can anyone doubt that the American Negro has not competitively proven his equality in less than 100 years since the days of his bondage, since the day when he was a commodity, sold body and soul as a chattel in the market place; he has in fivescore years perfected in human values far beyond his development in the centuries of his domicile in the lands from whence he came as an illiterate, underprivileged, pagan believing mortal with the highest moral standards and the finest of mortal humanism.

Given equal opportunity under our form of government, the future can only hold greater accomplishments for the American Negro but by contrast what opportunities for individual advancement are there for the people of communistic countries.

To an American, the admission of Alaska means more than a new pioneer's challenge or the launching of sputnik. In the days to come the real significance of this action is a great epoch in this decision by the American people will stand out long after the last beep has been heard from outer space. The beep the world will hear from now on into eternity will be the heart beat our free people here, in Alaska and wherever else destiny places our flag of brotherhood and statehood.

Compare if you will Alaska, Hawaii, Puerto Rico, the Virgin Isles to Hungary, Poland, Yugoslavia, and the rest of the so-called Communist-influenced States. Any comparison can be only odious.

And so I call upon the President, the Congress and the American people to make this celebration one that will put the sputnik even beyond outer space in the hearts, the minds and desires of men and women everywhere in the world.

Peace comes from the hearts of people not from the mouths of guns or the explosion of bombs.

Mr. Speaker, with the greatest of pride as an American, I offer the following resolution:

Whereas this Congress, this administration, and the citizens of America have joined with the peoples of Alaska in an eternal compact of equality under the Constitution of the United States of America; and

Whereas it is in the best interest of all the peoples of the earth to have a proper and fitting expression and celebration of this momentous event: Therefore be it

Resolved, That the President and the Congress of the United States, in conjunction and agreement with the government of the newly created State of Alaska, establish a joint committee to set aside a period and a day of celebration, to make necessary plans for the proper observances, to order a commemorative stamp, to promote and sponsor any and all activities that will properly and everlastingly mark the day of admission of Alaska as a free and equal member of the sisterhood of the United States of America.

Farley's Road to Senate Packed With Well-Wishers

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 10, 1958

Mr. VANIK. Mr. Speaker, there are a few people on the political scene who are not aware of the great participation in public life of Jim Farley, of New York, frequently referred to as "Mr. Democrat."

The following article, which appeared in the Dayton Sunday News on June 8, 1958, is a fitting tribute to Mr. James Farley:

FARLEY'S ROAD TO SENATE PACKED WITH WELL-WISHERS

(By Dick Cull, Jr.)

WASHINGTON, June 7.—As a popular personality, gentleman Jim Farley will get a rousing reception in this political-minded capital if New York voters elect him to the United States Senate in November.

Hardly an unkind word has been heard about the 70-year-old Farley, the one-time mastermind of Democratic national politics, since he announced on Tuesday he will be a candidate. It will be Farley's first real bid for elective office in 45 years.

"He is a great guy, I hope he wins," an Ohio Republican who has known genial Jim for years said when he heard the news.

As usual, it was the small things that Farley always remembers that prompted the Ohioan to speak. "Every time he came to my hometown he called me," he said. "I always appreciated that."

Long-time friends and the reference books always emphasize Farley's friendliness. "I like people," says the man who is a genius for remembering first names. Ten years ago he said he had 100,000 friends.

The story here at the National Press Club and in the corridors of Congress is that Farley liked Washington but his wife, now dead, didn't.

If she didn't, she had a lot of company. This reporter remembers other wives of prominent men in political life who said frankly they thought many of the social trappings here were phony.

In 1946 Farley wrote a book, Jim Farley's Story, telling about the Roosevelt years, and dedicated to his mother and to his wife. In writing the book, Farley leaned heavily on his close friend, Walter Trohan, correspondent here for the Chicago Tribune.

In his book, Farley recalls his first meeting with Franklin D. Roosevelt, the fellow New Yorker he helped to elect to two terms in the White House before breaking with him in 1940 over the third-term issue.

That meeting brought a wry comment about politicians from wife, Bess.

As Farley tells it, it was 1920, the first summer of his marriage and he was invited to attend a reception in New York for the late former Gov. James Cox of Dayton, the presidential candidate that year, and FDR, his vice presidential running mate.

Then Farley, who was then a county chairman, goes on:

"Although I should like to be able to say that some psychic understanding passed between the tall, vigorous vice presidential candidate and myself, I can only report that the meeting was nothing more than a handshake and a 'How d' you do.'

"The only memorable remark came from Bess at the end of the long, tiring day, when she said, 'If I had ever realized that politicians spent their time going through such nonsensical performances, I would never have married you.' "

The prescription for success in politics, Farley once said, is a delicate one. These were his words:

"In politics, you can speak too often or not often enough; you can speak too loud or too soft; you can start too soon or too late; you can be too polite or not polite enough; and again you can be too friendly or not friendly enough.

"Any of these extremes at any given time may be fatal."

Although 70, the campaign trail should not prove too difficult for Farley. He is in good health and good spirits, friends say, and itching for the battle.

If elected, the I-like-Jim-Farley line will stretch a long way outside the Senate Chamber on the day he takes his oath.

Spiraling Inflation and Social Security's Inadequacy

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1958

Mr. NEAL. Mr. Speaker, immediate prospects for a turn in the inflationary trend are not apparent.

Labor demands for wage increases, Government's consent for more and higher paid employees, manufacturers' and producers' propensity to adjust prices in terms of production costs seem to have become accepted practice.

Individuals, business enterprises, and fiscal agencies at all levels tend to disregard ledged deficits. Increased national debt, requiring increasingly greater cuts in the dollar's purchasing power, provides the stimulus to resort to a greater profit motive as the only means to get ahead.

As this cycle of fiscal malignancy infiltrates the body politic, society automatically separates into two distinct classes: First, those who are in positions to demand periodic adjustments by seeking wage and salary raises and producers free to pass increased costs onto the taxpayer; and, second, those who lack organized power to compel wage and salary standards in keeping with living costs, plus that large group made up of retirees, pensioners, relief, and social security recipients.

The basic social-security legislation adopted when the dollar would buy its par value in goods and services has by no means kept pace with the dollar's decline in value. Citizens who purchased their social security with 100 percent dollars now face the impossible problem of making a 50-cent dollar meet their needs.

As organized groups are legally empowered to seek adjustments through collective bargaining, the problems arising out of inflation are promptly overcome by negotiation. To them inflation has little or no bearing on standards of living.

Now that governmental agencies have approved salary increases for both civil and military personnel, they, too, at least for the time being, are in a favorable position to battle inflation. While the financial status of industrial retirees varies considerably and railroad retirees feel the pinch, Federal employees are in position to look for a modicum of relief.

But the social-security retiree, especially those with no savings, are at this writing quite unable to live comfortably even when their payments are supplemented by public assistance.

The social-security legislation should be revised. Recipients on social-security rolls who have no other source of income should receive monthly payments in amount to meet the present-day cost of living. This might be possible with little or no increase in rates by setting an arbitrary limit on assured incomes of those who retire at 65, if instead of going on the social-security rolls they were given the right to withdraw the totals of their contributions with accrued interest at that age. Universal social security is not solving the problems of a sizable number of the aging population. If inflation is not curbed, the Nation will be confronted with an ever-increasing number of unfortunate citizens.

Educational Improvement Through Local Action and Lay Participation

EXTENSION OF REMARKS

OF

HON. WILLIAM L. SPRINGER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1958

Mr. SPRINGER. Mr. Speaker, the Vice Chairman of the President's Committee on Education Beyond the High School was Dr. David D. Henry, president of the University of Illinois. At the National Conference on the Rural Development Program, held in mid-June, Dr. Henry delivered an address on Education Improvement Through Local Action and Lay Participation.

I desire to bring to the special attention of my colleagues in Congress certain portions of that address by one of the Nation's most able educational leaders, Dr. Henry.

The concern for more and better education is widespread and engaging the attention of Congress. The educational problem is most acute in low-income farm and rural areas.

A major sector of the Nation's rural development program is emphasis on more and better education. It will give the boys and girls of poor families the opportunities in life that should be theirs. It will strengthen America.

State and local leaders already have moved into action to get more boys and girls to go beyond high school with their education. This is being done through the education committees of the rural development programs.

The conference on the rural development program, where Dr. Henry delivered his address, placed major emphasis on the need for an aggressive action program for education beyond the high school in areas where incomes are low. As he stressed:

National security, economic growth, and effective democratic living are intertwined with what happens educationally to youth * * *. The number of able students who withdraw prior to high school graduation is an alarming waste of human resources * * * only 1 out of 3 of the upper one-fourth graduating from high school goes to college.

Excerpts from Dr. Henry's address follow:

EDUCATIONAL IMPROVEMENT THROUGH LOCAL ACTION AND LAY PARTICIPATION

(Address given at Rural Development Conference by David D. Henry, president, University of Illinois, Vice Chairman, President's Committee on Education Beyond the High School, June 16, 1958, Memphis, Tenn.)

It was nearly a year ago that the Committee on Education Beyond the High School presented its main report to President Eisenhower and to the American people. In the intervening period, the substance of the report has been widely debated and its subject has had unprecedented public attention.

In considering how comprehensive public understanding and appreciation might be brought to bear upon education problems in the United States, two theses of the Report on Education Beyond the High School are stressed repeatedly. They are directly related to the work of the Rural Development Conference. One is that readiness and improvement in education service will come chiefly from local action. The other is that the layman has a vital role in the attainment of the Nation's education goals.

A grassroots understanding of the problems and a widespread public participation in planning for the future are basic to orderly progress. Schools are not apart from American life, and the solution to school problems will depend upon intelligent lay involvement. The specific form lay participation will take will vary from community to community, from institution to institution. But the idea must have friendly support from the profession and from citizen leaders if it is to be meaningful.

HELPING THE INDIVIDUAL AND HELPING THE SCHOOLS

There are two aspects to citizen action in school improvement, and they both apply to a consideration of education beyond the high school. One has to do with assistance to the individual; the other has to do with help to the school as an organization.

A specific point of action for any community is to persuade able students to remain in high school through graduation. You have been told in advance materials for this conference that one out of five students in the upper one-fourth of their class scholastically drop out of high school before graduation.

The number of able students who withdraw prior to high school graduation is an alarming waste of human resources.

Improved counseling in the secondary school—both in numbers of counsellors and in method—is an acknowledged point of attention in all studies of the subject. Counseling of parents and of families is a part of the need.

A community which organizes a program of "On to College" for its youth will do much to encourage students to remain in high school as well as to stimulate motivation for advanced work. On the latter point, only one out of three of the upper one-fourth graduating from high school goes to college.

Many students need financial help to remain in school or to go on to school. I believe, however, that at the present time improved motivation of students is a more influential factor than is financial aid. In most States, the majority of students are within commuting distance of an institution with at least 2 years of college work.

Among those who undertake the costs of going to school away from home, many are on their own. Fifty percent of the single undergraduate men and 30 percent of the women students at the University of Illinois receive no family support. They manage with summer employment, part-time employment and sometimes savings. Some qualify for scholarships and loan funds. It should be noted, too, the working or self-help students make the better grades.

The individual young person looking ahead to his own education can have assurance on two points.

First, the world has need of his talents whatever they may be and in whatever direction he may apply them.

And, second, motivation is a controlling factor in success.

Each community is interested in recruiting youth for its own on-going life. Rural communities quite properly want to retain as high a proportion as possible of their youth for rural life; and the education program of a community should take this goal into account.

Beyond this purpose, however, is the larger concern for individual opportunity, the obligation to give every boy and girl a chance to develop his talents, wherever he may have been born and under whatever circumstances. This goal is the great American dream and it has come nearer to fulfilment in this country than anywhere else in the world. But we still have the task of making the ideal apply to increasing numbers, with increasing effectiveness.

National security, economic growth and effective democratic living are intertwined with what happens educationally to youth. This idea is not new. It has been a part of the public philosophy in every age of American history. Each age, however, must bring it up to date and make it work in its own time. Citizen support for school improvement in general is the key to educational progress.

Individual freedom is meaningful only if we make sure that every youth has a chance to develop according to his talents and his intellectual and emotional horizons. Without that opportunity we would lose our sense of adventure, our aspiration for an improved society, our faith in individual freedom itself. We would go down the road of cynicism, content ourselves with the conservation of what we have with security as our watchword and mediocrity our standard.

EDUCATION AND AGRICULTURE

Boys and girls from rural areas should be encouraged to learn the career opportunities

in agriculture today and the education required for them.

Trained brainpower and the development of new ideas have accounted for the past success of agriculture, a success which for the moment has upset the balance of supply and demand.

Instead of being discouraged about the future of agriculture because it has been too successful, cannot we assume that the same basic ingredients of past success will mark the future? "New knowledge and its application has become the single most important factor shaping the affairs of agriculture," says Prof. Theodore Schultz of the University of Chicago. "Fertile brains are as important as fertile fields," another has said.

The manpower requirements of agriculture are not commonly understood. In numbers of people, our needs are still very great; and the methods of agriculture today require more than ever that those numbers be adequately trained. With an increasing population predicted for the Nation, there can be no letdown in our educational effort to produce an efficient and effective farm operator and manager.

In Illinois, for example, 4,500 people are needed to enter farming each year, just to meet the turn-over requirements. The number of college graduates in this annual roll call is at present far too small to fulfill the expectations for maximum leadership and development.

The developments of new business for agriculture may take three forms: the building of new markets, economically through new consumption or geographically; the discovery of new uses for present products; the discovery of new products. The history of American agriculture is replete with examples of all three forms of growth.

Thus we are reminded that agriculture is not alone a vacation or profession, and not alone a business; it is also a science. Highly trained technicians are needed, and this message should be conveyed to the young people who have a narrow view of farming. Agronomists, geneticists, animal breeders, plant breeders, cereal chemists, entomologists and botanists are very much needed. "There is," says Dean A. D. Weber of Kansas State College, "a bull market for such men."

Any discussion of the future of agriculture or any aspect of it, brings us back to the need for trained personnel for management and leadership, for teaching and for research, and education beyond the high schools takes on greater and greater importance in all phases of a successful agriculture.

CONCLUSION

In the history of our country the establishment of universal educational opportunity, the growth in support for the free public elementary and secondary schools, the establishment and development of our State universities and land-grant colleges, the founding of many non-public institutions in the public service have all come only after terrific struggle for support and great public debates.

But in each generation the issues must be defined anew and the battles fought again. There are those today, as in other years, who say the student should pay the full cost of his education, that enrollments should be restricted for the intellectual elite, that we cannot afford an expanding system of higher education.

If 1957 is recorded as the year of sputnik, 1958 should be the year when America recognizes more fully than ever before that her chief resources are her human resources, and that education is the most important business of the Nation.

As long as we harvest the talent of the Nation from a broad base, encourage its freedom of choice, and provide for adequate educational opportunity, our national achievement will be adequate in the economic, scientific, and military competition of the world.

Whatever may be the appraisal of the work of the President's Committee, or of other groups working on education problems today, the American people have at last started thinking about plans for the future of higher education and education service for post-high-school youth. With confidence in the process of democratic appraisal, it may be hoped the school and civic leadership together may build a responsiveness among the people which will be a source of strength and inspiration for the challenging questions of our time.

For an appropriate peroration on the meaning of our work and its importance in our time we may well repeat the main burden of the report of the President's Committee, as thus phrased:

"What confronts us all is an enormous and unprecedented opportunity to develop the human resources of this Nation to a broader and fuller degree than even our most optimistic forebears ever dreamed of. The challenge presented by this opportunity points up, rather than supplants, the cardinal role of education.

"That role is to develop human beings of high character, of courageous heart and independent mind, who can transmit and enrich our society's intellectual, cultural and spiritual heritage, who can advance mankind's eternal quest for truth and beauty, and who can leave the world a better place than they found it.

"Only by pursuing these paramount goals of education can we insure a free society and a sane and peaceful world in which all individuals may live in greater dignity and achieve greater fulfillment."

Mr. Nixon—"Gran Señor"

EXTENSION OF REMARKS
OF
HON. ROBERT P. GRIFFIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. GRIFFIN. Mr. Speaker, under leave to extend my remarks, I include the following article from the July 5, 1958, issue of America:

A LOOK BACK AT CARACAS

Even Venezuelans were surprised at the violence of the demonstrations against Vice President NIXON during his recent visit to Caracas. Angry accusations were tossed about—at students, disgruntled nationalists, and Communists. Who was responsible?

A month has passed and Caraquenos have had time to reflect. The Jesuit monthly sic, of Caracas (Apartado 628) concludes in its June issue that a Communist group masterminded the riots of June 13. What is worse, Sic charges, someone is today preventing exposure of the facts.

Why has there been no investigation of the Molotov cocktails and the Communist leaflets found in a house in the parish of San José"? Who organized the painting of "Down with Nixon" posters and worked out the riot plan "in a high school that everyone knows"? Finally, how is it that phone calls from the Ministry of the Interior came to the newspapers, forbidding them to mention these disclosures—and that now the Ministry denies any knowledge of the calls?

"We conclude with apprehension," writes Sic, "that the Communist Party is so strong here that it silences the press and paralyzes the police and the courts."

There had been feelings of resentment against the United States, the editorial admits, but after the outburst Venezuela was overwhelmed by a sense of national shame. The one who came off best was Mr. NIXON, whose calm and aplomb during the attack * * * and whose statements back in the United States reveal the 'hombre culto' and the 'gran señor'."

Goldfine-Adams Case Interpreted by Youths

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. CUNNINGHAM of Nebraska. Mr. Speaker, I include here a summary of opinion as expressed by a representative group of young people in my district. This article was taken from the July 13 edition of the Omaha World-Herald, as follows:

GOLDFINE-ADAMS CASE INTERPRETED BY YOUTHS

The Goldfine-Adams case in Washington was interpreted this way last week by members of a summer class in American Government at Central High School:

Barbara Chandler, Benson: Bernard Goldfine was trying to buy influence. Sherman Adams should not be removed from office because he didn't realize Goldfine was trying to buy influence. It has not been proven that Adams really did anything wrong.

Rosan Carder, Benson: Washington should turn its attention to a violator of trade laws (Goldfine) and shouldn't persecute an easily persuaded underdog (Adams).

Gene Brown, Benson: This thing has caused more excitement than it is entitled to. It has turned from a violations investigation to a political issue.

Ronald Black, Central: Mr. Goldfine has a lot to explain about the Christmas checks to White House workers.

Shirley Baer, Benson: This is what Americans have to watch for.

Joan Pedersen: The Adams-Goldfine case is an example of how we are falling short.

Margaret Lessard, Benson: I can't see how Adams could influence the Federal Trade Commission. Adams shouldn't be the fall guy just because the Democrats are looking for an issue. But Adams should be removed if the Republicans are to gain control of Congress and get a President elected.

John Riekes, Central: The case has been overpublicized. Imagine the field day for papers like Pravda. No man is indispensable. Sherman Adams has lost prestige. This incident shows that President Eisenhower, in a sense, is weak. The case points to corruption and illegitimacy in both parties. Papers stolen, rooms wired, records gone—in Mr. Goldfine's words, these are Gestapo tactics.

Susan Hursh, Benson: Adams shouldn't be removed unless it can be proved he influenced the FTC in Goldfine's behalf.

John Otte, Benson: The case has been blown out of perspective. The United States has again lost face.

Georgia Heidkamp, Benson: The Government should get rid of Adams.

Terry Maides, Central: Both Adams and Goldfine should be punished.

Sally Nelson, Benson: Men (in government) are men, liable to make mistakes. The Government's readiness to do some-

thing about it renews America's faith in its Government.

Marilee Nelson, Benson: Adams has served his country long. He should be given the benefit of a doubt.

Joel Davis, Central: If Adams stays in office, Republicans definitely will be hurt.

Doug Platt, Central: Adams holds a big office and his loyalty should not be questionable.

Jamie Taras: Politics are not always clean. Adams should be removed. I don't see how this can put the Republican Party in a hot spot. This administration is cleaner than Truman's. Democrats ought to save their hot air for warming up Alaska.

Nancy Donaldson, Benson: I think it is wonderful for President Eisenhower to put so much faith in Adams and stand by him. It shows the President is a man of character.

Statement of Letters Favoring S. 2119

EXTENSION OF REMARKS
OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1958

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks, I would like to have printed in the RECORD my statement to the Communications Subcommittee, Interstate and Foreign Commerce Committee, favoring S. 2119. Also, letters received by me in support of this legislation and written by Mr. Ralph Lowell, of the Lowell Institute Cooperative Broadcasting Council, which operates educational television Channel 2, WGBH-TV, in Boston, and from Mr. Gilbert E. Mottla, of the University of Massachusetts, for the Western Massachusetts Broadcasting Council, Inc., board of directors:

JULY 17, 1958.

Hon. KENNETH A. ROBERTS,
Member of Congress, Acting Chairman, Communications Subcommittee, Interstate and Foreign Commerce Committee, House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: I appreciate this opportunity that members of the subcommittee have given me to express my views on S. 2119, the bill before you for consideration.

This legislation, which has passed the Senate, would expedite the utilization of television facilities in our public schools and colleges, and in adult training programs by granting funds to establish or improve television broadcasting facilities for educational purposes.

I wholeheartedly support this legislation. I feel the Federal Government should, and with considerable justification, give financial support to foster this very worthwhile use of television.

I am sure the members of this subcommittee are aware that the only noncommercial educational television broadcasting station on the eastern seaboard is located in Boston. It is WGBH-TV, Channel 2, operated by the Lowell Institute Cooperative Broadcasting Council. This station presents a wide variety of interesting and stimulating programs on a very modest budget, approximately $3 million a year, the cost of a 90-minute network color spectacular. As Mr. Jack Gould pointed out in the New York Times of January 5, 1957, Boston's Channel 2 presents low-cost brain waves and the WGBH-TV gets the top minds for its telecasts.

In his New York Times article of January 13, 1957, Mr. Gould wrote:

"But it is equally apparent that Madison Avenue has scratched only one side of the medium: Educational TV, despite its forbidding title, is one of the most hopeful remedies yet seen for what ails the electronic colossus. The lesson of WGBH-TV is that after a while a viewer can be entertained to death; there does come a time when it is refreshing to have the mind titillated with regularity and purpose."

While channel 2 is telecasting to an audience of hundreds of thousands of persons in the eastern Massachusetts area, the citizens and educational institutions in western Massachusetts, where my congressional district is located, have not had an opportunity to benefit from such programs because no educational station has gone on the air. The Federal Communications Commission has reserved channels 80 and 82 in the ultra-high frequency bands for educational purposes in western Massachusetts. But, due to the tremendous costs in establishing a UHF station, the Western Massachusetts Broadcasting Council, Inc., has not been able to put these channels on the air.

This subcommittee will be interested to know that the Special Commission on Educational Television, in its second report to the Commonwealth of Massachusetts, estimated the costs of establishing channels 80 and 82 at over $500,000. The directors of the Western Massachusetts Broadcasting Council, Inc., are from the various colleges and school systems in the area, including: Horace Hewlett, Amherst College; Roger Holmes, Mount Holyoke College; Donald Sheehan, Smith College; Gilbert E. Mottla, University of Massachusetts, and Edmond P. Garvey, council representative for the Springfield School Committee. The council urges that this legislation be enacted by the 85th Congress so that channels 80 and 82 can be established and a tie-in made with the educational television network.

In conclusion, may I also ask members of this subcommittee to act favorably on S. 2119 so that the bill can go to the floor of the House soon for a vote.

Sincerely yours,

EDWARD P. BOLAND,
Member of Congress.

WGBH,
LOWELL INSTITUTE
COOPERATIVE BROADCASTING COUNCIL,
Cambridge, Mass., July 11, 1958.

Congressman EDWARD P. BOLAND,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: I am interested to learn that the Senate bill (S. 2119) for the purpose of expediting the use of television facilities in schools, colleges, and adult-training programs has passed the Senate and has been referred to the House of Representatives Committee on Interstate and Foreign Commerce.

As you know, while we have channel 3 here in Boston serving the educational needs of eastern Massachusetts, there are no educational facilities in the Connecticut Valley area, including Springfield, nor facilities to serve the Berkshires, including the Pittsfield area. WGBH is now programing not only a wide range of educational and cultural materials for adults, but is also presenting programs for in-school use at the elementary-grade level. (A copy of our school guide is enclosed.)

The New Hampshire Educational Broadcasting Council has just announced that it will activate the ETV channel in Durham, which will cover New Hampshire and southern Maine, and will carry a substantial amount of the WGBH program schedule over their station.

It is a great shame that the people who live in the Connecticut Valley and Berkshire areas cannot also benefit from this programing, and particularly that their children will not have an opportunity next fall to take advantage of the many excellent programs that the WGBH Educational Foundation will present to the public, private, and Catholic schools and colleges in the eastern part of the State. It would be so easy for educational stations in these 2 western areas to rebroadcast these programs that originate in Boston at WGBH-TV, as well as to present their own local programs. I think there is no question but that this bill supplying $1 million to each State would make it possible to establish a statewide educational television network, which would permit the entire State rather than just a portion of the eastern area to enjoy the benefits of this unique medium of communication.

In connection with this bill, I would have one suggestion, and that is that it include responsible agencies authorized to operate an education television station such as a nonprofit corporation similar to our own WGBH Educational Foundation. The bill as it comes from the Senate includes such authorization. In our case this would make it possible for public, Catholic, and private schools and colleges to engage in a joint undertaking with the aid of these funds to bring educational television to the western half of the Commonwealth.

It would be a tremendous step forward in education, not only for our own Massachusetts, but for the entire New England area, as it would undoubtedly become part of a larger network serving this region with educational benefits that are of tremendous importance in these days of rising educational costs and inadequate school staffs.

We are also sending a packet of materials about the WGBH operation that we hope will be of us to you.

Sincerely yours,

RALPH LOWELL.

WESTERN MASSACHUSETTS
BROADCASTING COUNCIL, INC.,
Amherst, July 7, 1958.

Congressman EDWARD P. BOLAND,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN BOLAND: The Western Massachusetts Broadcasting Council, Inc., is very much interested in the Magnuson-Udall bill (S. 2119), recently passed by the Senate and now before the House Interstate and Foreign Commerce Committee, where hearings are scheduled to begin on July 15. The act would grant funds to establish or improve television broadcasting facilities for educational purposes.

As you may know, while channel 2 is on the air in Boston serving eastern Massachusetts with educational television, some 600,000 citizens in western Massachusetts are deprived of the opportunity to view educational television. In 1953 the Western Massachusetts Broadcasting Council, Inc. was instrumental in having the FCC reserve UHF channels 80 and 82 for educational purposes in western Massachusetts. The reason that these channels have not been utilized is due to the tremendous costs involved in establishing a UHF station. In its second report to the Commonwealth of Massachusetts, the special commission on educational television estimated the cost of establishing channels 80 and 82 as over $500,000.

This year some 54 school systems in eastern Massachusetts are cooperating in in-school television programing over channel 2 in Boston. Legislaiton has been passed to allow all Massachusetts school committees to vote money for in-school television. Unless facilities are established in western Massachusetts, primary and second school students in this area will not be able to share in the educational advancements now

available in the eastern part of Massachusetts.

The council urges that the Magnuson-Udall bill be granted a favorable committee report and subsequent passage by the House before its expected August adjournment.

Passage of the Magnuson-Udall bill would make a statewide educational television network a reality in Massachusetts and would assure our continuing leadership in the whole field of education.

Sincerely yours,

GILBERT E. MOTTLA,
University of Massachusetts Representative for the Western Massachusetts Broadcasting Council, Inc.

(Directors: Horace Hewlett, Amherst College; Roger Holmes, Mount Holyoke College; Donald Sheehan, Smith College; Gilbert E. Mottla, University of Massachusetts; Edmund P. Garvey, council representative for Springfield School Committee.)

Expulsion of Communist Correspondents

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the 39th annual convention, Department of Pennsylvania Veterans of Foreign Wars of the United States, Inc., at Pittsburgh, Pa., on July 9, 1958, regarding denial of visas by Soviet Union to American correspondents and recommending expulsion of Communist correspondents:

"Whereas since the Union of Soviet Socialist Republics without explanation, has denied Daniel Shorr, former Moscow correspondent of Columbia Broadcasting System, permission to return to his customary news beat at Moscow; and

"Whereas this arbitrary and unprecedented act of the Soviet Government is equivalent to dictating who may represent a privately owned American radio news service in Moscow; and

"Whereas Pravda and Izvestia, two Moscow newspapers, the former named Truth and the latter named News, of which Communists themselves say there is "no news in the Truth and no truth in the News;" and

"Whereas Tass Telegraph Agency of the U. S. S. R., and Pravda and Izvestia combined have numerous allegedly bona fide correspondents in Washington and New York who enjoy equal privileges and courtesies extended other actually bona fide correspondents under our constitutionally-guaranteed freedom of the press, as compared with the extremely limited privileges of American correspondents in Moscow who report such facts as they can obtain, and who work under strictly enforced news censorship rules, and unbelievable hardships in news gathering purposely created by the Soviet Government; and

"Whereas the Communist correspondents at Washington and New York, despite the availability of hard news facts, notoriously slant American news to parallel the prevailing Moscow-line, which appears obvious from their filed reports rebroadcast worldwide from Moscow that are attributed to Tass correspondents who are thus aiding in intensifying the "cold war" between the Soviet Government and the United States Government by their false news that disparages our Government's purposes and policies and the attitudes of our people; and

"Whereas Pravda, Izvestia and Tass correspondents at Washington and New York, who are actually Soviet Government employees and work under orders of the Soviet Embassy at Washington and the Soviet delegation to the United Nations, and enjoy virtual immunity while simultaneously undermining the United States Government through their false news and through abuse of our freedom of the press system, which privileges accorded them in the circumstances of their work might be questioned; and

"Whereas two Russian correspondents are preparing to return to Moscow, ostensibly on vacation and probably for new instructions detrimental to the United States, have requested renewal of their reentry to United States visas and, despite their contemptible conduct, insist permission to return be granted before they leave the United States: therefore be it

"*Resolved*, That permission to return to the United States be denied the two Communist correspondents in reciprocation for the Soviet Government's decision in the case of Daniel Shorr, until Daniel Schorr is permitted to return to Moscow as an accredited correspondent, or satisfactory reason is given to the United States Department of State for Daniel Shorr's arbitrary exclusion from Moscow by the Soviet Government; and be it further

"*Resolved*, That the policy of the United States Government should be to expel at once from Washington the Communist correspondents under provision of rule 3 of Rules Governing Press Galleries, approved by the Committee on Rules and Administration of the Senate, that limits membership in the press galleries (of the Senate and House of Representatives) to bona fide correspondents of repute in their profession, and also under rule 4, subsection (b) of the same rules, which subsection denies admission to the Senate and House of Representatives press gallery to any correspondent engaged in promotion work, which is their principal occupation, and also expel from the United States any other Communist correspondent at Washington or at the United Nations who deliberately distorts American news to serve the purposes of the Kremlin's propaganda policy that is hostile to the United States Government and injurious to the best interests of the American people; and be it further

"*Resolved*, That a copy of this resolution be forwarded to the Vice President of the United States; the Secretary of State of the United States; the Honorable Sam Rayburn, Speaker of the House; Senator Thomas C. Hennings, Jr., chairman, Committee on Rules and Administration of the Senate; Representative Omar Burleson, chairman, Committee on House Administration; Senator Theodore Francis Green, chairman, Committee on Foreign Relations, the Senate; Representative Thomas S. Gordon, chairman, Committee on Foreign Affairs, the House; Representative Francis E. Walter, chairman, Committee on Un-American Activities, the House; Mr. Frank Eleazer, chairman, Standing Committee of Correspondents, Senate and House of Representatives press gallery, all at Washington, D. C., for appropriate consideration and action."

Approved by the council of administration, Department of Pennsylvania, Veterans of Foreign Wars of the United States, at a regular meeting at Pittsburgh, Pa., July 9, 1958.

WILLIAM J. TEPSIC,
Department Commander.

Attest:

ROBERT S. MUSSER,
Department Adjutant.

A Warning to Soft-Living Americans: Soviets Will Stomp Us If We Don't Settle Down

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. BOLAND. Mr. Speaker, the clarion calls we have heard over the years warning against a soft, complacent living and a disregard of the growing and dangerous power of communism have too often fallen on muted ears. Let no one underestimate the perilous times in which we live. Evidence of this is crystal clear and we need but look around, pause and give heed to the menace that would and desires to destroy the way of life we enjoy and hope that our children and their children will have in the years ahead.

Mr. Speaker, the survival of democracy has been tested many times before and it has prevailed. But, never in its history has it come up against the power and machinations that threatens it in this day and age. For, today, we are dealing with an evil that knows no bounds, respects no word, glibly breaks its commitments and heaps abusive and distorted condemnations upon peoples who seek peace and freedom and the right to choose their own way of life.

We are now engaged in the struggle of how to meet this challenge. There is much that we have done but there is so much more that must be done. Mr. Speaker, every man, woman, and child in this land of ours is a party to this struggle. Without some kind of sacrifice on the part of all, we cannot hope to remain free.

Mr. Speaker, I commend to the Members of the House and to the American public a very pointed article clipped from today's Washington (D. C.) Daily News and I quote the note that headed the report:

Walker Stone, editor in chief of the Scripps-Howard Newspapers, has been traveling the past few weeks in Russia and the European satellite countries. He returns to home base in the midst of the Near East crisis. Here he writes of America's long-range struggle against Communism dictatorship.

Mr. Speaker, under unanimous consent, I include Mr. Stone's article with my remarks:

A WARNING TO SOFT-LIVING AMERICANS: SOVIETS WILL STOMP US IF WE DON'T BUCKLE DOWN

(By Walter Stone)

If we don't get off our big fat comforts, we are going to be stomped into the ground.

Events in Iraq and Lebanon illuminate the struggle in which the West has taken a stand to halt the spread of gansterism and world power gained by assassination and subversion.

Whatever happens in the Near East will not end the struggle. It will continue through the lifetime of all who read this—since Americans and others who have known freedom will not supinely yield to slavery.

To prepare ourselves for the great test of strength we cannot avoid, we must rid our-

selves of two myths now prevalent in America.

MYTH NO. 1

One is the myth of "peaceful coexistence." We must try, of course, to coexist with the Russians. They are a powerful nation of 200 million, occupying a sixth of the earth's habitable area.

But we have to get over the wishful thought that they are going to be easier to live with, no matter whether the top ruler is Lenin, Trotsky, Stalin, Khrushchev or whoever.

Peaceful coexistence, in the sense we understand it, implies a trust in which we might relax and pursue our pleasures. The Communist system, which pervades everything Russian, rules that out. For the primary aim of communism—at once a religion and a political and economic philosophy—is frankly world dominion and complete mastery over the lives and minds of men.

The other myth we must get rid of is that we can survive against this Soviet plot without toil and sacrifice. We'd better stop dreaming of an easy future with "the bees and the cigarette trees and the soda water fountains, and the lemonade springs where the bluebird sings, in the big rock candy mountains."

It is easy for an American newspaperman, after traveling in the Soviet Union, to stress the hard life and low living standards of the people. But that would give a dangerously false impression of their dynamic energy, their state of mind and their power to produce in competition against us.

Living standard comparisons never are printed in Russia and wouldn't be believed if they were.

TRUE BUT—

It is true that the American steelworker can buy a good pair of shoes on the wages of 4 hours' work, while the Russian steelworker must toil 60 hours to buy an inferior pair. But neither can wear more than one pair at a time and the Russian thinks he's doing all right when he doesn't have to go barefooted.

The average Russian's diet of bread and potato soup, borscht with cabbage, and an occasional chunk of meat would not satisfy an American accustomed to culinary variety and abundance. But what the Russian eats suits his taste and provides him with the calories he needs to maintain health and vigor. He never tasted a steak and doesn't know what he is missing.

In the city he may live in one room with his family, and share the kitchen and bath with other families. If he lives in the country he may have no indoor plumbing at all—probably never has seen such luxury.

Similar Spartan standards did not diminish the survival power of American pioneers. Only half a century ago, they lived in one-room, sod houses with dirt floors and ate what they could grub from barren plains.

These privations toughened our pioneers who had one advantage in common with the average Russian of today. They didn't know they were underprivileged.

OPTIMISTS

They worked hard and had faith in the future. Though the Russian is an automaton, he feels he is part of a collective society, and that next year, and the next, things will be better.

"Come back 3 years from now," he tells you, "and see how much we have done."

He does not compare his lot with American or other western standards of which he knows nothing. His comparison is with what he had under the czars or more likely, during the earlier days of the revolution.

FEWER PATCHES

A westerner coming into Moscow may be impressed by the absence of Brooks Bros. suits and modish dresses. He had better be impressed by the absence of patched clothes, so prevalent only a few years ago.

And he had better be impressed less by the continuing shabbiness of the people than by the hustle and purposefulness of their stride—a people on the make and on the go, a people hurrying to their date with destiny.

They are at the command of cynical, power-hungry conspirators who control their government and can channel their energies into guns instead of more food and better clothing.

If we don't go to work fast, we'll get tromped down.

For "the stairway of time ever echoes with the wooden shoe going up and the polished boot coming down."

Buren Presidential Disability Proposal Receives Editorial Praise

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1958

Mr. HOSMER. Mr. Speaker, a few weeks ago I presented a plan conceived by retired Attorney Frank Buren, of Long Beach, Calif., to solve the presidential disability riddle and remold the office of the vice presidency to fit modern needs and conditions. I have introduced House Joint Resolution 651 which seeks to adopt the proposal by an amendment to the Constitution. The plan has recently received editorial praise from both the Long Beach Independent and Press-Telegram newspapers.

The Independent editorial reads as follows:

DISABILITY PLAN REMOLDS VICE PRESIDENT ROLE

Frank Buren, retired Long Beach attorney, earned a full page in the finely printed CONGRESSIONAL RECORD this month with a new and unique plan to resolve the presidential disability riddle.

Buren's essay was introduced to the RECORD by Congressman CRAIG HOSMER who noted that the attorney's solution not only handles the disability problem, but recasts the office of the vice presidency into a more modern mold, better suited to the exigencies of our time.

His plan, in the form of a proposed amendment to the Constitution of the United States, provides for relieving the Vice President of his duty as President of the Senate and for making him an active Assistant President. As such he would have the power and duty to perform any of the official acts of the President when so authorized and directed by the President.

Under the Buren plan thousands of signings of bills, now the constitutional duty of the President, could be done by the Assistant President. Numerous other purely ministerial and routine duties would be performed by the Assistant President, thus giving the President more time to consider and act upon important matters of state.

Attorney Buren emphasizes that his amendment also expels all doubt as to what the Vice President should do in case of the inability of the President, by authorizing him to assume the duties of the office as Acting President until the President returns to duty.

A section of the Buren amendment also provides for Presidential appointment of a successor in the event of the death or removal from office of a Vice President.

Buren regards this replacement feature important because there have been as many Vice Presidents as Presidents who have died in office—seven of each.

The Buren plan has a long way to go. Congressional approval and States' ratification of constitutional amendments may take anywhere from 5 or 6 months to 2 or 3 years.

The author is to be commended, however, for a constructive piece of work which he is following step by step along the long road, and for one which already has received some congressional attention.

The Press-Telegram editorial stated the following:

THE BUREN PROPOSAL

Long Beach made the CONGRESSIONAL RECORD last Tuesday through the offices of Congressman CRAIG HOSMER and the words of retired Long Beach Attorney Frank Buren.

The entry, termed "interesting and unique" by HOSMER, was an outline of Buren's proposed constitutional amendment to provide a new scope of duty for the Vice President including his accession to the post of acting president in case of Presidential disability.

Buren's amendment would relieve the Vice President of Senate duties and make him an active Assistant President, "with the power and duty to perform any of the official acts of the President, when so authorized and directed by the President."

This would relieve the President of his current constitutional chore of signing personally all bills, resolutions, orders, and votes of the Congress.

A disabled President could "authorize and direct" his Vice President to take over. If the President lay unconscious, his Vice President could take over on his own without the currently-existing fear of being charged with power grabbing.

Then, with recovery, the President could resume his role as Chief Executive. A Vice President could not cross his President, Buren explains, because it would be political suicide. Since the Vice President's whole power lies in being authorized and directed by the President, the President could reduce an erring assistant to an officer in name only, with no official duties.

We'll be hearing much more about Buren's proposal, just touched upon here, for he plans to work toward presenting a formal resolution in Congress.

Then it will be up to experts to determine its value. Meanwhile, Attorney Buren deserves congratulations for his enterprise in advancing a constructive idea toward solution of a puzzle as old as our Government.

Another Attack at the Court

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. VANIK. Mr. Speaker, the following belated editorial in today's New York Times, entitled "Another Attack at the Court," reflects a sober afterthought on H. R. 3. The editorial properly attacks the vindictiveness of this legislation and its retroactive effect on settled existing law in many areas.

I personally believe it will strike down the Natural Gas Act and expose millions of American consumers to ruthless manipulations of natural gas pricing.

The editorial is as follows:

ANOTHER CRACK AT THE COURT

In trying to protect alleged States' rights from Supreme Court decisions based on the doctrine of Federal preemption, the House of Representatives has passed as weird a piece of legislation as could be imagined—and one that calls for unceremonious burial.

This measure would prevent Federal laws from superseding State laws on the same subject unless the Federal statute specifically said so, or unless there was an absolutely irreconcilable conflict between the two. While doubtless inspired by the Nelson case of 1956, in which the high court invalidated a Pennsylvania sedition statute under the preemption doctrine, the bill that went through the House with the usual combination of conservative Republican and southern Democratic support is so broadly worded that—if it means anything at all—it would go far beyond the Nelson case and throw the whole area of Federal-State relationships into indescribable confusion.

The "one certain effect of this legislation"—in the words of so moderate a Republican as Representative KENNETH B. KEATING of New York—"is that it will unsettle a large body of existing law in many vital areas, such as interstate commerce, immigration and naturalization, agriculture and labor relations." Retroactive as it is, it would bring untold chaos into railroad regulation and it could "resurrect long-dormant State statutes * * * enacted in the horse-and-buggy age" relating to a tremendous variety of human activity.

What the House was doing by passing this vindictive bill was to take a crack at the Supreme Court because the latter has handed down a number of decisions of which certain people disapprove, particularly in the field of civil liberties. The measure endorsed by the House is bad in purpose and worse in content, and is no credit to the 241 members who, astonishing as it may seem, voted for it.

Eliminating an Inequity in the Civil Service Retirement Act

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1958

Mr. KEATING. Mr. Speaker, I have today introduced a bill to eliminate from the Civil Service Retirement Act the requirement that an unmarried employee or Member of Congress must be in good health in order to elect to provide a survivor annuity to persons with an insurable interest.

Under the present law, a married person is not required to pass a medical examination in order to name a survivor as the beneficiary of his civil-service annuity. But an unmarried person must be found by the Commission to be in good health in order to exercise that privilege. My proposal would eliminate the requirement of good health for unmarried civil servants, thus bringing it in line with the standards for married civil-service workers.

The inequity in the law was brought to my attention by a constituent who was a Post Office clerk with 44 years Government service. He complained that because of a heart attack and his unmarried status, he would be prevented from naming his sister as his annuitant. He asked for the correction of what he termed the great injustice of the present law.

Mr. Speaker, the present statute, requiring good health for unmarried civil servants and Members of Congress, but not for those married, in naming annuitants, is grossly unfair and discriminatory. There is no logical reason for withholding this privilege from anyone simply because, through the whims of fate, he happens not to have been married.

In a Nation founded on the principle of universal equality, we cannot allow one standard for marrieds and another for unmarrieds. It is high time we put an end to this discrimination against the honorable states of spinsterhood and bachelorhood. We can do that, simply and swiftly in this case, by eliminating the requirement of good health for unmarried civil-service workers and Members of Congress who wish to name an annuitant.

I am sure this measure will have the backing of all fairminded people, and most particularly and directly, those bachelors now serving in both bodies.

A Revolution of Small-Business Men

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1958

Mr. PORTER. Mr. Speaker, Wallace R. Fingal, of the Washington editorial office of Printers' Ink, points out in Printers' Ink for July 11, 1958, that the small-business revolution against the administration may turn out to be more significant than the hint of scandal that has reached into the White House. Under a consent previously granted, I include Mr. Fingal's entire remarks:

The small-business revolution against the administration may turn out to be more significant than the hint of scandal that has reached into the White House. How many voters Sherman Adams' self-confessed imprudence will affect is by no means certain as yet, but small-business men are sure to be changing their minds at the ballot box this fall.

The administration has never been notably a friend in deed to small business, but this year, many feel, it has consistently and repeatedly betrayed them. A leading spokesman representing several national trade groups—and a lifelong Republican who is normally extremely cautious in expression—says: "In everything I have tried to do (in efforts to protect small business) I have been kicked in the face."

Another disillusioned trade-group counsel—also a lifelong Republican, who has served as aid to two Republican Senators—states that he will advise the membership of his 90 percent small-business national organization that if they vote for this administration in the coming elections they will be voting to commit business suicide.

Increased postal rates are the hardest blow the administration has dealt small business this year. In congressional rate hearings, many warnings were presented about the possible effects on small publishers and small retail advertisers. Not only were these warnings ignored by the administration, but Postmaster General Arthur E. Summerfield stated in an interview with a magazine that the rate-increase opponents were only a few large magazines.

The dire outlook for smaller magazines and mail advertisers is coming true, as the effective date of the rate increases approaches. At least one mail advertiser has begun preparations for closing down his business.

Not so well known is the administration's effort to scuttle a small-business tax-relief bill. The story has leaked out thus far only to a handful of observers. The tax-writing House Ways and Means Committee finally directed its staff to write the version of the bill that is to be reported. The committee was scheduled to meet again this week, with the expectation that the bill would be ready by then.

The tax-relief report is thus about 4 weeks late. The committee began work on the bill at the beginning of June, and planned to report it by June 12. The reason for the delay is that the committee was constantly interrupted by a variety of administration efforts to take the meat out of the measure, and even to kill it altogether. The specific undercutting method was an attempt to substitute one or all of the administration proposals which have been termed meaningless by small-business spokesmen.

The key proposal for small business will probably be watered down in the Ways and Means Committee bill. Small-business forces have been trying to put across a measure that would free part of any business' income from Federal taxes, in order to allow those earnings to be reinvested in the business.

Reinvestment must take the form of greater business expenditure, and must be made in the same year as the tax exemption. Proponents of the bill assert that the provision will give a dynamic lift to the economy.

Small Boat Safety

SPEECH

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 18, 1958

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 11078) to promote boating safety on the navigable waters of the United States, its Territories, and possessions; to provide coordination and cooperation with the States in the interest of uniformity of boating laws; and for other purposes.

Mr. SIKES. Mr. Chairman, I would like to call your attention to the language of the committee amendment on line 15, which says "become effective until 60 days thereafter." I propose to add language which will say when the entire amendment is read: *"Provided*, That such rules and regulations shall be submitted to the Speaker of the House and the President of the Senate when Congress is in session, and shall not become

effective if disapproved by a resolution adopted by either branch of Congress within 90 days thereafter."

Mr. Chairman, I submit that the language of the committee amendment does not, in the first place, provide ample time for the Congress to express disapproval of regulations that may be submitted in connection with this bill.

In the next place, the type of action to be taken by the Congress to disapprove such rules and regulations is not spelled out. If my language is adopted, there will be a clear responsibility of the Congress if it does not favor the proposed rules and regulations to so show its disapproval by a resolution adopted for one branch or the other of the Congress within 90 days.

Obviously 60 days is insufficient time to insure adequate time for Congress to act. My amendment will give time enough to study whatever is submitted in proposed rules and regulations, to analyze and determine what the effect would be upon those who are under the jurisdiction of small-boat legislation.

Those in the coastal areas recall very well the distressing experiences we have had under Public Law 519. For months we battled regulations that were excessive and exacting in scope. The first regulations proposed by the Coast Guard would have made it virtually impossible for boat operators in the coastal areas to carry on normal operations. Those regulations literally increased their costs of operation to the point and placed such requirements on them that it would have been economic suicide for fishing and pleasure craft operators to try to stay in business. It took the Congress a long time and a great deal of effort to secure partial correction of the regulations that were issued under Public Law 519. Even though the worst regulations were modified or eliminated, there is widespread hardship as the result of this legislation.

If my language is adopted, the Congress will have an orderly way of insuring that unreasonable rules and regulations are not summarily imposed by the administrator of this act.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1958

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of July 19, 1958:

WASHINGTON REPORT
(By Congressman BRUCE ALGER, Fifth District, Texas)
JULY 19, 1958.

A simple bill, H. R. 3, "To establish rules of interpretation governing questions of the effect of acts of Congress on State laws," provoked one of the year's longest, most controversial debates. The bill's one single sentence is: "No act of Congress shall be construed as indicating an intent on the part of Congress to occupy the field in which such act operates, to the exclusion of all State laws on the same subject matter, unless such act contains an express provision to that effect, or unless there is a direct and positive conflict between such act and a State law so that the two cannot be reconciled or consistently stand together."

This brief statement to many Members represents a rephrasing of the 10th amendment to the Constitution, which says:

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

This act is intended to prevent Federal preemption of legislative fields from the States wherein there is concurrent jurisdiction. Some fields are solely Federal—such as foreign affairs, war, coinage, postal, etc. In others, there is concurrent jurisdiction, both Federal and State, such as tax, transportation, health, sedition, and many others.

The Supreme Court in the Nelson case ruled that the Smith Act, a Federal law on sedition, preempted the field from State law, that of Pennsylvania, simply because the Federal Government had a law in this field. When the Smith Act was passed, Congress did not intend to preempt this field, as the Supreme Court ruled. In the hue and cry of debate, the opponents of the act proclaimed mainly their concern over: (1) the clash of Federal and State law that would be provoked; and (2) the "retroactive" nature, wherein earlier Federal laws would be upset in favor of State jurisdiction. To the first argument, proponents answered that the language of the bill by its nature prevented confusion and would force evaluation and expression of jurisdiction; and, to the second, that no retroactivity would follow, since this was a yardstick for the Court to use in the future.

In 3 days' debate I heard no arguments damaging the good sense of the bill's objectives. In fact, I felt that any retroactive effect of this bill would be most healthy. The arguments against, to me, were powerful arguments for. The AFL–CIO was opposed to this bill. The votes were quite significant. On the earlier rule to take up the bill for consideration, of the 114 against, 105 were Democrat, 9 Republican. On final passage (241 to 155) of the 155 Members voting against, 132 were Democrats and 23 Republicans.

Educational TV legislation with Federal grants to States, is before the Interstate Commerce Committee for public hearings. Testimony established the peculiar advantage of TV teaching, each student having the illusion the teacher is talking directly to him, possibly improving students' concentration. One unanswered question for me is this, Should we start new spending programs when we're running up a heavy Federal deficit?

The Mideast situation is recognized by all as in a most dangerous and precarious balance. The United States was obliged to make good the earlier Mideast resolution offering help to those seeking it ,when Lebanon appealed to us for help. Force and firmness are understood by Russia. This we know. Communist weapons of infiltration, subversion, and duplicity, are not United States weapons. True, we chance outright war with Russia. Unanswered questions, however, include: (1) Will Russia be deterred and delayed in Mideast advances through subversion by our action? (2) How dangerous is the quickened choosing of sides—the Nasser United Arab Republic backed by Russia, against Lebanon and Jordan backed by the United States and Britain? (3) How will the many neutrals line up? (4) Is Arab nationalism too strong a force to be contained in view of the artificial boundaries of many of the Mideast nations? (5) Will a U. N. majority support us?

This is sure. We need our best effort, our clearest thinking, our combined devout prayers for guidance. It's time the nations of the world recognize the terrible menace of worldwide communism masterminded by the Kremlin, as have we. If the United States fails in the role of leadership for peace and freedom, through economic collapse or conquest, the world's people would all become Communist slaves.

Testimonial Dinner Honoring Chester E. Merrow, of New Hampshire, June 16, 1958

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mrs. BOLTON. Mr. Speaker, on June 16 I had the pleasure of participating in a testimonial banquet given for our distinguished colleague from New Hampshire, the Honorable CHESTER E. MERROW. It was a standing-room-only affair and one of the most heartening evenings I have spent in a long time. Some 500 people had come to express their appreciation of Mr. MERROW's wonderful service to them through the years, and to wish him well. May I say, as an aside, that they were not all Republicans. I had the privilege and pleasure of giving the group gathered there a glimpse of what we here in the Congress think of CHESTER MERROW, especially those of us on the Committee on Foreign Affairs which he has served faithfully since 1945.

Miss Christine Perry, chairman of the Merrow for Congress Committee, gave a beautiful address which expressed so well the sense of those present. Mr. Speaker, under unanimous consent, I include Miss Perry's statement and my own talk in the RECORD as a part of my remarks, together with excerpts from an article appearing in Foster's Daily Democrat for June 17, 1958:

REMARKS BY MISS CHRISTINE PERRY AT TESTIMONIAL DINNER HONORING CHESTER E. MERROW, June 16, 1958

CHESTER E. MERROW, your life is the perfect denial of the old saying that a man cannot lift himself by his own bootstraps.

Born by the light of a kerosene lamp in your beloved town of Ossipee, by your own efforts you drove yourself through school and college.

Entering public life as a member of our New Hampshire general court, you quickly proved your ability in debate on the floor of the House and won wide respect and many friends.

When the time came for you to run for Congress, your lack of money and modest means were made up tenfold by a far more valuable asset—your sterling worth and your sincere desire to help your fellow citizens.

Although you have walked with kings you have never lost the common touch. You have never forgotten how much sweat there is in a $10 bill, nor what it means to walk the cold roads in threadbare clothing.

Today you strive, through travel, conference, and hearings to establish an international understanding and means of living together, so that the world we live in and all that we hold dear will not be wiped out overnight by the third and last world war.

You have been instrumental in deepening Portsmouth harbor, aided our towns and cities from the dangers of flood, speeded our mail communications and gone beyond the normal call of duty to make sure that our veterans received their hard bought benefits. You have always had a ready and attentive ear for every one of your constituents.

CHESTER MERROW, you are the living example of the American tradition that no matter what a man's origin, if he but prove himself worthy, his fellow citizens will recognize his strength and place him in position to aid in the counseling of our Nation's destiny.

TESTIMONIAL DINNER HONORING CHESTER E. MERROW, MEMBER OF CONGRESS, NEW HAMPSHIRE

(Talk by Hon. FRANCES P. BOLTON, Member of Congress, Ohio, 22d District, Wentworth on the Sea, New Castle, N. H., June 16, 1958)

Friends, you cannot know what deep pleasure you have given me by your kind invitation to take part in this testimonial dinner tendered my colleague, the Honorable CHESTER E. MERROW. We have been together in the Congress for many years, and since the death of our greatly beloved comrade, Larry Smith, of Wisconsin, in January, we have sat side by side.

There is a curious bond between the men and women of the Congress—especially among those who are of the same party. We Republicans have many differences of opinion—too many once and again—but the bond is strongly felt by those who come back after some years in other fields. Warm welcome awaits them, and memories dance in the Chamber. Yes; it is a strangely friendly company, merciless in its criticism, seldom given to praise. One earns whatever reputation one builds.

This Representative of yours has built himself an enviable place in the greatest legislative body in the world. When he has spoken on the floor it has been to the point. Intelligently and simply he has presented us with his views. You can read his statements in the CONGRESSIONAL RECORD. All of them redound to your credit, as well as to his.

I could read you his record—I have it here—and I assure you it is an enviable one. Portsmouth Harbor — Farmington — your shipyards, your industries, are but a few places which are better for his service. All these, while he was giving himself also to special missions to Australia, Pakistan, India, Thailand and Indochina—to Europe, to Central America, and, not least, a fine contribution as 1 of the 2 United States congressional delegates to the 10th General Assembly of the U. N. I know what this last means, for I was a delegate to the 8th Assembly in 1953.

So I say to you with great earnestness, that the value of this man who has served his district, his State and his country, increases with each year you send him back.

Yes; it is good that you take this evening to let him know how truly you recognize his value and honor him. I congratulate you all for your understanding and your wisdom.

My colleague suggested to me that you might be interested if I gave you a few thoughts on that great continent of Africa to which I went 3 years ago. But before I do, I want to give you another picture—about matters nearer home, matters that have to do with your security and mine, and the security of free men and women the world over—for in that picture your Representative in the Congress, the Honorable CHESTER E. MERROW, plays a unique and far-reaching role.

We on the House Committee on Foreign Affairs, pride ourselvees that we are first of all Americans, without party. Yes; we Republicans sit on one side of the committee table and the Democrats sit on the other, but in all the 17 years I have sat on that committee, I could count the partisan votes on my fingers.

This year we have had a demonstration of truly American action unlike—and to my mind beyond—any so far known. One of the two members of the Committee on Foreign Affairs participating in this unpartisan action is your Representative; his companion—A. S. J. CARNAHAN, a Democrat from Missouri. The most important bill before our committee this year was the mutual security bill. Probably no bill has ever suffered more from misrepresentation, from half truths, from exaggerations. Certainly no bill was ever in greater need of an honest presentation to the people. Such a presentation these two men made—indeed they are still making it—when invitations reach them.

Only those who have presented serious matters to audiences can have any conception of the amount of preparation that has to be done before a word is spoken. With their charts set up between them they told their audiences the reasons for and the results from this program entered into by our Government. They showed it to be the most far-reaching and effective method of protecting the free world in this all too little understood war that is being waged between those of us who believe in God, who consider the individual of first importance because He is part of the very essense of the infinite, and those who deny His very existence.

No two men ever assumed a more selfless service—not easy—not simple, but infinitely worthwhile. I am glad of this opportunity to say once again: Thank you, CHESTER MERROW, for the fine contribution you have made and are making.

[From the Foster's Daily Democrat, Dover, N. H., June 17, 1958]

FRIENDS HONOR CONGRESSMAN MERROW WITH TESTIMONIAL BANQUET—MRS. BOLTON, OHIO REPRESENTATIVE, PRAISES WORK OF MERROW IN CONGRESS—ACCOMPLISHMENTS OF CONGRESSMAN REVIEWED IN TALK BY MISS CHRISTINE PERRY

WENTWORTH-BY-THE-SEA.— Representative FRANCES P. BOLTON, of Ohio, said here last night that Congressman CHESTER E. MERROW and S. J. CARNAHAN, of Missouri, succeeded in getting the facts of the mutual-security program to the people in their recent tour of the United States.

The woman Congressman who serves on the House Foreign Affairs Committee with Merrow, said the program is "one of the most misunderstood" in the country. It provides 600,000 jobs in the United States, she explained.

Eighty percent of the money in the mutual-security program is spent here at home, she said.

Mrs. BOLTON, who has served in Congress since 1940, spoke to a capacity audience at an appreciation dinner for MERROW at this resort hotel. The affair was sponsored by Strafford and Rockingham County friends of Congressman MERROW. She commended MERROW and CARNAHAN for their recent cross-country tour in bringing the facts of the program to the country.

She described the mutual-security program as a death flight, with godless communism in aiding underprivileged sections of the world. Mrs. BOLTON said Americans must cease being "an arrogant lot" and come to understand other people.

"Our schools must teach languages—including Russian," she said. "The State Department is struggling to put languages back into our public schools."

Mrs. BOLTON spoke of her recent tour of Africa, the continent that God has held in reserve. We need the confidence and friendship of its peoples, said the Congresswoman, and you can't buy that. She spoke of the continent's bauxite, industrial diamonds, and iron which our industry and our economy must have.

"Africa has everything we need," she concluded.

TRIBUTE TO MERROW

Hugo Lindahl, of Manchester, presented Congressman MERROW with a citation for his work in behalf of the country and the First Congressional District. He described MERROW as the living example of American tradition.

Others paying tribute to MERROW included James Smith, toastmaster of the evening; Andrew Christie, an old friend and longtime MERROW supporter; Andrew Jarvis, the mayor of Portsmouth; Christine Perry, of Somersworth, whose enumeration of MERROW's accomplishments on behalf of the First Congressional District appear in an adjoining column; Samuel B. Blair, chairman of the dinner committee; Mrs. Norma Studley Currier, Rochester, national committeewoman; and State Senator Paul Karkavelas, who as acting mayor of Dover, brought the good wishes of our great, beautiful, and industrial city.

MERROW told the gathering that he was deeply moved by the confidence expressed here tonight and expressed great satisfaction with being able to carry on his work.

He said that he and CARNAHAN are convinced that the American people are being missold on the intent of the mutual security program. He added that they will speak in Concord July 7, and probably in other New Hampshire communities.

The Congressman said, "I will dedicate my efforts to trying to see if we can build a peace, for another war—a nuclear war—would be devastating."

Seated at the head table were: Mr. and Mrs. Samuel B. Blair, of Dover; Rev. and Mrs. Robert Dunn, of Portsmouth; Rev. David, of the Franciscan Order at Rye; Mayor and Mrs. Andrew Jarvis, of Portsmouth; Mr. and Mrs. James Smith, Mr. and Mrs. Hugo Lindahl, of Manchester; National Committeewoman Mrs. Norma Studley Currier, of Rochester; State Chairman William Treat, of Hampton; Congressman and Mrs. Merrow, Father Thomas Duffy, Portsmouth, and Miss Christine Perry.

Among those attending the dinner were several prominent labor leaders in the local area.

Speaking for the committee that sponsored the testimonial to Congressman CHESTER E. MERROW last evening, Miss Christine Perry, of Somersworth, reviewed some of the accomplishments of the New Hampshire Congressman. In particular she stressed some of his work for Strafford and Rockingham Counties during the past several years.

She spoke as follows:

CHESTER E. MERROW, your life is the perfect denial of the old saying that a man cannot lift himself by his own bootstraps.

Born by the light of a kerosene lamp in your beloved town of Ossipee, by your own efforts you drove yourself through school and college.

Entering public life as a member of our New Hampshire general court you quickly proved your ability in debate on the floor of the house and won wide respect and many friends.

When the time came for you to run for Congress, your lack of money and modest means were made up 10 fold by a far more valuable asset, your sterling worth and your sincere desire to help your fellow citizens.

Although you have walked with kings you have never lost the common touch. You have never forgotten how much sweat there is in a $10 bill, nor what it means to walk the cold roads in threadbare clothing.

World Peace Through World Law

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. PORTER. Mr. Speaker, the present crisis in the Middle East gives renewed and grave emphasis to the need for an effective method of settling international disputes. We know that this method will not come quickly or easily. There is no gimmick, no magic formula. World peace will only be attained through world law. We will only attain world law by wanting to attain it.

Now is the time for more attention to be paid to the recently published book World Peace Through World Law, by Grenville Clark and Louis B. Sohn. Under permission previously granted, I include hereafter an editorial from the Washington Post for July 9, 1958, entitled "Bid for a World Order":

BID FOR A WORLD ORDER

Amid the fulminations of international politics, it is refreshing to find two eminent lawyers solemnly publishing a detailed plan for reorganization of the United Nations and establishment of legislative, judicial, and military organs that would substitute world law for nuclear force. Statesmen and citizens alike will perhaps look upon the plan as a wishful dream. One reads it with a sense of remoteness from the current scene. Yet the President commented on it at his news conference the other day, and indeed its reminder of the world's headlong rush toward mass suicide affords a tie to realities most basic than any maneuver in the cold war.

The book entitled "World Peace Through World Law" is the work of Grenville Clark, an eminent New York lawyer and student of international organization, and Louis B. Sohn, who teaches United Nations law and problems in the development of world order at Harvard University. What they contemplate is a strengthened U. N., with a more representative General Assembly in which the largest nations would have 30 representatives and the smallest nations 1. This Assembly would retain its broad powers to make nonbinding recommendations on any subject and in addition would be given legislative powers "strictly limited to matters directly related to the maintenance of peace."

The Assembly would elect an Executive Council of 17 members to take the place of the present Security Council. The 4 largest powers—the United States, India, China, and the U. S. S. R., would have a representative on the new council at all times, 4 other seats would rotate among 8 medium-sized powers, and the others would go to smaller nations. The council would be the executive arm of the revised U. N. in carrying out total disarmament and enforcing peace. It would be responsible for its actions to the Assembly.

Elaborate plans have also been worked out for a world police force, for a judicial and conciliation system and a World Development Authority. Total disarmament would be achieved in stages with worldwide inspection to make certain that all countries were complying. A bill of rights would reserve to existing nations all powers not granted to the U. N. and guarantee basic individual rights againts encroachment by the U. N. The entire U. N. Charter would be enforceabel through the judicial system to be created for that purpose. The proposed new Charter would come into effect when ratified by five-sixths of the world's nations, including every country with more than 40 million people.

We have not observed any rush to the Clark-Sohn standard. But many pressures are driving mankind toward a keener realization that some form of international control to keep the peace is imperative. If nuclear war should break out, the clamor for world law and a world policeman are likely to be irresistible. The efforts of two thoughtful lawyers to pilot this movement deserve far more attention than they have received to date.

Disarmament

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 26, 1958

Mr. ROOSEVELT. Mr. Speaker, the following address was delivered before the Americans for Democratic Action Educational Conference recently, in Cleveland, Ohio, by Alfred J. Holtz, professor of political science at Western Reserve University. Under leave to extend my remarks I include it in the RECORD because, while it is not necessarily an accurate reflection of either my views or those of ADA, it does represent an important independent judgment on disarmament.

The address follows:

DISARMAMENT AND NATIONAL SECURITY

(By Alfred J. Hotz, department of political Science, Western Reserve University)

The vital issue of disarmament has, frequently, been discussed as a problem apart from, rather than as a part of, the crucial political and military issues that deeply separate the Soviet Empire and the Western World. It will be my hopeful purpose to place these political and military problems into proper perspective, or at least in sharper focus.

The fundamental political question that divides East and West arises from two diametrically opposite concepts of political world order—the Soviet concept of a monistic, highly centralized, coercive Soviet Empire versus the western concept of a pluralistic, decentralized, cooperative union of sovereign states. Since major political objectives are never achieved merely by political means, even when augmented by economic, psychological, and ideological means, the vital element of military power is invariably applied, either directly or indirectly. Briefly stated, military power is the ultimate arbiter in the achievement of national objectives, and thereby has a positive connotation.

The vital military problem, that divides the Soviet Empire from the American coalition, revolves about the existing, and future, military balance of power, both global and local. Parenthetically, the military balance is never a perfect equilibrium as between the two main protagonists because of variant geographic positions, changing military technology, and vacillating, or determined, political will. In general, however, each side attempts to establish a military balance that is generously in its favor, if not superior to that of the other side.

Therefore, in oversimplified form, American military objectives have been twofold: (1) a positive purpose to support our modest political objectives in the international arena; (2) a negative purpose to deny the Soviet Union a military superiority to threaten the military security not only of the United States proper, but as well the national security of other vital strategic areas that constitute the overall global balance of power.

Soviet military objectives are likewise twofold: (1) the negative purpose, to reduce American military power, thereby to protect Soviet military security; and (2) the positive purpose to support what appears, at least in western minds, to be the expansion of the Soviet monistic, highly centralized, coercive Empire. While the Kremlin, whether under Stalin or Khrushchev, would probably prefer to achieve their political objectives by less than open military means, it is clear that Soviet leadership is irrevocably committed to the application of military pressure, whether open or veiled, against the West. Soviet leadership knows and understands the vital component of military power—after all, the Kremlin uses it constantly against its own Russian people.

What compounds the American military posture are two major weaknesses: (1) our distant geographic position from the major strategic areas of the world, as contrasted to Soviet geographic propinquity to those selfsame regions; and (2) the military weakness and political paralysis, or at least lack of political will, of some of the West European powers that formerly had preserved, in some degree, at least, the prewar balance of power.

Thus, the military requirements of the two major antagonists, whether necessary defensively to protect national security or offensively to protect national political objectives, very considerably. Indeed, due to a wide divergence in political will the past and present military balance of power has changed, if not fluctuated, considerably. Therefore, disarmament proposals and negotiations have, heretofore, in general been one-sided, and, thereby, unsuccessful.

No serious, and reasonable, disarmament programs can be divorced from the existing military-and-political balance of power. At the risk of oversimplification, may I illustrate this thesis by dividing the post-War II period into three main periods, with the fourth military balance presently emerging, and by evaluating the American disarmament proposals and Soviet counterproposals within the changing context of the prevailing balance of power.

Period I encompassed the years 1945–50 (the Korean war). In theory, the military balance appeared to be a tolerable equilibrium between the Soviet conventional forces and the western (American) demobilized conventional forces, buttressed by the American monopoly of the A-bomb, a supposed massive deterrent. Parenthetically, Secretary Dulles may have coined the phrase "massive retaliation," but, in reality, the massive nuclear deterrent has been American military policy vis-a-vis Soviet possible aggression since 1945.

However, any military policy, whether maximal or minimal, depends primarily on whether or not it is "credible." In brief, it depends upon whether the nation-state having such a military component is politically prepared to use it as an instrument of national policy. But more important still, its effectiveness depends on whether or not the enemy believes it to be "credible"; that is, fears the employment of that military weapon, or weapons system, and, therefore, hesitates to risk its own military power to test, or to break, the prevailing military balance.

Thus, period I ended when the Soviets tested in Korea not merely the American military posture, but as well our political

will to employ military power in defense of our national interests. But the American atomic deterrent was found wanting at the time of the Korean war. Incidentally, I approved the devision of a limited war with limited objectives to redress the local North Pacific balance of power. Parenthetically, it should be clear that our major objective in defending South Korea was to defend Japan as a bastion of the western defense system.

Period II, which ran approximately from the Korean war to the summit conference in Geneva (1955) established a different military balance than the earlier period. The American military posture was strengthened by the accumulated increase in conventional troops and arms, occasioned by the Korean conflict. Furthermore, it was augmented by the development of more destructive nuclear weapons, including the H-bomb, with concomitant strengthening of our delivery system, both through development of the Strategic Air Command and the envelopment of the Soviet Empire by a wide-flung series of airbases.

Meantime, the Soviet Empire increased its military striking power both within the Soviet Union and through the acquisition of Communist China's conventional forces. Major emphasis, during period II, was given to the increase in weight and destructiveness of Soviet firepower—nuclear weapons. Soviet atomic and hydrogen bomb capability served as a counterweight to the American ever-expanding nuclear component.

Thus, while the United States still held, during this period, a relatively overall superior military advantage, we were restrained from employing same except as a defensive warning agaisnt Communist encroachments.

The military stalemate was, as yet, not a "balance of terror," as Winston Churchill described it, primarily because the United States bastion itself was relatively safe from direct Soviet military assault. Therefore, the Soviet Union, during period III, covering roughly from the Geneva Conference (1955) to the present time, was determined to place the United States proper under direct military threat.

Consequently, major attention was directed to the development of a new, faster, and more flexible delivery system—the IRBM and the ICBM—in brief, missiles. The Soviet Union, primarily, as the result of greater political will, has temporarily gained an advantage, but how decisive, in military terms, is questionable, or at least debatable. Therefore, I would be prompted to state that while the military balance of power is no longer favorable, in purely military terms, as it was in the previous periods, it is certainly not unfavorable, as yet to the United States, nor the West. In brief, there is a more tolerable military balance for the Soviet Union, as we enter the fourth postwar period, than at any time heretofore.

This new military balance, presently emerging, will in all likelihood be the most precarious ever in history largely for three reasons. First, the newest race in weapons technology—missiles—with all the complex concomitants, including electronic guidance systems and dispersal of launching platforms, or bases, will take some years to effectuate, and then possibly stabilize. Second, the unknown factor of outer space for military purposes, both offensive and defensive, will add a new and incalculable dimension to the future military balance of power. Third, the flexibility and unpredictability of the post-Stalin leadership of the Kremlin provides a new test of American prudence, coupled with imagination.

Now, side-by-side with this constant armaments race, there has evolved a series of disarmament proposals by both sides. Stripped of all verbal paraphernalia, the military objective of the various American disarmament proposals was designed to weaken Soviet striking power, whether conventional or nuclear. The political objective that undergirded our proposals was to establish an "open society" within the Soviet closed-totalitarian state, thereby, in turn, achieving two specific objectives: (1) to grant the West sufficient warning against "surprise attack"—a sort of "clear and present danger signal"; and (2) to create, if possible, a more rational Soviet political order less given to a pathological hatred of the West.

The Baruch plan, the various inspection programs presented before the U. N. Disarmament Commission, including President Eisenhower's "open skies" plan, all had the above objectives, laudable from our standpoint, but quite, obviously, unacceptable to the Soviet Union. For had the Kremlin accepted any one of the above proposals, the prevailing military balance would have shifted perceptibly even more in our favor.

Equally, and more obviously, all of the Soviet counterproposals for disarmament were designed to militarily disarm primarily the West, and particularly the United States. Thus, their demands to ban the A-bomb was calculated to remove the major military counterweight to Soviet overwhelming preponderance in conventional forces. Soviet constant demand for American withdrawal from our forward bases in the NATO countries, including West Germany, has the selfsame military objective.

Meantime, Soviet outcries against the horrors of nuclear war had a political objective of rising importance—i. e., an appeal to Western pacifism and neutralism. Thus, even American public opinion, or at least certain sectors thereof, oscillate between apathy, on the one hand, and agony, on the other, when it comes to dissecting and debating the rough-tough military questions in this nuclear age. Parenthetically, on this question, I share the opinion expressed by Walter Lippmann (1915): "We shall end war by dealing effectively with our problems, not by reiterating that war is horrible."

We shall not deal effectively with our military dilemma, nor with reasonable disarmament proposals, until we face squarely the various types of wars, or military pressure, that the United States, its allies, and other regions of the non-Soviet world may be subjected to. Without attempting to delineate the different types of military conflicts, allow me to, at least, list them in separate categories: (1) all-out nuclear war; (2) limited conventional war, supported by tactical weapons (both of these contingencies involving directly the two great powers); (3) "proxy" wars engaged in by satellites to alter a local balance of power situation; (4) international civil war within a nation-state, with one side supported militarily by the Soviet Union, the other by the United States; (5) local wars erupting from the military Nassers, supported directly or indirectly by the Communist bloc with view to subtracting from the Western defense system.

The key problem is the maintenance of both the global and the local balance of power, at best favorable, but at least tolerable, to the defense of American vital interests. Therefore, any present or future disarmament programs must take this military balance into serious consideration. All the problems of cessation of testing, cutoff of production, geographic placement of aerial bases or missile-launching platforms, reductions in armed manpower, redeployment of conventional forces, require careful calculation by both sides, and the establishment of a new military balance that is rational and acceptable to both.

Therefore, I suggest that no substantial disarmament is possible or probable until the following conditions are met:

1. Weapons technology will have to be frozen, or at least stabilized by mutual agreement. Incidentally, our present nuclear tests were necessary, first to test a nuclear antimissile missile, thereby to counter the Soviet IRBM and ICBM; and, second, to test new systems of light, rugged, mobile weapons to fight limited wars and local wars with a minimum of radioactive fallout. Actually, both the Soviets and the United States have sufficiently tested nuclear weapons of optimum destruction. However, it should be recalled that a democracy requires a more sophisticated and flexible weapons system than does a totalitarian aggressor.

2. Delivery systems will have to be balanced to meet variant geographic-military requirements for both sides. With the uncertainty of outer space and its military potential, I do not foresee much immediate progress on this issue. Significantly enough, neither the Soviet Union nor the United States have seen fit, as yet, to bring into negotiations another delivery system—navies.

3. Manpower requirements for both military blocs will undoubtedly require a different formula than presently being discussed within the U. N. Disarmament Commission. Meantime, the deployment of conventional troops by both sides will also demand more careful consideration to achieve a tolerable military balance.

4. Finally, military disarmament cannot be completely divorced from the larger political questions that have, thus far, defied successful agreement, such as Germany. Moreover, until Red China is brought into the disarmament negotiations, and thereby part of a reciprocal agreement, we would be unrealistic to expect genuine and effective disarmament.

In conclusion, may I merely add that disarmament is not a panacea, but merely a possible program for making war more rational, and more calculable. Our major task remains: To achieve, and to maintain a tolerable military balance of power that clearly forewarns the Soviet empire that it cannot achieve its objectives by the employment of military force. Continued negotiations with the Soviet Union are, therefore, necessary in order to airify and clarify this basic political issue.

Albert Einstein, when asked why man's intelligence and ingenuity was capable of inventing the atom, but not of establishing peace, is reported to have answered: "Politics is far more difficult than physics."

H. R. 9521

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1958

Mr. DINGELL. Mr. Speaker, I speak about H. R. 9521, the bill which would relieve produce of the soil, that is, fruits and vegetables, from the necessity of bearing a label declaration of added chemical preservative, and I would like to speak primarily of the fact that enactment of this bill would seriously curtail the public health protection that is presently available to the American public.

The Food and Drug Administration and its counterparts in the States have the obligation of determining that food is pure and wholesome. When a chemical preservative is used, it is important

for them to know that it is permitted on food and that it is present in a safe quantity. If these officials know that a preservative is present, then they are able to proceed expeditiously to a determination of the quantity present without wasting valuable time examining stocks of fruits and vegetables that have never been treated with preservatives.

The need for conserving the time of our public health officials is acute. A few years ago a committee of outstanding citizens, representing various walks of life, studied the activities of the Food and Drug Administration and found that it needed a 3- to 4-fold increase in staff in order to perform an adequate job. The situation in most of our States is even more critical. We do not have sufficient manpower working on this important field of public health to allow 1 hour of time to be squandered. Yet this is a bill that would require the squandering of untold hours of time of those who must protect our public health.

Why is it so important to check fruits and vegetables for preservatives? Simply because growers and shippers are beginning to use more and more frequently the extremely toxic chemicals to reduce the losses in transit. The effects of some of the preservatives now permitted will curl your hair. While these substances have been shown to be safe when present only in approved concentration, they can be extremely unsafe if a little too much is used.

Captan is one of the preservatives permitted on a number of crops at this time. Too much Captan depresses growth, causes enlarged livers and kidneys, and actually brings about changes in the testicle of the male.

Another preservative, 2,4–D, which we think of primarily as a preparation to kill weeds in the front lawn, is used widely on citrus and excessive amounts damage the liver.

Another preservative for citrus, diphenyl, damages the kidney if too much is present.

Two preservatives coming into rather widespread use today on melon crops are Maneb and Zineb. They injure the thyroid gland and the liver when present in too large an amount. Other preservatives are nerve poisons and one developed just recently, which goes under the tongue-twisting name of tetraiodoethylene, has been shown to interfere with reproduction of test animals. The latter, I am glad to say, is permitted only on cantaloups and I have full confidence that the food and drug officials assured themselves either that it does not penetrate the skin into the edible portion of the melon or, if it does, that the quantity that reaches the edible portion is insignificant.

These examples illustrate the significance of the problem raised by this bill. I know you have been told that there is no public health problem involved. But that is not so. There is no public health problem so long as these preservatives are used exactly as they are supposed to be used. But people make mistakes and it is an easy thing to put a little too much chemical into a soaking tank at some shipping point, particularly during the rush season when fruits and vegetables are moving through there by the carload. Have you ever been to a vegetable packing shed at the peak of the season when they are operating around the clock to try to keep up with the incoming produce? Why, it is like a nightmare. There is utter confusion all over the place. How can anybody honestly expect that the application of these extreme poisons to our fruits and vegetables will be made under these confused conditions so that they are always applied in the proper manner. It is not reasonable to expect that. So we have got to leave with our food and drug officials all of the tools they need to permit adequate checking of fruits and vegetables bearing poisonous chemical residues.

I submit, Mr. Speaker, that the proposed bill would be bad legislation, would be a backward step in public health protection, and should not be enacted.

The Timid School Board

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1958

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert the following article entitled "The Timid School Board," by David G. Salten, which appeared in the Nation, July 19, 1958:

THE TIMID SCHOOL BOARD
(By David G. Salten)

LITTLE ROCK.—Judge Harry Lemley's decision on June 20, delaying integration in Little Rock for 2½ years, has placed a roadblock in the continuing progress of our American public schools toward equality of educational opportunity. If this decision is not reversed in the higher courts, an obscure Federal judge who once declared the South "is almost a religion with me," will have accomplished something that neither Orval Faubus and his troops nor mob violence could achieve—the removal of eight Negro students from Central High School.

Both sides in the 3-day hearings which preceded Judge Lemley's decision agreed that the eight Negros had been guiltless of wrongdoing. The fault admittedly was on the side of a small group of white supremacists who displayed their contempt for law and order. Yet it is the Negroes who are being sent away. Apparently we delude ourselves when we consider scapegoat justice a phenomenon of the past. In Little Rock, the sin of a community has been ceremonially attached to a group of eight Negroes—themselves the victims—who will now be driven out to dispel the evil.

The hearings, held June 3–5 on a petition of the school board to delay school integration for two and a half years, resulted in somewhat less than 500 full pages of testimony. As a school superintendent called in as an expert witness on behalf of the NAACP, my chief concern and field of special competence was the practical problem of administration of Central High School. In any American community, however, and especially in Little Rock today, school administration is intimately related to the prevailing political climate of a community and the broad educational policy of its school board. To get a clear picture of the internal situation and school-board planning, it is necessary to view the collapse of its discipline against the background of failure in the disparate but related areas of political action and school-board planning.

The 1957–58 school year was due to commence on September 3. The Little Rock Board of Education had arranged to enroll nine Negro students in the formerly all-white Central High School. On September 2, Governor Faubus announced that "in the interest of preserving the public peace and tranquility," he had called out units of the Arkansas National Guard and had directed that the white schools be placed "off limits" to Negro students and that the Negro school be placed "off limits" to white students.

Subsequent events indicated clearly that Governor Faubus' method of "preserving the public peace and tranquility" was about as inept an example of governmental administration as can be found in recent American history. One is compelled to accept either the fact of Faubus' amazingly poor judgment, or the theory advanced by some local political sages that his action was designed to make him a symbol of resistance to the Supreme Court decision and assure him a rare prize in Arkansas—a third term as Governor.

Only the most naive of Americans can view the Little Rock controversy as a local rather than a national issue. Traditionally, long-term planning for the solution of national problems is a responsibility of the executive branch of the Federal Government. President Eisenhower took firm action on September 24 when he ordered troops of the 101st Airborne Division onto the grounds of Central High. Since then, the President has maintained the position that the responsibility for implementing the decision of the Supreme Court belongs to the courts, and that the Justice Department and the executive branch generally will not intervene unless their help is actively sought by local authorities. Thus, the rate of compliance with the Supreme Court's decision will be determined, in effect, by litigation in district Federal courts. In the present state of affairs, Little Rock School Superintendent Virgil Blossom's plea for Federal legislative assistance is disingenuous because of the attitude of the southern bloc in Congress.

In Little Rock, not one but a whole series of errors has been made—at Federal level, at State level and within the school district. My experience and training qualify me to speak on problems of school administration, not on Government; and it is therefore to the field of my special competence that this article is addressed.

The 3-day hearings before Judge Lemley yielded numerous indications that the Little Rock Board of Education planned poorly for desegregating Central High School, and that some trouble might have been expected even without Governor Faubus' colossal blunder. Either through ignorance or design, the board failed to take into account what has been learned elsewhere about desegregation. Wherever desegregation has taken place smoothly, it has been the result of vigorous school-board leadership on three fronts: (1) Genuine and intense support of democratic ideals, (2) involvement of the moderate and responsible elements of the community, and (3) refusal to be intimidated. The Little Rock school board struck out dismally on all three. From the outset, it adopted a philosophy of despair and defeat. This was dramatically expressed in the board's pretrial petition to Judge Lemley, wherein it was plaintively argued that segregationist were continually implanting in the minds of the citizens that a Federal cour order is a nullity and that nowhere in the South has a plan of inte-

gration been put into effect except where the school officials have supinely acquiesced to the orders of the court.

What few steps the board and the school administration did take to prepare the community for gradual desegregation showed little evidence of a commitment to the democratic ideal of equal educational opportunity. Superintendent Virgil Blossom spoke to some 200 groups of Little Rock citizens. But his plan treated integration as an unavoidable evil which could be minimized by skillful management. The community was assured that school-building plans and zoning regulations would be arranged so as to continue, in fact, a segregated school system which would no longer be maintained in law. There was no attempt to make clear the basic reasoning of the Supreme Court, i. e., that racial discrimination in public education is unconstitutional because racially separate educational facilities are inherently unequal.

In effect, the school authorities told the community that its plan was designed to avoid integration as much as possible. Before Judge Lemley, Superintendent Blossom testified that there had been room for 400 Negro students at Central High, but that he had screened this number down to approximately 60, and then down to 17—of whom all but 9 withdrew. On cross-examination, Mr. Thurgood Marshall, the NAACP's chief counsel, asked, "Wouldn't you agree, Mr. Blossom, that you deliberately kept it as low a figure as you could?" "I've admitted that a dozen times," Mr. Blossom responded.

With an air of scholarship and conservatism characteristic of school superintendents, Mr. Blossom defended his view of what the Supreme Court meant by deliberate speed. During cross-examination, he stated: "Now we're speaking about something that the Negro race cannot help. * * * The history that I recited to you does not reveal the centuries of opportunity, of culture, and all of those opportunities that are wrapped up in that phrase 'socio-economic background.' This generation of Negro children is not responsible for that, but it is a factor in maintaining the educational program and standards."

The board assumed that the Little Rock situation was unique and that little was to be learned from other districts in the South where school integration had taken place smoothly. In his testimony, Wayne Upton, president of the board, seemed unaware that widely divergent reactions to school integration had taken place in Southern communities which were relatively close together Clinton and Oak Ridge, Tenn., are both Southern—in fact, they are only 6 miles apart. Yet the Oak Ridge schools were integrated with relatively little difficulty, while the Clinton schools were scarred by strife and turmoil. The school board of Louisville, Ky., developed a plan of desegregation which worked smoothly, while in the Kentucky towns of Clay and Sturgis, desegregation created violent opposition. Mr. Upton knew little of how integration had been effected in Hoxie, Ark.

Superintendent Blossom stressed, in the course of his testimony, that curriculum planning, which had been previously emphasized at Central High, had been seriously impeded by the admission of the Negro students. Indeed, the single point made most frequently and emphatically by him was that the quality of education had been substantially impaired by the presence of 8 Negroes (1 of the original 9, Minnijean Brown, having been expelled.)

Admittedly, the responsibility for developing and maintaining a program of high educational quality should be the chief concern of any board of education. But it is meaningless to discuss quality in education unless there is a preliminary agreement as to what constitutes a good curriculum. The policy-making responsibilities of a local school board require that the purposes of the curriculum be made explicit so that the board, acting for the people of the community, may have some set of standards against which to evaluate the effectiveness of the school program. There is almost universal acceptance among the thousands of school boards in the Nation that preparation for good citizenship is at, or close to, the top of the imperative needs of youth. It was the duty of the Little Rock Board of Education to establish the goals of Central High School in terms of the knowledge and skills, and more important, the behavior and overt actions, which are essential for good citizenship in a democracy. Only in the light of these goals can educational quality be measured.

One does not have to be a professional educator to recognize that students learn more in school than is to be found in their textbooks. The most valuable addition the school board could have made to the Central High curriculum was to give white and Negro students an opportunity to learn they could go to school together harmoniously. Conversely, the reluctance or inability of the Little Rock Board of Education to carry out the supreme law of the land in the operation of Central High taught the students disrespect for law and order by demonstrating that a hard core of student troublemakers could repeatedly break the law with impunity. This was a disastrously immoral lesson to teach—and one which will take much unlearning.

The truth is that the board simply refused to accept the findings of fact on which the Supreme Court decision of 1954 was based, namely, that racially segregated schools are inherently unequal. White students as well as Negro students need to have the experience of studying together in an integrated cultural environment. The Little Rock board's measure of quality in the up-to-date Horace Mann High School for Negroes included physical facilities, teacher preparation, and instructional supplies. But the essence of a good curriculum is the total school experience to which a student is exposed, including measures of student behavior which will indicate whether desirable changes in attitude and conduct have taken place.

Much of the testimony presented to Judge Lemley dealt with the collapse of discipline at the school. The first witness was Mrs. Elizabeth Huckaby, vice principal in charge of girls, who has been at Central High since 1930. She testified that all through the year she had been apprehensive, not sleeping well, and that her social life had dwindled to nothing. "On weekends," she testified, "I would usually go to the country with my husband and just sit for about a day and usually by noon Sunday I would begin to revive enough to face the next week." On cross-examination by Mr. Marshall, Mrs. Huckaby admitted that she had not had any professional training in discipline. "I am afraid," she said, "my limit has been a workshop course in the summer."

J. O. Powell, vice principal in charge of boys, characterized the discipline as chaotic, but ascribed the turmoil to a lack of prompt, firm, and effective action. Although he was the school board's own witness, Mr. Powell, on cross-examination by Wiley Branton, counsel for the NAACP, gave evidence that was extremely damaging to the board's position. He testified that no disruption had taken place inside the classrooms and continued: "I wish that we, as administrators, had followed the teachers' example in being able to control and maintain order as admirably as those teachers have in the classrooms." He asserted that he had received no specific instructions for coping with the special problems which might confront him as a result of the integration controversy with the exception of a board policy statement on discipline which did not appear until the second semester had already started.

The high point of this witness' testimony was the disclosure that he had recommended suspension of a small group of habitual offenders involved in incidents with Negro students or in acts of vandalism. These recommendations were not adopted by the principal. Mr. Powell expressed his personal conviction that if the group of some 20 to 25 ringleaders and "repeaters" had been removed by juvenile authorities, or by some appropriate police action, the entire disciplinary situation would not have deteriorated.

The school board's next witness, A. F. Lake, Jr. director of the band, testified that Negroes had never been in the band, but that their presence in the future would create a serious problem. "Do you think it would hurt to put Negros in the band in 1961?" Mr. Marshall asked. "That is rather speculative; I don't know," responded Mr. Lake.

The school board called upon O. W. Romine, director of school plant services, as one of its star witnesses. Mr. Romine spent considerable time on the stand describing the conditions which Judge Lemley later found intolerable. Mr. Romine had organized 43 bomb searches during the course of the year. These were very costly because some children persisted, in violation of school regulations, in using locks with unregistered combinations for their lockers. When these unauthorized locks were cut off by the bomb searchers, the students were reimbursed. Pressing home the enormity of this expenditure, board counsel Butler asked, "Do you know how much these locks cost individually?" "They cost us a $1.25 per each," Mr. Romine responded. "So that every time you would have to saw a lock off and replace it, it would cost the school district $1.25?" Butler continued. "That is right," Romine answered. Later, Judge Lemley in the memorandum accompanying his decision, noted that Mr. Romine "saw a bushel basket full of locks and that it cost the board $1.25 apiece to replace them."

Mr. Butler asked Mr. Romine why radiators had been removed from restrooms.

Answer: "These were floor radiators and the fact that students urinated on those radiators when they were hot caused fumes to go through the entire building."

Question: "Did that create quite a stench?"

Answer: "It did."

Question: "Was there any way you could remove that stench effectively?"

Answer: "By leaving the radiators cold it could not happen."

Question: "What did you finally resort to doing?"

Answer: "We removed them."

Question: "Did that leave the restrooms cold?"

Answer: "It left the restroom areas without heat."

On cross-examination, Mr. Branton asked, "You have testified at length about the obliteration, mutilation of public property at Central H. S. and destruction of physical facilities attached to the building. Is there anything as a result of your investigation that would lead you to believe that any of these acts were committed by Negro students enrolled at Central High School?" Mr. Romine responded, "It would be very difficult to tell, but my personal opinion would be that they were not."

W. P. Ivy, a teacher of mathematics for 34 years, testified that he didn't even know about some of the "things that went on up there until I got home and read it in the paper or saw it on television." Mr. Ivy had 1 Negro in each of 2 classes and 2 classes which were all white. He testified that the grades in the 2 mixed classes were not as good as those in the 3 all-white classes. But, of course, he himself had given those grades.

Presumably, too, a teacher of mathematics would know enough about sampling theory and statistical inference to realize that these data, even if achieved on objective tests, proved nothing.

The board's next witness, Miss Shirley Stancil, "guidance counselor for A through C of the 10th graders, and H through P of the 11th graders," testified that this past past year she was "more exhausted at the end of the day," and that standardized achievement tests in science had not been given because the teachers felt that the classes had not covered enough material in science. On cross-examination, Mr. Marshall asked how tests results in other subjects compared with past years. "About the same," Miss Stancil said, "the results were good."

Lawrence Mobley, basketball coach and teacher of physical education, testified that the presence of 1 Negro in a class of 150 students created problems. To avoid trouble, he had eliminated exercises and contests involving bodily contact between students.

The NAACP called two expert witnesses to the stand, Dr. Virgil Rogers, dean of the School of Education of Syracuse University, and the writer. Reduced to essentials, the testimony of the two administrators pointed up the demoralizing effects of permitting a small group of habitual troublemakers to remain in school and continue to flaunt the law with impunity. During a critical and abnormal situation, the customary discipline measures for misconduct should have been carried out more promptly and severely, rather than the reverse. The statements made by several of the board's witnesses suggesting that the staff didn't know how to handle an unusual situation because there simply had not been any discipline problems in Central High prior to the admission of the nine Negroes are, of course, untenable.

The techniques of good discipline need not be detailed here. Obviously, children will continue to use unapproved locks if their disobedience is rewarded by cash payments. Bomb scares in most schools have been brought under control quickly by adding to the length of the schoolday the time lost in searching lockers. Most high school students are occasionally mischievous; some are rebellious; a relative few are vicious. No teacher ought to become a high school principal before he can recognize these various types of misconduct and deal with them appropriately. School regulations are not a substitute for the State penal code. A person who commits a crime in high school should be summoned before the proper court.

Judge Lemley ruled that he was unwilling to substitute his judgment for that of the school administration in deciding what disciplinary steps should have been taken. Yet, since the principal of Central High School was not called to the stand to testify (a most significant fact, in itself), the judge should have given great weight to the testimony of the vice principal in charge of boys. It is most significant that Mr. Powell's recommendations for stricter discipline coincided with the findings of the two expert witnesses called by the NAACP. But Judge Lemley discounted the testimony of all 3, claiming that the 2 northerners were too far from the situation in Little Rock—and that Mr. Powell had been too near.

In his decision, Judge Lemley admitted that under the Supreme Court decision the eight Negroes in Central High have a constitutional right not to be excluded from any of the public schools on account of race. But the learned judge reasoned "that the time for the enjoyment of that right has not yet come." His agreement with the school board that any Negro in Little Rock could get a good high-school education by attending a colored school is a denial of the role of the free public school in making a reality of our American dream.

Milestone in Human Relations

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. HENDERSON. Mr. Speaker, next Sunday, the people of Washington County, Ohio, whom I have the honor to represent here will mark the 100th anniversary of the foundation of their county children's home. This fine institution is notable as the first such home supported by local taxpayers in the Nation. Its contribution to society and to countless children over the past century is an achievement of which any community might be proud. Through the molding of useful citizens, the cost to Washington County has been returned many times over.

The Washington County Children's Home was established 100 years ago by individuals who met a local need with dedicated and determined action—action which proved to be a model for other counties in the Nation. I wish to call the attention of the Congress to an account of the establishment of the home which appeared in the July 19 edition of the Marietta Daily Times of Marietta, Ohio. The article is as follows:

AMERICA'S FIRST TAX-SUPPORTED CHILDREN'S HOME WILL CELEBRATE ITS 100TH BIRTHDAY ON JULY 27

(By James Abrams)

Washington County Children's Home, the first tax-supported children's home in the United States, is 100 years old this year.

Centennial ceremonies will be held Sunday, July 27, at the home on Muskingum Drive. The Reverend Charles Harrison, assistant superintendent and chaplain of the Boys Industrial School at Lancaster, will be principal speaker. The Marietta High School summer band, directed by Grover Buxton, will present a concert.

Today the children's home includes a group of modern brick buildings dedicated in 1950 that surround the older administration building.

Founder of the children's home was Miss Catherine Fay who had been a schoolteacher and missionary among the Choctaw Indians. She married A. S. D. Ewing in 1866.

Returning to her parents' farm on Moses Run in 1857, she visited the Washington County Infirmary. Here she found what was common in every such institution in the country then—dependent children of all ages living with aged and infirm adults.

She felt that this was not the right place for children, who through no fault of their own, had been left homeless and destitute. Miss Fay requested and got permission to move the 26 children to her home.

"Aunt Katie Fay," as she was called by the children, was able to buy her family's 15-acre farm at Moss Run and to enlarge the house. On April 1, 1858, what was to become the Washington County Children's Home, was opened at its first site by Miss Fay for these children. Mariettans helped with gifts of food for the children, all of whom were under 10 years old.

Under Miss Fay's and other Mariettans' urgings, the State legislature authorized in 1866 the legal support of the Washington County Children's Home and other children's homes by direct taxation by the counties.

The original home was too remote and not large enough and the home was moved to its present location and opened there with 33 children on April 3, 1867.

Today approximately 75 children between the ages of 3 and 18 are cared for during school months. In the past 5 years the number has fluctuated between 84 and 34 children.

W. P. Rolleyson, superintendent of the county children's home explained that all but one of the children there are from broken homes. All are wards of the county, placed in the home by the courts.

He said that "children aren't placed here until we've explored all possible means of keeping them in their own home." "There isn't any better place to raise a child than in his own home," Rollyson emphasized.

The home is to a great extent a stopping-off place until homes can be found with relatives for children made wards of the county.

Many children are placed in free foster homes in the county. The county does not pay for children's upkeep in these foster homes. Interested people contact the county welfare board of their own accord to have children placed in their care.

Members of the Washington County Child Welfare Board that governs the county home are Ray Goddard of Cutler, Charles Ingram of Marietta Rural Route, Helen Evans of Lowell, Judge Xilpha R. Metcalf, and Attorney E. E. Erb, both of Marietta. Rollyson is executive secretary.

The 100-acre farm's own produce pays for about 35 percent of the home's costs. Its modern farm has a dairy herd, cans close to 1,000 half-gallon jars of vegetables, and raises around 7 to 800 pounds of sweet corn, 200 bushels of potatoes and its own pork.

The home operates its own school for grades 4, 5, and 6, in a 2-story brick building built in 1938. The other children attend Putnam School and Marietta High School.

The four modern brick additions dedicated in 1950 include a large well-equipped gymnasium with folding bleachers. Connecting on either side of it are the two single-story boys' dormitories. Connected to the administration building is the two-story girls' dormitory.

Rollyson and his wife, who is matron, have been at the home for nearly 6 years. Other staff members include 4 housemothers, a farmer in charge of the agricultural work, a utility man, a cook, a dining room supervisor, 2 laundresses, and a caseworker.

Resolutions Adopted by the Western Association of State Game and Fish Commissioners

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. DINGELL. Mr. Speaker, under unanimous consent, I include in the RECORD the resolutions adopted by the Western Association of State Game and Fish Commissioners, 38th annual conference, June 25, 1958:

RESOLUTION 1. AMENDMENTS TO COORDINATION ACT

Whereas the conservation and perpetuation of fish and wildlife are becoming critical because of the increasing utilization of lands and waters to meet the needs of our expanding human population; and

Whereas large sums of public money are being spent by State, Federal, and private

agencies for the development of water resources; and

Whereas construction agencies, both private and governmental, have been reluctant or legally unauthorized to consider ways and means to maintain or mitigate losses to fish and wildlife resources; and

Whereas many water development projects can be planned and coordinated to benefit all the users of the resources; and

Whereas the amendments to the Coordination Act of 1946 (commonly called Public Law 732) as proposed by the Department of the Interior and endorsed by the 48 States, and agreed to by all interested Federal agencies, will provide planning and procedures for enhancement of fish and wildlife as well as mitigation of losses in all construction projects; and

Whereas weakening and controversial amendments have been proposed to this legislation: Now, therefore, be it

Resolved by the Western Association of State Game and Fish Commissioners, That the Senate be urged to pass S. 3725 (Watkins) as reported from committee, and that the House expedite favorable action on S. 3725 or an identical bill.

RESOLUTION 2. SUPPORT OF $3 DUCK STAMP LEGISLATION

Whereas there is a great need to acquire wet lands throughout the United States for waterfowl conservation purposes; and

Whereas the cost of such acquisition has risen materially over the past years; and

Whereas the availability of such lands continues to decrease with agricultural and urban expansion; and

Whereas there is need for wiser management on said proposed waterfowl area acquisitions in order to harvest surplus waterfowl properly: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners does hereby endorse the provisions of H. R. 12072 (DINGELL, of Michigan) and similar legislation which would increase the cost of the duck stamp from $2 to $3, earmark all net receipts for the acquisition of waterfowl areas, and permit the Secretary of the Interior to open up to 40 percent of the acquired lands for migratory bird hunting, and which would further provide for the leasing of small acreages of wet lands and potholes as waterfowl production areas; and be it further

Resolved, That the bill contain no restrictions on the hunting of resident game species.

RESOLUTION 3. WATER RIGHTS ON PUBLIC LANDS

Whereas the recreational uses of the national forests and public domain lands are bound to increase in both social and economic importance with the growth of population, urbanization, and improved travel facilities, and the interest of the general public in the multiple-use management of the public lands is a very real interest that must be protected; and

Whereas the use of water for fish and wildlife purposes, largely a nonconsumptive use, is essential to and inseparable from the balanced multiple-use management of the public lands: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners urges the Federal administration of the national forest and public domain to exercise all necessary diligence under existing legal authority to forestall and deny the appropriation of water, or the development of water resources, when such appropriation or development would be inconsistent with the proper multiple-use management of such lands in the public interest; and be it further

"*Resolved,* That if existing authority is inadequate to protect the public interest, the Western Association recommends the initiation of legislation to correct the deficiency.

RESOLUTION 4. PACIFIC SALMON

This resolution, condensed here to save space, expressed concern because of the continued downward trend of Pacific salmon due to a variety of factors, and offered the following recommendations:

"*Now, therefore, be it resolved,* That the Western Association of State Game and Fish Commissioners does hereby endorse a more positive action on the part of all agencies concerned to maintain and improve the Pacific salmon resources; and be it further

"*Resolved,* That the Western Association officials appoint a committee composed of one member of each affected State, province, and Alaska to survey and investigate Pacific coast and Alaska salmon management programs and that of the international salmon fisheries and make a comprehensive report, along with recommendations, to the respective management agencies and their governments on their findings on or before the first day of January 1959; and be it further

"*Resolved,* That the three States' Pacific Marine Fisheries Commission be requested to undertake the task of compiling this report."

RESOLUTION 5. PUBLIC ACCESS FOR RECREATIONAL USE ON AND AROUND RESERVOIR IMPOUNDMENTS

Whereas Federal laws now provide that under certain conditions Federal agencies administering our public lands are permitted to issue special use permits to private individuals for the construction of dams for the purpose of impounding waters; and

Whereas it is recognized that said special use permits allow development of our agricultural lands and provide for the highest use of said lands; and

Whereas public access for recreational purposes does not interfere with the primary purpose for which the special use permit was granted; and

Whereas said lands belong to all the public rather than a few individuals: Now, therefore, be it *Resolved by the Western Association of State Game and Fish Commissioners,* That the Bureau of Land Management and other Federal agencies authorized to issue said permits be requested to include, at the time of granting, a provision stipulating the right of public access for wildlife and recreational purposes.

RESOLUTION 6. PUBLIC OWNERSHIP OF RESERVOIR SITES AND SURROUNDING LANDS

Whereas the policy of taking flowage easements rather than outright title to reservoir sites and surrounding shorelands, adopted in August 1953 by the Corps of Engineers and the United States Bureau of Reclamation, has resulted in an almost complete loss to the general public of highly valuable and irreplaceable recreational areas; and

Whereas under the policy followed prior to August 1953 such shorelands and access areas to these lands were often licensed to the various State game departments, resulting in a high and permanent public use of these areas: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners does strongly urge that the present flowage easement policy be terminated in the general public interest, and that there be substituted for it the former policy of taking absolute legal title to reservoir sites and surrounding shorelands in order that their use may be permanently assured to the general public.

RESOLUTION 7. REVISION AND AMENDMENTS TO THE FEDERAL RANGE CODE

Whereas some livestock interests are still making it difficult for the Bureau of Land Management to improve range conditions; and

Whereas the Federal Range Code of the Bureau only recognizes "reasonable numbers" of big game in its operations; and

Whereas the stockmen appeal-clause procedure under the Code is unsatisfactory and too time consuming; and

Whereas there is still lack of full appreciation and acceptance of the multiple use concept by various users of our Federal rangelands: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners does hereby urge the Secretary of the Interior to rectify these shortcomings in the Federal Range Code and to take immediate action to integrate multiple use throughout the code.

RESOLUTION 8. CONSERVATION OFFICER COURSES IN WILDLIFE SCHOOLS

In this resolution, abbreviated here to save space, the association recommended that administrators of educational institutions offering wildlife management degrees include in their curriculum courses in law enforcement, public relations, journalism, public speaking, report writing, general psychology and fisheries management as prerequisites to a bachelor's degree in wildlife management. The association further suggested that only wildlife students evidencing a special aptitude for research be encouraged to pursue true wildlife research and that they be encouraged to continue their academic training with graduate work.

RESOLUTION 9. OPERATION OUTDOORS

Whereas the United States Department of Agriculture, through the United States Forest Service, has developed a long-needed program identified as Operation Outdoors; and

Whereas part I of this program, concerning national forests recreation aimed at solving the mounting problem of increased family outdoor activity, has been published and is ready for implementation by increased appropriations; and

Whereas part II will deal with improvement and management of wildlife habitat on the national forests in cooperation with the fish and game departments, and

Whereas both phases of these activities have long been needed and have been programed in a most thorough and systematic manner: Now, therefore be it

Resolved, That the Western Association of State Game and Fish Commissioners commends most highly the United States Department of Agriculture for preparing the analyses and resulting plans dealing with the extremely important recreational and wildlife values of the national forests, and urges Congress to implement the program through appropriate financing.

RESOLUTION 10. COMMENDATION FOR THE TULE-KLAMATH SETTLEMENT

Whereas on April 1, 1958, Hon. Fred A. Seaton, Secretary of the Interior, issued a decree to the effect that the lands in controversy in the Lower Klamath-Tule Lake region of California and Oregon, which are so vital to the Pacific Flyway, must be used in a manner that will fully protect the valuable waterfowl resources of the area: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners does hereby commend Secretary of the Interior Fred A. Seaton and Assistant Secretaries of the Interior Ross L. Leffler and Fred Aandahl for their courage and foresight in recommending a positive settlement, favorable to conservation interests, of this long-standing controversial issue; and be it further

Resolved, That the Western Association urges Secretary Seaton to submit to Congress at an early date such legislation as may be

deemed necessary to implement the Secretary's action, and that the member States inform their respective delegations in Congress accordingly.

RESOLUTION 11. SOLICITOR'S OPINION ON STATUS OF WILDLIFE WITHDRAWALS

Whereas in the past decade there has been a widespread program among the 11 western States to withdraw tracts of public land for wildlife use in order that the general public could be assured of continued hunting and fishing access to these lands; and

Whereas the several State game and fish departments have spent considerable amounts of money and manpower in this program in the interests of the western hunting and fishing public; and

Whereas a member of the solicitor's staff of the Department of the Interior has recently submitted opinion M-36442 questioning the legality of withdrawing these public lands for wildlife use and transferring the administration of said lands to the State game and fish departments; and

Whereas it appears to the Western Association that this interpretation is incorrect and unreasonable: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners does hereby request that the Solicitor of the Interior Department review opinion M-36442 in order that the several States may be assured of their exact position with respect to past, present, and future withdrawal requests; and be it further

Resolved, That in the event the Solicitor of the United States renders a decision unfavorable to the State game and fish departments in their proposed administration of such lands that the Western Association sponsor Federal legislation which would assure the States of the right to administer these public lands for wildlife management purposes in the interest of the general public.

RESOLUTION 12. RETENTION OF HUNTING AND FISHING RIGHTS ON STATE AND FEDERAL LANDS PROPOSED FOR SALE OR EXCHANGE

Whereas parcels of federally owned and State owned land are being sold or exchanged to private interests in increasing numbers; and

Whereas it has been established by Federal law for many years and by most State laws that mining, mineral, oil and gas rights on any Federal or State land sold or exchanged shall remain in the name of the Federal Government or the State: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners does hereby request the legislative committee of the International Association of Game, Fish, and Conservation Commissioners to prepare a bill for introduction during the 86th Congress which will provide for the retention, in the name of the public, of hunting and fishing rights on any Federal land sold or exchanged; and be it further

Resolved, That following the action of the legislative committee of the international association, that the individual Western States prepare similar legislation for introduction into their State legislatures.

RESOLUTION 13. RETENTION OF WILDLIFE COVER IN RANGE IMPROVEMENT PROGRAMS

Whereas a number of private and Government agencies are conducting, or contemplate conducting certain large-scale programs for the eradication of sagebrush, juniper, and other chaparral, shrub, and tree growth by use of public funds in the Western States as a means of increasing the grass production on the lands in question; and

Whereas this procedure in limited areas appears to be beneficial to big game species in that it provides a beneficial edge, but the complete eradication of all shrub and tree growth over large expanses of terrain is detrimental to big game species with the possible exception of antelope because it eliminates necessary food and cover; and

Whereas reduction of the winter feed supply for big game will result in greater property damage to the landowners who advocate the eradication programs and/or a reduction in the carrying capacity for big game on the ranges concerned; and

Whereas big game has great economic and recreational value to the Western States: Now, therefore, be it

Resolved by the Western Association of State Game and Fish Commissioners, That Federal and State agencies approve such eradication programs on land under their jurisdiction only when fingers, blocks, or strips of the original growth are left standing for game cover and food, and when it has been determined in each instance that to do so would not be detrimental to the best public interest; and be it further

Resolved, That the Federal and State land management agencies, when contemplating such range improvement programs, confer in advance with State game departments as to the effect on big game resources and modify their plans to the end that damage to wildlife habitat will be held at a minimum.

RESOLUTION 14. OPPOSING CHANGES IN FEDERAL AID ACTS

Whereas the Federal Aid in Wildlife Restoration Act, more commonly known as the Pittman-Robertson Act, has since its enactment in 1939 been a tremendous asset to the wildlife conservation programs of the States; and

Whereas the formula for the apportionment of these Federal-aid funds to the States had the unqualified endorsement of all 48 States; and

Whereas this basis for apportionment has been successfully accomplished these past 19 years: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners goes on record as being unalterably opposed to any change in the present apportionment formula; and be it further

Resolved, That the western association goes on record as being opposed to spending any of the sportsmen's funds for determining the number of duplicate licenses sold and being in favor of continuing the present method of certifying license sales.

RESOLUTION 15. COMMENDATION FOR THE OIL AND GAS LEASING POLICY ON WILDLIFE REFUGES

Whereas for the past several years there have been threats to the integrity of the original purpose of the national wildlife refuges through ill-advised proposals for leasing oil and gas rights on these refuges and game ranges; and

Whereas recent regulations promulgated by the Secretary of the Interior would give effective protection to these refuges: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners endorses these regulations concerning oil and gas leasing and development on the national wildlife refuges and game ranges, and hereby commends Secretary Fred A. Seaton for his diligence in protecting the primary wildlife values in dedicated wildlife lands, and further urges him to stand firm on his established policy.

RESOLUTION 16. RESEARCH ON CHEMICAL HERBICIDES

Whereas there is an increased interest in chemical herbicides, insecticides, and pesticides for use in application on Federal, State, and private lands; and

Whereas some of these agricultural chemicals have been proven to have an immediate and/or accumulative effect on fish and wildlife species as a result of direct contact, and an accumulative effect as a result of changes upon the habitat of fish and wildlife; and

Whereas our knowledge of the effects of most of the chemicals so employed is deficient or entirely lacking: Now, therefore, be it

Resolved by the Western Association of State Game and Fish Commissioners, That Congress enact Senate bill 2447 as it now stands to authorize the Secretary of the Interior to undertake continuing studies of the effects of various chemical herbicides, insecticides, and pesticides on fish and wildlife resources so that they may be used with minimm loss of fish and wildlife; and be it further

Resolved, That the supplemental appropriations bill include $300,000 for the use of the Department of the Interior in the immediate activation of the provision of S. 2447.

In a final resolution the association expressed its appreciation of Idaho hospitality.

Postmaster General Needs Greater Authority To Control Obscene Literature Disseminated Through Mails

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. HENDERSON. Mr. Speaker, I wish to call the attention of the Congress to a resolution passed by the Ohio Rural Letter Carriers' Association at the organization's annual State convention in Columbus, July 13–16. This resolution, pertaining to the need for providing the Postmaster General with greater authority to control the dissemination through the mails of obscene literature, is as follows:

Resolved, That the Ohio Rural Letter Carriers' Association strongly support the valiant efforts of Postmaster General Arthur E. Summerfield to prevent the distribution of obscene matter through the United States mails; and

Whereas we, by the very nature of our duties, realize the demoralizing effect of such material has had on the morals of the people of this country, and particularly the young people who will be the leaders of tomorrow: Therefore be it

Resolved, That we urge the Congress of the United States to enact legislation which will prohibit the distribution of such matter through the United States mails, and which will penalize violators of this prohibition with fine or imprisonment, or both; be it further

Resolved, That copies of this resolution be sent to both United States Senators from this State and to all Members of the Congress from this State with the strongest possible recommendation that they support the fight against the dissemination of filth through the United States mails.

CHARLES FISHER,
Chairman.
LOWELL LEPP.
HOMER DEWEY.
DEWEY GIBBS.
GEORGE M. SHELLY.

Residents of southeastern Ohio have furnished me with shocking examples of

the filth that is being sent to unsuspecting families, often addressed to schoolchildren. I have been impressed with the speed and earnestness of the Post Office Department in acting against the purveyors of such trash.

The House of Representatives took an important step in the right direction recently when it passed H. R. 6239 to strengthen the hand of the Postmaster General in matters of this kind. This legislation, allowing for criminal prosecution of offenders either at the point of mailing or at the point where the mail is received should eliminate much of the frustration the Department has experienced in the past. I am pleased that this bill is on the Senate Calendar and it is my hope that consideration and passage will be forthcoming soon.

Middle East Question: Where Do We Go From Here?

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. REUSS. Mr. Speaker, the Milwaukee Journal is in a particularly sound position to comment on the situation in the Middle East because two of the members of its editorial staff have spent considerable time in that troubled area in the last few years—one of them in the last few weeks.

In its editorials of Thursday, July 17, Saturday, July 19, and Sunday, July 20, 1958, the Milwaukee Journal has raised a number of important questions about our future steps in the Middle East. I commend these editorials to the attention of my colleagues.

[From the Milwaukee Journal of July 17, 1958]

SOME LOGICAL QUESTIONS ABOUT INTERVENTION IN MIDDLE EAST

The fact that the United States Marines are in Lebanon makes it rather futile to discuss whether we should have intervened. We have intervened.

President Eisenhower says that he decided upon intervention "only after the most serious consideration." And surely there was much to consider, and much that might have recommended some other course of action.

The main fact of intervention now is that we have, in the minds of much of the world, been proved the "imperialists" that Russia and many of the so-called neutral nations call us.

By attempting to draw parallels between the situation in Lebanon and the cases of Greece, Korea, and Vietnam, as the President did, the implication is that we have moved in opposition to communism. Indeed, the President cited the Communist aggression in each of these alleged parallels.

But communism is a very minor issue in Lebanon. The issue, if any single one can be cited, is Arab nationalism, as a Milwaukee Journal staff correspondent reported from the Middle East a few weeks ago. Whatever one may call Nasser one cannot call him a Communist. In Egypt, Communists are in jail.

Very properly the President has taken the case to the United Nations. But here again there is a serious hitch. He acted after United Nations officials had declared that there was no massive outside intervention in Lebanon calling for U. N. action. Now Secretary General Hammarskjold reiterates that no international military force is necessary.

Our Government can argue—and rightly in the Journal's opinion—that the U. N. officials are mistaken. Syrian agents have undoubtedly played a big part in the Lebanese crisis. So has the Cairo radio. Syrian arms have been furnished the rebels.

In a country as small as Lebanon—a nation of 1,500,000 persons in an area smaller than Connecticut—even a few thousand rifles, a few hundred machineguns, a handful of mortars, and a few hundred volunteers can amount to massive intervention. But against this is the fact that a well-armed Lebanese army has made no serious attempt to put down Lebanon's revolution.

How do we convince the U. N. to send international forces to Lebanon when its officials have already said that the presence of U. N. observation teams is all that is required? Probably a Russian veto will stop any Security Council action. Can we get enough votes in the Assembly to back our demands for U. N. intervention? It is at least doubtful.

Then we will be left occupying a country that the U. N. says does not need help or occupation. It seems that the time to have gone into Lebanon, if there ever was a time, was a month ago—not after the U. N. had in effect taken a stand in opposition to our Government's view. Even our good friend Sweden now accuses us of violating the U. N. Charter.

The Lebanese intervention is aimed, of course, at broader problems—those of Iraq and Jordan,. Is it, then, our national policy to become self-appointed policemen to restore ousted regimes that had little mass support, or to put our troops behind shaky ones?

Obviously one great worry is Middle East oil, vital to our allies in Europe far more than directly to us. But is it to be our policy to protect resources over the world by force?

Have we any real proof that Middle Eastern oil would not be sold to the West whatever regimes, short of Communists, take over Middle Eastern countries? The only hope that the Middle East has to realize its aspirations for development requires sale of oil. The West lost control of the Suez Canal, but is not denied its use.

Barring Russian intervention with force—which is not to be ruled out for a moment—we and our allies could police the Middle East indefinitely. But where does that get us? How long do we sit as policemen? How long can we oppose the aspirations—many legitimate aspirations—of Arabs to control their own destinies? How can we expect world peace if we engender hatred of us and our allies in widespread areas of the world—alienating not only the people of the Arab world but many in India, southeast Asia, and Africa?

These are legitimate questions.

We are in Lebanon. It is too late to gain much by debating the reasons for our being there. But it is not too late to ask: Where do we go from here?

[From the Milwaukee Journal of July 19, 1958]

WHEN CHAMOUN STEPS OUT, WHAT HAPPENS IN LEBANON?

The claim that Camille N. Chamoun wanted to change the constitution so he could succeed himself to a 6-year term as President was the excuse for starting the Lebanese revolt.

But that was not the basic cause for revolt. The real cause lay in the determination of the Moslems to aline Lebanon with the Arab States and their opposition to Chamoun's stanch prowestern policies.

Chamoun did not help matters by refusing to commit himself on his plans to succeed himself. He was cagey. He kept saying that he had never said he planned to change the constitution. But he refused to say that he had no such plans.

His refusal rested on several considerations. One was that for a time he did want to succeed himself. He thought that the elections of a year ago had brought to the Chamber of Deputies enough supporters to guarantee him the two-thirds majority necessary to change the constitution. And the chamber elects the President. He was confident, too, because in 1952 he won the Presidency by an overwhelming 74-to-3 vote in the chamber. He also had the qualification of being a Maronite Christian. By gentlemen's agreement Lebanon has always had a Christian President and a Moslem Prime Minister.

Now Chamoun's hopes have died. Prime Minister Sami Solh says his Government will not allow the constitution to be changed. Chamoun has denied any desire for reelection, but it comes weeks too late.

One irony is that Chamoun took power after President el-Khoury, who had changed the constitution to reelect himself, was forced out of office. One of Chamoun's first acts in 1952 was to rewrite the bar to reelection into the constitution.

Under Lebanese law Chamoun's term ends September 23. Law provides that the speaker of the chamber of deputies can call a session to elect a President 30 to 60 days before the end of a term. If no session is called, one is automatically held 10 days before the end of a term. The speaker has called the session for next Thursday, July 24. The question now is whether enough deputies will attend the session to provide a quorum. Even if a quorum is present, will enough of the chamber's 66 deputies attend to provide the two-thirds majority of membership necessary to elect a president? The Moslem rebels may boycott the session.

What would happen then is anyone's guess. At all events, Chamoun is through in about 60 days. America's problem is what happens to our invited intervention if an antiwestern president is elected or there is no president at all.

[From the Milwaukee Journal of July 20, 1958]

HOW THE MIDDLE EAST MESS DEVELOPED IN LAST 4 YEARS

The Senate Foreign Relations Committee is preparing to study our Middle Eastern policy and ask: Where do we go from here? It can't avoid asking how we got into our present mess. A review of our Middle East policies, especially as they affect Egypt, is vital. It is not a reassuring story.

The United States had no imperialist record in the Middle East. It benefited from a reservoir of good will. Some of that good will was lost among the Arabs when we backed the creation of Israel in an area the Arabs considered Arab. But the great fall in our stock in Arab lands has come in the last 4 years.

The President says of Lebanon that it is our duty to help preserve a legally constituted government. We felt no such compulsion when King Farouk of Egypt asked our help in putting down a revolution in 1952. We refused.

When Mohammed Naguib and Col. Gamal Abdel Nasser kicked out Farouk, our Government gave them every reason to feel we were sympathetic. The Naguib-Nasser government started out immediately on welcome and much needed reforms. We sent

experts to help. Secretary Dulles visited Cairo and gave Naguib a silver-plated pistol—a fine symbol of peace and tranquility—to show our esteem.

The Egyptians asked financial help. Our Government showed interest. But—as Nasser said with bitterness (and some exaggeration) to a Journal staff correspondent in 1954—nothing was forthcoming except "a few sick chickens." Without sufficient aid, the reforms slowed almost to a halt.

In 1954 Nasser, who has ousted Naguib, sought American arms. These were promised on condition that agreement was reached on evacuation of British troops in the Suez Canal zone. Arms were not furnished, although agreement was reached on British troops. Nasser sought arms again after Israel attacked the Gaza strip in 1955. Our government offered two propositions—arms for dollars that Nasser did not have or arms accompanied by a military mission. Nasser felt politically unable to accept a western military mission. He turned to Russia and got Communist bloc arms for cotton.

Our reaction was a new arms offer. It failed, but it showed to Nasser's satisfaction that he could play us off against Russia. He has ever since.

The Egyptians claimed, probably falsely, that Russia had promised to help build the Aswan dam. The claim worked. We rushed in with the British to offer to do the job. We soon believed Russia had made no such offer. And Dulles rejected the dam plan abruptly in a manner that Nasser took as a personal insult. Our government went out of its way to say that Nasser couldn't afford the dam because he spent too much for arms.

Nasser's reaction was immediate. He seized the Suez Canal. Our government said navigation would be endangered by control of the waterway by one nation. "How about Panama?" the Arabs asked. We said Egypt could not run the canal. It has, successfully.

In 1956 America regained much prestige by forcing Israel, France and Britain to withdraw after invading Egypt. But much of the gain was lost when this country froze $40 million in Egyptian funds. We rejected Nasser's urgent request to buy $14,000 worth of medicines for refugees, at a time we were pulling all stops to help Hungarian refugees. We refused wheat needed by hungry Egyptians, in spite of our huge surpluses. We stopped the CARE program that was feeding 3 million Egyptian children. The Arabs were bitter—and again turned to Russia for help.

The Eisenhower doctrine, promising intervention in case of Middle East invasion by Communist forces, far from being welcomed by the Arabs, was looked upon as imperialism and unwarranted interference.

When Syria got Soviet arms in 1957 an American emissary rushed to the Middle East to confer with all but Syrians and Egyptians. Arms were rushed to Jordan. Dulles told the U. N. that Turkey was threatened by Soviet arms in the hands of the tiny and inept Syrian Army. Turkish troops, with Americans present, stood on Syria's borders.

Through these years Nasser made repeated efforts to deal with the United States. He was rebuffed.

Now we are in Lebanon, where U. N. officials and even many prowestern Lebanese say we are not needed. Again we insist on status quo in an area where change and unity are considered the only hope by Arabs.

We have failed in the Middle East because our Government has ignored a basic fact: Foreign policy must take into account the aspirations and opinions of the people in the area if it is to work.

The Senate committee should have no trouble finding out how the mess we are in developed in the Middle East.

How to solve it now is another—and far more complex—matter.

Democracy in Venezuela

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. PORTER. Mr. Speaker, under a consent previously granted, I include remarks I made on Radio Caracas TV, in Caracas, Venezuela, on July 6, 1958:

Friends, my wife and I have greatly enjoyed celebrating with you our independence day and your independence day. I apologize for not knowing your language. Our tongues are different but our hearts are the same.

I congratulate you on having overthrown the tyrant Perez Jimenez. You are on the road to greatly improved economic and social conditions on a democratic basis.

Your junta has pledged free elections soon. I commend Admiral Larrazabal and his colleagues on the junta. They deserve much credit.

Will you succeed in establishing democracy in Venezuela? Hope and enthusiasm are high, both here and elsewhere in the hemisphere.

Of course hope and enthusiasm are not enough. Brains and patience are needed also.

Your great national parties have great leaders. I have had the honor to meet them all. Along with you I like and respect them. They would be great leaders wherever they lived—Betancourt, Caldera, and Villalba.

AD, COPEI, URD, honorable and dedicated parties, determined to improve the economic conditions of Venezuela, determined to guarantee equal justice under law.

AD, COPEI, URD, all dedicated to government deriving its just powers from the consent of the governed.

Infinitely preferable to the tyranny of Perez Jimenez or to the rule of the Communists who are the tools of a tyranny.

Perez Jimenez is overthrown. Trujillo is tottering, Batista's days are numbered. Stroessner and Somoza will soon be engulfed by the strong tide of liberty and justice.

Tyranny is tyranny, be it allegedly anti-Communist, Communist, or neither. Tito, Ibn Saud, Khrushchev, Mao, Chiang Kai-shek, or Franco—chiefs of vile police states, just like Trujillo, Batista, Stroessner, and Somoza.

All are enemies of the free man, of justice, of God.

My country's Government is not perfect. Nor is yours. We have made mistakes. We will make more mistakes. So will you. But we are committed to freedom under law and against tyranny of whatever name. We are not Yankee imperialists.

Our own mistakes of policy have been of technique, not of intent; of the head, not of the heart.

Certainly our mutual love of freedom and hatred of tyranny binds us close. I fully endorse my Government's declared policies toward Venezuela.

These policies are:

1. Nurture friendship between our governments and our peoples.

2. Encourage the development of democratic institutions and constitutional government.

Ask yourselves, my friends, do the Communists want democratic institutions and constitutional governments? No Communist country today has these features, so the answer is no, of course not.

I have been shocked to have it alleged to me that a number of educated Venezuelans, even including journalists, are sympathetic to communism.

Or they proclaim their neutrality and profess to be disgusted with both the United States and the Soviet Union.

As for me, I agree with Betancourt, Caldera, and Villalba that Venezuela needs parties that put Venezuela first, not the Soviet Union, not the United States.

Our mutual love of democracy will bring Venezuela and the United States together, in spite of disagreements between us.

There are quarrels in the happiest families.

Misery and fear are formidable foes. We need all our strength to win over them.

We need political parties, more than one, to translate the will of the people into the laws of the land.

We need armed forces who know that their duty is to keep order and to defend their country, not to try to govern it.

We need labor unions to insure better working conditions and fair wages.

We need a press that will tell the truth fearlessly.

We need the church, businessmen, lawyers, doctors, farmers, everyone to work together.

Only in a democracy can this be done to mobilize most powerfully against misery and fear. The fancy facade of the tyrant hides much misery and much fear, whether this tyrant be in this hemisphere or the other hemisphere.

Friends, now you have a great opportunity, great leaders, great national parties. We in the United States admire your courage. We sympathize with your suffering.

We pray for your success in your struggle for democracy.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Daily Digest

HIGHLIGHTS

Senate continued consideration of trade agreements bill and passed 19 sundry bills.

House passed 38 miscellaneous bills.

Senate

Chamber Action

Routine Proceedings, pages 13061–13075

Bills Introduced: 10 bills and 2 resolutions were introduced, as follows: S. 4157–4166; and S. Con. Res. 108–109. **Pages 13062–13063**

Bills Reported: Reports were made as follows:

H. R. 7734, to exempt teachers in the Panama Canal Zone from application of the dual employment statute (S. Rept. 1863);

H. R. 3513, relating to entitlement to reenlistment of certain former officers (S. Rept. 1864);

H. R. 7140, to authorize a registrar at the U. S. Military Academy, with amendments (S. Rept. 1865); and

H. R. 8002, to provide for improved methods of stating budget estimates and estimates for deficiency and supplemental appropriations, with individual views (S. Rept. 1866). **Page 13062**

Bill Referred: One House-passed bill was referred to appropriate committee. **Page 13075**

Onion Futures: Senate insisted on its amendments to H. R. 376, to amend the Commodity Exchange Act to prohibit trading in onion futures in commodity exchanges, agreed to hold conference with House, and appointed as conferees Senators Ellender, Johnston (South Carolina), Eastland, Aiken, and Young. **Page 13065**

Coal Development: Senate disagreed to House amendments to S. 2069, to amend the Mineral Leasing Act in order to promote the development of coal on the public domain, asked for conference thereon, and appointed as conferees Senators O'Mahoney, Carroll, and Barrett. **Page 13080**

Sundry Bills Passed: By unanimous consent the Senate set aside its unfinished business and passed 19 sundry bills as follows:

Without amendment and cleared for President:

Hospital construction loans: H. R. 12694, to authorize loans for the construction of hospitals and other facilities under the PHS Act (motion to reconsider passage tabled);

Amphibious vessels: H. R. 11518, authorizing the construction of not to exceed 20,000 tons of amphibious warfare vessels and landing craft;

VA refunds: H. R. 9369, to authorize the VA Administrator to make certain refunds;

Land exchange: H. R. 10321, authorizing exchange of certain lands in Estes Park, Roosevelt National Forest, Colo.;

Land exchange: H. R. 11253, authorizing exchange of certain U. S. land with the city of Redding, Calif.;

Forest townsites: H. R. 12161, to provide for the establishment of townsites in national forests;

Transportation allowances: H. R. 7902, to authorize travel and transportation allowances in the case of certain members of the uniformed services;

Firearms permits: H. R. 11700, authorizing certain civilian personnel of the Department of Defense to carry firearms;

Naval and Marine Corps transfers: H. R. 11504, to permit enlisted members of the Naval and Marine Corps Reserve to transfer to the Fleet Reserve and Fleet Marine Corps Reserve on the same basis as members of the Regular components; and

Naval aviation cadets: H. R. 11626, to increase the period of active service for naval aviation cadets.

With amendment, to be sent back to House:

Hospital construction: H. R. 12628, to extend the Hospital Survey and Construction Act (motion to reconsider passage tabled); and

Navy—shore duty: H. R. 11636, to remove the requirement that the Secretary of the Navy certify that the assignment of naval officers to shore duty is in the public interest.

Without amendment and cleared for House:

Unita National Forest: S. 3248, authorizing exchange of certain lands in the Uinta National Forest, Utah; and

Vessels—day signals: S. 3951, authorizing the Secretary of the Treasury to prescribe day signals for certain vessels.

Appendix

Food in a Changing World

EXTENSION OF REMARKS
OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, July 22, 1958

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Food Industry in a Changing World," delivered by Bernard L. Oser, Ph. D., of the Food and Drug Research Laboratories, Inc., Maspeth, Long Island, in my city, on the occasion of his receiving the Babcock-Hart award.

The article calls our attention to the tremendously vital question of the capability of our earth to support the increase in population. It points out that the answer to the problem is the increased application of technology to food production and processing.

We in New York are proud of the award made to Dr. Oser and of the distinguished contribution which he has made to this science.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE FOOD INDUSTRY IN A CHANGING WORLD

It is a distinct honor to have one's name associated, however remotely, with Babcock and Hart and the distinguished list of past recipients of the award bearing their names. I am truly appreciative of the honor which has been bestowed upon me.

The other day, when I was contemplating some of Babcock's accomplishments, I was impressed by the parallel which exists between what he did and the challenge which faces all of us as food scientists today. His development of a simplified scientific method to determine the fat content of milk was cited as "emancipating the dairy farmer from the rule of thumb." Today, food science may hold the key to another, and even more far-reaching emancipation: We have the opportunity to free mankind from the burden of two great fears—the fear of starvation and the fear of the scourge of war.

That's a bold statement. However, I am convinced of its fundamental truth. If we, as food scientists, appraise the situation which confronts mankind we will have to acknowledge that whether man's tenancy of the world continues depends upon how well our science progresses. If we are farsighted and diligent, mankind's future is assured; if we are shortsighted or laggard, the prospect of man's surviving for many centuries is dismal.

Consider where we stand today. This is the most crucial time in the history of the world. Within our own lifetimes man has propelled himself at speeds beyond that of sound; he has created new moons to explore the atmosphere above the earth; he has peered into the very depths of the atom; he has produced new forms of matter and is tapping new sources of energy; he has conquered the most devastating diseases; and he has discovered exquisite ways of destroying himself.

Our attention has been focused upon these remarkable achievements—and in terms of science they must be regarded as achievements. But we have paid but little heed to two matters which are vital to man's future existence. These are the explosive growth in the population of our planet and the clear inadequacy of present and immediately prospective resources to feed burgeoning mankind. I'm impelled to modify a Biblical reference somewhat and say, "What availeth a man to attain the moon and lose the world."

Let's consider for a few minutes the food problems which the world's fast-growing population thrusts upon us. Then, a little later, we can appraise how this is related to the prospect of war or peace.

World population at about the time of Christ was somewhat under 300 million. By 1650 this had about doubled. This relatively modest increase was characterized by many ups and downs due to famine, war, and especially the ravages of disease. (For example, cholera killed a full quarter of the people in Europe in the 14th century.) During no half century before 1650 was the population gradient greater than 10 percent. But from an estimated 518 million people in 1650, humankind has now multiplied more than fivefold to 2.7 billion. What is more important, century by century the rate of rise has accelerated to 14 times the rate before 1650. If it continues we may anticipate a world population of between 7 and 9 billion a hundred years hence. One hundred years is a short time—my birth to the time my grandchildren reach my present age.

We should be aware, of course, that the United States has played no minor role in the rate of population increase. In only the past quarter-century our population has grown from 125 million to over 170 million. This represents an increase of nearly 40 percent, which is greater than India's, for instance, and even greater than that of the world as a whole. Estimates of what our population will be in 1975 range from 207 to 229 million—or 20 percent to 33 percent over the present level. (In the 4 minutes since I began this talk 30 little Americans were born.)

The food situation in this country is, of course, unique. And being so it tends to condition our perspective as far as the rest of the world is concerned. We are blessed in the United States with an overabundance of food and with excellent storage, transportation and processing facilities. In the past 20 years we have accomplished miracles in increasing production of grains, milk and eggs per acre or per unit weight of animal or feed. Our principal nutritional affliction is obesity. But that is far from being so in many other parts of the world. More than half of the world's population now struggles to receive fewer than 2,200 calories per capita per day. Shortly before World War II there was sufficient food to provide a world average of 2,300 calories per person. Now, despite a 9 percent increase in food output, the average available today is down to 2,260 calories. We are indeed walking a nutritional tightrope.

Moreover, as I have intimated, whether we have war or peace may well depend on the adequacy of our food resources. It is not weapons that create wars. Rather it is disturbances—regional disturbances—of a social or economic nature which spawn wars. And they have at their roots the pressing needs for existence. The fight for freedom and independence may inflame nations to wage wars but smouldering beneath these aims is the struggle for a decent standard of living.

Look back over history and that truth becomes evident. We pride ourselves on being a peace-loving people. And we are. But we have had a rich continent to plunder. Suppose it had been otherwise; suppose our country had been barren and we had been hungry. Suppose we knew about—or saw—the fertile wheat fields of Canada to our north. Might not our necessity and our covetousness have overwhelmed us?

Greater worldwide production of foodstuffs is essential if we are to minimize the danger of war—a war of human extermination. As a corollary, I might suggest that any dictator or political leader finds it almost impossible to arouse warlike sentiments in the minds of comfortably fed people.

Let us take the optimistic view that neither nucear warfare, famine, nor disease will seriously affect the predicted expansion in world population and then consider our available and potential food resources. We may assume that the physiological energy requirement of man may diminish somewhat with advances in mechanization, automation, and transportation. Nonetheless, it will probably never fall much below present levels of about 2,800 calories per day. Where are the vast—and they are vast—quantities of food we will require for sustenance going to come from?

Much of the earth's 36 billion land acres is not arable. In fact, less than one-tenth is under cultivation and, it has been estimated, present agricultural technology would permit at most a doubling of current world food production. Compare this with the anticipated trebling or quadrupling of population and it becomes obvious that some control of human multiplication must be exercised. This, however, is a subject fraught with emotional and sectarian implications and is outside the sphere of food scientists. Perhaps we may assume, however, that birth-control measures will counterbalance population increases deriving from the conquest of disease. Some sort of population control, in any case will be inevitable since, as it has been so aptly put, "this battle between production and reproduction will never be won by production alone."

Nevertheless, every means will have to be taken to expand and conserve food supplies. Arable acreage must be wrested from the erosive forces of wind and water; hydroelectric, solar, and nuclear energy must be harnessed to irrigate desert areas; water must be drawn from subterranean sources or reclaimed from the sea at low cost. We may look hopefully toward control of rainfall, toward greater utilization of genetic selection of plant and animal varieties capable of resisting adverse climatic and soil conditions, and toward the extension and improvement of mechanization on the farm. It is advances such as these that have doubled production per farm worker in the United States in the past two decades.

We shall have to find or make new foods. These foods may little resemble the foods we now prefer or enjoy but they will furnish the energy, the amino acids, the vitamins, and the minerals for survival and reproduc-

tion. And, under the pressure of necessity, I warrant that man's palate will become adapted to accept them.

They may come from some of the thousands of known plant varieties never before consumed by humans, from artificially cultivated algae or yeasts, or from the sea. For instance, the krill or animal plankton which whales consume at a ton-a-day rate, abounds in the surface waters of the Antarctic. It is rich in protein but has not been exploited as food or feed for land animals. (In passing, I might mention that Dr. Babcock once proposed that whales be domesticated, brought to ocean slips, and milked.)

But in addition to tapping the natural sources and biological factories, future mankind will have to look to the chemical laboratory—or the chemical factory—for supplemental amino acids and calories as we do today for vitamins. Commercial synthesis of the essential amino acids, of which only a few grams per day would suffice to round out an otherwise protein-deficient human diet, is now foreseeable. Synthetic fats and carbohydrates will also be made available by the time the demand becomes sufficiently great, thanks to the progress being made in organic chemistry, photosynthesis, and other types of enzymic synthesis.

The science of chemistry is our greatest potential ally. Through the study of soils, the fixation of atmospheric nitrogen, the development and improvement of fertilizers, the chemist has already rendered vital contributions to the agricultural revolution of our age. In recent years, too, significant strides have been taken in the effective use of chemicals to destroy plant and animal pests—including insects and rodents, pathogenic, microorganisms and viruses and weeds. Chemicals have also been synthesized which prevent fruit from dropping to the ground prematurely and rotting, which prevent germination during storage (of potatoes, for instance), which induce defoliation, increase yields and produce seedless varieties of fruit.

It is impossible to calculate precisely the value of agricultural produce saved by pesticides alone. Some estimates, and they seem reasonable, place it at 20 percent of our entire United States production. It is ironical, however, that shortly after the introduction of DDT to Ceylon the death rate from malaria decreased while the birth rate and food production remained unchanged. This created an acute food shortage in that lush country. On the one hand, science invents new compounds to fight off the Grim Reaper. On the other hand, it creates the problem of feeding those whose lives have been saved.

I have mentioned various methods whereby world food production can and must be expanded and the increasingly important role that chemical science must play. Passing mention must also be made of the use of chemicals to protect foods from contamination, dehydration, and spoilage after leaving the farm or factory; to retain or impart nutritive value; to maintain color or clarity; to improve flavor, texture or attractiveness; to facilitate preparation in the kitchen; and to effect economies in production and in distribution to consumers.

These functional uses of chemicals have contributed greately to expanding the variety and wholesomeness of our foods. Parenthetically, this has also been important in coping with the problem of the shortage of domestic household help. Today there are more than 20 million workingwomen in the United States, so the advantages of foods that keep well, and hence requires less frequent shopping, and which contain built-in convenience and speed of preparation are obvious. The food additive which all housewives and many husbands appreciate most is, in fact, antidrudgerine.

In spite of the established virtue of food additives there is a growing tendency to look at them askance as though they debase foods. The rigid structure of our laws has cast most of these substances as poisons. True they cannot themselves be eaten as ordinary foods. Even when the amounts contained in foods are so trivial as to present no hazard to human health, the law forbids the presence of additives, regardless of how useful they may be, unless they are actually essential to production. The fact that an exception is made in the case of certain pesticides, which are unquestionably poisonous, seems paradoxical.

It can hardly be denied that caution must be exercised in effecting basic changes in the principles governing our food supply. However,—out of sheer necessity—people generally and health officials particularly will have to abandon the attitude of suspicion toward all change. We will have to gear our thinking, legislative and otherwise, to technological and agricultural progress if we are to satisfy human needs in the days to come. The scientist must be encouraged to pursue his research with the realization that he will not have his progress thwarted by overzealous enforcement agencies which feel themselves bound by stagnant or archaic laws.

Consider for a moment what science, and particularly chemistry, has accomplished for mankind in other areas. A few decades ago we were following the same practices in clothing ourselves as did primitive man. We sheared sheep, tediously unravelled the cocoon of the silk worm, or waited a full season for a bit of fluff to ripen on a cotton plant. Now we can make textile fibers, by the ton, from plentiful chemical raw materials. To produce rubber we had to tramp through steaming jungles, draw the sap from trees, coagulate it over a smoky fire and ship the gum half way round the world.

To provide medicinals we had to seek out exotic botanicals, harvest, ship, and laboriously extract some of their ingredients. Chemical progress has changed all that—and for the better. Yet I venture that little of that progress, and those benefits, would have come to be ours if scientists in those fields had been as restricted by status quo regulations as we food scientists. Such regulations do not, of course, develop of themselves.

Much of the popular writing on the subject of chemicals in foods is buncombe. It is fabricated from speculations, half-truths, and obsolete information. Nevertheless the doubts, the fears, and the confusion engendered by these sensational outpourings are not offset by the more sober but less exciting facts which seldom reach the public. Consequently emotional pressure is brought to bear on legislative representatives and administrative agencies who are forced to hearken to the will of the people, however ill-informed they may be.

The responsibility for this situation must be placed not only on blood-thirsty journalists or crackpots but also on some quite competent scientists with a strong sense of personal greatness. They fancy themselves as being persecuted when colleagues reject their unproved postulations and prejudices. With all the sincerity, and all the zeal of crusaders, they vent their spleens in the form of ill-considered, ill-tempered, or peevish statements to feature writers.

It would be in the common interest if views on controversial scientific questions were either resolved or explained by groups of competent scientists in responsible agencies such as the National Academy of Sciences rather than leaving complex scientific questions to the judgment of the general public which, for lack of specialized training is incapable of separating the wheat from the chaff.

Let it be remembered that science is but one constituent of progress. To reap its fruits we must have boldness and courage, as well. Primitive man had to use the process of trial and error to select and prepare food. He was his own guinea pig and often to his great distress. We owe to him our knowledge of poisonous berries, mushrooms, roots, nuts, legumes, and so on ad infinitum. Today, however, we have remarkable research tools and refined biological methods to insure the safety and wholesomeness of new foods and food ingredients. We do not have to tarry for years or generations for acute or subtle dangers to manifest themselves. Present-day risks are minor risks and we can afford to take them to win the greater benefits that await us and our descendants.

In our concern lest a few parts per million of a useful food additive violate the letter of the law, let us bear in mind that if we are to produce and protect food for future billions, the advances of chemistry must be capitalized upon. Additives are important today and always will be. But the "food chemicals" of tomorrow will be eaten by the pound and by the ton. They will be the synthetic proteins, fats, and carbohydrates that will augment the cruder products of nature.

A negative or shortsighted attitude toward chemicals will only delay—but not prevent—the day when creative chemistry will come to the rescue of a world population threatened by mass starvation or the strife of mass extermination. We, as food scientists, and our colleagues in the days head, have a responsibility to all mankind—to the future of the world.

Housing for Middle-Income Groups

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Tuesday, July 22, 1958

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by Mr. Gerald S. Gidwitz, chairman of the board, Continental Materials Corp., to the Housing and Home Finance Agency and Federal Housing Administration.

Mr. Gidwitz has developed materials and methods which it is believed will lower the cost of good housing and bring it more closely into conformity with the means of the lower- and middle-income groups. He has made some very interesting suggestions, which he himself, as a successful industrialist, is carrying out. I commend a reading of the statement to all persons interested in the subject.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY GERALD S. GIDWITZ, CHAIRMAN OF THE BOARD, CONTINENTAL MATERIALS CORP. TO HOUSING AND HOME FINANCE AGENCY AND FEDERAL HOUSING ADMINISTRATION

A major stumbling block to the continued health and prosperity of our Nation requires the immediate attention of Government and industry.

Simply stated, it is that we are failing to build the type of homes necessary to accommodate the huge home market and to make updated living facilities available to the great majority of our citizens.

The result is that the home building industry is not measuring up to its capabilities nor is it carrying its full share in insuring the stability of the economy.

Other than in cost, the materials, design, and construction of our homes has not kept pace with the rapid and startling advances made in other fields.

It costs 2½ times more to build a house today than in 1941. The $8,000 prewar house now costs $20,000. But the resisting home buyer is not being offered much that is new or better to reconcile his objections to construction costs which will continue to move upward some 3 percent a year.

The well being of our entire economy, as well as the fortunes of many other large and important industries, are closely related to the performance of the housing industry. It is up to housing to lead the way to greater economic growth.

Last year fewer houses were started than in any of the preceding 10 years. Yet our population is greater and national income has been rising to new high levels each year. This makes the housing industry as culpable for the recession as any other industry.

For 1958, however, home builders are predicting a 10-percent increase to about 1,100,000 starts on the basis of easier buying terms under Government-backed mortgage plans and a planned increase in the construction of lower-priced homes.

This still is far short of what could be achieved were the huge market potential effectively tapped. But it is first necessary for the many elements making up the complex $20 billion home building field to shake off their mantle of conservatism and conventional thinking and give the buyer something really new and better.

The American home building industry has within its hands the means of mass-producing budget-priced dream homes this year with which to open up a new era of economic prosperity and of family living. New materials and construction technology hold the promise of transforming the face of all America into a veritable panorama of utilitarian beauty and variety in which all our people can share.

Unfortunately, this great promise is far short of realization at this time—not for any lack of technological achievement but rather because of traditional thinking which has fallen far behind our technical progress.

The home-building industry is composed of many individualistic elements—building materials suppliers, architects, contractors and engineers, governmental agencies, lending institutions, skilled craftsmen and common laborers, and unions. It has yet to achieve a really central force of direction, initiation, planning, and financing.

As a result, new materials, new construction techniques, and new concepts in home design are extremely slow in gaining acceptance and adaptation in this field.

In the past decade, new products have found ready acceptance in, and paced the growth of, most other industries in both unit and dollar sales. Yet the resistance to—or fear of—change in the home-building industry has kept it from making full capital of its own technological developments in this same period.

I should like to propose that the Government, preferably through the Federal Housing Administration, concern itself more closely and directly with this all-important socioeconomic matter. The Federal Housing Administration, which remains the bastion of home building for the bulk of our great middle-income population—accounting for as much as 25 percent of all homes built per year—must take the lead in translating the home-building industry's enormous potential into positive action.

I urge that the Federal Housing Administration actively encourage the use of new materials and techniques—those that meet the necessary specifications of performance and quality—to pave the way for continuing economic and social improvement for all our people. I am not implying that the FHA is not aware of, and sympathetic to, new developments, but I am asking for a dynamic further development of FHA's interest in better housing at lower prices.

A coordinated program of action is needed, and I therefore propose:

The establishment under Federal Housing Administration auspices of a special agency composed of all elements of the housing industry to work together in giving the American home buyer a home product that he wants, that is better, less costly to buy, and more economical to maintain.

This agency or board, which would have an advisory and initiatory function, would be named by the Federal Housing Administration and be composed of representatives of Government, leading architects, engineers, building contractors, materials manufacturers, building trades unions, and building code officials.

This board would concern itself with all matters relative to improving home construction techniques and design, the adaptability of new building materials toward furthering this end, and maintain an ever-watchful eye toward effective cost-cutting practices.

This agency could be of immeasurable help by pursuing the following programs:

1. Sponsorship of the construction of strikingly new and superior model homes in a minimum of 100 key market areas. These homes would incorporate new features, new materials, and new designs—and be erected via improved techniques. They would serve as an example of what can be done, not only for the consumer-home buyer, but to recalcitrant builders and building-trades people generally. Each home would be staffed with an expert to explain its erection, cost factors, the materials used, advantages, etc.

2. Promote the modernization of antiquated community building codes throughout the country. In many areas these codes were written early this century, many before World War II, and fail to recognize or take into consideration the great advances made in materials and construction techniques since then. The drafting of a realistic standard building code and its presentation at a national conference of local building department officials would be a logical first step. This should, of course, be followed by a concerted effort to sell the suggested building code at the local level.

3. Sponsorship of traveling seminars to major metropolitan areas for educational and instruction purposes. A major drawback toward the adoption of revolutionary new materials and techniques is lack of coordination, explanation and cooperation between building materials suppliers, architects, builders and laborers. Such seminars would serve to point up the value and use of new materials, as well as instruct construction personnel and builders in how to work with them.

4. This board would invite materials manufacturers and builders to submit their new products and/or construction techniques for inspection to the FHA's own testing section, and then more widespread adaptation, by passing upon them with an open mind toward the demands of the home market.

5. Sponsorship of an effective educational effort to the journeymen and contractors to emphatically point out that the use of these new concepts makes for better and less expensive homes, and will widen the housing market. Greater, and not fewer, job opportunities will obviously result because the expanded market for new homes will insure a rising and continued demand for home construction workers far in excess of the best year we have had to date. The building trades worker, contractors and unions, understandably fearful that such automated advances are a threat to their job security, must be brought up to date for their own well being and that of the industry and the whole economy.

6. The board would also work with banks and other lending institutions to overcome the traditional conservatism of such organizations against financially supporting revolutionary concepts in home construction.

New families of building materials developed in recent years are in most instances superior to conventional materials found in nature. The industry, in its factories and using mass-production techniques and prefabrication, can make virtually anything necessary for building better and cheaper than by on-site handicraft methods.

Standardized, precision-made and mass-produced building material components can utilize to great advantage power assembly techniques on the job. This means mass production of homes as well as of the materials, resulting in quicker built, better built, and lower priced homes using imaginative new design concepts providing more space, new luxury features and facilities now not available to the average American family.

What are some of these revolutionary new materials and concepts?

1. Calsi-Crete, a multipurpose lightweight cellular concrete panel is one such material which may help revolutionize home construction. A home of Calsi-Crete can be erected in 40 percent less time and at 20 percent less cost—and be practically maintenance free. This product provides high strength and structural qualities, fire protection, intrinsic insulation, dimensional stability, economy of erection, good acoustical values, and pleasing appearance.

2. Stressed skin sandwich panels are now an economic and practical reality. The skins can be made of almost anything—metal, plastics, wood, composition materials, etc. The cores can be made of lightweight concrete, foamed plastics, honeycombs or grids (paper, aluminum, gypsum, etc.). These panels are structural, meaning that they are self- and roof-supporting. They offer a new kind of panelized house using maintenance-free materials that will cut assembly costs sharply. They provide for an entirely new home product made with precision factory conditions.

3. Partitions will be nonstructural, providing for walls that can be put up, taken down and moved anywhere throughout the house. Modular panels of materials such as lightweight cellular concrete, in standardized ceiling height lengths, mean quicker assembly on the job and reduced shipping and handling costs.

4. New powerful adhesives may result in homes assembled without nails or screws. They provide for stronger, better sealed joints as well as more rapid and less costly assembly, and a greater freedom to combine various dissimilar materials such as masonry, concrete, wood, metal, plastics, etc. New mechanical joints have been developed for connecting and holding lightweight concrete panels that enable a complete wall to be installed without support beams except at the corners.

5. Plastics—principally polyethylenes and polypropylenes—have great adaptability. In piping, hardware, exterior and interior finishes they provide for lower cost, longer life, better weather-resistance, and lowered maintenance. Plastic foams also hold promise as spray-on carpeting, acoustical ceilings, sandwich panel cores, etc., providing a big weight saving in shipping and assembly costs.

6. Prefabricated, plastic molded, modular bathrooms can cut assembly costs, standardize bathrooms for rapid installation, cut costs and lower maintenance.

7. Oversized brick or prefabricated brick sections also hold the promise of quicker installation on-site, less maintenance and reduced costs.

All these developments, plus many, many more, presage not only better and less ex-

pensive homes to appeal to practically all our people, but homes that will also look different in shape and design, homes that truly will exemplify the American culture and the growing American philosophy of outdoor-living, indoors.

With these new materials and construction techniques it may be possible to build new and better homes at prices in the $12,000 to $15,000 category that are comparable to, and in many ways superior, to those homes of today made with conventional materials and costing $20,000 and more.

The American public is not only ready for something new and better in their homes, but they are demanding it.

Today they can only get this in luxury housing which most can ill afford. The Federal Housing Administration, as the Government agency concerned with housing, must work with the industry in taking advantage of the dazzling opportunities offered by the technological developments in housing of the past few years.

Home building directly accounts for some 5 percent of our gross national product, but indirectly probably sustains well above 25 percent of our total production and economic health, even with the fact building starts have been hovering around the million mark each year.

By astutely studying and then building for its real market, the industry would see a home-building boom that would shove the recession into oblivion and set the whole economy into a rising orbit.

I urge the industry, and the Federal Housing Administration, not to delay. The need is great, the solution is at hand.

States Rights Victory

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 22, 1958

Mr. THURMOND. Mr. President, popular demand for the enactment of H. R. 3, the so-called States rights bill, appears to be on the increase. I believe that this reflects the growing public awareness of the necessity for such a law to prevent the Supreme Court from invalidating useful State laws.

I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial from the News and Courier of Charleston, S. C., for June 20, entitled "States Rights Victory." The editorial points out that the desire to protect the rights and powers of the States is not, as is sometimes supposed, a peculiarly southern phenomenon, but, on the contrary, is national in character.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STATES RIGHTS VICTORY

The whopping 86-vote margin by which the House of Representatives passed a bill Thursday designed to prevent the Supreme Court from knocking out State laws not in direct conflict with Federal laws indicates rising national opposition to the Warren court.

The bill introduced by Representative SMITH, Democrat of Virginia, says that no Federal law shall be interpreted as superseding State laws on the same subject unless the State act is in direct and positive conflict with the Federal law and the conflict cannot be reconciled.

If enacted, the bill would restore State antisubversion laws. The Supreme Court knocked these out last year when it ruled that Federal law covered the entire field of subversion control.

The President has threatened to veto the law. The Senate, which faces a heavy load of work before it adjourns this summer, may not be able to vote on the bill this session. But a precedent has been set for action next year. The 241 to 155 vote makes clear that judge rule over States is being vigorously opposed in Congress by representatives from States outside the South.

The Popularity of Foreign Aid

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 22, 1958

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial, which is timely at this particular moment because of our approaching action with respect to appropriations for mutual security. The editorial is entitled "Is Foreign Aid Unpopular?" and was published in the New York Times. The editorial sets forth important and revealing economic facts which should be reassurring to every American. For example, the total per capita yearly cost of the entire foreign aid program since the end of World War II has been $35.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IS FOREIGN AID UNPOPULAR?

Democratic leaders in the House, as Allen Drury reported to this newspaper last week, are convinced that the foreign-aid bill is "generally unpopular with the country this year, and that by upholding cuts in the program they would be taking the politically profitable course." About 7 out of 10 House Democrats acted accordingly. They sliced some 20 percent out of what the President had called "the smallest amount we can wisely invest in mutual security during the coming year."

The President and his principal spokesmen have been making similar appeals during the past 6 years, as did President Truman and his staff before them. Foreign aid, beginning with the Marshall plan for the economic revival of western Europe and coming down to today's global mixture of military aid, military support, economic aid, and technical assistance, has cost us about $60 billion since the end of the Second World War. This is a considerable investment, soberly if not always eagerly made. Are we growing tired of the experiment?

Sixty billion dollars is about $350 per capita. Spread over 10 years it is $35 per capita yearly. The House has been trying to reduce Mr. Eisenhower's request for $22.60 per capita to about $17.60 per capita for the coming year. The billions are not quite so alarming when they are translated into the extra tax bills each one of us must pay.

The reluctant voter to whom the Democrats and many Republicans seem to be appealing might be wise to do the indicated long division. If he can afford a motorcar, a television set, a summer vacation—if he can afford these comforts, then foreign aid, or, as it may better be called, mutual assistance, is not beyond his means. It would be beyond his means only if it didn't buy anything.

It does buy something. In western Europe it bought a return of prosperity that kept communism from taking over France and Italy. It is buying not merely military strength but greater well-being and an enlarged freedom in the Far East. It is buying health, food, independence, and self-respect in the underdeveloped lands.

Is foreign aid unpopular? If it is so, the reason is lack of information, lack of straight thinking, lack of imagination. We willingly spend for instruments of war to use in our defense. Shall we grudge the pennies or even the few dollars a year that may avert war?

This newspaper doesn't believe we do. It doesn't believe that the Democrats or Republicans in Congress who support a false and dangerous economy in foreign aid will earn votes by it.

Ready Forces Prove Value

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Diego Union of July 17, 1958:

READY FORCES PROVE VALUE

When the showdown came in the Middle East it was rifle-carrying marines who went ashore backed by the guns of warships and the air power of Navy carriers.

The significance of this should not be lost on the American people. Here was no threat of atomic annihilation, with all or nothing the stake in a vast area of the world.

The United States put ashore, from a swift-moving, highly-mobile task force; what amounts to an international police force—a force to make the peace and keep the peace. Its aim was not a military surrender, but the restoration of order in countries helpless before a subversion fed by international communism and military adventurers.

This didn't create a battlefield, but it did isolate an area of possible war by the very action of peaceful intervention at the scene of spreading trouble. This police power, however, is backed by the knowledge of America's atomic power, of the capability of massive retaliation—if ever necessary.

But that is the key—if ever necessary. As long as this country, or the United Nations, is able to isolate scenes of trouble, and limit military action to prevent full-scale war, the danger of an atomic holocaust is small.

The action in the Middle East demonstrates the absolute need for ready ground, naval and air action, equipped with the conventional weapons proved in World War II and in Korea and continually being improved for just such emergencies.

Would the United States have taken the step it did in Lebanon if it had only the choice of an atomic action or nothing? Would the limited objective have been worth the cost of an atomic war?

The speedy action by the Navy and Marine Corps indicates that the present concept of our military organizations, with the Joint Chiefs of Staff, is a sound one.

The Navy and Marine Corps, along with the Army and the Air Force, fully understand their roles and missions. While the Navy

and marines were making the landings in Lebanon, the Air Force moved into readiness with its power of massive retaliation if made necessary by a sudden Russian explosion, and other naval units moved to protect America's shores and to block off any accompanying actions in other parts of the world.

It was a remarkable demonstration of military coordination and again proved how right were the opponents of the single-chief-of-staff system which would scrap our present defense organization for an omnipotent military conception.

The Middle East situation is proving that this Nation cannot forsake the so-called conventional weapons. Its nuclear armaments and ballistic missile power must be made second to none, and fast, but this country should never be left with no military alternative but all-out war.

Two Virginia Plans—A Contrast

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. ABBITT. Mr. Speaker, last Thursday, the House passed H. R. 3, the so-called States rights bill which has as its purpose prohibiting the Supreme Court of the United States from annulling State laws simply because there are acts of Congress on the statute books dealing with the same subject unless Congress intended by its act to set aside State laws or unless the State laws are in direct conflict with Federal laws. The bill also specifically restores validity to all State sedition laws set aside by the Supreme Court in the infamous case of the notorious Communist, Steve Nelson.

On Monday, July 21, there appeared a very enlightening editorial in the Richmond Times-Dispatch entitled "Two Virginia Plans—A Contrast." Under leave to extend my remarks, I desire to include the editorial in the hopes that it will bring enlightenment to the people of this country who need the know what the Supreme Court is doing to the rights of our people and the integrity and sovereignty of our States. The editorial is as follows:

TWO VIRGINIA PLANS—A CONTRAST

Thanks to a coalition of southern Democrats and Republicans, the House last Thursday passed the Smith bill, designed to prohibit the Supreme Court from invalidating State laws on its assumption that Congress tacitly agreed to preemption by Federal statutes.

The 241 to 155 vote rebuked the Court for equating what it imagines to have been the "intent of Congress" with the Court's own political philosophy. Repeatedly it has voided State legislation—not because of inconsistency with the Constitution but on grounds of do-it-yourself policy.

The author of this defensive measure was Representative HOWARD W. SMITH of Virginia.

Its passage by an overwhelming margin is a tribute to his prestige and parliamentary skill, and reveals a welcome awareness—that the threat to intrastate rights is not limited to the South.

Representative SMITH's Virginia plan to preserve those constitutional rights when not in conflict with congressional legislation points up its contrast with the original Virginia plan, offered at the Constitutional Convention of 1787, and intended to give Congress "a negative on State laws."

At that convention the States' Rights Party was favored by the smaller States. They were partial to a loosely knit league of States, and desired a Constitution that would have been little more than a feeble enlargement of the Articles of Confederation.

Populationwise and politically, Virginia was then the giant of the family. Her fears of domination by the small fry was understandable.

The sixth clause of the Virginia plan in 1787, fortunately rejected, would have empowered Congress:

"* * * to negative all laws passed by the several States contravening in the opinion of the National Legislature in the Articles of Union."

Washington, Franklin, and Madison approved this centralization of legislative power.

"A negative on State laws," said Madison, "is the mildest expedient that can be devised for enforcing a national decree. Should no such precaution be engrafted, the only remedy would be coercion. This prerogative of the General Government is the great pervading principle that must control the centrifugal tendency of the States, which without it, will continually fly out of their proper orbits and destroy the order and harmony of the political system."

Because of the Nation's phenomenal growth the dangers of excessive State autonomy has disappeared.

In its infancy the Federation might have fallen apart, for lack of sufficient interstate authority.

Today the States are inseparably linked by the national economy, entities fully able to administer their own affairs.

The danger now is that a topheavy Central Government will become too big and too powerful, oblivious to regional diversities and hence as incompetent in the handling of multistate affairs as "the old woman who lived in a shoe."

High Court Curb Too Drastic

EXTENSION OF REMARKS
OF
HON. JAMES A. BYRNE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. BYRNE of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial entitled "High Court Curb Too Drastic":

HIGH COURT CURB TOO DRASTIC

Disturbing as was the Supreme Court's decision overruling the trial and conviction of Communist Steve Nelson under a Pennsylvania antisubversion statute, the move generated in the House of Representatives to curb powers of the high tribunal in dealing with State laws is even more so.

The Inquirer decried the Steven Nelson finding because it nullified antisubversion laws in this and many other States on the ground that the Federal Smith Act preempted all authority to combat destructive communism and other forms of sedition.

Congressman WALTER, of Pennsylvania, sought to overcome this by a simple measure to restore to the States the right to legislate against those undoubted evils.

But in the latest drastic move in the House, heavily prodded by southern States rights adherents, opponents pointed out that the bill as passed Thursday was a broad States rights measure that might put handcuffs on the Supreme Court in a wide variety of cases, including segregation.

It would be a grave mistake to enact legislation of that character. The bill has gone to the Senate where, it is intimated, its prospects are not good. It is to be hoped this is the fact and that the measure is defeated or at least modified to eliminate provisions that would make the Supreme Court a virtual cipher in dealing with many vital aspects of our Government.

Tribute to the Late B. E. Stallones

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 22, 1958

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the RECORD today a notice of the death and funeral services for B. E. Stallones, of Tomball, Tex.

Mr. Stallones has been a friend of long standing, and I have worked with him personally in many of his endeavors. The farmers of Texas have lost one of their staunchest spokesmen and dearest friends in the sudden death of this outstanding Texas leader. Mr. Stallones has served as president and manager of the South Texas Producers Association of Houston, Tex., since its first operations in 1931.

He has become nationally known through his work with the farmers and producers of Texas. He has not only been a leader in his home State; he has achieved national prominence as a leader in his field of endeavor.

Mr. Stallones' interest in the cooperative approach in solving farm problems became known when he purchased and stocked a dairy farm near Tomball, Tex., in 1929. A year or so later, the South Texas Producers Association was formed, and Mr. Stallones devoted his talents and leadership unceasingly to this work. He became director of the National Milk Producers Federation in 1935, and has been on its executive committee since 1953.

I ask unanimous consent that the news item and the editorial carried in the Houston Post of Thursday, July 17, 1958, be printed in the RECORD.

There being no objection, the news item and editorial were ordered to be printed in the RECORD, as follows:

B. E. STALLONES RITES TODAY—FOUNDER OF MILK ASSOCIATION

Funeral services for B. E. Stallones, 65-year-old civic leader and founder-president of the South Texas Milk Producers Association, will be Thursday, at 2 p. m., in the First Baptist Church of Tomball.

A native of Arkansas and resident of Tomball and Houston since 1927, Stallones was

one of the outstanding agricultural leaders of Harris County. He died early Wednesday morning in the Tomball Hospital, of which he was a founder. Cause of death was attributed to a stroke.

Survivors include his wife, Mrs. B. E. Stallones; one son, Troy; a daughter, Mrs. Dana Johnson; one grandson, Tod; four granddaughters, Dana Darlene Johnson, Gayle Johnson, Melissa Stallones, and Jennifer Stallones, all of Tomball.

Also surviving are eight brothers, W. R. Stallones, of Houston; L. E. Stallones, of Elgin; T. C. Stallones, Ike Stallones, Bill Stallones, and Hurley Stallones, all of Tomball; Kenneth Stallones, of Dallas; and Jake Stallones, of Spring; one sister, Mrs. Leota Coble, of Banning, Calif.; and a number of nieces and nephews.

The Rev. W. W. Baker, Jr., and Rev. B. P. McGowen will be in charge of the funeral services. Burial will be in the Willow Cemetery of Tomball.

B. E. STALLONES FOUGHT FOR TEXAS DAIRYMEN

B. E. Stallones, president of the South Texas Producers Association, was a controversial figure of a quarter century ago who later won the admiration and respect of his opponents.

During the depths of the depression Stallones, then operator of a small dairy farm near Tomball, organized his fellow dairymen of this area into the South Texas Producers Association. Under his leadership it grew into a giant cooperative which now has a membership of thousands of dairymen in Texas, Mississippi, and Louisiana.

He fought hard and tirelessly to improve the lot of dairymen. He became a familiar figure in Washington where Secretaries of Agriculture and Members of Congress heard his views on dairy problems expressed in a booming voice that needed no microphone. His contributions to the betterment of dairying were outstanding. His death is a great loss to the industry.

Unionism and the Mob

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. BYRNE of Illinois. Mr. Speaker, representing a Chicago district and being a lifelong resident of Chicago, I have been following the activities of the Rackets Committee in the Senate closely.

Many of the restaurants mentioned recently are familiar to me and I have heard often the names of some of those from Chicago who were subpenaed by the committee to give testimony of activities by members of the restaurant unions and restaurant owners. I have a deep concern for the future of American unionism. The climate of public opinion which exists today toward unionism generally does not auger well for the days ahead.

The New World of July 18 published a splendid editorial on this subject. The views expressed in this piece are not brash but indicate calm, clear, and sound thinking, aimed, not at destroying respect for unionism but to preserve and rekindle it. At no other time has the need to do this been greater than now.

The editorial follows:

WHO'S GOING TO MAKE UP THE SCORE CARD?
(By William F. Graney)

The McClellan rackets committee has recently been focusing the powerful searchlight of TV on Chicago's restaurants and the so-called union for their employees. The quiz has revealed the tieup between this "union" and "the syndicate," or underworld mob.

The committee's hearings have revealed that this union has done nothing more than shake down restaurant owners for tribute, euphemistically called union initiation fees and dues. The owners were forced to pay or face the threat of a strike with pickets parading around their front door to keep the customers out and around the back door to keep the garbage in.

The extortion money was taken in without any benefits to employees in the form of better hours, wages, or working conditions. The employees did not even know they were "members." The only ones benefiting from the arrangement are the big boys who muscled in. Victimized were the employer, the employees, and the general public. The employees sometimes had to take salary cuts to pay "dues." If a legitimate union even got started, you can imagine the opposition.

The mobsters are not talking, but who really needs their self-incrimination now? Their refusals to answer the questions of the committee were enough to convince viewers of their connection with the shakedown. This conviction of the general public was no doubt the aim of the committee.

It is likely a hope of the committee to stir this conviction into a state of indignation. Public indignation can be a powerful force to support future legislation. It can press law enforcers to be more alert and better equipped. It can give the AFL–CIO the public support it needs to throw out the union, just as it threw out Jimmy Hoffa's teamsters, if the International Restaurant Union cannot guarantee an immediate clean up.

The public can be aroused, but first it has to be informed. You can't distinguish a legitimate union from a hoodlum union without a scorecard. Now who is supposed to make up the scorecard? Is it a Senate committee, police officers, or the AFL–CIO? I would think, for the sake of unionism, it should be the AFL–CIO. We can hope to see a swift descent on this muscle outfit, but what can we expect in the future? Are we going to have to wait for a Senate committee exposé before any action is taken by legitimate unionism against hoodlums in unions?

The case of Hoffa's union was admittedly a different story. The teamsters union was seeking and obtaining benefits for its members, and, strange to say, it still does even after its expulsion. It was, and still is a powerful union with 1½ million members. The Senate committee hearings which revealed the questionableness, if not the corruption of its leadership gave George Meany, president of the AFL–CIO, the public support he needed for the strong action of expulsion.

Fortunately, for those who like to keep score, the restaurant union in Chicago made no effort to mask their muscle operation by giving any service to the "members" of the union. The list of members was not even kept accurately. That was a mistake which the AFL–CIO failed to capitalize on.

Senate committees have an admitted advantage over the AFL–CIO in the power to subpena witnesses. But would witnesses have to be subpenaed to learn that members were receiving no benefits from union dues? It seems a visit and conversation with listed "members" would have revealed this.

Could it be the AFL–CIO was asleep; or could it be that this hoodlum influence is so strong in unionism as to tie the hands of the AFL–CIO; or could it be that the AFL–CIO is so internally weak as not to maintain the minimum of standards for entrance to its organization? I suspect the answer lies in the third possibility. The AFL–CIO would have to and should explain. Whatever the ailment a remedy must be found quickly if people are to maintain respect for American unionism.

There is a danger arising from these hearings that people may lump all unions together. There are going to be people who will say, "See, I told you unions are run by gangsters, just like I've been saying all along." If this necessary distinction between good and bad unions is to be made by the public, help is needed. It should come from the AFL–CIO.

Opinion Poll Indicates Voters' Beliefs on Current Issues

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. BRAY. Mr. Speaker, I have recently conducted an opinion poll among my constituents of the Seventh District of Indiana. I believe the results of this sampling are of significance and of interest to my colleagues.

SUMMARY OF POLL RESULTS

Despite the soft approach of Communist diplomats, only 4 out of 10 replies indicate hope for a worthwhile summit conference. The response was divided about evenly until the political execution of Imre Nagy and other Hungarian leaders became known. Thereafter the daily tabulations showed as little as 25 percent hopeful about a summit meeting.

More than 60 percent of those responding favor stopping our testing of nuclear weapons after the current series is completed, if the Russians will do the same. The favorable answers usually were qualified with the admonition to be sure that the Russians do not resume testing without our learning of it.

Two out of three replies favored the postponement of general tax reduction until the Federal budget can be balanced and deficit financing avoided. Additional comments on this subject indicate that people recognize that defense is costly, but believe that overall Government spending can be reduced. Some express pessimism about balancing the budget, but fear tax reduction at this time would merely increase inflation.

Excise tax reduction was favored by about the same margin that general tax reduction was opposed. Many of the wartime taxes on transportation, communications, autos, and appliances are considered burdensome, and it is felt that reduction or elimination of the taxes on these services and products would stimulate sales and promote economic recovery.

Legislation to prohibit any of the forms of toll television was favored by 3 out of 4 respondents, for it is felt that

such charges would put an unnecessary burden on low-income families who rely on television for much of their entertainment and news. Several of those who oppose prohibitive legislation stated that they are opposed to pay TV, but do not believe a legislative ban is necessary to defeat it.

Almost 75 percent of the replies expressed the belief that foreign aid appropriations should be substantially reduced from the amount of the authorization bill which had passed the House before the questionnaire was released. Many noted in the margin that large-scale foreign aid should be discontinued altogether.

Strong support was expressed for greater traffic control over military aircraft to avoid repetitions of recent mid-air disasters, although there is reluctance to hinder the alert readiness of our air defense forces.

The replies, which came from non-farm as well as farm families, indicate 1 out of 5 prefer price supports at a fixed 90 percent of parity over the sliding scale of flexible supports. More than 1 in 10 declined to comment on this question, however, and several suggested the elimination of price support programs.

By a 3 to 2 margin, voters rejected proposals for a large-scale program of Federal grants and loans to help communities undertake public works projects, frequently expressing the fear that they would become make-work projects typical of some of the depression relief programs. Both yes and no answers frequently were qualified with suggestions as to what types of programs would be worthwhile.

The response was better than 4 to 1 against giving diplomatic recognition to Communist China. This is a clear indication of public dislike and distrust of the Peiping regime until it demonstrates a capacity to act as a responsible nation.

POLL PROVIDES VALUABLE INSIGHT

We all recognize our duty to know the thoughts and beliefs of our constituents and to be the spokesmen of these views in the House of Representatives. It is not an easy task to keep well-acquainted with voter sentiments in districts that cover large areas and contain populations of 300,000 or more. In addition to the thousands of letters, telegrams and telephone calls I receive, I greatly appreciate the many personal contacts I have with seventh district people, including my customary tour of all of the post offices in each of the 11 counties. I believe this poll is another worthwhile tool for keeping closely in touch with the legislative wishes of the people, and consequently being better able to represent them. Each of those who replied helped to form this cross-section of public opinion, and demonstrated the willing participation and interest in public affairs which has been the hallmark of American citizenship.

I commend this insight into the thinking of my constituents to all of my colleagues for I know these people to be truly representative of the finest traits and characteristics of this Nation.

Final summary of opinion poll conducted by Congressman William G. Bray, Seventh District Indiana

	Percent		
	Yes	No	No opinion
1. Do you believe a so-called summit conference between leaders of the free world and Soviet Russia would help to relieve world unrest?	42	53	5
2. At the conclusion of our 1958 test series, should we then stop testing nuclear weapons if the Russians will do the same?	62	35	3
3. Should personal and corporation income tax reduction be postponed until the budget is balanced and deficit financing avoided?	67	26	7
4. Should excise taxes (transportation, communications, autos, appliances, etc.) be reduced to promote business and expand employment?	68	29	3
5. Do you favor legislation outlawing pay television?	73	22	5
6. The House has authorized $2,900,000,000 in foreign aid for 1959. Do you believe the appropriation, to be voted on soon, should be substantially less than the authorization?	74	21	5
7. Should military aircraft be placed under civil air safety control to reduce the chance of midair collisions?	74	19	7
8. Do you favor fixed (as opposed to flexible) price supports for farm commodities?	22	65	13
9. Should the Government begin a large program of grants and loans to communities for public works to stimulate economic activity?	38	57	5
10. Do you believe the United States should give diplomatic recognition to the government of Communist China?	16	80	4

NATO Parliamentarians' Conference

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 22, 1958

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Washington Post and Times Herald of July 7, 1958, which refers to a resolution which is on the Senate Calendar. The resolution relates to the NATO Parliamentarians' Conference. We have for consideration a concurrent resolution, sponsored by the Senator from Rhode Island [Mr. GREEN], the chairman of the Committee on Foreign Relations, approved by the full committee. The resolution proposes to carry out some of the recommendations which were agreed to by the NATO Parliamentarians' Conference last September.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEW LINKS FOR NATO

The Senate has a chance to help foster, if even in a modest way, a more meaningful sense of community among the 15 nations in the North Atlantic Treaty Organization. Last September, the annual conference of NATO Parliamentarians conceived the idea of giving private citizens a chance to confer together on ways of enhancing the Atlantic Alliance. Unanimously, the Parliamentarians—all legislators from NATO countries—called upon their governments to appoint officially outstanding private citizens as delegates to such a conference. This would fill a void which now exists by giving private citizens a role in NATO. Conceivably, the citizens could propose useful suggestions for giving greater unity of purpose to NATO and emphasizing the nonmilitary aspects of the alliance. No citizens, of course, could commit his government, and all proposals would be advisory.

The next step in this country is before the Senate. All the Senators present at the NATO meeting have joined with Senator GREEN in sponsoring a concurrent resolution which would request the President to take appropriate action. The Senate Foreign Relations Committee, without dissent, approved the resolution; favorable action in the House seems assured if and when the Senate as a whole votes its approval. Therein lies the rub. Faced with the adjournment confusion, this noncontroversial resolution could be relegated to limbo. That would be a pity. There is much cogency in Senator GREEN's comment that "all wisdom does not lie in governments." Surely the Senate will give the businessmen, scholars, labor leaders and scientists a chance to throw new light on this problem of so much concern to the free world.

San Jose Building Boom Paces Nation

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. GUBSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including the following editorial which appeared in the San Jose News under date of July 10, 1958:

SAN JOSE BUILDING BOOM PACES NATION

City Building Inspector R. V. Lotz reports that new building permits for the first 6 months of the year are running almost $2 million over the same period of last year. Our jubilation knows no bounds since we have repeatedly said construction is the most substantial evidence of a soaring economy and lays the basis for prosperity in every other single field.

Single family homes lead the parade with permits at $18.7 million. During the year previous, the score stood at $14.5 million, a fantastic increase. In addition, Hayward builder A. L. Branden will this forthcoming Sunday dedicate his Tropicana Village which will be a $150 million community of 10,000 homes, the largest such project ever planned in the West, with the site at Bayshore Freeway and Story Road.

What is happening in this area reflects the very same pattern, if to a lesser degree, developing across the Nation. The F. W. Dodge Corp., construction news and marketing analysts, report that construction contracts made in May were at the very highest level for any month in any year in the history of the Nation.

The Dodge company also says that the awards, which total for May more than $3.4 billion, exceed May of 1957 by nine one-hundredths of 1 percent. In addition, the third highest month in history, June of 1957, was 5 percent below last month's record. These figures, incidentally, run parallel with the San Jose reports for they are, by and large, mostly concerned with home rather than commercial building.

Since there is absolutely no question but that construction is the most reliable indicator of economic trends, it is possible to be complacent about a sneer at the United States hurled the other day by Nikita Khrushchev who took time out in East Berlin to taunt losing capitalism. The Russian pointed out with obvious relish at the American recession and said smugly there was no need for the Soviet Union to destroy the United States by force of arms, implying that we are doing a good job of economic suicide all by ourselves.

Thus San Jose is still booming along and the rest of the Nation is lifting itself out of the slump in the most constructive and lasting of ways. And the most recent employment index verifies this.

Every Third Family Hit by Recession

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. ROOSEVELT. Mr. Speaker, a most interesting and illuminating document on the effects of the recession has recently come to my attention. This is Elmo Roper's Public Pulse of July 19.

Mr. Roper titles his release "Every Third Family Hit By Recession," and goes on to substantiate this claim on the basis of questions which were asked of a cross-section of the population, nationwide.

To me one of the most enlightening comments on the impact which the recession has made on the individual stems from the correlation which is made between economic status and unemployment. These statistics show that unemployment is significantly higher—21 percent—among families that are already in the low income group, while in the high or upper middle income group that is only 3 percent.

Even worse is the substantiation which Mr. Roper seems to make for the thesis that unemployment is felt first and worst by Negroes. Twenty-four percent of Negro families have an unemployed member, as opposed to only 9 percent of white families.

I highly recommend this short article to my colleagues as a new perspective of the recession, and under leave to extend my remarks, include it in the RECORD:

One third of the Nation has felt the impact of the current recession. This means that close to 60 million people have been affected in some degree—either by loss of employment or loss in income—by the economic malaise that has crept across the Nation in the past year. A nationwide cross section was asked this question:

I'd like to know a little about how the recession has affected you personally. Which of these statements applies to you?

	Percent
I or someone in my immediate family is out of work	10
While no one in my family is out of work, our family income is less than it was a year ago	22
Our family income is the same as it was a year ago	52
Our family income is higher than it was a year ago	14
Express no opinion	2

What job statistics do not show is the millions of people who while still at their jobs, have suffered cuts in pay or in overtime. The official figures do not record how many salesmen are facing unaccustomed sales resistance, to the extent that their families face unaccustomed budget restrictions. Nor do they reveal the number of factory workers who have dropped from a 5-day week plus overtime to a 4 or 3-day week. Yet such people represent a group more than twice as large as those actually unemployed.

High though these figures are, they still leave the majority of the public untouched by the 1957–58 downturn. They also reveal a substantial segment who are actually better off than they were a year ago. This last group is of course a mixture of people on their first jobs, people who benefit from automatic pay increases, as well as those working in businesses or industries that are actually doing better this year than last.

Inevitably, the economic blight is spread unevenly over the economic scale. Among people whose normal standard of living is above average, the better off and the worse off balance each other out. But among those already on the economic margin, half the families have suffered a setback in their standard of living:

[In percent]

	High or upper middle income	Middle income	Low income
Out of work	3	7	21
Income lower	18	21	26
Income same	56	57	43
Income higher	20	14	8
Express no opinion	3	1	2

In addition, the old belief that Negroes are last hired, first fired gains substantial backing from today's results. Only 9 percent of white families have an unemployed member at the present time, but 24 percent of Negro families report this sad statistic.

RURAL RECESSION WORST

Although cities like Detroit have been hard hit, in general people in large cities have weathered this year's rugged economic climate better than people in small towns and country areas. While in cities of 100,000 or more, 28 percent either have a family member out of work or reduced family income, the corresponding figure for people from towns of 2,500 or less and those living in rural areas is 37 percent.

Since farm income is up somewhat, the rural recession appears to reflect a loss of job opportunities off, rather than on, the farms. While agriculture demanding less and less manpower, country and smalltown people have been turning more and more to forms of industrial employment within commuting range of their homes. Apparently this kind of employment has dropped sharply.

Regionally, midwesterners and southerners are most affected. The lowest out-of-work figure is reported for families in the Northeast. The Far West, whose unemployment figures are as high as those of any other part of the country, also shows the greatest number of people better off.

[In percent]

	East	Midwest	South	Far West
Out of work	6	11	12	12
Income lower	23	23	22	18
Income same	58	50	51	46
Income higher	12	14	11	21
Express no opinion	1	2	4	3

What do these figures mean? They make it clear that the blight of unemployment spreads quickly beyond those who actually lose their jobs. A dip that has not earned the name depression has nonetheless reduced the economic well-being of a full third of the Nation's families.

Senators Thank Sun-Times for Telecast of Hearings

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. BYRNE of Illinois. Mr. Speaker, I believe that the Chicago Sun Times is fully aware of the appreciation on the part of Congress and the public, including the working men and women as well as businessmen for telecasting the Senate rackets-committee hearings held in Chicago recently.

This endeavor was indeed an act of public service and I want to thank the Chicago Sun Times, too.

It is my belief that better solutions and sounder legislation will result because the eyes of the people are on some of the unscrupulous labor leaders as well as on Congress. The public is informed and the people want action to remedy and not destroy, to strengthen, not weaken our laws in the labor field. Justice to all concerned will not be wrought with prejudicial thinking and discriminatory legislation.

[From the Chicago Sun-Times of July 19, 1958]

SENATORS THANK SUN-TIMES FOR TELECAST OF HEARINGS

(By Jack McPhaul)

With the thanks of the government, a 2-week public service telecast of the Senate rackets committee probe ended Friday.

The camera report to Chicagoans on gangster activties in their city initiated by the Sun-Times and station WBKB (channel 7) ended with the reading of statements by senators as they concluded the Chicago phase of the hearings.

The Sun-Times and WBKB presentation began with the start of hearings July 8 and the cameras were on the job at every session thereafter.

WIDE INTEREST SHOWN

Surveys have shown that the telecasts attached wide interest and attention throughout the Chicago area. Letters received by this newspaper reflected the anxiety and indignation of citizens over the disclosures

of hoodlum forays against working people and businessmen.

This alerting of the public to gangland violence, intimidation and extortion was one of the chief goals of the hearings, Senator JOHN L. MCCLELLAN (Democrat of Arkansas), committee chairman, said Friday.

"This committee is very grateful to The Sun-Times and Station WBKB for televising the hearings," said Senator MCCLELLAN. "It was a genuine public service. The program was not sponsored. It was presented by The Sun-Times and WBKB at their own expense."

MCCLELLAN said he wished that similar public service programs could be presented in other communities during exposures of local conditions.

Senator KARL E. MUNDT (Republican of South Dakota) and Senator FRANK CHURCH (Democrat of Idaho), other committee members, joined with the chairman in praising the telecast.

"PUBLIC'S BUSINESS"

"This is the public's business," said CHURCH. "It is appropriate that the hearings be televised and publicized in the press."

In addition to supporting the telecast, The Sun-Times assigned staff reporters to the hearing for full newspage coverage of the testimony, background information and interpretation.

Televiewers in homes and public places watched and listened as MCCLELLAN stated that the next move was up to Chicago public officials. He said:

"Other than legislation, the final good, the maximum good can only come if local enforcement officers will meet their responsibilities and pursue the clues we have developed here to the end that those who have committed criminal acts are brought to the bar of justice."

Again, the Coin Clippers

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. HARRISON of Virginia. Mr. Speaker, inflation continues to rob the financially prudent and thrifty citizen. It oppresses the elderly and the disabled, existing on modest fixed compensation, pension or savings.

Under leave to extend my remarks in the Appendix, I include a thought-provoking statement on the effects of this vicious and unbridled economic robber contained in a letter I have received from Mr. Maury A. Hubbard, executive secretary of the Virginia Farm Bureau Federation.

The pertinent portion of his letter follows:

Every responsible citizen is interested in security and a large part of our total energies are expended toward the attainment of this objective. This is done through systematic savings which are generally invested in life insurance policies, pensions, annuities, stocks, bonds or real estate and personal property. Such savings and investments not only provide security for those who prudently provide for their own future—they also provide the capital which must be available to supply the machines and tools needed by job holders in an ever expanding economy. Up until now, this has been one of the factors responsible for our fantastic growth and development.

But people will not save for the future without some assurance that their savings will be protected.

It is here that government has a very solemn moral obligation and responsibility. It is not the responsibility of government to undertake the impossible task of providing security for each of its citizens—this is something that they and they alone can do. People support government—government cannot support people.

Instead of attempting the impossible, the Congress should make it a first order of business to discharge its responsibility in preventing any further deterioration and erosion in the value of savings already accumulated or which will be accumulated in the future.

There are numerous examples of why this is necessary and desirable.

We shudder at the thought of the coin clipping indulged in by the Roman emperors in order to finance false and fraudulent schemes designed to mislead people into thinking that government could or would provide for their security. Dishonest practices of this sort led to the collapse of the mighty Roman Empire.

The wild inflation in Germany following World War I brought on the collapse of government that produced Hitler.

The political shenanigans of Argentina's Peron, who professed to love the poor people, the shirtless ones, caused a deterioration in the value of money amounting to 73 percent over a 9-year period. Mr. Peron destroyed 73 percent of the security of the provident people in Argentina under the guise of providing for their security. Thrifty people, the backbone of every country, lost their earned security and the shirtless ones, the poor people, lost job opportunities for the lack of capital to provide the machines and tools needed to supply jobs. Result: no one has security—not even Mr. Peron.

France is now on the verge of collapse—politically, economically, and militarily—in spite of millions which we have poured down the rathole trying to bolster up and support her socialistic economy. The job is completely hopeless and will continue so until the people of France recognize the utter futility of government attempts to do for people what the people should and must do for themselves. In its failure to protect the people's savings, however, government has made it impossible for even the wise and the provident to take care of their own future needs.

Consider the plight of the farsighted Frenchman who at the age of 21 in the year 1914 started a program of systematic savings which would have given him a comfortable retirement income of 1,000 francs per month beginning in 1958. For his provident sacrifice over the years, at retirement, his reward was 1,000 francs per month—worth the price of 1 meal every 30 days. Such is the end product of government-guaranteed security.

Well, that can't happen here—some will say. But it is happening here. The dollar of 1939 is now worth 48 cents. It has lost 15 percent of its purchasing power in the last 9 years. Each month, in spite of the recession, prices move up, the papers say. It would be more accurate to say that each month the value of money shrinks. Security based on a dollar that becomes increasingly insecure is a cruel political fraud. It is a crime against the very people whose provident foresight and self-sacrifice have entitled them to a secure old age and whose savings have provided the machines, tools, and other resources necessary for our unprecedented progress.

The total tax take, Federal, State, and local, now amounts to around 32 percent of the total earnings of every man, woman, and child in the United States. Pushing this rate any higher would generate irresistible demands for increased salaries and wages plus further demands for the Government to provide services which the exorbitant tax rate makes it increasingly difficult for families to provide for themselves. Hence the only sensible course is to reduce expenditures to balance our tax income. Yet in spite of indications that the Federal budget may be as much as $10 billion out of balance on the red side, we are witnessing the disgusting spectacle of some Congressmen falling over themselves in their attempts to force through legislation calling for vast new and additional Federal outlays.

As coin clippers, such Representatives put the ancient rulers to shame, and as pilferers of the public's savings, these men make of John Dillinger a 10th rater.

I Have Served My Country

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include "A Mother's Letter to Theodore Roosevelt," dated February 3, 1916, and his reply:

"I HAVE SERVED MY COUNTRY"—A MOTHER'S LETTER TO THEODORE ROOSEVELT AND HIS REPLY

THE LETTER TO COLONEL ROOSEVELT

DEAR SIR: When you were talking of "race suicide" I was rearing a large family on almost no income. I often thought of writing to you of some of my hardships and now when "preparedness" may take some of my boys I feel I must. I have 11 of my own and brought up 3 stepchildren, and yet in the 30 years of my married life I have never had a new cloak or winter hat. I have sent seven children to school at one time. I had a family of 10 for 18 years with no money to hire a washerwoman though bearing a child every 2 years. Nine—several through or nearly—of my children have got into high school and two into State Normal School and one into the University of Michigan. I haven't eaten a paid-for meal in 20 years or paid for a night's lodging in 30. Not 1 of the 5 boys—the youngest is 15—use tobacco or liquor. I have worn men's discarded shoes much of the time. I have had little time for reading.

I think I have served my country, my husband has been an invalid for 6 years—leaving me the care and much work on our little sandy farm. I have bothered you enough. To me race suicide has perhaps a different meaning when I think my boys may have to face the cannon.

Respectfully,

Mrs. ——— ———.

COLONEL ROOSEVELT'S REPLY

FEBRUARY 9, 1916.

MY DEAR MRS. ———: Your letter interests me very much. It interests me both because of what you tell me about yourself, and because of what may be the attitude of mind of other women and men, whom I heartily respect and admire, and who do not understand quite what it is that I am trying to say to our people.

You say that when I was talking of race suicide you were rearing a large family on almost no income; that you often thought of writing to me of some of your hardships; and that now that my "preparedness" may take some of your boys, you feel you must write to me. You state you have 11 children of your own and have brought up 3 step-

children, and that yet, in the 30 years of your married life, you have "never had a new cloak or winter hat" and that you had sent 7 of the children to school at one time and had a family of 10 for 18 years, with no money to hire a washerwoman, although you were bearing a child every 2 years; and you say that, of your children, 9 have gotten into high school and 2 into the State normal school and 1 into the University of Michigan; that you "haven't eaten a paid-for meal in 20 years or paid for a night's lodging in 30," and that you have had most of the time to wear men's discarded shoes and have had little time for reading; and you say that you feel that you have served your country. (And so you have.) You add that your husband has been an invalid for 6 years, so that you have had to do most of the work on your little sandy farm. You end by saying that race suicide has perhaps a different meaning to you now, when you think your boys "may have to face the cannon."

Now, my dear Mrs. ———, you have described a career of service which makes me feel more like taking off my hat to you and saluting you as a citizen deserving of the highest honor, than I would feel as regards any colonel of a crack regiment. But you seem to think, if I understand your letter aright, that "preparedness" is in some way designed to make your boys food for cannon. Now, as a matter of fact, the surest way to prevent your boys from being food for cannon is to have them, and all the other young men of the country—my boys, for instance, and the boys of all other fathers and mothers throughout the country—so trained, so prepared, that it will not be safe for any foreign foe to attack us. Preparedness no more invites war than fire insurance invites a fire. I shall come back to this matter again in a moment. But I will speak to you first a word as to what you say about race suicide. I have never preached the imposition of an excessive maternity on any woman. I have always said that every man worth calling such will feel a peculiar sense of chivalric tenderness toward his wife, the mother of his children. He must be unselfish and considerate with her. But, exactly as he must do his duty, so she must do her duty. I have said that it is self-evident that unless the average woman, capable of having children, has four, the race will not go forward; for this is necessary in order to offset the women who for proper reasons do not marry, or who, from no fault of their own, have no children, or only 1 or 2, or whose children die before they grow up. I do not want to see us Americans forced to import our babies from abroad. I do not want to see the stock of people like yourself and like my family die out—and you do not either; and it will inevitably die out if the average man and the average woman are so selfish and so cold that they wish either no children, or just 1 or 2 children. We have had six children in this family. We wish we had more. Now the grandchildren are coming along; and I am sure you agree with me that no other success in life, not being President, or being wealthy, or going to college, or anything else, comes up to the success of the man and woman who can feel that they have done their duty and that their children and grandchildren rise up to call them blessed.

You have had to work very hard, but, Mrs. ———, I am sure you are the type of woman who takes pride in what you have accomplished. Surely, you feel you are entitled to respect, not sympathy or pity. Certainly this is the way I feel about you. I feel that you are the kind of American of whom all good Americans should be proud. I think that what you have done puts you in the first rank of those men and women of this generation who have served their country.

Now, for what you say about preparedness. I am enclosing you a slip of paper containing an account of the destruction that has been wrought in Belgium by the German Army. Over 18,000 houses have been destroyed. You will see that in one town 127 out of 130 houses were burned to the ground, and in another 1,263 out of 1,375. A population twice the size of that of Michigan is now living under conditions where, if the women of a family are maltreated, the father and sons dare not stand up for them against any soldier of the invading army, because they would be shot if they did so. In some towns, the officers treat the women and children well. In other towns they permit frightful misconduct toward them. Would you wish your sons to see you and their sisters frightfully maltreated and be afraid in any way even to show resentment against the brutal men guilty of the misconduct? This is exactly what has happened to the population of Belgium—7 million souls—because they had not prepared their strength in advance. Beligum gave no cause of offense to any nation. She was much freer from giving offense than the United States has been. She had not committed a wrong of any kind or sort; but she was rich; she was badly prepared; only a small proportion of her people had been trained to war; and so she was invaded. For 18 months her people have been living in misery such as you and I can hardly picture to ourselves. The shame, the humiliation and suffering have been well-nigh intolerable. Many hundreds of Belgian women and children, many thousands of men, have ben killed. Multitudes of innocent noncombatants have been killed, or their houses burned, and their little all taken from them. Many hundreds of thousands are in the direst want. All are suffering greatly. And this is because her people had not prepared and because a big, powerful neutral nation like the United States did not dare to stand up for them.

Mrs. Roosevelt and I have four sons and they are as dear to us as your sons are to you. If we now had war, these four boys would all go. We think it entirely right that they should go if their country needs them. But I do not think it fair that they should be sent to defend the boys who are too soft or too timid to face the cannon, or the other boys who wish to stay at home to make money while somebody else protects them. If throughout this country all young men like your sons and like mine are trained so that they can defend this country in time of trouble, I do not believe that the trouble with ever come. Preparedness will probably prevent these boys from having to face the cannon; but if other nations become convinced that the mothers of this country have raised their boys to be afraid to face the cannon, then you can be absolutely certain that, sooner or later, these other nations will come over and treat us just as the military powers of the old world have treated the Chinese. The Chinese were too proud to fight; and so they have been kicked. Those of our people who are too proud to fight ought to wear pigtails.

You say you have had little time for reading; but your letter interests me so that I am sending you a copy of my autobiography. You won't care to read it all; but I wish you would read about our family life and about what I say of war and social justice. I think, on the whole, you will agree with what is therein said.

Sincerely yours,

THEODORE ROOSEVELT.

A Dream Come True

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. MACK of Illinois. Mr. Speaker, during the 10 years that I have served in Congress, I have sponsored the annual Mack educational tour to Washington, D. C., for schoolchildren of the 21st Congressional District of Illinois. It has been my policy to ask the children, after returning to Illinois, to submit an essay giving their impressions of their trip. Each year the American flag which was flying over the Capitol when the students visited there is awarded to the writer of the best essay.

This year the winner of the flag was Paul James Walstad, of Morrisonville, Ill. I would like to include his winning essay in the CONGRESSIONAL RECORD.

MY IMPRESSIONS OF WASHINGTON, D. C.

(By Paul James Walstad)

During my study of American history in junior high school, I dreamed of the time I would be able to visit our Nation's Capital. This dream was first implanted in me by my mother who lived and worked in Washington, D. C., for 3 years before I was born. My dream came true, due to the generosity of Congressman PETER F. MACK, Jr., during the period June 9 through June 13, 1958.

I learned that our Capital City is laid out in a wheel design, with the stately Capitol Building forming the hub, and the beautiful avenues, along which are constructed the many Government buildings, the spokes. As I began the tour I was first impressed by the beauty of the city and its beautiful marble buildings. However, as the tour progressed I became increasingly aware of the historic background which formed the city and laid the foundation for our present form of government. Once in the Capitol Building I was impressed with its structure, the statues of our forefathers, and the beautiful paintings on the walls. As the tour of the Capitol Building progressed I felt, along with the others, that it truly is the living symbol of freedom.

The tour covered such places as the Bureau of Engraving and Printing, the Federal Bureau of Investigation, where we shook hands with J. Edgar Hoover and saw various new criminal detection devices, the home of our first President at Mount Vernon, the National Cemetery in Arlington, the Supreme Court Building, the White House, and many other points of interest. We also, during the tour, visited Jefferson's Memorial, Washington's Monument and last, but not least, Lincoln's Memorial where I was impressed by the large statue of Lincoln.

As I went from one point of interest to another, I was impressed by how closely related each was with the other. In Washington, D. C., lies the beginning of our government and from it comes the hopes and promises that our Nation shall remain free.

This feeling was most apparent during my visit to a session of the House of Representatives and to the Senate. There I became aware that we are living in the days of vital history making. As I watched our Representatives and Senators at work, I was espe-

cially grateful for our democratic form of government.

As I said goodby to our Capital and started on the trip home, I promised myself that I would, somehow, do some small task in helping to keep our Nation free and always be faithful to her.

Right To Come, Go

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. DAVIS of Georgia. Mr. Speaker, on July 15, 1958, I inserted in the CONGRESSIONAL RECORD an editorial which pointed up the matter of the President's proposal to Congress to enact legislation to restore to the Government the right to deny passports to Communists and their sympathizers.

Since that date, another newspaper item in the form of a letter to the editor of the Baltimore Evening Sun by George Washington Williams, of Baltimore, Md., which addresses itself to this same important problem, has come to my attention. These two newspaper articles herein referred to come from widely separate sections of our country and, by reason of their separation, point to two significant facts: First, that the American people are alarmed by the continuous, unbroken string of Communist-coddling decisions of the Supreme Court; and, second, that this alarm is not sectional. To the contrary, this feeling of alarm, disgust and grave suspicion of a Court which has subordinated law, national security and commonsense to what they glibly and sanctimoniously refer to as individual rights, is a general one shared by the people throughout the country.

Travel abroad for purposes which might be inimical to the national interests of the American Government is not one of the inherent rights of citizenship. Instead, it is a high privilege and one which should be restricted to those loyal Americans who have demonstrated their loyalty to the United States—the country upon which they may call for protection while traveling in foreign lands.

Under unanimous consent I insert this item herewith:

RIGHT TO COME, GO

To the EDITOR OF THE EVENING SUN.

SIR: The matter of the refusal of passports has been given a fair amount of attention by the Sunpapers and the President is now pressing for legislation to provide him with discriminatory power. As we not infrequently refer to the Magna Carta in connection with what may be called primordial rights reference therein to this problem may be appropriately made at this time. Section 41 of the original Carta provided for all merchants to come and go, except in time of war. The following section provided that "It shall be lawful, for the time to come, for anyone to go out of our kingdom, and return safely and securely * * * unless in time of war, by some short space, for the common benefit of the realm." The other reservations are not important to the moment, except "according to the law of the land."

Now, there were a number of changes in the Carta, but the one in common use will show that section 42 has been eliminated, which is found only in the original Carta. It appears that the King had the right to control his subjects' movements by the use of the writ "ne exeat regno," and particularly in the interest of war necessities. In any circumstance, the right to go and come was dependent upon circumstances and was finally eliminated from the Carta, thus making the matter of coming and going dependent upon the needs of the kingdom as provided for by law. It will be noted that this coming and going, as the right appeared in the original Carta, was for the common benefit of the realm, and not for the convenience of the subject. So we find that the right to come and go is not completely rooted in that basic document to the point where the interference with it runs afoul of due process or the law-of-the-land limitation on government action.

GEO. WASHINGTON WILLIAMS.
BALTIMORE, *July 9.*

Letter to Constituents

EXTENSION OF REMARKS
OF
HON. JAMES H. MORRISON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. MORRISON. Mr. Speaker, with leave to extend my remarks, the following is a letter which I am sending to some of my constituents in Louisiana:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C.

MY DEAR FRIEND: I am enclosing a reprint from the CONGRESSIONAL RECORD which I will appreciate your reading. This will give you an idea of a few of the accomplishments which I have worked hard to bring about as your Congressman. Since January of 1943, I have had the great honor and privilege of serving you as your Representative in Congress. During my term of office, which counting this year will make 16, I have done my very best to give you the kind of representation that you wanted and deserve here in Washington.

I have tried to help each and every one in the district that called upon me for assistance during this period, and have done everything possible to give each and every person my sympathetic and complete cooperation in their problems with a feeling of understanding and friendship. As you no doubt realize, since 1942 we have been through, and are still going through, perilous times. I think you will agree with me that my seniority and experience in Congress for the past 16 years certainly enables me to work in your best interests, and for the best interests of the Nation as a whole.

Since Congress is still in session, and may or may not adjourn before election day, I will be deprived of an opportunity to get around the district to personally see and shake hands with you, and for that reason, I am writing this letter to sincerely ask you for your vote and support on Saturday, August 23, which is election day.

I am extremely grateful for your kind and sincere support in all my previous elections, and I again will be most appreciative for your vote and support on Saturday, August 23. I know many times it is most inconvenient to go to the polls on election day, but I again urge you to do everything possible to go to the polls and be sure to vote, Saturday, August 23. You may rest assured that I shall continue to do everything within my power to help and assist you in any trouble that may beset you at this time and in the future. You may, therefore, rest assured that I shall continue to put forth my best efforts in your behalf.

With kindest regards and best wishes, I am
Sincerely,

JIMMY MORRISON,
JAMES H. MORRISON,
Member of Congress.

P. S.—As I have said in the past, I want you to feel that at any time I can serve you in my capacity as your Congressman, please do not hesitate to call on me. Best regards.

J. H. M.

H. R. 469, a Bill To Require Fiber Content Labeling of All Textile Products

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1958

Mr. SMITH of Mississippi. Mr. Speaker, most of the opposition to H. R. 469, my bill to require fiber content labeling of all textile products, has come from various segments of the garment industry. I think it is worth noting that one of that industry's well respected and longtime columnists, Dorothy L. Wallis, who has been writing for the Women's Wear Daily for many years, has spoken up strongly in favor of fiber content labeling. Under unanimous consent, I include her column of May 27, 1958:

WHAT'S IN IT?

(By Dorothy L. Wallis)

May a consumer have an opinion? Amid current hullabaloo on the subject of compulsory fabric fiber labeling, has it not occurred to some of the disputants that in many cases the consumer wants to know?

The pros and the cons battle, scourging each other with "selfish interests," "high-powered promotion," "protection of the customer," and other robust terms. "The textile industry is not misrepresenting its products," insists a spokesman in a lately published letter to the New York Times. Hardship, high costs, hitting an industry when it's down are all bandied about freely. "We tell the consumer what she needs to know," insists one faction. "She's more interested in durability, shrinkage, colorfastness, and service."

Well, here's one consumer who wants to know all that, and still wants to know what fibers go into the materials she buys. I'm no textile technician, but I'd like respect for the small knowledge I have, when it comes to materials with which I've had, or am going to have, experience.

I'm able to learn what specific fur I'm buying. And incidentally, from what country in the world it comes, another controversial aspect of the textile labeling bill, as it's being juggled about in House and Senate. Perhaps the bill is, as argued by some antagonists, a propaganda effort on the part of cotton growers. Certainly parts of the fur industry fought their bill before it finally became law. Presumably, nobody's yet gone out of the fur business simply by reason of having to identify his goods. The

same situation may well continue in the textile fields. And here's one consumer who will be happier and more satisfied—if anybody in textiles cares.

Soviet Schedule Kept in Near East

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1958

Mr. MULTER. Mr. Speaker, the following article from the Washington Post of July 17, 1958, is most interesting. It reveals in retrospect what I said more than 2 years ago was in prospect.

I told it to all who would listen, including all of the people I could get to in the White House, in the State Department, as well as to our Joint Chiefs of Staff.

It should have been in their files then. There can be no excuse for it not having been verified by them long before the happening of any of the events recounted.

The article by Drew Pearson, based on his own travels through the area, follows:

SOVIET SCHEDULE KEPT IN NEAR EAST

(By Drew Pearson)

The Kremlin timetable for the Near East is running right on schedule. Last October, after talks with Arab leaders, this writer reported Nasser's plan to unite Syria and Egypt, and Moscow's plan to work with Nasser in gradually taking over all the Arab States through subversion and revolution.

The Kremlin timetable, as then reported, was 3 months to take over the desert kingdom of Jordan; 6 months to take Saudi Arabia; 9 months to take Lebanon; and 12 months to take Iraq.

The timetable is late in one respect, early in another. Jordan did not fall in 3 months. Tough little King Hussein, backed by American arms and the British-trained Bedouins of the Arab Legion, resisted all attempts to undermine his regime.

Instead, the timetable was speeded up for Iraq. This country, supposed stronghold of the West, was scheduled to become Nasserized in 12 months. Instead it fell in 9 months.

It was to block the Kremlin timetable that the Eisenhower doctrine was proclaimed. Here is how both timetable and the doctrine are working:

Saudi Arabia: King Saud's glamor visit to the United States seems to have been for naught. The old King is sick, a virtual prisoner in his own palace, surrounded by wives, children, and medical prescriptions. His brother, Prince Faisal, a friend of Nasser, has been running the country.

Saud has sent a hurry-up call to the State Department to send an American doctor to his desert capital. After the doctor's arrival it's expected Saud will go to Switzerland for medical treatment and remain there indefinately. This will be the cue for Prince Faisal to become King. There is already unrest in Saudi Arabia and a definite tie-up with Egypt is expected shortly after Faisal assumes the throne.

Lebanon: Handsome, pro-West President Chamoun, a Catholic surrounded by Moslems, is bitter against the United States. For weeks he has been pressing Secretary Dulles informally for aid under the Eisenhower doctrine; and for an equal number of weeks Dulles has been working through the United States Ambassador to head off any formal request for aid. Only this week did the desperate Chamoun lay it on the line. Up until then, Dulles had pointed out that the United Nations found no evidence of foreign intervention.

However, U. N. Secretary Dag Hammarskjold has now admitted privately to American diplomats that he deliberately whitewashed Syrian-Egyptian intervention in Lebanon in order not to embarrass Nasser. When Hammarskjold went to Cairo, Nasser promised to cooperate with the U. N., if the U. N. did not embarrass him. On the other hand, if the United States and England intervened, Nasser warned, he would be forced to resist. So Hammarskjold pulled a "Munich" and declared there was little evidence of Egyptian-Syrian intervention in Lebanon.

President Chamoun, who will step down after the July elections, is expected to throw his weight to the Lebanese chief of staff, Gen. Fuad Shehab, his successor. However, he has warned that Shehab is deceitful, will probably play ball with Nasser. General Shehab has been sunning himself on the beaches outside Beirut instead of fighting to defend his country.

Iraq: Instead of cooperating with Dag Hammarskjold as promised, Nasser's agents in Baghdad dealt the West one of the most deadly blows so far received in the Near East. The United States had not the slightest inkling that revolt was coming.

We were so confident of the Iraqi Army that we were planning to use them, along with Turkish troops, to intervene in Lebanon. American transport planes had been flown to southern Turkey near the Iraqi border from Wiesbaden to be ready to ferry Iraqui troops to Lebanon.

Israel: When I reported the Kremlin timetable to Premier Gen-Gurion last fall, he kept repeating, "This is a problem for President Eisenhower." What he meant was that the plan to solidify the Arab States in a Nasserized anti-West confederation was too big for Israel. He was right.

Loyalty Oath Ruling

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Los Angeles Evening Herald Express of Tuesday, July 8, 1958:

LOYALTY OATH RULING

The United States Supreme Court caused another shock when it decided that the California non-Communist oath required of religious groups and veterans seeking State tax exemptions is unconstitutional.

Thus was toppled another barrier set up by those who felt they were trying to stem the progress of domestic communism in this country.

Justice Brennan stated that it was not proper that the individual or organization applying for the tax exemption bear the burden of proof that he is not a person or organization advocating the overthrow of the Government.

But Justice Clark in opposition said:

"I cannot agree that due process requires California to bear the burden of proof under the circumstances of this case. This is not a criminal proceeding. Neither fine nor imprisonment is involved.

"Appellants are free to speak as they wish, to advocate what they will. If they advocate the violent and forceful overthrow of the California government, California will take no action against them under the tax provisions here in question.

"But it will refuse to take any action for them, in the sense of extending to them the legislative largesse that is inherent in the granting of any tax exemption or deduction."

And Los Angeles County Counsel Harold W. Kennedy declared:

"As a public law officer, I firmly believe it is the purpose of the Constitution to preserve the government and not to serve as a protective shield for those who, while claiming privileges under the Constitution, would seek to destroy it."

More and more, it would seem to us, the way is being paved toward that day when it will be just nobody's business who and how many people are American Communists, no matter how harmful or threatening their activities.

States Rights Victories

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1958

Mr. SMITH of Mississippi. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Memphis (Tenn.) Commercial Appeal:

STATES RIGHTS VICTORY

The last of the 10 original amendments to the United States Constitution says:

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

The House of Representatives, by an overwhelming 241 to 155 vote, has reaffirmed that guiding American principle in a measure referred to as a States rights bill. It is a signal victory for State government.

In essence, the bill was designed to put a restraining hand on Supreme Court tendencies to indulge in judicial legislation.

The House measure states:

"No act of Congress shall be construed as indicating an intent on the part of Congress to occupy the field in which such act operates, to the exclusion of all State laws on the same subject matter, unless such act contains an express provision to that effect, or unless there is a direct and positive conflict between such act and a State law so that the two cannot be reconciled or consistently stand together."

To Representative WILLIAM M. COLMER, of Mississippi, must go much of the credit for this important legislation. He was a coauthor of the bill, and he fought long and energetically for its passage.

In this he had strong support from the American Bar Association, the American Farm Bureau, the Conference of Governors, the Association of State Attorneys General, and the American Medical Association.

Opposition came mostly from the AFL–CIO, the NAACP, railroad brotherhoods, and the Departments of Justice and Labor.

As we read it, the bill holds the Constitution supreme, and where there is any question about States versus Federal control, Congress stands as the arbiter. It will affect antisubversive laws, narcotics statutes, water rights—many fields in which State laws have been preempted.

Mr. COLMER put it to his House colleagues plainly. The bill restates, he said, the Jeffersonian doctrine "of keeping the government on a local level as close to the people as possible, as against concentration in an all-powerful Federal Government."

Bang-Jensen: Another Martyr

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Manchester Union Leader, Manchester, N. H., of July 16, 1958; which cites an article from the Indianapolis Star, also included:

[From the Manchester (N. H.) Union Leader of July 16, 1958]

BANG-JENSEN: ANOTHER MARTYR

The dismissal of the senior political affairs officer Povl Bang-Jensen by the United Nations Secretariat, for refusing to hand over to that body the names of 81 Hungarian witnesses who testified during the U. N. investigation of the brutal Hungarian massacre, ranks as one of the most cowardly and unprincipled betrayals of trust in the history of this country. Moreover, it is an act for which the American Government cannot shirk its responsibility, for Ambassador Henry Cabot Lodge has washed his hands of the whole affair, calling Bang-Jensen's ouster an internal personnel matter, and Judge Robert Morris, former counsel of the Senate Internal Security Subcommittee, says he has definite proof that two top Americans at the U. N. actually had a hand in the conspiracy against Bang-Jensen.

The naivete of Ambassador Lodge, who says he thinks the names would have been kept out of the wrong hands if the Secretariat had access to them, is too good to be true. We don't believe it is naivete. Lodge knows full well that the scores of Communist employees of the Secretariat would have stolen the list of names and the Reds would then have murdered hundreds of innocent Hungarians, just as they did former Premier Imre Nagy and Gen. Pal Maleter only a few short weeks ago. Bang-Jensen realized this too, but being made of sterner stuff than our U. N. representatives, he not only refused to hand over the names of these Hungarians, who agreed to tell their stories under the pledge that their identity would be protected, but he also fought until he secured permission to burn the names in the presence of U. N. officials.

Why have the Communists centered their fire on Bang-Jensen? Unless your memory is very short, you will recall that it was he who put the teeth in the U. N. report condemning Soviet Russia for the brutal rape of Hungary. While the Communists go unpunished for the atrocities they commit, Bang-Jensen is fired for doing his duty. It was Bang-Jensen whom the U. N. had personally entrusted with the safekeeping of these names.

This whole sordid affair does have one brighter aspect. It has given the American people an opportunity to see the great power wielded by Russia within the United Nations. It has given them an opportunity to see the cowardice of the Eisenhower administration, which stood idly by and permitted Bang-Jensen to be fired without ever having had an opportunity to testify in his own behalf, an administration which had acquiesced when the U. N.'s highest tribunal ruled that American employees at the U. N. could not be fired for suspected Communist sympathies. Bang-Jensen was fired, but they were reinstated with back pay.

We urge our readers to protest the cowardly betrayal of Bang-Jensen to Secretary of State John Foster Dulles, Department of State, 21st Street and Virginia Avenue, Washington, D. C., and, by way of encouragement for a job well done, to send copies of their letters to Mr. Bang-Jensen, 18 Old Farm Road, Lake Success, Long Island.

[From the Indianapolis (Ind.) Star]

A COFFIN NAIL FOR FREEDOM

We have been sent a copy of a letter from Ambassador Henry Cabot Lodge to State Supreme Court Justice M. T. Philips, of Arizona. It concerns the fate of Paul Bang-Jensen. He is the Danish diplomat who refused to surrender the names of scores of Hungarian freedom fighters to the U. N. Secretariat, first because he promised the Hungarians not to, and second, because he knows that U. N. employees from Communist countries would be certain to steal or copy these names and give them to Soviet delegates.

Lodge washes his hands of the whole affair. First he says, he was always convinced that the names would have been kept out of the "wrong hands" if the Secretariat had got them. That is nonsense. Anybody who knows anything about communism ought to know that all the Soviet Union has to do is order one of its employees to steal those names and it will be done. There are scores of employees in the Secretariat from Communist countries.

Second, says Lodge, the names have been destroyed anyway. That is right, but it is no credit to Lodge. They were burned because Bang-Jensen refused to surrender them, and due to public protest in the United States. If Lodge had had his way, Bang-Jensen would have surrendered the names, and no doubt the list would be in Soviet hands now.

Finally Lodge says, "I have no authority in this aspect of the matter." This is only an "internal personnel matter" from which "member states are specifically precluded from interfering." Again nonsense. This is not a simple "personnel matter." For Bang-Jensen it is a matter of his whole future which he is risking to protect Hungarian patriots. For the United States it is a matter both of human justice and foreign policy. For if a U. N. employee can be persecuted by the U. N. Secretary General, and his deputy, at the behest of the Communist states, for doing his duty well and for protecting the lives of the sufferers of Soviet aggression in Hungary, then the same thing can happen to future U. N. employees who dare to expose aggression, subversion and terror anywhere by the Soviet Union.

For the United Nations itself the Bang-Jensen case is of vital importance. For with Bang-Jensen fired for doing what he did, what does it prove? It proves that the Soviet Union dominates the U. N. Secretariat. It proves that if the Soviets want a man punished who works through U. N. machinery against Soviet interests, he will be punished regardless of the truth. It proves, in other words, the very thing Bang-Jensen has claimed—that Communist representatives in the U. N. Secretariat control the Secretariat. And Hammarskjold and Cordier are just front men for Khrushchev.

More than this. If Lodge is right, that he can do nothing in this case, then we have here in the United States a powerful instrument falling under control of the Soviet Union, which we are powerless to control, powerless to investigate, powerless to prevent from carrying on activities aimed at destroying the United States. Is this what the U. N. was supposed to be? Has the United States no say over what conspiracies and plots are concocted against us in our own land?

What is amazing to us is the fact that only from Denmark has there been official protest against the blatant Communist persecution of Bang-Jensen. In the United Nations everyone looks the other way and washes their hands of the affair. Why? Are they so cowed by the Soviet Union that they dare not take a stand for the rights of this man, for his right to due process, his right to be heard, his right to know what charges are made against him so he can properly answer them?

America was once the "land of the free and the home of the brave." Henry Cabot Lodge makes us appear like the land of the cowed and the home of the cowardly. Let the true voice of America speak for Bang-Jensen, the voice of our people. For as Bang-Jensen goes, one more nail in the coffin of liberty is nailed over the corpse of the United Nations.

What Recession?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. MULTER. Mr. Speaker, the following editorial which appeared in the New Republic, July 21, 1958, issue, is most timely and I commend its reading to the attention of our colleagues:

WHAT RECESSION?

Whatever happened to the recession? Lots of people have no jobs, steel mills operate languidly, and Detroit makes so few cars that nobody seems to care whether a new contract between the companies and the UAW is signed or not. But our newspapers have decided that the recession makes stale (or is it unpatriotic?) copy. The new news is that of economic improvements. Thus, on July 9, the New York Times, in a front-page headline, pointed to the new job upturn shown for June. A more discreet subhead read: "But the total of unemployed reached a 17-year high." On June 29, a solemn editorial assured us that the rise in the cost of living was the smallest since December. The July 6 Times headlined the news that the recession was ending, and, lower and littler, that "most experts expect slow recovery." Good news demands block letters. Bad news is fit to print in small type.

Have the Times and a large part of the rest of the press wished the country into prosperity? Unfortunately not, but the press has done something else instead. It has reinterpreted the recession in something like the following manner: True, we have close to 5.5 million persons unemployed, but many prophets expected 6 million out of work. Prices don't stop rising, but note how slowly they ascend. Maybe the recession isn't getting better, but it's wonderful that it grows no worse.

How soon can the economy absorb its idle men and idle plants? The 1959 automobiles, the hope of the optimist, promise to be less salable than their 1958 predecessors. Capital expenditures show few signs of reviving. Unemployment compensation has run out for hundreds of thousands, and supplementary unemployment compensation covered only a small fraction of manufacturing employees. In short, the fact that the press doesn't scream, doesn't prove that its readers aren't bleeding.

H. R. 10637

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. MUMMA. Mr. Speaker, as a member of the House Committee on Banking and Currency, I have been receiving a large amount of mail for the past few weeks from savings and loan associations all over the country urging favorable consideration of H. R. 10637, introduced by the gentleman from Alabama [Mr. RAINS].

Some of the banking institutions in my district and the surrounding area oppose this legislation. In this connection, I forwarded information sent to me by the United States Savings and Loan League to Mr. J. E. Brucklacher, president of the Cumberland County National Bank & Trust Co., Camp Hill, Pa., for his comments. The following letter from Mr. Brucklacher gives his reactions, and I thought his letter would be of interest to other Members of the House.

The letter follows:

CUMBERLAND COUNTY
NATIONAL BANK & TRUST CO.,
New Cumberland, Pa., July 18, 1958.

H. R. 10637, Home Loan Guarantee Corporation.

Hon. WALTER M. MUMMA,
Congressman, House of Representatives, Washington, D. C.

DEAR WALT: Material sent with your letter of July 15, 1958, is returned herewith. I found the details most interesting and it permitted me to consolidate my reactions more firmly.

The proposal is not unpalatable or beyond my imagination, but I cannot condone legislation that permits privileges to one unit of the lending industry. There are 4 major sources for real estate credit in our Nation and much of the earlier progress of our Nation can be attributed to the advances made by 3 of the types prior to recent ascendancy of the savings and loan associations. The May issue of the Federal Reserve Bulletin reports residential and nonfarm mortgage holdings at the end of 1957 by the 4 major lending groups as follows:

Commercial banks	$17,147,000,000
Mutual savings banks	19,010,000,000
Life insurance companies	32,640,000,000
Savings and loan associations	40,119,000,000
Total	108,916,000,000

The first 3 sources have a total of $68,797,000,000 representing 63 percent of the outstanding real-estate credit at the end of 1957. The aggregate is a fair contribution to our national growth and I believe it justifies consideration when one group is seeking maximum relief from limitations and not making the same privileges available to the other lending groups.

A further review of figures reflected in the Federal Reserve bulletin gives some interesting facts on conventional residential and nonfarm mortgage holdings at the end of 1957 distributed among the four groups of lenders as follows:

Commercial banks	$8,735,000,000
Mutual savings banks	6,551,000,000
Life insurance companies	18,124,000,000
Savings and loan associations	31,463,000,000
Total	64,873,000,000

By deducting holdings of the savings and loan associations, the three remaining lending groups held $33,410,000,000 equivalent to 51 percent of the total. It becomes quite evident that commercial banks, mutual savings banks and life insurance companies do not rely entirely on FHA or VA loans for their investments, but participate quite broadly in the conventional financing along with the savings and loan associations.

Our bank enjoys an enviable reputation in the FHA as well as VA originations ranking at the top among lending institutions in central Pennsylvania, but the volume of conventional loans represented 64 percent in 1956 and 77 percent in 1957 of all originations. We know we undertake a volume much greater than the average bank, but we maintain a ratio in conventional loans quite comparable to the average banking institution. Despite intense efforts to keep our volume at a peak, we have suffered in recent years from privileges extended to the savings and loan associations and the proposal to increase their facilities creates much concern in our organization.

In the statement made by Henry A. Bubb, chairman, legislative committee, United States Savings and Loan League, I find a recount of problems encountered with technicalities in the FHA program by small savings and loan associations, but reference to the same problems for smaller banks is overlooked. Our banking system has the same ratio of small institutions that exist in the savings and loan field and it seems quite unfair to seek freedom from details for small lenders in one field while the other must continue to suffer with the problems.

I would like to believe the proposed program would not interfere or harm the FHA, but the act does not define or control appraisal procedures sufficiently to prevent abuse and possible 100 percent financing. Savings and loan associations held $1,643 million in FHA loans at the end of 1957 and elimination of that type of loan origination will not harm the future of FHA. Maximum financing in amount almost equivalent to FHA provisions obtained quite informally without too much cost or redtape will influence borrowers and creates the real problem. In my opinion, few borrowers will care to undertake FHA financing when they can obtain the equivalent under the Home mortgage guaranty proposal with lower costs, quick settlements and freedom from detail.

Mr. Bubb used three pages in his comments to cite advantages of the proposed program, but I doubt if they justify the inequities that will be created for other lenders by passage of the act for reasons as follows:

1. As we review success obtained in the past by the HOLC, observe current earnings in the FNMA and realize FHA is quite self-supporting, it seems useless to initiate a new program to protect the Federal Government when there is no problem now or foreseeable in the immediate future.

2. As far as advantage to our economy is concerned, I am not sure we need a shot in the arm when most of us believe we should stabilize and not accelerate our economy to inflationary proportions.

3. Financing for the home buyer in rural areas, may be a problem in isolated communities, but local banks as well as individuals have served well over the years and with the expanded FHA provisions now available it seems unnecessary to provide specific legislation for a limited segment for our population.

4. I am certain we do not need additional legislation for the elimination of second mortgages as long as current legislation is ample and the actual deed is self-policing by the lenders.

5. I doubt the need for new provisions to finance existing homes or trade-in properties when I learn 61 percent of all FHA applications in June 1958 were of that type and I find 90 percent or more of my current originations are on older structures.

6. All lenders crave patterns that will be useful to them to assist in their relations with borrowers but all of us object to legislation that limits the usefulness to one type of lender, namely the savings and loan associations.

I appreciate the privilege you extended to me and hope the comments I have made will assist you as you continue study of the subject bill.

Sincerely,
J. E. BRUCKLACHER, *President.*

Comments by Rank-and-File Union Members on Labor Legislation

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. BENTLEY. Mr. Speaker, in connection with the pending labor legislation, I wish to include in the Appendix of the RECORD some of the comments I have received from those who replied to my questionnaire. In the next few days, I intend to insert all the comments which I have received from union members. Most of the comments are in favor of strong union legislation, however no attempt will be made to select those in favor of a strong bill. I believe the membership of the House will find these letters to be of considerable interest, since they give a good indication of the individual union members' views as distinguished from those of many union leaders and officers.

I am a UAW member since the union first started but I think the union has gotten out of control of the individual union members—in other words—too big for rank and file control, which is the fault of the members for not attending meetings and leaving the control of the union in the hands of the president and executive board and delegates elected by a small minority of members—often by a show of hands vote and not an election of all members. As an example, Walter Reuther was elected at the last convention by the delegates and not by a popular vote of union members. That is why I marked all five questions on the other side of this sheet. In the last convention in Detroit, the delegates voted a special $5 a month special assessment for 3 months for a strike fund without an election of rank and file to approve it. Who gains on a strike—nobody. (Auto lathe operator.)

I feel each union member should have a vote for union office holder from president to committeeman and do away with delegates who I feel vote any way after they once get there. (Factory worker.)

I am a member of the UAW. Our local cannot make contract agreements that do not follow the pattern set in Detroit. We are but a rubberstamp. The company I work for cannot stand all the demands made on them much longer. There has been no profit for 5 years. It is a small firm, 300 or less workers. (Factory worker.)

In regard to labor unions, I have belonged to a labor union since 1936 when I first went to work and have been a good member ever since. I have been president, vice president, member of the bargaining board, secretary, and other appointive offices in several locals throughout Michigan which I have traveled as a tool and diemaker.

I sincerely believe, as thousands of other members, there should be a closer contact held by your States and National Government over the unions as far as there being a corporation and held by antimonopoly laws and books audited so the members know where the money goes. Also, no money should be spent for any political party.

I am a Republican and under present conditions my dues money goes to support the Democratic Party without my O. K. This I don't like and if something isn't done about it you'll lose your job and I will be working under a labor dictatorship. (Tool and die-maker.)

Is there any antimonopoly legislation for corporations? The company whom I work for just bought a plant from the Government whereby they can now produce better than 90 percent of the country's magnesium metal.

It is the duty of all union laborers to attend their meetings. They know then what goes on. The meetings of our local are very democratic. (Repairman.)

Careful consideration should be given to any labor legislation before passage. Unions are just like a barrel of apples—there is always a bad one, but it doesn't spoil the whole barrel.

I am a member of the United Steelworkers of America and I believe our code of ethical practices cover every point you have brought up.

(a) Our pension plans are administered jointly by the company and union. The company deducts so much each pay and is responsible for all money received and amounts disbursed. The union has a trustee working with the company. These funds have to be audited yearly and results posted.

(b) If it is proven the union is creating a monopoly, it should be dealt with the same as a corporation.

(c) We always use secret ballots for election of officers—both national and local. Strike votes are generally always secret. Any member may ask for and receive a strike vote taken by secret ballot.

(d) The right to work law is a misnamed gimmick. It guarantees no one the right to a job or right to earn a decent living. All it does is allow a free rider to work and enjoy the benefits won by the union at the bargaining table and pay no dues for this privilege. Yet, if he has trouble with the company he can pay 1 month's dues and the union has to handle his grievance and he can withdraw from the union as soon as his grievance is settled. Do you think this law would be fair?

(e) Corporations can spend money for political purposes, why should not the union have the same privilege? The union doesn't tell you whom to vote for, but tries to let everyone know something about the issue or delegate to be voted for. It also tries to present both sides of an issue. (Steelworker.)

There has to be some kind of a law to regulate these labor unions. I am a member of the UAW—I have been for 20 years. I believe in labor unions, but at the present time they are run by the union officers, not the rank and file. About all the rank and file does is pay dues. Before we can have a union run by the rank and file, there must be some kind of a law to outlaw the union shop, also the closed shop. You can call it anything you wish: right to work, unrestricted employment, or democratic labor market. It all adds up to the same thing. Mr. Reuther, Mr. Meany, and John L. Lewis are not labor leaders by choice. They have their political machines and the rank and file can't do anything about it.

I believe the labor unions should be run like our own United States. I believe in voting for the president directly. This idea of voting for delegates to represent me at the conventions is no good. Too many of the delegates go to the convention with the idea of voting for the man that furnishes the best and most liquor. I know, I have talked to several men that were delegates. A man can resign from the union, sure, but he loses his job, too. That's the union shop. I hope Congress puts through some kind of a law or laws to regulate these union officers. (Factory worker.)

Resolutions of Nebraska Stock Growers Association

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include some resolutions as passed by the Nebraska Stock Growers Association when they held their 69th annual meeting on July 12–14 at McCook, Nebr.

Mr. Speaker, the cattlemen of the country have been wise in resisting Government controls of any kind. They are able to handle their own problems without Government interference. A few years ago we had the OPA regulations with red stamps for meat and the rationing of many products that simply did not work in America. The cattlemen believe in the free enterprise system.

They are in the business of producing meat for the human diet. As a physician I know the importance of meat in the human diet, and the importance of protein and animo acid because they make up every cell and tissue of the body. Proteins and animo acids of meat are needed to make blood, supply glands, repair tissue, and produce energy.

Mr. Speaker, nature has endowed no other food with so many essential vitamins and minerals as it has meat. Meat is a masterpiece of nature's laboratories. Meat is good for us. It can be produced under the free enterprise system, recognized and encouraged by fine organizations like the Nebraska Stock Growers Association.

I recommend to my colleagues the reading and consideration of the following resolutions as passed by the Nebraska Stock Growers Association:

GOVERNMENT ECONOMY

Whereas under existing procedures there are no effective controls over expenditures by Congress or the executive branch of the Government: Therefore, be it

Resolved, That we, the members of the Nebraska Stock Growers Association endorse and recommend passage of legislation which would provide that governmental appropriation be in terms of estimated annual accrued expenditures, namely charges for the cost of goods and services estimated to be received; be it further

Resolved, That the Nebraska Stock Growers Association endorse all efforts to encourage more interest in governmental affairs with special emphasis on economy; be it further

Resolved, That recommendations made by the Hoover Commission which would save approximately $7½ billion be given further consideration by Congress: Now, therefore, be it

Resolved, That the Nebraska Stock Growers Association favors the repeal of the excise tax.

CHECKOFF

Whereas there is a bill pending in Congress to permit a checkoff from proceeds of livestock sales at posted markets for the purpose of meat research and promotion: Therefore, be it

Resolved, That the Nebraska Stock Growers Association endorse its passage and a copy of this resolution be sent to each of our Senators and Congressmen.

Whereas this tax on freight charges is levied at every stage of marketing or manufacture, resulting in pyramiding the tax and is an unfair burden on the livestock industry: Now, therefore, be it

Resolved, That the Nebraska Stock Growers Association favors the repeal of the excise tax.

LABOR UNIONS

Be it resolved, That although we are not opposed to honest labor unions, we express our belief that no man should be denied employment solely because of membership or non-membership in an organization; and

That we deplore the ruthless and unjustified actions of some labor leaders; and

That we ask that labor unions be subjected to the same controls and regulations as are now in force for corporations and industry.

PACKERS AND STOCKYARDS ACT

We endorse the general principles of the Cooley-Hill bill (H. R. 9020), which transfers supervision of retailing practices from the United States Department of Agriculture to the Federal Trade Commission, but retains supervision of wholesaling and packing company procedures under the United States Department of Agriculture.

The Secretary of this association is instructed to send copies of this resolution to all members of the Nebraska congressional delegation.

FEDERAL AID TO SCHOOLS

Whereas legislation is pending before the Congress to authorize a program of Federal grants for school construction; and

Whereas Federal aid for school construction would be only the first step toward Federal aid for school operation; and

Whereas the White House Conference on Education reported that no State has demonstrated a financial incapacity to build its own schools; and

Whereas any form of Federal subsidy brings with it the implied threat or self-evident need for Federal supervision or regulation: Now, therefore, be it

Resolved, That the Nebraska Stock Growers Association is firmly opposed to the passage of any proposal to extend or provide new Federal grants for any school purpose.

OUR CONGRESSMEN AND SENATORS

Be it resolved, That the Nebraska Stock Growers Association express appreciation to our Representatives and Congressmen and our Nebraska Senators in Washington, and commend them for their work in Congress for the best interest of Nebraska and the cattle business, its principal industry, and hereby instruct the Secretary of the Nebraska Stock Growers Association to write letters of appreciation.

IMPORTS OF CATTLE AND BEEF

Whereas cattle and dressed, canned, and processed beef from foreign countries are attracted to our markets whenever domestic

prices reach a level at which we can operate without loss; and

Whereas the present import duties are inadequate to protect our markets against importations of more cheaply produced cattle and beef from foreign countries; and

Whereas our present protective tariff was written several decades ago and is now inadequate under present conditions of greatly increased costs of production in the United States: Therefore be it

Resolved, That we ask Congress and the Tariff Commission to revise these old import duty rates and import quotas to a more realistic basis which will preserve the American market for American producers.

United States Has It, Soviets Do Not, at Brussels

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. LANE. Mr. Speaker, we in the Congress have read and heard much on the subject of the United States Pavilion at the Brussels World Fair, both pro and con, and for that reason I request that the news story written by George Harris, of the Boston Globe, be inserted in the RECORD. Mr. Harris has made an on the scene observation of our exhibits at the pavilion and I for one am satisfied that his reflections are fair, unbiased, serious, and most truthful, and I for one am highly pleased that our exhibit is a credit to the people of the United States.

[From the Boston (Mass.) Sunday Globe of July 20, 1958]

GLOBE MAN REPORTS: UNITED STATES HAS IT, SOVIETS DON'T AT BRUSSELS

(By John Harris)

Even the White House sent ex-President Hoover over to the Brussels World Fair to get answers on the hottest questions posed about the mammoth United States pavilion:

How does it rate with the exhibits of other nations?

How does it stack up against the Soviet display?

Ever since I returned from the fair, I've been asked these two questions. After all, the biggest attractions at the fair are the United States and Soviet showplaces.

Which has made the bigger hit?

My answer:

"The United States pavilion by a mile."

Take the yardstick of attendance.

The rival pavilions attract about the same number of visitors. This is only natural because of all the conflicting publicity and, even more so, because they are located in the same international area of the city-size modernistic wonderland.

Throngs of men, women and children pour in and out the entrances of both main exhibit halls—the gigantic, rectangular Soviet structure and the large circular United States superbuilding. They stream along the corridors, up and down the stairways and escalators; collect in mobs around the Russian white-nosed sputniks; swarm around the lagoon and galleries to watch the United States fashion show.

The main point, though, is how do they react to the shows.

After strolling each of the exhibits for hours I can report that in the Soviet main building there is only one real audience reaction. This is not on the main floor, but rather on the basement level where one can find visitors laughing, applauding, enjoying themselves before a semicircle of TV sets.

There a gloomy-faced Russian is aiming a TV camera at the gathering of visitors, and the visitors—to their delight—find themselves flashed back on the semicircle of TV sets, in black and white. Who does not enjoying seeing himself on TV? The kids, making faces to add to the fun, love it.

The Globe's Otto Zausmer, by the way, tells me he saw the same stunt staged in a London department store back in 1939 and Victor O. Jones saw himself the same way at the New York's World Fair.

By the way of contrast, in the United States pavilion there seems to be no end of enthusiastic audience reaction.

The fashion show, with beautiful young women walking down a ramp from the gallery and parading on a float on the central lagoon, has been the most publicized. Some critics have assailed it as not being particularly American. But there's no denying the crowds find it thrilling.

They find plenty else that stirs applause. There is always a jam to watch the broadcast of color TV. Long lines wait to get into the circular theater and see the thrilling circarama, a quickie sight-seeing trip across the United States with rollercoaster sensations of going up and down San Francisco's hills and the Rockies, and the lifelike sea-rocking of entering New York's harbor and seeing the Statute of Liberty.

Dorothy Thompson once doubted that serving hamburgs and hot dogs at the United States restaurant would make a hit with Europeans, accustomed as they are to tasty sausage concoctions of all types and flavors.

Well, each time I went to the restaurant I found long lines of sightseers waiting to get in. A tour around the counters inside would convince Miss Thompson that Europeans do like to try our hot dogs and hamburgs.

"We sell 'em by the ton," a restaurant official told me.

Another big hit is the layout of trees and fountains in front of the United States pavilion. At night the trees—which are apple trees and beauties when they were in flower—are flooded with lights. The Russians have no comparable outdoor attraction. It is so popular there are signs placing part of it out of bounds for picnics.

Even the Sears Roebuck and Montgomery Ward catalogs, on display upstairs as part of American life, are so popular they are badly dog eared. Visitors gasp at seeing the things that can be bought direct from these catalogs. The companies would do well to keep a flock of replacements on hand.

Possibly the biggest crowd reaction comes from 6 voting machines on the ground level near the inner lagoon.

"These," said Mrs. Katherine Howard of Boston, top official at our pavilion, "were suggested by President Eisenhower. When I visited him and asked him what he thought we should have at the fair he told me. Get some voting machines so that people abroad can get an idea on how we run our elections.'"

Young United States men and women, part of the corps explaining the United States exhibits to visitors, answer questions about the machines. Said one of these young women:

"The crowds are delighted with them. Some," she chuckled, "mistake them for photograph booths, some for love-making, some for toilets. That's because of the curtains. But they all get quite a thrill when they enter and have them explained. They go in two's and three's and talk excitedly about them."

These guides have two stories about Russians and these machines. Two Russians came by and one thought of entering. The other warned: "Stay away. They're more dangerous than A-bombs. If you're seen going in there you might get shot." The other tale is about a Russian who nearly took one of the machines apart to find, as he put it, "the trick that makes it work."

There is actual voting. It applies, however, to a set of general questions. From this tabulation when I was there it appears that New York is the visitor's favorite city, Ben Franklin America's greatest statesman, Ernest Hemingway our greatest writer, Harvard the favorite college and Hawaii the favorite vacation spot.

There is also big crowd reaction to three, small, odd-looking buildings just outside the pavilion. These represent what is called America's unfinished business. In these are photographs, charts and newspaper clippings (blown up) on the subjects of slum clearance, soil erosion and racial relations.

The Russians have nothing like these. They admit to nothing wrong or worrisome in their workers' paradise.

Some United States critics have assailed our having these three little structures—built sort of awry to show the problems involved are still nettlesome. But if you listen to visitors as they go through these little buildings, you will quickly join them in admiring a big nation that is big enough to admit its shortcomings.

The usual reaction of visitors is::

"You have done a courageous thing here in showing these problems."

There are a couple of other highly admirable things about the United States exhibit. The corps of young men and women, each speaking at least two languages fluently, makes a visit to the United States sector highly instructive and entertaining. They eagerly try to help each and every visitor.

The Russians have nothing like this service. In their buildings there are Russians around, but they make no attempt to help enlighten visitors.

Another big advantage is that the United States pavilion stays open at night. The Russians, like most of the countries at the fair, close their pavilions—but not their restaurants—around 6 p. m. when thousands of visitors are still touring the fairgrounds. The United States pavilion remains open until about 11 p. m.

"Maybe the Russians have labor trouble," suggested one disappointed visitor when he found himself shut out, and turned happily into the United States pavilion.

After looking over both exhibits critically, I went away with the strong feeling the United States officials—despite some penny-pinching by Congress—have done an exceptional job. What they have to show beats the Soviets in every department (even in showing atomic medicine versus sputniks.

And loads of this credit goes to a Bay Stater, a tireless worker for United States good will abroad, Mrs. Katherine Howard.

To Serve You Better in More Than 250 Communities

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. O'KONSKI. Mr. Speaker, to better serve you, Congressman ALVIN E. O'KONSKI will be available so that you can see and talk to him personally right in your hometown. If you have any

Federal matter or Federal problem to take up with him, feel free to visit and talk it over with him in person at place and time listed on back of this card or published in your local newspaper.

All expenses of making his services available in your hometown each year are paid by the Congressman himself—with no cost to the taxpayer. Each year Congressman ALVIN E. O'KONSKI brings the congressional office to you—right in your hometown, no matter how big or how small. He is most anxious to help you in every way humanly possible.

Action Needed

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 14, 1958

Mr. HILLINGS. Mr. Speaker, it is essential that Congress act before this session ends to give the State Department authority to restrict and limit the issuance of passports.

The Los Angeles Examiner and other Hearst newspapers have repeatedly warned of the dangers inherent to our Nation as long as this authority is denied the State Department.

Prompt, positive congressional action is demanded now because of the dangers facing the United States. The following editorial from the Los Angeles Examiner of July 11, 1958, forcefully tells why:

President Eisenhower's special message to the Congress, calling for prompt approval of pending legislation in the vital field of passport controls, expressed grave concern for the dangers involved in delay—and his feeling of alarm is fully warranted.

As the President suggested, the recent decision of the Supreme Court stripping the State Department of traditional controls over foreign travel by American citizens precipitated critical problems.

It left the country powerless against disloyal and traitorous persons guilty of association with foreign conspirators against the peace and security of the United States.

Speedy correction of this perilous situation is strongly and urgently indicated, as the President recommends. As the Hearst newspapers have pointed out before, the Supreme Court was far from being of one mind about the supposed lack of State Department authority in this matter, and in fact divided 5 to 4 on the issue.

But whether there is distortion of fact or not, the country is left in an untenable situation. Since the Court says Congress has not previously delegated the necessary powers, it is mandatory that it be done at once. It is indisputably essential, as Mr. Eisenhower says, "that the Government today have powers to deny passports where their possession would seriously impair the conduct of the foreign relations of the United States or would be inimical to the security of the United States."

The prospect of the American Government being defenseless against those whose travels abroad are detrimental to the safety of the American people is a frightening one, and not to be endured.

Corrective legislation was first introduced June 17 by Representative PAT HILLINGS, Republican, of California. The administration now has introduced its own bill, generally following the Hillings proposal, which is sponsored by Senator THEODORE F. GREEN, Rhode Island Democrat, and chairman of the Foreign Relations Committee; and by Representative KENNETH B. KEATING, of New York, ranking Republican on the House Judiciary Committee.

It should have immediate attention and overwhelming approval.

One Hundred and Sixty Acres in Alaska: Yours for the Asking

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting and timely article by Leonard Lerner, which appeared in the Boston Sunday Globe, on July 20, 1958:

ONE HUNDRED AND SIXTY ACRES IN ALASKA: YOURS FOR THE ASKING (BUT YOU MUST CLEAR IT AND LIVE THERE)

(By Leonard Lerner)

If you're not afraid of real, hard work, you can get a free homestead in the 49th State.

Alaska, with a total population of 215,000 in its vast 586,000 square miles, needs people.

It needs people to encourage industry to build up its economy and to build its roads, and the new State is giving away land to prospective settlers.

If you are 21 years of age and an American citizen you are eligible. If you're under 21 but the head of a household and a citizen, you are still eligible.

Up to 160 acres of land are available and this acreage may be raised to 300 if some of the Alaskan officials get their way.

Once you get your land you must live on it at least part of the time.

Some of it must be put under cultivation and some of it must be cleared of undergrowth and trees cut down. It's not easy.

You've also got to build some kind of a house on your land. Not just the kind that will barely keep out the cold, but one that's livable.

In other words, you've got to show that you're really interested in homesteading, not just getting free land for speculative purposes. If you are a pioneer and want to make a life for yourself in the 49th State, the land is there.

The Federal Government still owns about three quarters of the land in Alaska and will place much of this on the line for future homesteading. With the coming of statehood, this program will continue.

In addition, when Alaska does officially become a State, new rules will probably be set up statewise to make land available, in addition to the Federal program.

The new State, under the Statehood Act, will be allowed to take almost 103 million acres of land. Quite a bit of this State land will be offered.

It will be done by outright sales, which will not call for the same regulations as Federal homesteading. It will probably be offered in part for lease, which would be to the benefit of those who want to speculate in Alaskan land.

And, the new State will probably offer outright homesteads, under its own regulations.

Actually, no money would be involved in obtaining a Federal homestead.

But, the Department of the Interior points out that even though you get your free 160 acres, you'll still need ready cash.

It costs money, in addition to labor, to clear your land, to comply with the rules of the Homestead Act.

Anywhere from $85 to almost $250 is estimated as the cost of cutting down the trees and getting the land level.

It's possible to live on your land, work it, and in order to pay for the costs of making it into a home and a farm, get a job in town. This is hard work, but many individuals are doing it—working a long, long day.

If you decide that homesteading is for you, it might be a good idea to look for land near Fairbanks in the Tanana Valley; on the Kenai Peninsula, or near Anchorage in the already-pioneered Matanuska Valley.

Statehood is going to bring an influx of settlers to Alaska.

Some will make it and some will become discouraged and go home.

But, now's the time to apply for your 160 acres if you think you can make it.

Just write to the United States District Land Office, Department of the Interior, either at Fairbanks, or Anchorage, Alaska, United States.

Brassie, Putter, Nine Iron

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the July 21, 1958, issue of the New Republic:

BRASSIE, PUTTER, NINE IRON

When the Canadian Premier, Mr. John Diefenbaker, answered a parliamentarian—who inquired if the Secret Service man who accompanied President Eisenhower had entered the House armed—by saying that he thought the President came armed only with a brassie and a putter, he summarized one part of the recent exchange of views in Ottawa. Announcement of the new, Cabinet-level committee to direct Canadian-United States defense policies for North America was clearly a brassie shot, long-range, and straight for the flag. And most of the rest could have been done with a putter.

What is not known at this writing is the extent to which the President and Mr. Diefenbaker may have consulted about each other's recessions. If such talk did take place, Mr. Diefenbaker may well have had something to say about the uses of a nine iron when the economy lodges in a sand trap. The Canadians have used a much heavier club than we in an effort to lift their economy back onto the fairway. Canada's decline in production started earlier, but it has not gone nearly as deep as that of the United States: its drop, from the high of February 1957, to the low of last December was a 7-percent falloff, compared with a United States contraction of 13 percent from August, 1957, to April of this year.

Canadian programs have included a price floor for farmers, direct public investment expenditures, aid to provinces and municipalities for public works. On the consumer side, social security payments have been increased as have direct loans for housing which have produced a record number of starts.

The Message of the Flag—Address by the Honorable Ernest Gruening

EXTENSION OF REMARKS
OF

HON. KATHRYN E. GRANAHAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1958

Mrs. GRANAHAN. Mr. Speaker, one of the finest historical discussions of the background and development of the flag of the United States was delivered in Philadelphia recently by a man who has had a remarkable role himself in the placing of what will be the 49th star in our flag. I refer to the Honorable Ernest Gruening, former Governor of Alaska, who appeared before the Flag Day Committee of Philadelphia on June 9, and outlined the order and the circumstances of the admission of each of the States in a manner I am sure every Member of Congress will find worth reading.

Governor Gruening was introduced at the meeting by one of our outstanding Philadelphia patriots, the Honorable Michael Francis Doyle.

The text of Governor Gruening's Flag Day address is as follows:

ADDRESS OF HON. ERNEST GRUENING BEFORE FLAG DAY COMMITTEE, PHILADELPHIA, JUNE 9, 1958

Our flag received its design 181 years ago from the Continental Congress.

The 13 alternating red and white stripes represented the 13 Colonies which unitedly secured their independence and were to become the first 13 States. The 13 stars also represented the 13 States that formed the Union. Each State admitted thereafter would be represented in the canton or union of the flag by a new star.

There was a temporary digression from this formula when Vermont and Kentucky were given statehood. For a brief period there were 15 stars and 15 stripes in our flag. But before long the Congress realized that a star in the blue firmament was adequate recognition for a new State; that adding also a stripe for each State would be needless duplication; would in time diminish the beauty of design by overburdening the flag with stripes; and that it would forfeit and destroy the great historic symbolism inherent in perpetuating the memory and fact of the 13 Colonies and the original 13 States. So 140 years ago the Congress returned to its original formula which has persisted to this day—13 stripes forevermore and an additional star for each new State:

Thirty-five stars have been added to the original 13. But that does not mean that our flagmakers had to make 35 different flags and 35 times scrap those on hand. A sufficient number of States came in at one time so that changes had to be made only about 25 times instead of 35. No historical museum could collect more than 25 different American flags because they do not exist.

In the nearly 3 quarters of a century between the formation of the Union and the Civil War, not a few States came in in pairs. The dates of their admission did not coincide exactly, but their joint entry into statehood was prearranged, and by design.

Each star that has been added to our flag represents a stirring chapter in our history. Each new star signalized a step in the progress of mankind. Each star incarnates a portion of the hopes, the struggles, the trials and errors, the quest for goals, and the achievements that together constitute the American epic.

It is, I believe, the greatest epic of all time. It is the greatest epic because it stories the untrammelled efforts of free men—freer than any of their predecessors in the pageant of history—to work out their own destiny.

So we must not think of our flag only as an emblem. We must not think of it merely as a symbol, though of course it is very much a symbol, a symbol of everything that our American faith embodies. But we should think of it also as a symposium of great adventures—adventures of mind and heart and body—a recording of past performance, proudly raised on high for each coming generation to look up to, ever a summons to present obligation and a guide to future conduct.

We cannot identify any one of the 13 stripes with any one of the original 13 States. We might have done so—or might do so—if someone wished arbitrarily to relate each stripe from the top of the flag down to each State in the chronological order of its adherence to the Union. That would assign to Delaware, our oldest State, the topmost stripe. It would award to Pennsylvania the second stripe from the top. Rhode Island's would be the stripe at the lower edge of the flag since it was the 13th State to sign up.

It was wholly appropriate that Delaware, the first State to enter the Union, should adopt as its motto, "Liberty and independence." Perhaps this is the time and place to advert to the fact that Pennsylvania, which decided to enter the Union 5 days after Delaware, amplified Delaware's ringing words "Liberty and independence" by preceding them with the word "virtue," so that as you all know, the Keystone State's motto is "Virtue, liberty, and independence." Possibly the 5-day interval between Delaware's signing of the Constitution on December 7, 1787, and Pennsylvania's adherence on December 12, led Benjamin Franklin and his colleagues in the Pennsylvania delegation to reflect that they already had liberty and independence and needed to prescribe virtue additionally to safeguard and amplify the blessings of their new-found freedom. It might be worth mentioning that the motto of the third State to ratify, 6 days after Pennsylvania, New Jersey, was "Liberty and prosperity." Thus was perhaps illustrated the rapidity of progress in our national infancy—all in the course of 11 days—from the newly achieved "Liberty and independence" hailed by Delaware, to the addition of "Virtue" by Pennsylvania, and the substitution by New Jersey for Pennsylvania's somewhat austere prescription of "virtue," the less arduous and perhaps more alluring goal of "prosperity."

Incidentally those three first States—Delaware, your own State of Pennsylvania, and New Jersey—all contiguous to each other, were the only States to join the Union in 1787. Not until after the New Year, 1788, had begun, did the others follow. Here in the very heart of the new-born Republic, midway between New Hampshire to the north and Georgia to the south, were the pioneer States, the first three to pledge their allegiance to the Constitution and flag of the United States.

I wonder that no one has thought to form an inner club, an exclusive order within some of the Sons and Daughters of Yesteryear, entitling it "The Joiners of 1787." Something analogous to it occurred a century later in Alaska. There, in what Alaskans fondly call the last frontier, "pioneering," a beloved word, dates from the days of '98 romantically eternalized in the verse of Robert D. Service and the short stories of Jack London. Ninety-eight was the year of the great gold rush that followed the discovery of gold in the Klondike. No candidate for public office in Alaska fails to claim—if he can truthfully do so—that he was a '98 pioneer. But several years ago, a charming lady, a candidate for Alaska's Territorial House of Representatives, proclaimed in her political advertisements that she was an '87 pioneer. She had been carried across the Chilkoot Pass in that year as a babe in arms, 11 years before the Klondike. She did not want to be mistaken for any of the Johnny-come-latelys of '98. She was elected.

It would perhaps be painting the lily to pursue further the theme of the rapid progressiveness of the sentiments in the subsequently enrolling States mottos, but it may be worth noting that Georgia, the fourth State, which came in on January 2, 1788, apparently considered "Liberty and independence," now achieved, no longer timely, and instead looked to the future with the motto, "Wisdom, justice, moderation." May "the Empire State of the South" achieve them. They are desirable goals for any State.

If it is not customary to associate any one of the 13 stripes in our flag with any of the original 13 States, it is even more impossible to attach any one of the 48 stars to a given State. Yet we might well view the addition of each star to our flag as much more than a minor and automatic change on a piece of bunting. Rather should we think of what lay behind that star, what preceded the admission of the new State that star represents, hail it as we would a great new star in the heavens and reflect on the cosmic forces that brought it into being.

Who can relive the story of Vermont's gallant struggle for self-determination which culminated in its entering the Union as the 14th State—the first additional star in the flag—without sensing that the Green Mountain Boys were reenacting on the home ground our own epoch-making Revolution? From the outbreak of the War of Independence Vermont was master of its destiny and determined to remain so. In those 4 years, between 1787 and 1791 Vermont had not had territorial status. It had steadfastly maintained its independence against the claims of adjacent New Hampshire and of powerful New York, which Vermonters were prepared to resist, if need be, by arms. Likewise Vermont rejected the tendered blandishment of union with Canada. It would join our Union, but only as an equal, as a sovereign State.

And now, early in our history, we come to the first of those interesting arrangements in which sectional balancing played a great part. For while Vermont was resisting the claims of two already established States, pioneers settled across the Appalachians in land belonging to Virginia, were trying similarly to free themselves from the grasp of Old Dominion, then by far the most populous—and by that token the most powerful—of all the 13 States. There had been not fewer than 10 conventions of representatives from Virginia and from the embryonic State of Kentucky in a vain effort to reach a solution. Finally in 1791 under the leadership of Thomas Jefferson, a provision which satisfied conflicting claims and regional rivalry was achieved for the admission of both States, Vermont and Kentucky. This solution was reflected in a bit of doggerel which originated in a Pennsylvania newspaper and was widely reprinted in the press of that period:

"Kentucky to the Union given,
Vermont will make the balance even;
Still Pennsylvania holds the scales
And neither South nor North prevails."

Thus, those first two new stars in the flag—the 14th and 15th—marked not only the advent of two States but, with the admission of Kentucky, the beginning of the westward march that has so profoundly shaped the American character and contributed such unique quality to our American life.

The next three States—Tennessee in 1796, Ohio in 1803, and Louisiana in 1812—were

admitted separately, but widely varying and unprecedented conditions accompanied the admission of each. The frontiersmen occupying the region south of Kentucky, and belonging to North Carolina, impatient at the delay in granting them admission to the Union, first set up a State of their own and called it Franklin, honoring your greatest Pennsylvanian. But receiving no invitation to join the Union from the first three Congresses, they assumed the initiative, drafted a constitution for the future State of Tennessee, elected two Senators, and sent them to the National Capital—then Philadelphia—to knock at the door of Congress for admission. They were successful. In a few months, in 1796, Tennessee became the third new State. And that example of Tennessee in, so to speak, jumping the gun was subsequently followed seven times by other areas seeking statehood. Tennessee's was the 16th star in our flag.

With Ohio, represented by the 17th star, the frontier advanced across the Alleghenies north as well as south, ushering in the birth of that great American region known—perhaps not too exactly—as the Middle West. In Ohio, also, Virginia acquired a rival Mother of Presidents.

Before the next State, Louisiana, added the 18th star to our flag, President Jefferson's Louisiana Purchase had doubled the extent of American territory, and extended its western border to the Rockies.

Now there was a return to sectional balancing into which the issue of free versus slave States had crept, with the admission in 1816 of Indiana and in 1817 of Mississippi, represented by the 19th and 20th stars.

The same pattern was followed shortly thereafter by the admission of Illinois in 1818 and Alabama in 1819, our 21st and 22d stars.

By now the slavery issue in relation to the admission of new States had become more acute and led to the Missouri Compromise—an important milestone in our history, dealing with problems happily no longer existing. By it Maine was admitted as a free State in 1820, our 23d star, and Missouri, our 24th star in 1821 as a slave State but with certain limitations, while thereafter all future States west of the Mississippi River and north of 36° 30' were pledged to freedom. There is perhaps a little significance in the fact that that compromise was arrived at as our Nation was midway in its creation of States, with 24 stars in the flag.

Thereafter the free versus slave State issue would for a time dominate every new State's admission. Arkansas, a slave State, came in in 1836, Michigan, its offset, a free State, in 1837—our 25th and 26th stars—and following the same pattern, Florida in 1845 and Iowa in 1846, our 27th and 29th stars. For in between, Texas, in 1845, under unprecedented and dramatic circumstances, following its victorious war of independence had come into the Union bringing its own lone star with it, and, surprisingly, not insisting that when added to our flag that star should be bigger than all the rest, but reserving the right to divide itself into five States. Texas was the 28th star.

By this time the irrepressible conflict was looming larger and the balancing in the admission of northern and southern States ceased. Texas was the last slave State admitted. Wisconsin placed the 30th star in the flag in 1848.

California, having loosened its bonds from Mexico set up its own republic, was briefly under United States military rule, and scorning even a temporary condition of territorialism, was admitted to the Union in 1850. Its star—the 31st—marked the extension of American dominion to the Pacific. It also marked the admission of the first State not contiguous with any other State; a thousand miles separated California from Texas, and 1,500 miles from Iowa, the 2 nearest States.

Minnesota came next in 1858, followed by Oregon in 1859 and Kansas in 1861, respectively the 32d, 33d, and 34th stars in the flag.

The next two States were "war babies." They were the direct consequences of the Civil War. When Virginia seceded in 1861, the State's 40 western counties voted to remain loyal to the Union, rejected the action taken at Richmond, and set up an independent State with the capital at Wheeling, W. Va., as these secessionists from secession called it, which was admitted to the Union in 1863.

Nevada was brought into the Union in 1864 by President Lincoln to help him secure ratification of the 13th amendment to the Constitution which abolished slavery. Perhaps we might with poetic license call these two—the 35th and 36th stars—"shooting stars." They came into the Union mid the booming of cannon on far-flung battlefields, and as a direct consequence of that bloody family quarrel.

Nebraska followed in 1867, and Colorado in 1876. Dakota Territory was divided into two States in 1889, and in the same year Montana and Washington came into the Union. Idaho and Wyoming followed the next year, 1890. Six States in two years. Utah was added in 1896, Oklahoma in 1907, and the last 2 States, New Mexico and Arizona, in 1912, brought the field of blue to its present galaxy of 48 stars.

There is a great story behind the placement of each new star in our flag. Each star is a condensation of that story. Each, while different, is a saga of aspiration and effort, of sacrifice and struggle—all primarily for one basic purpose, the application of that most fundamental of American principles, the principle of government by consent of the governed. It was proclaimed as an unalienable right in the Declaration of Independence. It guided our forefathers in the founding of the Republic. It has guided all of us to national greatness.

In one respect our flag is unique. While it is one of the oldest national emblems on earth—older than any other in the New World, and outaged by very few in the Old—it is the only flag which while unaltered in basic design, yet changes progressively. It is the only flag which is not static. It records the birth of our Nation; it codifies the Nation's growth from infancy to maturity.

It is now 46 years since the last State was admitted. The longest previous interval between the admission of States was 13 years, between the entry of Colorado in 1876 and of the great northern tier of States in 1889—the Dakotas, Montana, Washington.

Does this long pause mean that our flag, for so long a dynamic and inspiring compendium of what America signifies, is becoming static? And our country with it? I hope not. I think not. A 49th star is twinkling on the northwestern horizon. Its inclusion in the galaxy should—perish the thought—which some latter-day Jeremiahs have expressed, that our Nation, no longer young, its ardor cooled, its momentum lost, has completed its life cycle and is about to follow other civilizations that after rising to great heights have begun a melancholy decline toward decay and ultimate extinction.

Those vanished civilizations perished largely because they abandoned the principles through which they arose; were content to stand still when they should have moved forward. If and when our beloved country falls into that danger, its citizenry need but read the message of the flag and act accordingly.

West Will Need Iron Nerves

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1958

Mr. LANE. Mr. Speaker, I wish to include a very timely, also most interesting and highly illuminating, article written by that able and capable writer, James H. Powers, that appeared in the Boston Sunday Globe on July 20, 1958. I offer this well-written news statement for the attention of all Members of the Congress due to the present world situation:

WEST WILL NEED IRON NERVES—SITUATION IN MIDDLE EAST MOST SERIOUS SINCE WORLD WAR II—CONTROL OF AREA WOULD GIVE SOVIET DOMINANCE OF EARTH'S RAW MATERIALS

(By James H. Powers)

The Middle East was once described by a historian as "the cradle and grave of empires and civilizations." It still is.

During nearly 6,000 years that vast region, stretching from the Nile to the southern reaches of central Asia, has witnessed the rise and demise of the power and glories of ancient Egypt, of the fabulous Sumerians, of the Mesopotamian, Assyrian, and Persian conquerors. Alexander hammered together there the gigantic patchwork empire that immortalized his name. There he died—and his handiwork with him.

The Romans, the Saracen hordes, and the Seljuk Turks trod successively in one another's footsteps in the Middle East. Napoleon sought there to consolidate his growing imperium at the dawn of the 19th century—and failed, at the battle of the Nile.

His successors from France and Britain did better throughout the remainder of that century, only to find themselves compelled to retreat in the mid-20th before forces generated by the awakening of native peoples under stimulus of two devastating world wars.

PRECARIOUS BALANCE UPSET

Twice within the past 30 months, the dangers of a major collision among the powers have loomed in that endlessly uneasy region; twice they have been curbed. But the timid equivocal statesmanship of these evasions has as yet found no solution to the basic problems of the area.

That failure is attributable in part to the lack of a unified, coherent Western policy, in part to the determination of the Soviet Union to expand its reach and influence on the Eurasian-African land mass, in part to the formidable, and at times self-destructive, forces of an Arab nationalism astir from south Asia to the Atlantic.

Today, only 10 months after the flamboyant build-up of a crisis in the Middle East by Nikita Khrushchev, centering upon claims that Turkey threatened Syria, and almost exactly 2 years after the Suez crisis, the region is in turmoil once more.

The orgy of political subversion, military revolt, and murder which has overthrown the Hashimite dynasty in Iraq and instituted a republic adhering to the imperial pan-Arab program of Gamal Abdel Nasser of Egypt has created a situation more serious than any preceding it since World War II.

For this bodeful event has upset the precarious balance of power in the world's notorious storm center. Bearing all the

familiar marks of collusion from outside Iraq's borders, the Iraqi coup has knocked out Nasser's strongest opponent in the Arab world, adding another satellite to his United Arab State.

It has dealt a series of grave reverses to the West. Yanking Iraq from the Baghdad Alliance, it has weakened that pro-Western defensive setup along the southern borders of the Soviet Union. This has been a Russian objective for years. Simultaneously, the coup has generated a new upsurge of Arab nationalist pressures against all the remaining pro-Western nations in the region, and especially Lebanon, Saudi Arabia, Jordan, and Israel.

CENTURIES-OLD PRECEDENTS

These obvious threats raise new hazards to the flow of Middle Eastern oil to Western Europe, upon whose industrial complex the strength of the West's defensive system, NATO, reposes. Because of the alliance between Nasser of Egypt and the Soviet Union, the current crisis has finally compelled the West to make a decision:

Either it must take steps to halt the debacle of free, independent states friendly to the West, and to contain the Iraqi upheaval, or it must expect speedy erasure of these states, eventually including Turkey, and a new amalgamation of Russian-dominated power spread to the gates of Africa.

Thus the present turn of events is but a new chapter in the old story of the Middle East's strategic position in a troubled world. Only a few of the leading characters have changed. The facts of strategy and survival remain. Even in his espousal of a new Arab nationalist dream, Nasser is copying, with modern trimmings, the precedent of the Arab ascendancy of the sixth, seventh, and eighth centuries of our era, when the writ of the prophet ran all the way to the Atlantic.

SOVIET POLICIES NOT NEW

Nor is there anything new about the middle eastern policies of the Soviet Union. Only the tactics have altered, with appropriate Communist twists.

Russia's successive efforts to penetrate the area date back to the 18th century. In the early decades of the 19th, "The Eastern Question" revolved precisely around that issue. Palmerston, in 1845, turned back the czars at Constantinople by alliance diplomacy. The Crimean War in 1855 sprang from new efforts of czarist Russia to move across the Black Sea and the straits into Turkey.

The Congress of Berlin, in 1879, had as its main task still another containment of Russia's southward pressure. In 1900, Russian claims were advanced once more and repelled. In 1946, immediately after World War II, the Communist successors of the czars tried again at the straits—and encountered the Truman doctrine.

Why is the Middle East considered so important to Russia and the rest of the world?

The answers etch the contemporary world's dilemma. Control of the area, initially in alliance with a gullible Arab nationalism and eventually through an infiltrated takeover, would provide the Soviet empire with warm-water ports on the Persian Gulf. It would flank India from the west, open the land bridge from central Asia to the awaken-African continent, give Moscow control of air, water, and land communications between Europe and Asia, unhinge NATO, and place an openly hostile power at the controls of the raw materials supplies of two-thirds of the habitable globe.

TORTUOUS, LAMENTABLE TALE

The real tragedy of the present imbroglio in the Middle East is that the aspirations of an entirely legitimate Arab nationalism for independence from outside control, and its hopes for development of a resurgent Arabian culture and economy, have become entangled in Russian ambitions through failure of western leadership to present a consistent, dependable alternative.

Piecemeal policies, hesitant measures, grotesque failure to apportion a more realistic share of economic assistance to the middle eastern nations and to Africa from 1947 to 1955, reluctance of western governments to revise oil contracts until forced to, bland inattention to the activities of the Soviet Union in the area until the Russian breakthrough in the fall of 1955 startled Washington, and the tieup of Cairo and Moscow became a fact through the Soviet's arms and aid deal; the inability or unwillingness of the United States, at the peak of the Suez crisis, to grasp the opportunity offered for concerting a genuine settlement in the Middle East—the story is long, tortuous, and lamentable.

Its consequences were well-nigh inevitable. To contain and resolve this grim and sprawling diplomatic muddle will require more than the military precautions now forced upon the West. It will demand something more specific than recourse to the United Nations, important though that agency can be and useful as it is proving.

It calls for hard realism, constructive statesmanship, iron nerves, a just policy, and recognition of the political facts of life in Asia and Africa, not as we would like them to be, but as they are.

Danger in the Skies

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 14, 1958

Mr. HILLINGS. Mr. Speaker, I know that all of us are acutely aware of the danger that continues to lurk in our airways as long as Congress delays action on legislation to establish a single Federal aviation agency with complete authority and control over the use of our diminishing airspace.

I am convinced that this agency must be established and operative before our commercial airlines put the new, speedier jet transports into service on transcontinental routes. The day of this service is rapidly approaching.

I respectfully urge the House Interstate and Foreign Commerce Committee to approve without delay and without further modification the Senate-approved bill to create this agency, which would have complete control over all military, commercial, and private planes operating in the airspace over the continental United States.

The dangers of more disastrous midair collisions with their terrible toll of lives and property are with us daily under our present system of divided air controls.

The establishment of a single Federal Aviation Agency unfettered by any domination of the military, commercial or private interests will be the first major step forward in better utilizing our shrinking air space and promoting greater air safety. At least under such an agency, all aircraft operating in our airways would be in contact with one another, thus reducing the possibility of midair collision.

After the establishment of this agency, the second major step must be to make funds available for the many technical improvements required for the modernization of airway operations and control.

These improvements will be costly but measured against the prospect of greater air safety they actually would be cheap in the lives and equipment saved in this day of advanced aviation.

I again urge Congress to consider my proposal for the creation of a joint committee of the House and Senate on aviation and air safety to work hand in hand with the proposed new Federal Aviation Agency in promoting greater air safety in the United States.

A Fireman's Lot

EXTENSION OF REMARKS
OF
HON. WILLARD S. CURTIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. CURTIN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I should like to insert a very interesting and thought-provoking poem about volunteer firemen which appeared in the Bucks County Gazette, New Hope, Pa., on July 17:

A FIREMAN'S LOT

Now that the Eagle fire company has launched its annual fund drive, we'd like to give you a fireman's view of his job. The poem, unfortunately, doesn't tell of the satisfaction firemen feel after they've done a good job—and it doesn't tell how much they need your help to make a good job possible.

"FIREMEN DON'T HAVE A CHANCE"

When the firetrucks are delayed 40 seconds in traffic people say:
"It took them 20 minutes to get here."
When the truck races at 40 miles per hour it's
"Look at those reckless fools."
When 4 men struggle with an 8-man ladder:
"They don't even know how to raise a ladder."
When firemen open windows for ventilation to reduce the heat in fighting a fire:
"Looking at the wrecking crew."
When they open the floor to get at the blaze:
"There goes the ax squad."
If the chief stands back where he can see and direct his men, people say:
"He's afraid to go where he sends his men."
If they lose a building:
"It's a lousy department."
If they made a good "stop" folks say:
"The fire didn't amount to much."
If lots of water is necessary:
"They are doing more damage with water than the flames."
If a fireman gets hurt:
"It's a crazy department."
If a fireman inspects a citizen's property:
"He's meddling in somebody's business."
If he wants a fire hazard corrected:
"I'll see the mayor."
If he gets killed and leaves a family destitute:
"That's the chance he took when he joined the fire department."

Soviet Has Convenient Lapses of Memory Especially Where Hungary Is Concerned

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 14, 1958

Mr. BYRD. Mr. Speaker, in these days of crisis, when the Kremlin is endeavoring to exploit the Middle East situation for propaganda purposes, it is well to consult the record. Actually, and despite all the protestations of Khrushchev, the present difficulty in the Middle East is the result of Soviet intrigue and indirect aggression.

There was a timely reminder of the Soviets' double-dealing tactics by the Charleston (W. Va.) Daily Mail in a recent editorial entitled "Soviet Has Convenient Lapses of Memory Especially Where Hungary Is Concerned." Revealing the hypocrisy of the Kremlin in its present posture so far as the Middle East is concerned, the editorial aptly refers back to the Soviet aggression in Hungary when Mongolian troops and tanks were used to crush Hungarian patriots and keep proud Hungary in brutal servitude.

The Charleston Daily Mail has rendered an important national service in refreshing our memories and in illuminating the record on Soviet aggressions. I wish to call the editorial to the attention of my colleagues. It is as follows:

SOVIET HAS CONVENIENT LAPSES OF MEMORY ESPECIALLY WHERE HUNGARY IS CONCERNED

It becomes more and more apparent, as the world moves from one crisis into another, that the Soviet Union has a convenient lapse of memory when it chooses.

We have particular reference to the most frightening situation of recent months—the crises in Lebanon and Iraq which threaten to explode the entire Middle East and possibly engulf the world in conflagration.

Russia and her puppets have taken advantage of the sending of American troops to Lebanon and Turkey and British troops to Jordan to accuse the West of "imperialistic aggression" and "intervention"—among other things.

Allies of the Soviets declare that it is the right of the country concerned to act as it sees fit. If this means killing off the government officials and all who stand in the way, fine. If, by chance, the officials killed had been pro-West, so much the better. Russia and her satellites have hailed the Iraqui coup as a move toward "freedom."

It's ironic, we think, that a little over a year ago the Hungarian people made a bid for freedom, but this movement was not hailed by the Soviets. Quite the opposite, the Russians would have none of it.

Armed Russian troops were sent into Hungary to convince Hungarians they had freedom whether they realized it or not. Some Hungarians didn't realize it. They found themselves—equipped only with crude weapons such as pitchforks, clubs, other homemade weapons, and a few modern arms—battling the crack Soviet Army with its up-to-the-minute means of warfare.

Needless to say, the Hungarian freedom fighters didn't stand a chance. They had lost before they began. But the brief encounter served as a source of freedom in at least one respect. It provided an opportunity for thousands of Hungarians to escape across the border to the West. They apparently didn't think they had freedom in Hungary either.

But the Hungarian affair has been closed so far as the Russians are concerned. As a matter of fact, it wouldn't be the least bit surprising that if the Soviets were reminded of the Hungarian incident, they would counter with the remark that it never happened.

Emma Lazarus: 1849-87

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial written for the East Side News on the occasion of the anniversary of the birth of Emma Lazarus, much loved and much honored and probably best known for the fact that she wrote the words inscribed on the base of the Statue of Liberty in New York Harbor:

EMMA LAZARUS: 1849–1887

(By Harry H. Schlacht)

"THE NEW COLOSSUS

"Not like the brazen giant of Greek fame,
with conquering limbs astride from land to land;
Here at our sea-washed, sunset gates shall stand
A mighty woman with a torch whose flame
Is the imprisoned lightning, and her name
Mother of Exiles. From her beacon hand
Glows world-wide welcome; her mild eyes command
The air-bridged harbor that twin cities frame.
'Keep, ancient lands, your storied poump!' cries she
With silent lips. 'Give me your tired, your poor
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore.
Send these, the homeless, tempest-tost to me,
I lift my lamp beside the golden door'."

Tuesday we commemorate the 109th anniversary of the birth of Emma Lazarus, the beloved American poetess. Children of liberty will clasp her hand in loving memory.

Emma Lazarus is the author of the inspiring sonnett, The New Colossus. Her message to the world, all the world may read. It is engraved on the Statue of Liberty. It is standing in the gateway of democracy.

The noble soul and human heart of Emma Lazarus are symbolized in the Goddess of Liberty. It was given to a child of oppressed generations. To understand the true meaning of this liberty-loving nation; to pen the immortal lines with such prophetic pathos; to express the spirit of democracy with such eloquence; to welcome the persecuted of the Old World, to the glorious promise of the New World.

And through the years we can hear the echo of Miss Liberty's voice speaking to these pilgrims to our blessed land. As you breathe the free air of our shore homeless wanderer, reaching home, become one with us in freedom's cause, take the riches of our liberties and repay the gift of becoming one with us—an American.

The Goddess of Liberty and Emma Lazarus have become synonymous. No poet of any nation has ever received such world-wide distinction. The "lady with the torch" was presented by the people of France to the American people to commemorate the first centennial of American independence.

Emma Lazarus was born on July 22, 1849, in New York City. She was the daughter of an old Jewish family. The story of her literary evolution is the story of the fulfillment of the evolution of a soul. Many women of every race, many men of every race, have evinced literary ability.

But it is rarely given to man or woman to so combine the powerful poetic expression with the clear insight and courage, with the conviction and devotion, as it was in Emma Lazarus. Her poems had power. Her poems had fire.

Since Miriam sang of deliverance and the triumph of the Red Sea, the Jewish race has had no braver singer. Her songs of divine unity repeated on the lips of her own people, in all zones and continents, have been heard round the civilized world.

Her poem, The Crowing of the Red Cock, written when the Russian sky was red with blazing hatred, is a powerful lyric worthy of the Maccabean age. Her poem, Banner of the Jew, has the ring of Israel's war trumpet. It sounded the clarion call to all Jews to unite for human rights, for new achievements and for new glories as in the days of the Maccabees.

She was one of the pioneers of Zionism. She was one of the outstanding advocates of a Jewish homeland. It was in that cause that her character had its fullest flowering.

It is heartening to see that the same poetess who was the first to give expression for the national renaissance of her people has become the symbol of humanity and democracy. She died on November 19, 1887. She was in her 38th year.

On that tragic day no better appreciation of Emma Lazarus was expressed than that of the famous American poet John Greenleaf Whittier, who wrote: "Her people will mourn the death of this woman. But they will not be alone. At her grave the tears of the daughters of Jerusalem will mingle with those of the Christians."

As long as liberty shall live in the human heart, as long as the Statute of Liberty shall remain our symbol of freedom the name of Emma Lazarus will forever be a part of the fame of that symbol as the champion of liberty.

O, take Miss Liberty, O, take thy radiance 'round, when dimmed, revive; when lost, return; till not a shrine through earth be, on which they glories shall not burn.

Grave Hazard Faces Sheepmen if Wool Act Is Not Extended

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1958

Mr. ANDERSON of Montana. Mr. Speaker, my distinguished colleague, Representative LEE METCALF, and I have been in continuous communication with the sheepmen of Montana concerning the crisis now facing their industry if the Wool Act is not extended. There is a definite and desperate urgency in their appeals for legislation to be enacted at this session of Congress, and their reasons are expressively stated in the tele-

grams we have been receiving. We are urging the Members of Congress to read these representative views of a large corporate sheepgrower, a Production Credit Association official, the national president of the Sheep Shearers Union, a private sheepgrower, and a county political group. All portray this grave danger now confronting the wool industry.

Their messages follow:

ANACONDA, MONT.

Congressman LEROY ANDERSON,
House Office Building,
Washington, D. C.:

The wool market is approximately 35 percent below wool prices of last year. There is virtually no activity in contract buying of lambs or breeding sheep for fall delivery in this area. At this time of year normally there is a great deal of fall contract activity. These facts are presented to you as indications of the general unsteady feeling growers and woolmen have that chaos in the wool and sheep industries is likely to occur if the National Wool Act is not renewed during the current session of Congress. It is apparently quite possible that this measure might not be renewed without great effort on the part of you and other Senators and Congressmen who are friendly to the sheepmen. Current lack of activity in the industry indicates lack of confidence in the future due to an inability of the grower to plan his future breeding programs on an unstable future market. It is my personal feeling and the feeling of all persons connected with the wool and sheep industries that without the renewal of the National Wool Act the sheep and wool industries which are an important part of the basic national agricultural economy cannot survive but will collapse and thus severely adversely affect the economic status of thousands of farmers and ranchers throughout the Nation. Without the National Wool Act as a support program the sheep and wool industries cannot survive in the face of foreign competition and the growing pressure of synthetic fabrics. Without a support program the flocks of sheep in this Nation will unquestionably be dissolved or materially reduced and thus our domestic supply of woolen fiber which has proved to be essential commodity in every war will be lost as the result of sheep flock depletion.

Following this flock depletion if the United States were to find themselves entangled in another global conflict and our domestic source of wool was unavailable due to the reduction of flocks resulting from uneconomical operations due to low prices of products sold and high cost of production it would be impossible to reestablish the flocks for many years, probably not soon enough to meet the needs of a critical emergency. Thus another basic reason why the National Wool Act is needed to bolster the already depleted sheep flocks of the United States. I sincerely hope that with these facts before you in addition to the other facts with which you are cognizant you will expend every possible effort to have the National Wool Act renewed before the termination of this session of Congress. It would be appreciated if you would read this telegram into the CONGRESSIONAL RECORD to help acquaint other Senators and Congressmen of our problem. Many thanks in advance for your efforts and assistance.

Best personal regards.

DR. H. E. FERGESON,
Operating as Mt. Haggin Livestock Co.,
Anaconda, Mont.

HELENA, MONT.

Hon. LEROY ANDERSON,
House Office Building,
Washington, D. C.:

The lack of action by Congress in renewing the Wool Act is in a large measure responsible for a 30-percent reduction in wool prices this year compared with a year ago. Sheep and wool prices in Montana are well under other livestock values. The incentive payment on wool and lambs was the difference between profit and loss to most Montana sheepmen in the year 1955 and 1956. We finance over 100,000 sheep and whether or not the Wool Act is renewed will have a definite bearing on our extension of credit to sheep operators in the future. We urge your continued support of this legislation which we think is vital to Montana's continued growth and economy.

S. H. KEMP,
Montana Livestock PCA.

BUTTE, MONT.

Congressman LEROY ANDERSON,
House Office Building,
Washington, D. C.:

The sheep shearers union in convention at Butte, Mont., unanimously endorses immediate action to renew the National Wool Act this session.

LAVOR TAYLOR, *President.*
PAUL C. JOHNSON, *Secretary Treasurer.*

HELENA, MONT.

The Honorable LEROY ANDERSON,
United States Congress,
Washington, D. C.:

Imperative that the Wool Act be renewed this session. The breeding of sheep is a long-range enterprise. Planning must be made now and breeding program instituted for future production. Any change in breeding activity this year can influence sheep numbers and wool production for many years to come. The failure to renew the Wool Act this session will drastically reduce present breeding plans. This will reduce the production of wool, lambs, and limit the base of breeding stock upon which future expansions must build. The entire intent of the Wool Act and the good that it has done to date would be nullified. The effect on the sheep industry would be disastrous.

HENRY S. HIBBARD,
Sieben Livestock Co.

CHINOOK, MONT.

Hon. LEROY ANDERSON,
House Office Building,
Washington, D. C.:

Note that there appears to be some indications that Congress may adjourn without renewing the Wool Act. Feeling among local sheep ranchers and bankers is that the industry cannot survive in the face of foreign competition, synthetics, etc., high labor costs, and increasing taxation without a support program and that failure to renew the Wool Act would be disastrous. We thank you for your past support and now urge that you do everything possible to see that the Wool Act is renewed at this session of Congress. It is our thinking that a renewal of the act at the next session will be too late.

WILLIAM J. SULLIVAN,
Democratic State Committeeman.
JOE J. MATULKA,
Democratic County Chairman.
CHARLES L. O'DONNELL,
Secretary, County Committee.
D. J. SIAS.
WILLIAM S. HARBOLT.

Soviet Is a Giant Sweatshop

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks, I wish to follow up my comments of yesterday by including the second in a series of articles by Walker Stone, editor in chief of the Scripps-Howard Newspapers, which appears in the Washington Daily News today. Mr. Stone has just returned from a tour of the Soviet Union and the European satellite countries. In the following article he reports on labor conditions in the Soviet Empire.

MARXIAN SLOGAN LONG ABANDONED—SOVIET IS A GIANT SWEATSHOP

(By Walter Stone)

The Union of Soviet Socialist Republics is not patterned on the old Marxian worker's paradise formula of "from each according to his ability, and to each according to his need."

That was abandoned more than a generation ago.

There are no rewards for need.

Rewards are keyed to productivity. And penalties are assessed for lack of productivity.

The incentive motive, once considered a copyright of the capitalist system, is applied in elaborate detail in every phase of Soviet agricultural, industrial, and scientific endeavor. And it is backed up by the grim goad of poverty which forces even the laggard to produce or else.

SWEATSHOPS

In Western capitalist countries, under pressure of free trade unions, humanitarian thought, and social legislation, the sweatshop and the speedup largely have been abandoned. But those institutions thrive in the Soviet Union.

The standard workweek in the U. S. S. R. is 46 hours (Saturday is the short workday—6 hours). But the workers are not paid by the hour, nor by the week. When they work overtime, they don't get overtime rates. Extra pay is earned by producing in excess of allotted work quotas. Penalties are levied against their pay when they don't make their productive norms.

THE NORMS

These quotas or norms are based, not on averages, but on what fast workers can turn out. The norm wage for the average worker is fixed at about what he must earn to feed, clothe, and house himself—but seldom enough to support his family.

So his wife is propelled into the Soviet working force and goes out to earn her norm, in a factory, an office or perhaps sweeping the streets with a twig broom. They have to hustle to provide simple necessities, and work even harder if they are to obtain such luxuries as a radio or an extra pair of shoes.

Where pay is on piecework, the coffee break, and bull sessions around the water cooler are unknown. Especially not where consumer goods are made deliberately scarce and expensive, and people are driven to work even harder by the impetus of poverty.

In such capitalist countries as the United States and Britain, the main source of gov-

ernmental revenue is from income taxation, graduated according to ability to pay. That's not so in the Soviet Union, where the income tax produces only a small fraction of the revenue.

In the United States, the individual income tax rate starts at 20 percent and goes up to 91 percent. In the U. S. S. R., the lowest rate is 5 percent, the highest 13 percent.

Thus the big-money makers in the Soviet Union—the industry managers and top scientists—not only are not penalized for their success; they don't even bear their fair share of the cost of government.

The great bulk of Soviet revenue comes from the regressive turnover tax on goods produced and traded—and in the wide margin between what the government pays industrial and farm workers for what they produce and what the government charges for these same goods and commodities.

GIANT SALES TAX

This has the same effect as a gigantic sales tax on everything, including food. The margin of profit, or tax, on that scarce item, shoes, for instance, must run as much as 300 to 400 percent.

A Soviet trade union is not a bargaining agent for the workers, but an arm of the Government, the great employer of all labor. A Soviet trade union cannot call a strike for higher pay or fringe benefits. The job of the trade-union officials is to make sure that the workers produce what the Kremlin planners have determined they must produce.

EVERYONE WORKS

There is no unemployment in the Soviet Union. The system will not permit unemployment. You work at something—or else.

An American worker temporarily on unemployment relief in this recession period is better off than the average Russian worker earning his norm wage.

That is possible for us, of course, only because America's capital investment and enterprise are directed primarily to the production of goods consumers want to buy, whereas the Soviet economy is geared to scientific development and to the upbuilding of heavy industry and armaments that provide the greater world military and political power the Soviet rulers want.

The sweatshop, the speedup, exorbitant taxes on the food of the poor are relics of a dark age in the free world. But the Soviet rulers are making them work in Russia—with an expert mixture of fear and hope.

They are making this system produce military might, and that is what Americans must understand. Unless we voluntarily go to work, unless we sacrifice some creature comforts and luxuries, unless we return to fundamental values and build a stronger America and more purposeful society, we could very easily end up working for them

Blueprint for Mideast

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. FARBSTEIN. Mr. Speaker, I read a very interesting and timely article in this morning's New York Times which seems to me to effectively attack the situation in the troubled Middle East. I believe that serious thought, given to the situation, would prove salutary.

BLUEPRINT FOR MIDEAST—RESPONSIBILITY FOR PEACE SHOULD REST WITH U. N., IT IS SAID

To the EDITOR OF THE NEW YORK TIMES:

The United States and Britain have responded to the coup d'etat in Iraq by stationing troops in Lebanon and Jordan. In the absence of effective United Nations action two terrible alternatives threaten in the Middle East.

On the one hand, the United States and Britain may intervene in Iraq; such action seems certain to lead to the disaster of limited war, and may provoke war with the Soviet Union. On the other hand, the United States and Britain may in time withdraw their troops from Lebanon and Jordan, in the belief that the present crisis has passed; such action seems certain to lead to the eventual surrender of the entire Arab world to opportunist Nasserism.

A third, constructive alternative remains:

The United States should continue to press for the assumption of full responsibility for the stability of the Middle East by the U. N. as the only guaranty of peace. At the emergency session of the General Assembly, which the United States has already requested—and in which the Soviet veto will not operate—the United States should insist on the creation of a large U. N. Middle East police force, supplemented by a sizable observer corps. The primary mission of these U. N. units should be to guarantee the integrity of all legal governments in the area; to guarantee all national frontiers; to guarantee the submission of all international disputes in the area to U. N. arbitration, and to enforce an absolute embargo on all further arms shipments to the area.

THREAT TO SECURITY

The United States and Britain should announce unequivocally to the world that they regard the policies of Nasser's United Arab Republic as a direct threat to their own national security. The United States and Britain are not opposed to Arab nationalism per se, nor to legitimate aspirations for greater self-determination on the part of any national population in the Middle East. The United States and Britain are opposed to illegal and violent seizure of property—as in the case of the Suez Canal—and the illegal and violent abrogation of contractual agreements—as in the case of Syrian sabotage of the oil pipeline in 1956.

The policies of the United Arab Republic have been illegal and violent. The United States and Britain should openly acknowledge their need for the natural resources of the Middle East. And therefore the United States and Britain should declare that their opposition to Nasser's policies is not only based on principle, but prompted by the most vital reasons of national self-interest.

The United States and Britain should negotiate immediate mutual security treaties with Lebanon and Jordan which will allow United States and British troops to remain permanently in these countries until relieved by a U. N. police force.

TREATY WITH ISRAEL

The United States and Britain should proclaim that the national security of Israel is indispensable to their own national security and negotiate an immediate mutual security treaty with Israel which will allow American and British troops to be stationed in the country permanently until relieved by a U. N. police force.

The United States and Britain should announce unequivocally to the world that they will regard the sudden, violent, and illegal abrogation of oil supplies from any present source in the Middle East as an act of naked aggression directed at them. Unilateral and arbitrary interference with contractual arrangements for oil in Iraq, Saudi Arabia, Iran or anywhere else must and ought to be regarded as hostile action by the United States and Britain, and world opinion ought bluntly to be so informed. Alteration of any existing commitments for oil should in future be negotiated exclusively under the jurisdiction of a special U. N. body to be created for this purpose.

At this terrible hour these five steps may yet preserve both peace and the national security of this country.

STEVEN MULLER,
Assistant Professor of Political Science, Haverford College.
HAVERFORD, PA., *July 18, 1958.*

The United States Army Reserve: Its Importance and Future Status

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1958

Mr. ANDERSON of Montana. Mr. Speaker, there are more than 2 million Army reservists in the United States, with around 300,000 of these in a drill-pay status and other thousands in an active but unpaid status. They are vitally interested in the Army Reserve program and its future.

The Honorable Wilber M. Brucker, Secretary of the Army, in an address before the Reserve Officers Association of the United States, in annual convention at Atlantic City, N. J., had most significant views on this matter.

Secretary Brucker said:

It is a great pleasure to accept your invitation to come to Atlantic City and meet with this distinguished group during your annual convention. The representatives of your patriotic and dedicated organization gathered here today may well be proud of the progress being made in strengthening the United States Army Reserve as a vital element of our national defense strength. Our strength is the bulwark of freedom and the hope of all free men.

While all of you are dedicated to the noble purposes which we espouse, not all of you are primarily involved in the current subject of the reorganization of the Reserve components. Yet, I know that this is not only a subject of intense interest to you, but it is the real objective which we all seek. While many of the things I shall say are matters of common knowledge to some of you, nevertheless this assembly of the members of the Reserve Officers Association of the United States, from all parts of the country, presents an excellent opportunity to acquaint the entire membership of this dedicated group with the objectives we seek and the plans we have devised to attain these goals.

As you know, on March 28, 1958, I announced my decision to go forward with the development of a new troop structure for the Reserve components within the framework of a plan which had been developed by the Army staff and which had been recommended to me by the Chief of Staff.

In the development of this reorganization plan, as well as all other plans and programs for the Army, we have adhered to the concept established by law, that the Army of the United States is an entity consisting of the active Army, the Army National Guard of the United States, and the United States Army Reserve. A basic premise of all Army

plans and programs stems from the concept that the active Army, the Army National Guard and the Army Reserve are a composite entity. We are not three separate segments which become a whole only when joined together by some emergency. We are one Army. We must plan as one. We must organize as one, and if we must fight a war, then we will fight as one.

The law requires that the Army (including all three elements) be organized, trained, and equipped for prompt and sustained combat, and that it support and maintain national policies and objectives.

During the course of our review of the Reserve components program, it became clear that the Reserve components must be modernized in accordance with the pentomic concept upon which the active Army is now organized. The timetable of modern war makes it impossible to rely on the time consuming methods of mobilization in the event of an emergency which have proved reasonably adequate in the past. The lightning speed with which the powerful opening blows of any future conflict might strike compels us, during peacetime, to take those steps which will produce on M-day a force which can absorb these opening blows yet still retain a capability of immediate retaliation against the aggressor.

The adoption of the streamlined pentomic organization in the Reserve component division will serve this imperative purpose. It will produce Reserve units which can quickly and effectively mesh with the units of the active Army in an integrated combat force. Four primary requirements are met by the new organization:

1. The division commander will have atomic weapons within the organic structure of his division;

2. The division will be so organized that it can disperse readily in case of atomic attack into semi-independent battle groups replacing the present infantry regiments;

3. The division will be organized to take full advantage of the progress in signal communications which permit a division commander to direct and control more subordinate units than formerly, and

4. Organic divisional equipment will be reduced to that which is habitually needed in any theater of operations, and special equipment will be attached only when required to accomplish a specific mission.

The reorganized divisions will be considerably smaller than those of World War II. For example, the infantry division will be reduced in strength from 17,500 to 13,700. The number of company size units will go from 114 to 77. However, whereas there are 37 fewer companies in the pentomic division, in the case of the infantry rifle companies, their strength has increased from 196 to 243. In short, the trend, particularly in infantry, has been to fewer but stronger company size units.

The application of the pentomic concept to the Reserve components has been deliberately held back pending the completion of the reorganization of the active Army. Now that the pentomic readjustments within the active Army have been completed, the experience we have gained in developing solutions will assist in the adoption of the new structure within the Reserve components. I believe this dedicated group wholeheartedly supports our objectives in this area.

The overall review of our Reserve components program also highlighted the necessity to aline the reserve structure to the requirements of approved war plans. Within the guidelines of national policy under which this review was conducted, this would mean that the structure should contain only those units for which a requirement had been established by approved war plans and which could not be created from untrained sources in sufficient time to meet a predetermined mobilization schedule. By retaining only those units which fall into this category, we can obtain maximum return from our materiel resources and training support in achieving a higher degree of combat readiness during peacetime than we have ever been able to do in the past.

The guidance under which the size and composition of the Reserve component forces was developed can best be illustrated by citing an excerpt from a letter from the Secretary of Defense to the President of the United States dated February 20, 1958. He said: "The basic question is one of how large the Reserve components of the Army should be in order to augment the active forces and to insure a maximum of mobilization readiness. The troop basis now being developed by the Department of the Army is specifically designed to provide the Reserve forces required to support joint plans approved by the Joint Chiefs of Staff, and reached in accordance with basic national security policy. Units planned for inclusion in the Army Reserve troop basis, together with the active forces in being, are those required to meet current mobilization objectives. Units excess to requirements need to be eliminated from the Reserve forces troop basis if maximum support is to be given those units actually required in the early phases of mobilization."

President Eisenhower concurred with the views expressed by the Secretary of Defense.

After careful study, the Chief of Staff recommended a Reserve forces structure developed within the limits which I have just discussed. In turn, I have considered recommendations of the Chief of Staff and, after a detailed review, have given my approval. This structure was to contain 27 combat divisions—21 for the National Guard and 6 for the Army Reserve. In addition, there would have been 17 USAR divisions designated as training commands specifically designed to train individuals. This reorganization would have resulted in a reduction in the number of company-size units in the Reserve components. However, we would have assured the retention of only those units required to meet existing national policy and joint plans. To make certain that the Army met its mobilization schedule, we established a priority system in the Reserve forces. This system assures that the units needed first are ready first, by giving them preferential treatment in the assignment of personnel and equipment as well as authorizing a higher strength and equipment level.

I am certain you are familiar with the comments of the Army Chief of Staff before the Governors' Conference at Miami, wherein he stated that a relaxation by the Department of Defense of the original guidance upon which Army plans had been based enabled the Army to take another look at the problem. In brief, the Army has been authorized to develop a plan looking toward the retention of all the present 37 divisions in the Reserve forces structure—that is, 27 National Guard divisions and 10 USAR divisions—provided that this troop structure is maintained with no increase of cost or personnel beyond currently programed levels, and that priorities as between organizations contained in the troop structure be established to meet the essentials of approved war plans. I have, therefore, requested the Chief of Staff to restudy our previous plans in the light of this new guidance, with a view toward furnishing a tentative plan to the respective States, Territories, and ZI Armies at an early date.

Although this new review of our previous plans may retard the initiation of the reorganization of our Reserve components, I have not, as yet, changed the end of calendar year 1960 as the target date for completion of the reorganization.

At this point I would like to digress for a moment and discuss a collateral matter which has arisen by coincidence at the same time. Considerable confusion has come about as a result of the simultaneous consideration of two separate and distinct problems, (a) the modernized troop structure, and (b) the paid drill strength authorized the Reserve components.

I am sure that all who are assembled here are familiar with the fact that the fiscal year 1959 budget proposes to establish the new paid drill strength of the Reserve components at 630,000, of which 270,000 will be allocated to the Army Reserve. Gentlemen, I know that all of you are aware of my feelings toward the necessity of a strong and virile Reserve. You also, of course, are aware of the methods by which the budget is developed. The budget for fiscal year 1959 will support a paid drill strength for the Army Reserve of 270,000 spaces. Therefore, that is the figure included in the Army planning.

I cannot, however, emphasize one point too strongly—and that is that whatever figure may finally be approved by the Congress, the necessity to reorganize the Reserve components is still as valid as ever. The reorganizational changes are generated by military requirements and must come about irrespective of the drill pay strength finally authorized by the Congress. A higher drill pay strength than that currently programed in the President's budget would establish higher manning levels in those units required early in mobilization, thus hastening the attainment of the desired degree of combat readiness within these units.

I am sure that you share with me a sense of urgency in bringing our Army to the highest degree of combat readiness that time and resources will permit. We know that Soviet Russia has the capability of launching a limited or all-out war without resorting to nuclear warfare, and that they of course have a capability for an all-out atomic attack upon the free world. Another course which the Soviets may adopt to attain their aggressive aims is to sponsor attack by their satellites, supported by Russian materiel and so-called Russian "volunteers." No matter what course they might choose, the Army must be prepared to play its indispensable role in countering their moves and deterring their aggressive action.

To the degree that we rededicate ourselves to the problems lying ahead, to the degree that we recognize no unsurmountable obstacle, and to the degree that we march confidently ahead in the attainment of our common goal, will our power for peace be felt. I am confident that this patriotic group will, as you have so often done in the past, assume the lead in a vast reawakening of our people to the perils we face today, and to the pioneer spirit which cradled the birth of individual liberty and personal dignity within our beloved country.

On Memorial Day, I had the honor and privilege of escorting our Commander in Chief, President Eisenhower, to his position of honor at the Arlington National Cemetery on the occasion of the interment of the unknown dead of World War II and Korea. As you so well know, I am a veteran of World War I and, at the end of that terrible conflict someone penned a poem which captured the spirit of Flanders Field. They threw to us a torch of liberty and they admonished us to hold it ever high.

Gentlemen of the Reserve Officers Association, holding that torch high today involves much more than it has ever required in the past—it means constant and eternal vigilance. And I say to you in the spirit of our Commander in Chief that we might all very well adopt as our personal creed the motto selected by General Eisenhower to symbolize the spirit of SHAPE—"Vigilia pretium libertatis" or "Vigilance is the price of liberty."

Chances for Living to a Ripe Old Age

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. BOLAND. Mr. Speaker, during the last decade Members of Congress have been made increasingly aware of the problems of our aging citizens and geriatrics, that subdivision of medicine which is concerned with old age and its diseases. Modern science has made great progress in the treatment of diseases that afflict older persons so that they may enjoy a longer life in comfort.

One of the Nation's top medical writers, Miss Mary Clayton, of the Boston Advertiser, has written a most interesting article on the subject entitled "Chances for Living to a Ripe Old Age." Miss Clayton, who has made a thorough study of the problems of the aging and the promise of geriatrics, attended Trinity College here in Washington, D. C., graduated from Mount Holyoke College, and took a master's degree in journalism at Northwestern University. She has worked on the editorial staffs of the Springfield, Mass., Daily News, the Holyoke, Mass., Transscript-Telegram, and is now a writer for the Boston Advertiser.

With permission to extend my remarks, I commend to Members of the House for perusal Miss Clayton's article which appeared in the New York Journal-American on July 17:

CHANCES FOR LIVING TO A RIPE OLD AGE
(By Mary Clayton)

What are your chances of living to ripe old age?

What do you think your prospects are for good health at 65?

No one has a medical crystal ball for authentic predictions, but it's possible to speculate on the basis of knowledge we have so far.

Dr. Robert B. Hickler, specialist in geriatrics and director of Pearl Memorial Clinic at Peter Bent Brigham Hospital in Boston, suggests a possible formula for determining what you will be like when you are old.

Consider these factors:

The body which you've inherited—its defects and assets.

The general health and longevity of your parents and grandparents.

Your health habits over the years.

The physical and mental stresses you've experienced in your lifetime.

If young people have been fortunate enough to come from a family whose members commonly live to old age, this factor is good health insurance for their later years.

Of course, this doesn't mean that people can abuse themselves just because they have heredity on their side.

Our health prospects in old age are also the sum total of our whole pattern of living: eating, sleeping, exercise, and mental health habits.

Scientists are beginning to cope with the problem of chronic illnesses usually associated with age—hardening of the arteries, common types of heart diseases, cancer, arthritis. They don't have the answers yet, but they are striving to determine whether these illnesses are the result of the normal aging process of our bodies or whether they are the result of other unknown factors.

In the past, scientists were more likely to take the aging process for granted. As a result there was a lack of thinking and effort in this important area, says Dr. Hickler whose specialty, geriatrics, deals with the medical aspects of old age.

We know that the average lifetime of Americans has been extended to 70 years of age and may be even longer in the future. But by the time most of us reach 65, we have some chronic disease or physical impairment.

People who formerly would have died of diphtheria, smallpox, typhoid fever or pneumonia are saved through medical advances and live on to acquire the chronic illnesses.

"Medical science has an obligation to the elderly," emphasizes Dr. Hickler.

"Since science has permitted people to live so much longer and to develop chronic diseases we are confronted with the problem of preventing and managing these disabilities."

Dr. Hickler—and others in his profession—will tell you that the challenge is not just to keep patients alive, but to keep them usefully and comfortably alive as well. Their challenge is not only to keep younger people as healthy as possible but to extend the active life of the aging.

"Long life without health is a personal tragedy for the individual involved."

If the average lifetime of an American is 70 years, this means that there are people living into their 70's and 80's and 90's. As they live longer they are subject to more of the chronic degenerative diseases.

There are 14 million Americans today over 65. There will be 21 million in 1975. If you are 48 years old now, then odds are in your favor that you will be in that group in 17 years.

Protect yourself into the future and you'll be better able to understand the problems facing our senior citizens today.

Dr. Hickler believes that most of us neglect to consider what our old age will be like because of an almost unconscious resentment toward prospects of losing youth. This includes our attitudes toward gray hair, wrinkles, stiff joints and defective hearing.

Emphasis on youth in this country may be in part due to the fact that we are a young country. But we ought to keep in mind the compensations which older years bring: joy in past accomplishments, successful rearing of a family, an opportunity to take part in activities which have been shelved because of a previously busy life, the doctor feels.

Dr. Hickler's clinic treats ambulatory patients from 60 years and over—men and women who need more specialized treatment than usual medical channels have to offer. The clinic has as many patients as it can handle.

Pearl Clinic's program approaches its older patients in terms of the total person: attitudes toward life, social and economic problems, emotional and physical needs.

Dr. Hickler has found there are too many erroneous generalities about people who are elderly—a tendency to lump them into one group.

Many young adults think of all older persons as irritable and rigid. But men and women don't suddenly develop into grouches because of age, he says.

Old age doesn't make people rigid and unbending in personality. These characteristics date back into early years when personality traits were formed.

Older people want to be treated as individuals, recognized for their differences one from another, their contributions, their potentialities. People differ individually at any age.

Our attitude toward senior citizens affects their whole outlook on life, cautions Dr. Hickler.

Medical care of the elderly is not the only challenge. Recreational opportunities after retirement and economic problems are others.

Most of our senior citizens are retired and living on limited incomes. Fifteen percent need institutional or hospital care. Many need long-term care in nursing homes or in their own homes.

The best way to reach solutions to these problems is first to examine our own attitudes toward the elderly, Dr. Hickler suggests. Also the attitudes of the elderly toward young people and toward themselves.

Before undertaking "grand schemes" to aid our senior citizens, it's necessary to ask:

For the younger adult: "How do I think of my role at 65 or over? How would I like to be treated?"

For the older person: "How can I be old, accept the fact and make the best of it?"

When these questions are answered, Dr. Hickler believes, we will be making headway in coping not only with the medical needs of the aged but their other needs as well.

The Welfare of Italy

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1958

Mr. CELLER. Mr. Speaker, I have always been interested in Italy and its people. No Representative from New York City could be otherwise. A great number of my constituents have always been Italian immigrants or their descendants. New York City owes a great deal of its prosperity to its citizens of Italian heritage. Its arts and sciences have been quickened by them. Its industry would wither without their brain and brawn. The highly important dress trade and manufactory of New York could not exist without its Italian seamstresses, stitchers, cutters, tailors, designers, and workmen. Its food and restaurant industry is linked ineluctably with them. One of New York's greatest mayors was Fiorello La Guardia, son of an Italian musician immigrant.

I cannot conceive of the Metropolitan Opera without Del Monaco, Albanese, Siepi, Tagliavini. Then there were the unforgettable Caruso and Pinza. Small wonder, then, that during the opera season you can find me and my dear wife and daughter in our accustomed seats each Saturday night listening intently to La Boheme or Otello, Andrea Chernier or Aida. I often sing myself to sleep with the heavenly arias from La Tosca or Butterfly or the Barber of Seville.

All of which brings me to Italy and its desperately desired prosperity under its new premier Fanfani, who is soon to come to the United States. We shall offer him sincere welcome. As our friend and ally in NATO we must aid Italy to the utmost. Our people, too, should do their share. They can and should invest in Italy's future. She offers great inducements for safe and profitable investments. Her domestic economy is expanding at a rapid rate. Hea seaports, open year round in the sunny Mediterranean, afford wonderful shipping facilities. She plies the ocean

trade with the fourth largest merchant marine fleet in the world. Nearby lie the rapidly developing markets of Africa and the Middle East; to the north, the prosperous NATO community affords a ready outlet for all kinds of manufacture and produce.

Italy was formerly known primarily for her agricultural commodities. Who, for example, has not partaken of delicious Italian wine? But in recent years, the complexion of the nation has changed completely. Today, Italy is predominantly an industrial nation engaged in a wide variety of manufacturing. Her steel production has risen to almost 7 million tons per year and total industrial output since the end of World War II has doubled.

Foreign capital has already participated to a considerable extent in the development of the Italian economy. Substantial foreign investments have been made in Italy's textile industry, her growing chemical and pharmaceutical industry, and in her electrical industry. In Sicily, the island lying off Italy's southwestern coast, large expenditures have, with foresight, been made for exploring and developing her petroleum resources. Present instability in the Middle East would dictate that more Western capital be employed to make maximum utilization of the Sicilian oil fields.

I can assure you that, unlike many other areas of the world, capital investment from the United States is most welcome in Italy and much has been done to provide the economic climate necessary to attract dollars from abroad. Under Italy's new Foreign Investment Law, foreign investors are provided with the same rights and privileges of domestic concerns. There exist no limitations on the amount of money that may be invested in newly established companies in Italy nor on the number of nonnationals who direct or manage such ventures.

Truly, Italy provides a golden opportunity for American investment. By assisting in her economic development, not only will we in the United States be profitably employing our own capital resources, but we will be providing vital assistance to an important ally in this unsettled world. We cannot forget that it was an Italian who discovered America. It is now time for Americans to rediscover Italy.

Farmers' Net Income Jump Greatest in Decade

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. GUBSER. Mr. Speaker, the 22-percent jump in farmers' realized net income from the first half of last year to the first half of this year was the greatest in a decade. It was not much short of the 26-percent increase that took place between 1946 and 1947 as a result of the ending of wartime price controls.

The exceptionally large gain this year is mainly the result of improved market prices. Prices received by farmers averaged 8 percent higher in January to June this year, than a year earlier. The volume of marketings was also up 3 percent.

Production expenses increased less than 4 percent—not nearly enough to cancel out the increase in gross income.

The increase in realized net income in terms of dollars, reflects an annual rate for the first half of 1958 that is close to $2½ billion above the first half of 1957. That means increased buying power in the hands of farmers all over the Nation, and the effects will be felt throughout the communities in which they live.

Farmers' realized net income was running at an annual rate of $13.3 billion the first half of this year, as against only $10,850,000,000 the first half of last year.

Mr. Speaker, these figures dramatically point up that Secretary Benson has been right in his insistence upon a free farm economy and a lessening of government regulation.

An Area Rich in Coal Mines

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. MACK of Illinois. Mr. Speaker, I would like to include in the RECORD an editorial from one of the leading weekly newspapers in the 21st Congressional District of Illinois, the Gillespie News.

This editorial shows a spirit of enthusiasm and public-mindedness which is so essential to the progress of the small communities in that area which have been hurt by the decline of coal production and the closing of coal mines which were the livelihood for so many of their citizens:

[From the Gillespie (Ill.) News of July 9, 1958]

AN AREA RICH IN COAL MINES

Once upon a time there was an area rich in coal mines, a prosperous area. Men working, providing well for their families, most of them owning their own homes, and educating their children.

The entire area profited by the mines, business flourished. This all showed in the people, the home, and business houses.

Then came a different day, the mines began to work less hours, still times were not too bad, and most considered it only a temporary setback. This proved to be wishful thinking. One by one the mines began to close, until all the coal mines which had been gold mines were closed. For the first time a depression hit, gloom spread. Everyone in the community felt the tightening of money. Many of the men went elsewhere for employment.

As is always the case following calamity or disaster, life went on, business continued on a smaller scale.

Time went on, people learned to live without the mines, but naturally would prefer to live with them.

Since then there has been more or less drifting along—dreaming of the past, hoping that a sudden demand for coal would bring about the reopening of the mines. This cannot be counted on, therefore we need to look for other gold mines.

In the midst of this area, as you have probably guessed, is our own Gillespie. We still bear scars. We did come back in a manner—but, where are we going from here? Forward? There is no such thing as standing still, we go either forward or backward.

There is an appearance of drifting, a lack of leadership, organization, a general public apathy.

Attempts have been made to attract industry, a few working to this end and bearing the burden. Too many stand on the sidelines saying: "It can't be done." Those words and feeling spread, it takes away the vim and vigor.

Public meetings flop by lack of attendance and interest.

Civic organizations are in a rut. A business organization meets when necessary, but it's seldom necessary.

Cities smaller than Gillespie have both a chamber of commerce and a junior chamber. Each have their projects—and, carry them out. Sure, it takes work, it also brings results.

What makes the Canna anna's click? Projects. They are continuously working on some civic project. This working together brings action, which keeps them together, making Gillespie a better place in which to live—keeping Gillespie on the map. Even the men are proud of them, willing to assist, but seem content in letting the Canna annas do it.

If we had a strong men's organization, not to compete, but to work with, what a Gillespie we would have.

However, if we are not going to have action from the men, let's give the girls full power—a Canna anna mayor and a Canna anna council, then there will be only one way we can go—forward—and once more Gillespie will be a progressive, up-to-date city.

Report to the People

EXTENSION OF REMARKS
OF
HON. JAMES H. MORRISON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. MORRISON. Mr. Speaker, during the 8 consecutive terms or the 16 years that I have had the distinguished and great honor to serve the people of the Sixth District of Louisiana, I have done my utmost to give to them the representation they truly deserve.

During these 16 years the schools and colleges of the Sixth District have received in Federal grants and surplus properties an amount of over a million dollars.

To mention a few of the benefits that I have worked on during the past session, I list the following:

First. Necessary funds for flood control and navigation in Louisiana.

Second. Improved social-security benefits.

Third. Increase in Federal retirement.

Fourth. Increase in pay for all Federal workers, including classified and postal workers.

Fifth. Better care for our aged.

Sixth. Increased veterans benefits.

Seventh. Assistance to the farmers.

Eighth. Development of interstate highway program.

In the past 7 years as your Congressman, I did everything possible to secure Federal expenditures for the construction and maintenance of flood control and navigation projects for the State of Louisiana, which totaled $224,509,000.

The Pearl River navigation project was completed in 1956, at a total cost of about $10 million.

In this session of Congress, $6,500,000 was appropriated for the continued construction and development of the Baton Rouge-Port Allen-Indian Village cut-off of the Intercoastal Waterway. This makes a total, to date, of $16,237,000 in Federal funds for this project. Included in this project is the port of Baton Rouge and Port Allen which means so much to the sixth district, as well as Louisiana and the rest of the Nation. For the Amite River and its tributaries, the Federal Government, including this year's appropriation, has given for flood relief of the parishes of Ascension, Iberville, Livingston, and East Baton Rouge, the amount of $750,000 in Federal funds which will greatly help in relieving the drainage problems that exist in these parishes.

Approximately $29,767,200 for the old river control structure, north of Morganza, to keep the Mississippi River within its levees, has been provided in Federal funds. Of this, $8,550,000 is included in this year's appropriation.

All of the above did not just happen by accident. On the other hand, it took an enormous amount of time, planning, and effort, and quite naturally, I am proud of the part that I have played in helping to secure these much-needed projects.

Today my congressional office, or I really should say your office, in the Nation's Capital, has the reputation of being one of the most efficient on Capitol Hill. It has taken years of hard work and experience to achieve this.

Not only have I endeavored to represent you people of the Sixth District as you wish me to, and to vote for all constructive legislation; but I have also endeavored to help and assist each and every person in the Sixth District regardless of their walk in life or whether their problems were large or small, regardless of their political faith, to the best of my ability.

With this in mind, I pledge with the best of my ability to continue to help each and every one of you with your troubles that beset you and to work to improve your working and living conditions in every way possible.

During the years I have served you in Congress, I have voted for and supported all legislation that would help the farmers and I have voted for and supported all legislation that would be beneficial to all the veterans. I have been and will continue to be a strong advocate of free enterprise. I have been a perpetual supporter of all flood-control projects and all flood-control legislation.

During the time I have been in Congress, I have worked for, and helped secure $6,562,471 Federal funds for hospitals in Bogalusa, Mandeville, Hammand-Ponchatoula, Plaquemine, Covington, and Slidell, La.

From the above, I am sure you will understand how I have worked to help bring about many of the projects that mean so much to everyone in Louisiana.

Waterway Development Important to Mobile

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 22, 1958

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Waterway Development Important to Mobile," which was published a few days ago in the Mobile Register, of Mobile, Ala.

Although the editorial deals primarily with the importance of waterway development to that particular port, what the editorial has to say with reference to the connection between the Tennessee and Tombigbee Rivers has a great deal of importance to all the inland parts of the Nation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WATERWAY DEVELOPMENT IMPORTANT TO MOBILE

Government reports show a decline of about 15 percent in farm exports for the fiscal year which ended June 30.

"Major declines * * * were in cotton, wheat, rice, edible vegetable oils, meat and dairy products," the Associated Press notes in pointing out that "Department of Agriculture officials cited the export downturn in new appeals to Congress to extend the trade act."

Also making headlines this week, however, is the Midwest grain traffic on the Mississippi River.

"A flood of grain is pouring into St. Louis and from there flowing down the Mississippi headed for export markets," the New York Times relates.

"It represents the largest wheat crop in 11 years and the second largest ever. Harvesting in Illinois and Missouri is at its peak; millions of bushels are moving off the farms every day. * * *

"This year the wheat harvest is expected to exceed 1,311,000,000 bushels. Only the 1947 crop of 1,359,000,000 bushels was larger."

Grain flowing down the Mississippi River for export means, manifestly, that it will not move through the port of Mobile.

And here once again is reason, in the form of specific example, for Mobile to be keenly interested in seeing the Tennessee-Tombigbee Waterway become a reality.

This project, which contemplates the linking of the Tennessee and Tombigbee Rivers by navigable canal, would place Mobile in stronger position to compete for Midwest trade, including export grain.

With navigation established between these two rivers, an uninterrupted inland waterway route for barges would be available between this important gulf port and the middle United States.

The lack of such a route today, while Ol' Man River—the Mississippi—carries a huge annual volume of exports and imports through the New Orleans gateway, is an obvious handicap for Mobile in Midwest competition.

Not Mobile alone, but a whole vast region of the country would benefit from the Tennessee-Tombigbee Waterway development, of course. But the importance of this project to this port is currently emphasized by a flood of grain * * * flowing down the Mississippi headed for export markets.

It clearly is to the interest of Mobile as Alabama's industrial seaport to do all it can in behalf of high priority listing for the Tennessee-Tombigbee project every step of the way from here on in waterway improvements until it becomes possible for barges to operate without interruption between this seaport and the middle inland region of the country.

Donations of Free Food to Needy Abroad Nearly Four Times the Volume of Surplus Food Given to Needy in This Country

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mrs. SULLIVAN. Mr. Speaker, in my efforts in these past 4 years to enact a food-stamp plan for distribution of surplus food to all of the millions of very needy persons in our country, I have noted Mr. Benson's many glowing reports about the volume of surplus food now being given out to the unemployed in many areas of the country.

But Mr. Benson's own figures show that we have distributed nearly four times as much of this surplus food by volume to the needy of the rest of the world as we have given to our own needy. In fact, in any one year under Public Law 480, we give nearly twice as much surplus food away abroad—I am speaking now of straight-out donations to the needy, not to so-called sales for counterpart funds—we give to the needy abroad nearly twice as much as Mr. Benson has used for all domestic purposes here, including the school-lunch program, donations to public institutions, and so on as well as distribution to the needy.

I have repeatedly said I am not against our charity programs for the needy abroad—to have food in great abundance and not help to feed starving people would be a terrible sin. But while charity does not have to begin and end at home, there is nothing in ethics or morals which says we cannot be charitable to our own desperately poor in a manner at least equivalent to what we are doing overseas.

TABLES SHOW GREAT DISPARITY IN FOREIGN AND DOMESTIC FOOD GIFTS

Mr. Speaker, under unanimous consent, I am including as part of these

remarks several tabulations covering this point of foreign donations of food to the needy overseas under title III of Public Law 480 as compared to the much reduced program of food distribution to help our own needy.

I hope the Members will have an opportunity to look over these tables before voting Wednesday on passage of S. 3420 under suspension of the rules. I hope they will also note the detailed breakdown on the needy in their own States which I placed in the RECORD yesterday at page 13188. These various tabulations should prove beyond all doubt that a food-stamp plan for needy Americans belongs as part of Public Law 480, and that the bill to extend Public Law 480 should not pass under suspension of the rules but should be brought before us instead under the regular order so that it is subject to amendment to include a food-stamp plan.

The following tabulation lists the 85 countries which have been receiving free surplus food at United States Government expense so that they could help feed their poor. It shows the poundage sent to each country in each of 3 fiscal years, and the dollar cost to the United States Government of this phase of Public Law 480. This, I repeat, has nothing to do with the operations under title I of Public Law 480 under which we have transferred about a billion dollars worth of food a year to foreign governments in return for their own currency which is then usually lent back to them for their own currency which is then usually lent back to them for their own development.

The tabulation immediately below covers operations under title III under which we make outright gifts of this food, usually through church and charitable organizations, and help pay the ocean transportation costs as well. Note particularly the totals for the 1957 fiscal year and then compare those with figures for the same year covering domestic use of surpluses which I am also going to place in the RECORD further down in this insertion.

First, the report on foreign donations of food under title III, as follows:

Title III, Public Law 480—Sec. 416, foreign donations, fiscal years 1955–57

[Thousand pounds—thousand dollars]

Country	1955		1956		1957

[1] Less than $500.

SEVEN MILLION AMERICANS ON PUBLIC ASSISTANCE NEED A FOOD-STAMP PLAN

Mr. Speaker, I have not inserted the tabulation above for the purpose of protesting or decrying these gifts of food to the needy abroad. Far from it. I think we can all be proud of how much good has been done with that food in the countries whose people benefited from our charity and thoughtfulness.

But, Mr. Speaker, cannot we be charitable at least in kind to the nearly 7 million Americans on various forms of public assistance, plus the millions more today suffering extreme hardship because of the recession?

The tabulation below, also from official sources, lists the actual poundage of food distributed by Mr. Benson in the 1957 fiscal year to the school-lunch program, to public institutions, and to needy persons. I call attention to the totals in the needy person category, since that is the only one which would be affected if we were to enact a food-stamp plan. That shows only 489,800,000 pounds of surplus food—mostly flour, cornmeal, cheese, dry skim milk, dry beans, and rice—as having been given to our needy that year, compared to 1,727,877,000 pounds of food donated abroad under the Public Law 480 provisions which constitute a food-stamp plan for the needy of other countries.

I might say that the partial figures for fiscal 1958 on foreign as against domestic

donations of food show the same ratio of nearly 4 to 1 in pounds of food donated and in dollar costs to the United States Government:

Quantities of surplus foods donated for domestic use, fiscal year 1957, and estimated, July to March, fiscal year 1958

[In million pounds]

Commodity	Domestic, fiscal year 1957			
	Schools	Institutions	Needy persons	Total
Beans, dry	28.3	9.2	42.9	80.4
Butter	46.3	9.4	12.5	68.2
Butter oil				
Cheese	31.7	15.6	71.6	118.9
Cornmeal	17.7	9.5	89.9	117.1
Corn	.5	.4		.9
Cottonseed oil				
Eggs, shell	30.0	7.2		37.2
Egg solids, dried				
Flour	46.1	56.8	140.8	243.7
Grapefruit, canned				
Ground beef—frozen	71.3			71.3
Lard	16.5	6.0	1.6	24.1
Milk, nonfat, dry	23.6	15.5	82.7	121.8
Peanut butter				
Pork, corned and frozen	52.1		[2]	52.3

Turkeys, frozen	22.6	2.6		25.2
Wheat	1.9	6.4	(3)	8.3
Other [4]	7.1	5.1		12.2
Total	417.6	154.5	489.8	1,061.9

[1] Special distribution for hurricane disaster relief in Puerto Rico.
[2] Less than 50,000 pounds.
[4] Includes commodities distributed domestically in limited amounts during fiscal year 1957: Cabbage, fresh plums, sweetpotatoes, and cottonseed oil.

Student Loan Guaranty Funds

EXTENSION OF REMARKS
OF
HON. JOHN D. HOBLITZELL, JR.
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 22, 1958

Mr. HOBLITZELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Student Loan Guaranty Funds," published in the American Banker of July 22, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STUDENT LOAN GUARANTY FUNDS—WIDE ADOPTION OF NEW PLAN SEEMS LIKELY

Once the idea of students going into debt to finance their college education was pretty generally frowned upon in academic circles as a postgraduation handicap better avoided than incurred. Many argued that it was not wise to saddle the graduate with a debt load during the first struggling years of his business or professional career when income would be low and marriage a complicating factor. This sentiment was probably more widely entertained, however, before there were so many thousands of applicants hammering at the college gates. At any rate, there seemed to be an abundance of scholarship funds available to the exceptional or superior students as grants, rather than as loans, although loan assistance would be found in almost every college catalog. These scholarship grants are predicated, for the most part, on the assumption of a combination of scholarly attainment and financial need.

The loan assistance idea, however, is gaining increased recognition. That would seem to be the implication of the student loan plans being set up in some of the States under which bank loans to college students are being underwritten by some sort of instrumentality such as Massachusetts' Higher Education Assistance Fund.

The loans authorized under such plans are hardly enough to fall into the category of a load around the student's neck. A maximum of $500 a year for each of 3 years, or an aggregate of $1,500, is not a staggering sum these days. In one State, New York, the total is higher. There it could run to $3,000.

NOT BURDEN WHEN BUDGETED

Also in the past generation we have had reassuring experience on installment repayment loans in general. Going into debt is not frowned upon as a "burden" where repayments can be budgeted and the purpose is constructive. Moreover, certain private corporations, such as C. I. T., and certain banks, have launched their own plans for higher education loans. All in all, it looks as though the idea has shed its chrysallis and is ready to take flight and breed its kind nationally.

The new student loan idea is not directed as much at the top flight student as are most of the scholarship funds, but at the student qualified for college, unable to attend, or unable to continue if he is already in college, without some financial help. Much is being made in New York State, at least, of the fact that a substantial number of the upper half of their high school graduating classes do not go to college.

That there is a real need to be met seems indicated by the record of the Massachusetts Assistance Fund, where the idea was pioneered. In operation since the fall of 1956, this Massachusetts fund has guaranteed 2,000 bank loans to students, aggregating $900,000.

Perhaps it ought to be explained here that so far as we can learn, these loan programs are in operation in three States, Maine, Massachusetts, and New York.

NEW YORK PLAN MOST LIBERAL

The New York plan is more liberal than the other two, possibly because the New York Higher Education Assistance Corporation was created by the legislature with an appropriation of $425,000 for the guaranty fund and $75,000 for administrative expense. It will give a 100 percent guaranty to a bank loan for a student who has been accepted by a college. It will guarantee loans for each of the 4 years of college, up to $500 in the first year, up to $750 in the second year and in the third year and up to $1,000 in the fourth year. The interest rate is 4 percent. The student is allowed to spread his repayments over 6 years, beginning 5 months after graduation.

The Massachusetts and Maine Higher Education Assistance Funds were raised through private subscriptions by corporations and individuals. They guarantee loans only for the 2d, 3d, and 4th years in college. To be eligible a student must have demonstrated his success and intention to continue by completing his freshman year.

The Massachusetts fund's guaranty limit is 80 percent of a loan. A student may borrow $500 for each of his last 3 years in college. Repayment must begin by 6 months after graduation and be completed in 3½ years. The fund has currently fixed 4½ percent as the maximum that may be charged on these loans. The bank gets 4 percent, and one-half percent is remitted to the fund as a service charge.

In New York State, the interest rate ceiling is 4 percent. In Massachusetts the rate is one-half percent over the prime rate, but not more than 5 percent or less than 3 percent. The Maine fund sets a maximum rate of 4½ percent, with 1 percent being remitted to the fund for service. However, a lending bank may charge any rate below these figures.

On July 8, the New York State Higher Education Assistance Corporation, which has been in operation only this year, announced that it has guaranteed 71 outstanding loans, totaling $37,000. On June 30, the Massachusetts Higher Education Foundation announced that it has guaranteed 2,000 loans, totaling $900,000, and on July 15 the Maine Higher Education Assistance Foundation, which has been in operation only since April of this year, announced that it had guaranteed 16 loans, totaling $7,067. A pickup in applications is expected between now and college opening time.

Students under the borrowing rules may attend any recognized college or university. In New York State he obtains a loan application blank from the college registrar and submits it to the appropriate college official for certification, after which he submits it to the fund through the bank of his choice for guarantee.

In the two New England States, where the guaranty funds were raised privately, no legislation was required except laws to permit minors to sign notes for this purpose and be responsible for them. As pointed out, in New York, the fund is a public corporation created by legislative enactment.

It is understood that enabling legislation, in whatever form may be required, is under consideration in several other States, including Connecticut, Illinois, New Jersey, Indiana and Pennsylvania.

Service of Senator Neuberger to Oregon

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 22, 1958

Mr. HUMPHREY. Mr. President, it is always gratifying when we can read a very favorable, commendatory editorial about one of our colleagues in the Senate. Such an editorial was brought to my attention by means of a letter from a friend of mine in the great State of Oregon. With the letter there was enclosed an editorial which was published in the World, of Coos Bay, Oreg., on July 12, 1958. This splendid editorial is a very effective and enlightening one about the work done by the Senator from Oregon [Mr. NEUBERGER] as a Member of this body and, indeed, about the attitudes and philosophy of our friend and distinguished colleague. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. NEUBERGER AND BANK CASH

Senator RICHARD L. NEUBERGER, of Oregon, in his fourth year in the United States Senate, is paying the people of his State some handsome dividends for his election to that post.

Latest was last week's success—undoubtedly with help from his colleague—of securing an appropriation for a start on the Gold Beach harbor project and Green Peter dam.

Neither was recommended by the Budget Bureau. In such cases, securing the appropriation in committee is extremely difficult.

To be sure, the fact that the cash was put in the bill in committee does not assure a start for the projects. They may be lost on the floor of the Senate or in conference committee with the House.

But their inclusion is indicative of how well Mr. NEUBERGER has learned his job among a difficult and talented group of men, although he began with a head start through his legislative experience in Salem.

Along with these practical legislative matters, there is another dividend. Mr. NEUBERGER is becoming known as a nonhair shirt conscience of the Senate with his questioning of his own, and other Senators', propriety in accepting campaign contributions dhile at the same time criticizing the morals of the gift-accepting members of the executive branch.

One thing Oregon has in the Senate besides talent: she has national recognition. There is probably not a normally well-read citizen in the Nation who could not tell you the names of Oregon's two United States Senators.

Can you recall the names of the two Senators from, say, Florida?

WAYNE MORSE is of course a national institution after 13 hectic years in the Senate. NEUBERGER chose to make himself well known at the start with some bits about bedroom caucuses and squirrels. His sallies seemed insane at the time, but they achieved his purpose: DICK NEUBURGER became immediately well known from coast to coast.

Once over that hurdle, which takes most Senators about three terms of seniority-building, he was in a more formidable position to achieve things like cash for a start on the Gold Beach harbor, and he had a readymade audience for his more philosophical utterances, such as the nature of the Senator's conscience.

It has been widely reported that Senator NEUBURGER will be a one-termer, by choice.

He appears honest in saying that he finds Washington, D. C., a sticky and disagreeable atmosphere for a Northwesterner who likes nothing better than hiking, camping, and writing colorful history about his home country.

"I get no time to write," lamented one of America's best writers (and once its best paid writer) in a conversation about a year ago. "Sometimes I think I hate this job. But the courtesies a Senator gets would be hard to give up," he admitted, still leaving the impression that Teddy Roosevelt's vigorous life holds greater attractions.

Those NEUBURGER thoughts are prior to the certain pressure which will be brought on him by Oregon Democrats to run again, should he in 1960 indicate his thoughts are running the same way. A political party doesn't willingly give up an asset like DICK NEUBURGER, who is votes in the bank on any election day.

Neither, we are sure, will a State like Oregon give up a Senator like Mr. NEUBURGER without some pressure.

He is cash in the Oregon bank every day he's in the Senate—dividends of legislative know-how like that which produced the Gold Beach appropriation, and dividends of Oregon presige by the fact that he is well known and widely respected.

Supplemental Appropriation Needed for Veterans' Administration Loan Guaranty Program

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1958

Mr. TEAGUE of Texas. Mr. Speaker, during the hearings on veterans' housing held March 12, 1958, the committee asked the Veterans' Administration whether the agency had taken into account an increase in loan guaranty activities in compiling their budget request for fiscal 1959. The VA stated that the budget requested contemplated a steady decline in loan guaranty activities and that VA had just finished their hearings before the Appropriations Committee and had not asked for additional funds for any laws which had not been passed. The VA was asked to insert in the record estimates of additional funds and personnel that would be needed for increases in loans from 300,000 to 450,000 over and above their 1959 estimate.

Estimated increased costs, loan guaranty program, based upon stated number of loans closed

	Number of loans	Employment	Personal services	Other costs	Total costs	Increase			
						Employment	Personal services	Other costs	Total
1959 budget	55,500	1,750	$9,081,486	$1,952,156	$11,033,642				
Estimates	300,000	2,515	13,051,341	2,805,483	15,856,824	765	$3,969,855	$853,327	$4,823,182
	350,000	2,686	13,938,728	2,996,233	16,934,961	936	4,857,242	1,044,077	5,901,319
	400,000	2,853	14,805,358	3,182,521	17,987,879	1,103	5,723,872	1,230,365	6,954,237
	450,000	3,021	15,677,177	3,369,925	19,047,102	1,271	6,595,691	1,417,769	8,013,460

NOTE.—There is no allowance in the above figures for increased costs due to an increase or extension of the direct loan program.

On April 2, 1958, the committee wrote the Administrator calling attention to the VA's testimony and asking what steps, if any, were contemplated by VA for supplemental money in view of the new Housing Act that had been approved the previous day by the President:

HOUSE OF REPRESENTATIVES,
COMMITTEE ON VETERANS' AFFAIRS,
Washington, D. C., April 2, 1958.

Mr. SUMNER G. WHITTIER,
Administrator of Veterans Affairs, Veterans' Administration, Washington, D. C.

DEAR MR. WHITTIER: During the recent hearings held by the Committee on Veterans' Housing, officials representing the Veterans' Administration were requested to furnish for the record figures on personnel that would be required if the veterans' housing program was reactivated. These officials furnished figures indicating the additional personnel that would be required and the dollar amount that would be needed in addition to the 1959 budget if 300,000 or 400,000 loans were to be guaranteed by the Veterans' Administration during the next year.

Mr. T. J. Sweeney, former Director, Loan Guaranty Service, advised committee staff members that there is sufficient money for the remainder of fiscal year 1958 to employ additional personnel to handle any increase in housing activities.

Now that the President has signed the housing bill, I would appreciate being advised if there is sufficient money available for the remainder of fiscal year 1958 and what steps will be taken to request a supplemental appropriation for the 1959 budget in order to staff the regional offices so that the loan guaranty operations will not be hampered due to lack of personnel.

Sincerely yours,

OLIN E. TEAGUE,
Chairman.

On April 15 the Administrator replied that he had discussed the matter of securing additional funds for loan guaranty with the Bureau of the Budget and had decided to delay his request for a few months so that he would have some experience under the new law and would be able to more accurately reflect their needs:

VETERANS' ADMINISTRATION,
Washington, D. C., April 15, 1958.

The Honorable OLIN E. TEAGUE,
Chairman, Committee on Veterans Affairs,
House of Representatives,
Washington, D. C.

DEAR MR. TEAGUE: You are correct in that the Veterans' Administration has on hand sufficient funds to cover necessary expansion of the loan guaranty program in fiscal year 1958, as a result of the new housing bill as stated in your letter of April 2, 1958.

I have discussed the matter of securing additional funds for fiscal year 1959 with the Bureau of the Budget. Based on this discussion, it is my intention to submit a supplemental request to the Congress in sufficient time to permit action by the Congress prior to adjournment. By delaying this request for a few months we will have the opportunity to gain some experience under the new housing bill and will be able to more accurately reflect our needs for fiscal year 1959.

Thank you for your continued interest and assistance in this matter.

Sincerely,

SUMNER G. WHITTIER,
Administrator.

The House Appropriations Committee cut the overall VA budget by $2,088,000. Just what amount would be charged to loan guaranty operations is unknown at this time. The Senate, in considering the regular appropriations bill, restored the cut; however, in conference the amount was cut back to the House figure.

When it became apparent that the new housing bill adjusting the interest rate tnd providing increased direct loan funds was going to pass the Congress, it also became obvious that VA would need additional funds for loan guaranty personnel. The budget which had been pre-

sented contemplated a cut of 75 percent in loan guaranty personnel during fiscal year 1959. The committee urged the VA to seek additional funds in the regular appropriations bill for fiscal year 1959, and we are confident that if the VA had made a request the funds would have been provided. Nevertheless, the administrator made the decision to seek additional loan guaranty funds in a supplemental bill and I understand that bill is now being processed by the House. The VA workload has increased sharply and processing delays are being encountered in various parts of the country.

The Veterans' Affairs Committee is considering at the present time a bill which will increase the workload of the Veterans' Administration loan guaranty program. I regret very much that the bill which is being approved here today does not carry increased loan guaranty funds, but I do hope that additional funds can be made available soon through a supplemental appropriation.

Mr. Speaker, I want to say a few words in connection with the inpatient care item which is included in the bill pending before us under the Veterans' Administration. This item of inpatient care, as Members of course know, represents the amount of money which is actually spent for care of VA patients in VA hospitals and in contract hospitals where such care is authorized. The Veterans' Administration received from its operating agencies for the current fiscal year of 1959 a request for slightly less than $734 million for this item. To be exact, it was $733,966,000. The Veterans' Administration, on its own initiative, reduced this figure to $724,500,000, and the Bureau of the Budget, in submitting the 1959 budget, reduced this item further to $707,100,000. After hearing representative of the Veterans' Administration the Appropriations Committee recommended a sizable increase of $8 million in this one item, to make the total $715,465,000. The House passed it in this form and this was predicated by having an average daily patient load of 140,800. The other body, in its consideration approved the figure of $717,267,000, and the conference agreement provided for the return to the House figure—$715,465,000 with an average daily patient load of 140,490. I cite these figures, Mr. Speaker, to make the record abundantly clear that the Veterans' Administration was prohibited by the Bureau of the Budget from even asking the Congress for the amount of money which it felt it needed. While the final version is considerably more than the budget submitted by the President, it is still inadequate and, in that connection, I will also include as part of my remarks in the RECORD a letter from Dr. J. Gordon Spendlove, manager, Veterans' Administration Hospital, Portland, Oreg., and a resolution of the western managers adopted at the conference on March 19–21, 1958, in Oakland, Calif.

Mr. Speaker, it should also be clear to Members that the funds provided for fiscal year 1959 contemplate a reduction of 1,125 tuberculosis patients, this due to improved techniques in the treating of this disease. The 1,125 figure will not be entirely lost, however. Three hundred and twenty-seven of this 1,125 figure will be devoted to neuropsychiatric patients, and an additional 300 for general medical and surgical care. There will be a net reduction, however, of 498 in the average daily patient load, which means, of course, that there will be a corresponding reduction of approximately 500 operating beds.

Newspaper stories have been published indicating that all Government agencies are under instructions not in effect to submit for the 1960 budget any item in excess of their spending for 1959. This would mean, this case, that we can expect a further reduction in this field in the next budget which will be submitted to the Congress in January 1959. Originally, the Administrator had contemplated the closing of seven hospitals but after the restoration of funds in the House those plans were canceled.

VETERANS' ADMINISTRATION HOSPITAL,
Portland, Oreg., March 26, 1958.

The Honorable OLIN D. TEAGUE,
Chairman, Committee on Veterans' Affairs, House of Representatives, Washington, D. C.

DEAR MR. TEAGUE: I believe that it is my duty to apprise you of the feeling of the managers and assistant managers of the 23 Veterans' Administration hospitals, centers, and Domiciliaries located in the 7 most Western States. This group met in Oakland, Calif., March 19, 20, and 21. Enclosed is a copy of a resolution which we are asking our central office to forward to the Congress of the United States and the Bureau of the Budget.

We believe that current appropriations do not and have not supported presently legislated benefits for veterans nor the accepted concept of medical care either in 1958 or in the past several years. You will note in our statement that economies have been necessary to the extent that essential care to patients is deteriorating and further, that the Government's investment in equipment and physical plants has not been protected. We believe that Congress should either provide the money to implement the law or that it is guilty of breaking the law. The alternatives, of course, are that sufficient money be appropriated, or that the veterans' benefits be redefined on a level afforded by the appropriations.

Since you are the most powerful person in regard to the legislation affecting veterans' affairs, I have felt compelled to direct this correspondence to you.

Sincerely,
J. GORDON SPENDLOVE, M. D.,
Manager.

RESOLUTION OF MANAGERS CONFERENCE
MARCH 19–21, 1598

The managers of the 23 Veterans' Administration hospitals, centers, and domiciliaries located in 7 Western States have met to consider our hospital program for the next 2 years. Our deliberations have revealed a simple stark reality. Current appropriations will not support presently legislated benefits and accepted concept of veterans medical care.

The inexorable flood tide of price increases on all fronts is recognized throughout the hospital field. Voluntary hospitals, State hospitals, and university hospitals have experienced the effect of rising costs. With the possible exception of a few State hospitals, the costs are reflected in large rate increases and in substantial appropriations each year. In the nongovernmental hospitals these costs are passed on directly to the patient.

Our Veterans' Administration hospitals have not received funds over the past several years sufficient to keep abreast of these ascending costs. We are endeavoring to maintain a medical program equal to that offered in the community on preinflation appropriation levels. Neither have managers had funds adequate to discharge their specific responsibility in protecting the Government's investment in the physical plant and in equipment.

We have economized to the extent that essential care to our patients is inevitably deteriorating. Our 23 hospitals must have a substantial increase in fiscal year 1959 and a specific increase of $10 million for 1960 over and above the appropriation for 1958 in order to retain an acceptable level of medical care and to maintain our physical plants. These sums do not include whatever might come in a general pay raise for Federal employees, or the automatic wage boosts for blue collar workers.

Unless these sizable sums are made available, Congress must face these alternatives:

1. Lower quality of medical care and further deterioration of the physical plants; or
2. Reduce beds with a concomitant reduction in patient load: (a) close selected hospitals throughout the country; (b) close whole sections of beds in many hospitals.

We therefore unanimously resolve that the Bureau of the Budget and the Congress of the United States be apprised of this basic issue and be requested to take clear cut remedial action.

President Carlos P. Garcia, of the Philippines

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. McCORMACK. Mr. Speaker, on June 19 last, we heard His Excellency Carlos P. Garcia, President of the Philippines, address us in this Hall. He spoke to us as the leader of 23 million Filipinos, our loyal friends and allies. It was an impressive speech. We gave him one of the most cordial and heartwarming receptions ever given by Congress to a visiting head of state.

The speech was impressive because of its frankness, its sincerity, its forthright expression of loyalty to the ideals of democracy and freedom. He gave us an Asian interpretation of the meaning of Philippine-American relationship, how the success or failure of Philippine democracy would be taken by the uncommitted peoples of the world. Without circumlocution he told us the problems that confront his country and his administration and he appealed to the "soft spot" that he knows the American heart has for the Philippines. He said he did not want charity, he wanted a development loan "on a strictly business basis." It was a dignified plea and it struck a responsive chord in every American heart.

His plea was heeded. Our Government gave him the development loan that he needs for the first year of his 3-year economic program. Because the executive cannot commit our Government beyond 1 year in view of the need

for yearly congressional budgetary approval, President Garcia was given only the amount which it is believed his program needs for its initial requirements. This was mentioned in the joint communique signed by the two Presidents and I may say that the communique is remarkable in that as far as I can remember it was the first time that a specific amount of a loan or that the subject of a loan was ever mentioned in a joint comunique signed in the White House as a result of the visit of a head of state. This may be considered a feather in President Garcia's cap. Furthermore, I have no doubt but that such further assistance as his Government may believe necessary to complete his 3-year projects will be forthcoming when the funds are needed after the first year and the original credit line has been wisely invested.

President Garcia's trip to the United States was a tremendous success not so much for the development loan that he obtained or the prospect of other loans, but principally for the favorable impact that his visit had on Phillippine-American relations. His address before the National Press Club, his extemporaneous replies to the question-and-answer period, his speeches in Nork York, his unrehearsed televsion appearance in Meet the Press, his press statements, his addresses in Chicago, Phoenix, Los Angeles, and San Francisco were well received and favorably editorialized by the leading organs of American public opinion, and they all served to cement the friendship that exists between our two nations. Wherever he went the American people welcomed him with a warmth that proved to him how right he was in referring to the soft spot that the Philippines occupies in our hearts.

In order that the American people may know how the Filipino people gratefully acknowledged the cordial welcome that was accorded their leader, under unanimous consent of the House I include in my remarks a few of the many editorials written in the Manila press about President Garcia's visit, the clippings of which I received by airmail from the Philippines the other day:

[Editorial from the Manila Times of July 3, 1958]

WELCOME, MR. PRESIDENT

One of the most successful top-level missions to the United States runs full circle today when President Garcia and his entourage return to Manila. The success of the good will part of the Garcia mission has been both clearly evident and unanimously accepted, both here and in the United States.

The good will aspect of the mission has been so successful there is no quarrel between the majority and the opposition over its practical value. With dignity and intelligence, the President represented the Philippines in Washington and before select and influential groups in the United States. His presence, the readiness with which he answered questions, and his frankness served to dispel prejudices to which even American observers are not immune and to create a fresh and clear impression of the type of leadership we have in the Philippines. Such a result has to be classified as an imponderable which can't be valued in terms of dollars.

A grateful people will meet the President at the airport today. We add our own word of welcome as he steps off the plane to rejoin his people.

[Editorial from the Philippines Herald, Manila, June 22, 1958]

IT'S UP TO US NOW

The United States has demonstrated once more to the world that it will not fail a friend in need. In hurried negotiations that reflected a marked departure from the usual stringent business deals, the United States Government wrote down a promise of up to $125 million loans to boost the shaky Philippine economy and a verbal assurance that there would be more help coming if the funds to be utilized in the next 12 months were used as intended.

It undoubtedly is to the distinct credit of the American Government and people that this happy situation has come about. Realizing the dangers posed by a collapse in the Philippine economy, not only in the point of common defense against communism but also from the standpoint of regional prestige, the United States Government strained its efforts in accommodating Philippine requests for loans that could arrest the slowdown in the country's economic development and afford a continuation of its program of industrialization. It can be said in all candor that the American Nation, in entrusting their faith in the economc blueprints submitted to them during the negotiations, not only has reaffirmed its maternal concern for the welfare of 23 million Filipinos but also has shown to 1 billion Asians that friendship with America, not on the basis of political blackmail but one on a plane of good will and genuine concern for each other's welfare, pays off handsomely.

For President Garcia, the gesture of the American Government and people will go a long way toward realizing his administration's economic goals. To the majority, his loan-seeking venture, earlier considered "dim" by a good number of people, including Americans, has come as a surprise and a spectacular triumph for which the Chief Executive can be proud of. It cannot be doubted now that the President took a calculated risk and a gamble in seeking the loans. And it is to his credit and to that of the entire Philippine Nation that he won.

But the loan alone, which can give prosperity to the entire country, is not all that the President has secured for his people. With his conferences with President Eisenhower, the Chief Executive was able to secure an unqualified assurance that the United States would instantly run to the defense of the Philippines if attacked, more aid and assistance for the armed forces, and, most important of all these assurances, that the military-bases question, which has long plagued the harmonious relationship of the two allies, would be resolved to the satisfaction of the two countries "having regard to the principle of sovereign equality and the vital requirements of an effective common defense." Indeed, President Garcia has secured much from his mission that he will return to his country a "victor."

In the face of all these triumphs, we should not lose sight, however, of the fact that the $125 million loans represent just the first step in building the nation economically. It should be remembered and constantly borne in mind by our leaders, both in the economic and political fields, that more economy-boosting loans will come our way if the administration spends wisely and fruitfully the initial amount during the next 12 months. For it is on this basis that the American Government and people will judge us on future approaches for aid. And for our own sake and America's prestige in this region, we should not fail.

[Editorial from the Manila Evening News of June 23, 1958]

THE JOINT PHILIPPINE ISLAND-UNITED STATES STATEMENT

The eyes of underdeveloped countries in the last few days were doubtless trained on the Philippine President and his mission as they went through their paces in Washington. The central target of the mission, as the world knew, was the procurement of an economic self-help loan for long-range developmental projects. At the end of President Garcia's 3-day visit to Washington, the results of his efforts were briefly summarized in a joint statement issued by the heads of state.

Firstly, there was a reaffirmation of the special ties between the Philippines and America, a friendship that now belongs to tradition. In the process, the Philippines and the United States pledged anew their cooperation against aggression, their adherence to the principles and aims of the United Nations, and the unity of strength and purpose in achieving peace with justice, based on the dignity of the individual.

As to the economic aid sought from the United States, none can deny that the President had received more than just sympathy. Necessarily, because of the long-range projects outlined, the United States could not immediately ascertain just how much financial aid it could extend. But instant action was taken in meeting the Philippine Island's immediate requirements—in the form of a $75 million credit line and a maximum of $50 million development loan. The immediate effects of these grants may be felt in the continuation of existing projects, as well as the launching of new ones deemed needed at this time, besides maintaining and certainly improving the employment level, the living standard, and the volume of production. Equally important is that these grants would serve to stimulate economically idle areas.

Finally, the joint statement assures us of continuing United States military aid in the buildup of our defenses against aggression, instant United States action in repelling aggression, and an equitable solution of problems affecting United States bases in the Philippines, with all due regard to the "principle of sovereign equality and the vital requirements of an effective common defense."

In fine, the joint statement answers fully the questions formed in the minds of those who watch from the sidelines, quizzically or skeptically, or perhaps hopefully, about the validity of this friendship between two countries, one big and the other small, whose main common ground is mutual faith in freedom and democracy, and whose relations rest squarely on mutual affection, respect and a reverence for justice.

Hundreds of editorials were written in the American press eulogizing President Garcia. I have only chosen a few excerpts at random representative of the spontaneous and sincere admiration that he earned because of the splendid manner in which he comported himself while in America and the excellent way in which his trip was arranged. Under unanimous consent I include them in my remarks:

New York Times (June 18): "It is a pleasure to welcome Philippine President Carlos P. Garcia who arrives this morning in Washington.

"We have occupied a unique position in that the Filipinos were in a sense, our wards for a long time. They have become our stanch allies, our firm friends, our coworkers for democracy and freedom. We have built up a new framework of government in Asia and we fought together for it.

The Filipinos have a right to assume that we will not fail them now."

New York Daily Mirror: "Speaking an English which Americans recognize as their own language, President Carlos P. Garcia of the Philippines has made a brilliant impression upon those who saw and heard him in New York at the various affairs arranged for his reception."

New York Herald Tribune: "He has won the admiration and friendship of the public * * * has shown that he can handle diplomatic problems with cool self-possession."

New York World Telegram and Sun: "Americans, no less than Filipinos can be grateful that a man of Mr. Garcia's stature and principles was available as successor to the late, great Ramon Magsaysay. The United States and the free world as a whole remain assured of a faithful ally and dedicated fighter against communism in a vital corner of the globe."

New York Times: "Philippine President Carlos P. Garcia is now in New York for a few days. His visit here is not technical. * * * His official duties have been discharged in Washington. Here he is merely among friends.

"It is at this point that President Garcia's visit, here and elsewhere, becomes far more than an economic mission. It is rather a symbol of the good things that Filipinos and Americans have been able to do in the past by their joint effort and a promise for even better things in the future."

Time: "The speaker before a joint session of Congress was the Philippines' cheerful, articulate President Carlos Garcia, and as he moved through Washington last week on an official state visit he soon found that United States officials had for him a soft spot."

Chicago Tribune: "A new type of Asian leader."

Arizona Republic: "President Garcia, like most Filipinos, is uncompromisingly anti-communistic. His government has not established relations with Soviet Russia nor does it recognize Red China. * * * The Philippines today is a bastion of American military strength in the Far East. Our bases on Luzon, both air and navy, are strong links in the defense of the free world. We can keep these bases because the Filipinos are on our side."

President Garcia unquestionably sold himself to the American people because of his winning personality and his apt and eloquent utterances. He has succeeded in establishing personal relationships that will be of great value to his administration and to his people. He showed no histronics in his demeanor and he did not play to the gallery. There was a dignified restraint in his behavior and there was unstudied honesty in his remarks. In his address before Congress he did not appear as one with hat in hand. Although he had something to ask for, he did it subtly and very appropriately—and may I add effectively—almost at the end of his speech and with such dignity and sobriety that won for him the standing ovation his splendid and masterly address so richly deserved.

Having said all these in tribute to a great leader and statesman who left behind him in this country, especially in Washington, an excellent impression that will no doubt be an asset to his people in the years ahead, I am sure it will not in any way detract from his personal success to mention also in this connection the Ambassador of the Philippines, Gen. Carlos P. Romulo who, as his country's representative in Washington, was the one who we all know laid the groundwork for the Presidential visit. I have personal knowledge of the meticulous care with which General Romulo made the preparatory arrangements because he called on me several times, wrote to me, and telephoned me regarding his President's trip. A Presidential visit is a difficult thing to manage and only by a careful handling of the smallest and multitudinous details in connection with it can every phase of the visit, official, diplomatic, social, and publicity-wise be a total success, and the Philippine Ambassador, with his usual ability and efficiency and using the innumerable valuable contacts that he has cultivated in and outside the United States Government, saw to it that nothing was overlooked.

It was also a good instance of effective public relations job and in this field General Romulo has rendered his nation service of incalculable value. He has visited every State of the Union and spoken in every important city in the United States publicizing the Philippines, has written books about the Philippines, and is respected and liked by the American press. He has helped make us more Philippine conscious. General Romulo is so highly regarded by the American people he has enhanced Philippine prestige immeasurably and has built here such a reservoir of good will for his country it is with justifiable pride that as his former colleague in this House, I also pay tribute to him today. An evidence of the esteem and affection in which he is held was the unprecedented ovation given him by the Senators and Representatives when he entered the session hall of the House the day President Garcia addressed the joint meeting of Congress. As is the usual practice when a head of state addresses Congress, his ambassador enters the session hall behind the United States President's Cabinet, accompanied by the State Department's Chief of Protocol.

As we face critical days ahead of us because of explosive international developments in the Middle East, as our motives are questioned when as a nation we have proved to the world, time and again, that our one and only aim as a people is to preserve peace and freedom not only for ourselves but for all, it is gratifying and inspiring to be able to dwell on a subject such as Philippine-American friendship, the keynote of which is identity of ideals and purposes, equality, mutual respect and good will between two nations of two different races. A state visit is paid to us by the Philippine President and he leaves behind him for us to cherish the lasting impressing of the tested friendship his people have for us. We hope he carried with him also the memory of the more than cordial welcome we accorded him and which we reserve only for those who, like the Filipinos, have earned a soft spot in our hearts.

This is the way to permanent peace and world brotherhood, and the Philippine-American pattern should be held up for all the nations to profit by.

Rising Costs and Foreign Competition Threaten Aluminum Industry's Future

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 14, 1958

Mr. DENT. Mr. Speaker, I am in receipt of a letter from one of my constituents, Mr. Nunzy Chipoletti, enclosing excerpts from a speech entitled "Rising Costs and Foreign Competition Threaten Industry's Future," made by Mr. Donovan Wilmot, vice president in charge of product sales for Alcoa. I respectfully submit for insertion in the RECORD both the letter and the speech, as I believe they contain messages of great importance.

JULY 21, 1958.

DEAR CONGRESSMAN: Enclosed is some reading material that might interest you. It came out of our monthly magazine we get here at our New Kensington Aluminum Co. plant.

We, here at the Arnold and New Kensington plant have been walking the street with seniority as high as 22 years for the past 10 months.

What they have called back is just a handful. Things have been at a standstill.

Sure, we get unemployment checks but that won't last forever. Unless something is done to our import laws, we will be out one long time, and at our age nobody will hire us for what few remaining jobs there are to get.

I have put 4 years in the Army infantry. Twenty-four months fighting through the jungles of Guam, Philippines, and Okinawa. I'm not looking for sympathy or handouts. Just a chance to work, so I will have some security for my wife and kids.

You have done a wonderful job in what short time you have been there and if you can lick this situation it will be magnificent.

Respectfully yours,

NUNZY CHIPOLETTI.

RISING COSTS AND FOREIGN COMPETITION THREATEN INDUSTRY'S FUTURE

(Speech of Donovan Wilmot, vice president in charge of products sales for Alcoa)

I am a little tired of the economic platitudes which have been handed out so freely over the past several months. I don't propose to discuss here whether business conditions have bottomed out, are going sideways, will edge up or fall off further or what. I think we would all be better off if less were written and more direct and positive action taken.

In November 1955, there was a shortage of aluminum. Alcoa's plans to substantially increase capacity to produce primary aluminum were well along when business went into a decline. This is the irony of fate. It has happened to us many times in the past. We recognize the current situation as one of those periods which inevitably occur from time to time. It is painful while it lasts but we get over it.

We want to sell every one of the products we produce at prices calculated to return a fair profit. This is highly necessary if a fair return is to be realized on the heavy capital expenditures we have made for expanded facilities and older facilities for the production of aluminum and aluminum products. Unjustifiable price concessions, only defeat the aims described.

PRICE POLICY HAS ENCOURAGED GROWTH

One factor which has given the aluminum industry an advantage over competing industries has been its pricing policy. This policy has been an important item in aluminum's rapid progress over the years. It has been designed to realize a modest return on investment rather than to take all the traffic would bear. This policy has encouraged consumption of the metal and enabled every segment of the industry to increase its size and strength.

It has been impossible to absorb the increases in wages and benefits and the consequent increasing material costs which have occurred with monotonous regularity year after year. The next increase in the aluminum industry under the last leg of the 3-year contract between the producers and labor is due August 1. If this goes through, our costs will, of course, be increased substantially and we shall have to decide what to do about prices. We don't like price increases any more than you do, but we want to compensate our employees properly and earn a fair return for our stockholders.

INDUSTRY COSTING SELF OUT OF BUSINESS

We, as an industry, and the American economy as a whole, face a number of more than usually difficult problems resulting from increased costs. I share the opinion of many others that if some well-considered action is not taken soon, American industry will cost itself out of business. For a long while the American people were apparently indifferent to price increases. That situation no longer exists, as you realize. The President mentioned this especially in his speech before the American Management Association in New York on Tuesday, May 20. Somewhere along the route we are going to reach a point of reckoning. In fact, we may have already passed it.

Every one realizes that this country is an excellent market for aluminum and aluminum products—the best in the world. This fact is not lost to the producers and manufacturers in foreign countries.

During World War II there was considerable agitation for the United States Government to enter into long-term contracts with a foreign source for its aluminum supply. This proposal was rejected by our military authorities who insisted that this country should provide its own facilities and therefore not be at the mercy of a foreign source. The primary industry must remain strong and will find it increasly difficult to do so unless the Government provides adequate protection for it against the competition of subsidized or state-owned foreign producers. Wage rates in these foreign operations are only a fraction of the rates paid in this country. I think you will find the following comparison interesting:

The present wage rate of the average factory worker in this country is $2.07 per hour. Average hourly earnings, excluding fringes, in the aluminum industry in the United States today are in a range of from $2.50 to $2.65. In certain competing industrial countries the following wage rates are paid:

	Cents
Japan	24.3
Italy	33.1
Netherlands	35.5
France	39
West Berlin	48.3

RECIPROCAL TRADE AGREEMENTS QUESTIONED

The matter of reciprocal trade agreements has been much in the news of late. I think it would be appropriate for me to take time out at this juncture in order to make a comparison for you of the tariff on imports into the United States versus those now effective for imports into certain European countries.

The United States tariff on aluminum pig and ingot today is 1.3 cents per pound. On July 1 of this year it will be reduced to 1.25 cents per pound.

France has a duty of 20 percent ad valorem on primary pig and ingot. On top of this, aluminum items are subject to 25 percent sales tax.

Italy has a tariff on crude aluminum of 25 percent ad valorem. On most semifabricated products its tariffs vary between 25 percent and 31 percent. The tariffs against Americans shipping into these countries are something like 6 to 10 cents per pound as compared to the 1.25 cents United States import duty which will become effective on July 1. Where, may I ask, is the reciprocity in this set of conditions for American-made aluminum?

While on the subject, I'd like to ask this question. "What do you want the Government to do regarding the import duty on extruded shapes, tubing and rod, which you can make on your extrusion presses?" And—"What about the tariff on fabricated items such as window frames, etc.?" You may be aware of the fact that many fabricated products of aluminum are now being imported into this country at 8 to 15 cents per pound under the established domestic market price.

Going far beyond the sphere merely of aluminum, I firmly believe that if the United States is to maintain its industrial strength and leadership, if our workers in many industries are going to continue to have jobs and the populace generally to enjoy our high standard of living, then something has to be done about our economic relationship with the competing industrialized foreign nations. American industry must not be put at a disadvantage with its foreign competitors. I would be willing to play golf for sizable stakes with a Sam Snead or Ben Hogan if the match were properly handicapped. I am certainly not, however, foolish enough to play against a Snead or Hogan with no allowance for the difference in our skills. They don't even run horseraces on that kind of a basis.

I would hope that Americans would give these complex problems the most serious consideration and then arrive at a policy which would safeguard our interests while dealing as fairly as possible with whatever friends we may have made among the foreign nations.

Returning to our own immediate domestic situation, I would again urge all to exert the maximum effort to create more uses for aluminum products and thereby provide orders for the greatly expanded domestic capacities which now exist.

Seven days each year Alcoans forsake their mills and typewriters to take a holiday with pay. In 1957, each one of these holidays cost Alcoa close to half a million dollars in holiday pay.

By the time the year's 7 paid holidays had rolled by in 1957, employees had received about $3,250,000 in holiday pay for those days of relaxation. For employees who had to be on the job on official holidays there was an additional $700,000 in premium pay.

Paid holidays are only one part of the Alcoa benefits program which makes up a hidden paycheck that last year averaged $880 per employee. The benefits which make up the hidden paycheck are life insurance, sickness and accident insurance, hospital and surgical benefits, workmen's compensation, State unemployment compensation, supplemental unemployment benefits, social security, retirement plan, jury pay, paid vacations, and paid holidays.

I would like to add just a few words of observation.

As a legislator of many years, I helped by legislative action to build up these hidden payrolls. They are part of the American way of life. They contribute to the American worker's standard of living.

The problem that I face is whether I can justly ask our American employer to compete with foreign employers who are not carrying the legislated extras placed upon his production costs.

The employee must face this reality sooner or later. If he demands cheap foreign products for his own use he destroys the market for his own handiwork and eventually creates the impossible economic situation that closes down plants all over the country.

No sane person is against reciprocal trades, but to be reciprocal they must be beneficial to both countries making the agreement. There is room for living and letting live. There is room for all of us to work, produce, and prosper. However, in this area of possibility the realistic and practical viewpoint must prevail.

Unemployed workers and closed plants reduce the revenues of our country. With reduced revenues how long can we continue the foreign-aid program?

To be honest to others, we must be honest to ourselves. The American consumer market can sustain foreign products only so long as the market is healthy economically.

When we have recessions of long duration the foreign producers will find themselves in a far worse dilemma than before their entrance in our domestic market.

I sincerely believe we must make a complete survey of reciprocal trades. We must ask two questions, Where have we been and where are we going?

In these answers can be found the solutions.

Why Not a Conservative Tack on States Rights?

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1958

Mr. SIKES. Mr. Speaker, I would like to call the attention of my colleagues to an editorial which appeared in the Florida Times-Union:

WHY NOT A CONSERVATIVE TACK ON STATES RIGHTS?

One of the most important pieces of legislation to come up in this session of Congress goes to the Senate now that the House has approved it.

The Upper Chamber will be a more formidable obstacle for passage of the bill. Lateness of the session—Congress is due to adjourn in August, barring a worsening of the Mideastern crisis—will also prove a stumbling block to Senate approval.

The measure is simply styled, "H. R. 3," meaning House Resolution No. 3, but it deals with the important subject of States rights. It seeks to avoid invalidating State laws on subjects on which there are also Federal statutes, as long as the two are not in conflict and unless Congress specifies that other laws on the matter are voided by its enactment.

While duplication of legislation has its disadvantages, there is danger in action—judicial or legislative—that might clip the wings of States rights and duties. One of the unhealthy trends—and it is a product of

our tremendous national growth—in government today is the centralization of authority in Washington. Anything to counteract that tendency should be encouraged, as well as moves that prod States into discharging their local responsibilities.

Why shouldn't States have laws on same subjects as the Federal Government? Don't their lines of operation overlap? A look around us—in the fight against crime, for instance—confirms that the National Government could use help in its work.

Accounting for a considerable bit of the opposition to the bill is the sweeping nature of the legislation. It is claimed by opponents of the measure that it leaves open the possibility of States virtually nullifying Federal statutes on a vast range of subjects.

Why not a more conservative approach to States rights? The only amendment to H. R. 3 so far sets the pattern. It declares that Federal laws on sedition and subversion do not supersede State laws in the matter. It was the Supreme Court's ruling overturning Pennsylvania's laws on this score that sparked the present action.

From that point the problem could be tackled in other particular instances. Step by step the principle of States rights could be strengthened, and its effect could be most far reaching.

Master of Oregon State Grange Favorable to Purposes of Columbia River Regional Power Corporation

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, July 22, 1958

Mr. NEUBERGER. Mr. President, the Oregon State Grange is the largest farm organization in the State of Oregon, and its annual sessions are attended by delegates from all sections of my home State. The sessions of the annual Grange convention are devoted to discussion of a wide variety of political and social questions of concern to members, not only on the basis of an interest in agricultural matters, but also because of desires to discharge responsibilities on broader issues of public policy.

One of the highlights of the annual grange sessions, which I have attended personally many times as a member of the grange and as a participant in its program, is the annual address of the State master. The Oregon Grange has been long and ably served by Mr. Elmer McClure, of Clackamas County. He has a deep interest in efforts to gain social justice and to insure maximum development and use of natural resources. This year, in his annual address, Mr. McClure covered a number of subjects. After his presentation, the Oregon State Grange adopted several sections of Mr. McClure's address as the official position of the organization on these important problems.

Because this action reflects public opinion among a large segment of Oregon's population, I ask consent to include a portion of Mr. McClure's address in the Appendix of the RECORD, so the Congress may be apprised of the viewpoint of the majority of Oregon Grange members. I particularly desire to stress and emphasize the endorsement by Mr. Elmer McClure of the general purposes and aims of a Columbia River Regional Power Corporation, such as we have advocated here in the Senate.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

The following sections of the master's address were adopted by the delegates to the annual session of the Oregon State Grange, assembled in Eugene, Oreg., June 9–13, 1958:

"REGIONAL CORPORATION

"I believe that the time is at hand when the Oregon State Grange should establish a specific policy concerning the Columbia River Regional Corporation program. The purpose of the Regional Corporation is to establish a single agency, a Federal corporation, to develop the water resources of the entire Columbia Basin. This corporation would have the authority to plan, to build, and to administer the development of the entire basin. It would be self-financing. It would absorb the Bonneville Power Administration.

"It is generally agreed that this is a financially feasible approach to the problem of regional development. We have as an example what has happened in financing the Bonneville grid system. A report from the Office of the Comptroller General shows that Pacific Northwest Federal power projects were $78,806,820 ahead of schedule in repayments to the Federal Treasury at the end of the 1957 fiscal year. The Federal loan payout schedule until that time had called for $148,017,884 in payments on principal, but the projects had earned sufficient additional revenue to repay $226,824,704, thus exceeding requirements by more than 50 percent. In addition, the dams have returned $161,718,044 in interest payments. They have also paid $123,933,335 for all operation and maintenance expenses of the projects.

"It is a matter of record that expansion of the Bonneville grid system has come to a halt. No new major projects have been authorized for Federal construction since 1953. The effect of this is that, where we had an expanding economy in the Pacific Northwest States during the 12-year period ending in 1952, we now have had no new major industries in Oregon for the last 5 years. That the steady expansion of the preceding 12 years was based on the abundance of low-cost power from the Bonneville Power Administration is aptly summed up in a report from the Stanford Research Institute made in 1951. This report stated 'Any detailed examination of the region's manufacturing growth during the past 12 years must conclude that a large part of it has been due to the region's ample supply of low-cost power, either directly or indirectly.'"

Extension of Trade Agreements Act

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Tuesday, July 22, 1958

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the speech I made at the annual convention of the Leaf Tobacco Exporters Association on June 24, 1958.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR JOHN SHERMAN COOPER, DELIVERED AT THE ANNUAL CONVENTION OF THE LEAF TOBACCO EXPORTERS ASSOCIATION, WHITE SULPHUR SPRINGS, W. VA., JUNE 24, 1958, SPEAKING WITH SENATOR JOHN F. KENNEDY, CHIEFLY ON EXTENSION OF THE TRADE AGREEMENTS ACT

I am very happy to be with you, and to speak at the annual convention of the Leaf Tobacco Exporters Association and the Tobacco Association of the United States. I want you to know how much I appreciate the cordial invitation extended to me by your organization.

One of my principal interests in the Congress has been to work with tobacco growers and organizations like yours, to promote the welfare of the tobacco industry—an industry vital to the people of my State as well as to Kentucky's sister States throughout the South, and to the Nation.

Many of your number are my fellow Kentuckians, and in my various stays in the Congress I have come to know and enjoy the friendship of Mr. Lanier, and many others among you.

Today, I intend to talk about tobacco and foreign trade. And in doing so, I know that I am talking to a group with export knowledge in this field.

You and your predecessors have been marketing United States tobacco in the far corners of the world since the first cargo of a few hundred pounds of leaf moved from Jamestown to England some 350 years ago.

You know the importance of the tobacco industry—both in its domestic and foreign trade aspects—to the people of the country. More than 800,000 rural families in the United States depend on tobacco as their principal source of cash farm income. Countless dealers, warehousemen, traders, factory operators, wholesalers, and retailers depend for their livelihood on the tobacco trade. Additional thousands of sheet metal workers, coopers, paper and foil factory workers make their living indirectly, but in part, from tobacco. And in this day of high budgets, we do not forget that Federal and State governments receive more than $2¼ billion annually in revenues from tobacco.

The level of foreign trade is of vital importance to all of those engaged in the tobacco industry. About 30 percent of a normal United States tobacco crop moves overseas each year, either in the form of leaf or tobacco products. Exports for the past 3 years—including leaf used in the manufacture of export tobacco products—averaged 600 million pounds of tobacco annually, worth over $400 million. This 3-year record of exports is an alltime high in value, and in volume was exceeded only by postwar restocking.

Nevertheless, even with these record exports, the United States is not sharing proportionately in the growth of world tobacco trade. Tobacco production abroad has increased remarkably since World War II, and our competitors have steadily enlarged their share of world trade. At no time in history has the United States export tobacco trade faced such intense competition in world markets as it does today.

A number of adverse factors have prevented our exports from reaching even higher levels. You gentlemen are well aware of that. But I would like to mention them briefly here.

I assume that one of the first to come to mind is that of competitive prices. It is not easy to appraise the ability of the United States tobacco growers to compete with respect to price in the international movement of tobacco. World market prices, such as those for cotton and wheat, based on uniformly recognized grades and quali-

ties, do not exist for tobacco. Our prices for the better grades of cigarette leaf are no higher, and generally lower, than competitive growths produced in such countries as Rhodesia-Nyasaland and Canada. On the other hand, lower quality grades produced abroad usually bring prices well below those for similar grades of United States leaf. So it is wrong to assume categorically, using average export prices from a given country as a criterion, that we are not competitive in world markets for cigarette leaf.

Of course, we are definitely not competitive in price, with respect to dark tobaccos. Yet our exports of these kinds of leaf, due to their suitability for manufacture abroad, have not declined drastically in recent years. But consumption of products made from these tobaccos, in foreign countries as well as in the United States, is definitely declining.

From the above discussion—it may be said that prices of United States tobacco, in general, appear to have had less adverse effect upon exports than other factors in world trade.

Basically, the dollar problem—the necessity to acquire and consume dollars for total trade—has been the justification used for the continuance of barriers to tobacco trade. Most foreign governments have been unable to earn sufficient dollar exchange to purchase from us all the tobacco and other commodities they desired. Our tobacco had to compete, not only with leaf grown abroad, but also with other United States commodities which these countries desire to buy—must buy—especially capital goods and other industrial products considered essential to economic development. Consequently, the major problems confronting us arise from actions taken by other countries.

Balance-of-payments difficulties have induced foreign governments to encourage self-sufficiency in tobacco, to resort to bilateral trading arrangements covering tobacco purchases from areas which are natural trading partners, and to use licensing and exchange controls which limit tobacco purchases here. But even with these barriers to our export trade, countries whose consumers insist on good-quality tobacco products, must continue to import substantial quantities of United States leaf tobacco to maintain satisfactory standards. For our export tobaccos—particularly those kinds used in cigarettes—flue cured, burley, Maryland, and others—are the hallmarks of quality the world over.

Within the Commonwealth market, producers in Rhodesia, India, and Canada are favored by guaranteed purchase arrangements and preferential tariffs. Even so, our tobacco accounts for about 50 percent of consumption in the United Kingdom—for there the superior quality of our tobacco overrides the price factor—and Commonwealth countries buy 40 percent of our tobacco sold abroad.

A second group of markets, outside the British Commonwealth, accounts for another 20 percent of United States exports. These markets also place greater emphasis on quality than on price and include such important customers as Sweden, Norway, Ireland, Thailand, and Mexico. We continue to hold the major portion of the import trade in these markets.

A third group of countries can be called price markets and for this group the price factor is of greater importance than the quality of imports. In countries such as Belgium, the Netherlands, Denmark, Portugal, and Austria, manufacturers have low profit margins and may pay close attention to leaf costs. But even in these countries, manufacturers are meeting consumer resistance against inclusion in their products of larger quantities of substitute tobacco. For example, Portugal announced recently that it would step up its purchases of United States burley this year, because of consumer preference for cigarettes containing good Kentucky tobacco.

These facts strengthen my conviction that price supports at a level lower than the present 90 percent of parity would not solve our export problems. And I do say that the thousands of tobacco growers who produce tobacco as their principal source of cash income must have some assurance that the crop they grow will repay them adequately for the long and arduous toil devoted to it. Growers have worked together over the years to keep their program sound, and have joined in a cooperative effort to comply with the law of supply and demand.

During the postwar period of foreign dollar shortages and domestic surpluses, various United States Government programs have been undertaken to bolster exports of farm commodities. The most important one in operation at present is Public Law 480 which, as you know, provides for the movement of tobacco and other farm products into friendly foreign markets, with payment made in local currency. The program is designed to sell to these countries additional products over and above what we might sell them for dollars.

Since 1954, some 200 million pounds of tobacco, valued at $135 million, has been programed under the Public Law 480 program. The Senate recently voted extension and expansion of this program, as I am sure the House will do. It is a valuable program and one of the best instruments of foreign policy that we have.

Primarily, however, you gentlemen are interested, and you are to be commended for pushing aggressively, the regular commercial sales of tobacco. For more than 90 percent of United States export sales last year were for dollars.

Our basic export objective is still to sell tobacco, with payment in dollars. This means that in the long run, foreign customers must have the dollars to pay for tobacco they desire to purchase in the United States.

Our best hope for improvement in the tobacco export situation, therefore, lies in the general upswing in world economic activity. Increased tobacco consumption abroad, which necessarily benefits our export trade, can only come from a substantial easing of international trade barriers.

You have been in the forefront of those advocating the reciprocal trade agreements program as the best means of achieving this objective. I believe your industry is right in looking to this program to foster and develop export markets for its products.

The original trade agreements legislation has been extended 10 times by the Congress since its enactment in 1934.

In the early days of the program the United States negotiated on a country-by-country basis, and between 1934 and 1937 concluded bilateral agreements with 29 countries. They embodied the most-favored-nation principle, and were therefore bilateral only in the sense that they were negotiated between two countries, and not in the sense that they established exclusive or preferential advantages. In each of these agreements we reduced or agreed not to increase duties on selected imports, and our friends made similar commitments on United States exports products, including, in numerous cases, leaf tobacco, and tobacco products.

In 1947 we decided that better progress in lowering world trade barriers would be made by negotiating on a multilateral basis, and since then we have negotiated under the General Agreement on Tariffs and Trade, commonly known as GATT. This multilateral approach has the effect of assuring to the United States many concessions resulting from the extension to us of agreements between other countries. Within this framework the United States has concluded agreements with 39 counties.

But the present authority to negotiate trade agreements will end on June 30 of this year. The President has urged Congress to again extend the authority—this time for a period of 5 years.

The basic purpose of the legislation is to enable the President to continue this program, to expand free world markets, and to expand markets for United States products. It is to strengthen our economy and the economies of our overseas friends. It is to strengthen our security by making more difficult the international economic penetration of the Soviet Union.

The President would be authorized to reduce duties in effect on July 1, 1958, by 25 percent in not more than 5 annual stages, with no decrease to exceed 10 percent in any one year. In order to deal with low duties, he would have the alternative authority to lower rates by 2 percentage points. High duties could be reduced to 50 percent ad valorem.

At the same time it provides safeguards to domestic producers. The peril-point and escape-clause safeguards would be strengthened. The peril-point investigation period would be lengthened from 4 to 6 months, permitting a more careful advance study of possible concessions. The escape-clause investigations would have to be completed in 6 months, instead of 9 months, as under present law. This change is designed to permit greater speed in bringing relief to injured or threatened industries.

There is a new provisions for review of escape-clause cases. When the President disapproves recommendations of the Tariff Commission in whole or in part, both Houses of Congress could within a 60-day period take action to approve the Tariff Commission's recommendations by a concurrent resolution, under privileged status, to be approved by a two-thirds vote of each House.

There are other important modifications, but I believe I have covered some of the principal points. On July 11, thanks to bipartisan support, the House of Representatives passed H. R. 12591 by a strong vote of 317 to 98. The Senate Finance Committee is now holding public hearings, and shortly, the Senate must come to its decisive vote.

The importance—yes, the necessity, for a 5-year renewal of the President's authority to enter into trade agreements is intimately related to the recent creation of the European Economic Community—the so-called European Common Market. Here six European countries, with a combined population almost equal to ours, and a combined national product about one-third of our own, are in the process of forming a new economic grouping.

During the next 12 to 15 years, the European Economic Community will gradually eliminate all duties on its internal trade, and will gradually adopt a common tariff to the outside world, including the United States. With this economic unification should come faster economic growth, and, consequently, enlarged opportunities in the European market for our traders and investors. The extent to which we can benefit from these enlarged opportunities will, however, depend upon the tariff rates ultimately adopted by the European Economic Community, and our ability to negotiate with the European Community during the critical years when it is fixing its policies. If we cannot negotiate through the mechanism of a Trade Agreements Act, we may lose rather than gain markets.

It is true that in certain lines our exports have been encountering unfortunate but unavoidable obstacles. I know you have experience with exchange controls, quantitative import restrictions, licensing systems, and other nontariff trade barriers which developed in many countries after the war. Un-

der the terms of GATT the member countries imposing these restrictions are obligated to eliminate them as rapidly as their exchange position improves, and the United States is constantly pressing such countries to relax their restrictions on American export products.

Most people are not aware of the extent to which these quantitative restrictions have been eased in recent years, particularly in Western Europe. Today, for example, Belgium, the Netherlands, and Germany—three of our principal trading partners—impose virtually no restrictions on imports of dollar goods. In fact, practically all of the countries of Western Europe have taken some steps to remove quotas on dollar imports. This development undoubtedly has played a part in the extremely favorable development of our European trade in recent years—our exports to this area having increased from $2.9 billion in 1953 to $6 billion in 1957.

There can be no doubt that some of our domestic industries have been hurt by competitive goods originating abroad. Nor can anyone deny that the Reciprocal Trade Agreements Act has, since 1934, made this competition easier for foreign products. What is really at issue, however, is whether or not this country gains more than it loses under reciprocal trade. Is there a positive balance of benefit accruing to the United States from the operation of the Trade Agreements Act?

The answer lies in two areas, domestic and foreign. On the domestic side there must be counted some American industries hurt by competition from abroad. I think it is only honest to say that low wage scales, combined with increasingly efficient production techniques, have put some American industries at a dangerous disadvantage.

Ranged on the other side, however, is a massive array of facts, figures, and opinion to the effect that although some industries are depressed, at least in part, because of foreign imports, the Nation's business as a whole is benefiting enormously from international trade.

Last year we imported $13 billion worth of goods. That is no small figure. But our exports in that same period totaled some $19.5.

To emphasize the importance of this trade to our economy, I would like to quote Secretary of Commerce Sinclair Weeks. Testifying last Friday before the Senate Finance Committee, Secretary Weeks pointed out:

"Our exports of goods and services currently represent about 6 percent of the Nation's output. The value of United States goods marketed abroad in 1957 exceeded the value of: all consumer purchases of automobiles, parts, and accessories; or all residential construction; or all consumer purchases of furniture and household equipment.

"Or, to take examples from the field of agriculture: all cash receipts of farmers from crop marketing; or all cash receipts of farmers from marketing of livestock and livestock products.

"We exported around 10 percent of our entire output of movable goods in 1957, including: 13 percent of our machine tools; 20 percent of our production of trucks; 29 percent of our construction and mining equipment.

"And in agriculture, on an average over the last 5 crop years: 25 percent of our cotton; 28 percent of our tobacco; and 32 percent of our wheat.

"Figures of these dimensions forcefully demonstrate the importance of world markets to every area of the United States, and every major segment of business and agriculture in our country."

It is easy to talk in terms of figures. They are cold, impersonal. This whole issue involves human beings as well. Testimony has been given in the current hearings that some 4.5 million men and women are dependent, directly or indirectly, upon international trade for their livelihood. They constitute 7 percent of our labor force. On the other hand, it is estimated that less than one-half million people would lose their jobs if all tariffs were abolished completely, a step no one suggests.

The trade agreements program has introduced a strong measure of stability into our international trade, and this we need to preserve.

Through the trade agreements program, moreover, we have a considerable degree of protection against the arbitrary and capricious setting up of trade barriers against our products. Any member country wishing to limit imports of American products must go through the formal processes set forth by the agreement. These same processes also serve in reverse to help us get foreign trade barriers removed.

And finally, I would like to say that the extension of the Trade Agreements Act is important to our national security, as well as to our economic well-being.

Our immediate crisis is one of physical security. It is different from any that we have known before, for Russia has developed rockets and missiles which can strike this country. Today, it can be said that we have adequate retaliatory power, and it would seem unreasonable that Russia would risk its own destruction by launching an attack upon the United States.

But for our own safety, we cannot assume that nuclear deterrence is absolute. There is always the danger of an act of desperation, an act of fear, or of a mistake. But until we secure disarmament, or settlements, our ability to maintain superiority, or at minimum, a balance of strength, is absolutely essential to our security.

Our national security is challenged also by the economic and political side of the new Soviet policies.

For some time now, Russia has been saying to other countries of the world that they, too, can develop economically, and quickly, by following the Soviet pattern, and by associating closely with the Soviet bloc. And, despite the needs of her own people, Russia has been offering, and delivering, substantial economic aid through trade agreements with other countries.

If we withdraw or withold assistance, and most important, if we close the channels of trade with friends throughout the world, so that they come to rely permanently on Soviet aid and trade, and their economies are tied into the Soviet bloc, then we will face eventual isolation in the world.

It is an isolation which would cut off vital materials, supplies that we buy throughout the world. It would dry up our world markets. Worst of all, it would make of the United States a military garrison, and we would see our standards of living steadily go down.

Recently, we have been shaken by the outbursts of anti-Americanism in South America, the Middle East, and even in Europe. I think it is likely that these outbursts and resentments against our country will continue. For millions of people throughout the world are in the act of revolution. As the richest and most industrialized country in the world, one that can give or withhold aid—restrict or open the avenues of trade—invest or not invest—insist on true disarmament and settlements, or adopt the illusory proposals of the Soviets—our policies will be a source of constant attention and criticism.

I am, like most of my fellow Americans, optimistic by nature. Yet I feel today, more than I believe I have ever felt, that our country and its institutions are in danger. During the past year and a half, the threats of war in Egypt and the Middle East—the cruel oppression of the Soviet Union in Hungary and Poland—war in Algeria, and now in Lebanon—the seeming return of Soviet Russia to Stalinism—all reflect the danger and instability of our time.

The question for us is whether we will make the continuing effort and sacrifice that our time requires.

And a further question is whether we will give the President the flexibility he needs, through the extension of the Trade Agreements Act, to meet the economic offensive of Soviet Russia. For in the next 10 years it is the economic competition between democratic countries, above all of the United States, with the Soviet Union that may determine the future of freedom.

The United States has for years been regarded as the leader in the move to lower trade barriers, eliminate trade discrimination and encourage the healthy flow of commerce between countries. I believe that our friends all over the world are watching developments in Washington, and will regard the outcome of current congressional deliberation on the trade agreements legislation as a guide to our future international economic policy.

Extension of the Trade Agreements Act will reflect the awareness of the American people and the Congress that economic growth—and the stability that can be enhanced by the development of wider world trade—is an important part of our effort toward world security and peace.

I believe that the Congress will extend the trade agreements legislation for another 5 years, with adequate authority for the President to conduct a trade program to the benefit of our economy and security, and that of our friends overseas and to the discomfiture of Mr. Khrushchev and his fellows.

Pope Pius XII

EXTENSION OF REMARKS
OF

HON. VICTOR L. ANFUSO

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1958

Mr. ANFUSO. Mr. Speaker, in these very trying days for humanity when the specter of war casts deep shadows over the entire world, the great figure of Pope Pius XII emerges as a source of hope and an inspiration for continued efforts in the interests of peace. People of all faiths are with him in his prayers for peace, for in them he expresses the wishes and the yearning of all mankind.

A very timely and inspiring article on Pope Pius XII, Beloved Spiritual Leader appears in a special issue of Wisdom, a magazine published in California. I commend it highly to my colleagues:

POPE PIUS XII, BELOVED SPIRITUAL LEADER

(By Alden Hatch and Seamus Walshe)

From the moment a child notices anything at all his character begins to be formed. In this his mother plays an almost solo role as she leads her baby out of the confusion that surrounds it.

Virginia Pacelli was not only a devoted mother, but deeply religious. She truly believed that the only reason we are born into this world is to serve God. So little Eugenio Pacelli was conscious of God almost as soon as he was conscious of hunger; and certainly in that household prayer was more important than food. As soon as he could speak, his mother taught him to say his baby pray-

ers at her knee. And his father's example was equally devout.

By the time Eugenio was 5 years old and ready to start school, the Pacellis had moved to Number 19 Via della Vetrina, the Street of the Window. This was deep in the crowded area that surrounded the Palazzo Taverna.

The pious Pacellis would not dream of allowing their son to attend a kindergarten or grade school supported by the state. Anti-clericalism and new ideas on philosophy, they feared, had penetrated even to that level. So they found a school they were sure was run in the old familiar way. It was conducted by the Sisters of Divine Providence, and situated conveniently close to the Via della Vetrina. In this gentle atmosphere the sisters extended the peace and contentment of spirit that Eugenio found at home.

Little Pacelli was already showing a marked leaning toward a religious life. In Rome it is the usual thing to see small shrines in houses, on the street corners, even in offices, dedicated to the Madonna or some favorite saint. The Pacelli home was no exception, but Eugenio wanted his own special shrine. He made it himself, with an altar on which he put a fine white damask, pieces of lace, and silver vases that he joyfully wheedled out of his mother and adoring older sister. He kept the vases filled with flowers, and when he played at religious ceremonies, candles burned in silver candlesticks on his altar.

Apparently Genio's one secular passion, then and all his life, was music. He learned to play the violin at a very early age, while his younger sister, Elizabetta, was equally precocious on the piano. Apparently the only arguments the devoted brother and sister ever had concerned the interpretation of a favorite composition. On such points Eugenio had strong views.

When Eugenio was 10, he had learned all the Sisters of Divine Providence could teach him. Just about this time Giuseppe Marchi, who had a fine reputation as a teacher, started a private school in his house in the Piazza di Santa Lucia Ginnasi on the far side of the Chiesa Nuova. The school seemed made to order for Eugenio.

Indeed, the moment he came under the intelligent guidance of Professor Marchi, Pacelli's mind opened its doors. Marchi grounded him well in the classics, and he delighted in the works of the ancient Greeks and in the history of his own great city. But his special ability was in languages. He picked them up seemingly without effort and could soon converse fluently in French and German, and had some English. To these he added many others in the course of his life.

Eugenio first assisted at the sacrifice of the mass in his own church, the Chiesa Nuova, where he became an altar boy for his cousin, Don Vincenzo Cirilli. He had a perfect record of attendance, for he considered it a great honor and joy to be allowed to wear the cassock and surplice and to assist the priest.

When Eugenio was 15, his father decided that it was time for him to think of choosing a profession. Eugenio had no definite ideas on the subject, but Filippo Pacelli had very definite ones. He wanted his son to be a lawyer like himself.

So Eugenio was entered in the Liceo Quirini Visconti. In 1891, this liceo, or high school, had a fine reputation for scholarship; but it was a very different sort from the pious education to which young Pacelli was accustomed. It was state-controlled and staffed by professors whose ideas on politics and religion were extremely modern—which then meant 19th-century materialism.

It must have been like the shock of an icy plunge to young Pacelli after being sheltered in a sort of intellectual incubator. However, Eugenio neither fell for this specious thinking, nor did he reject it blindly. Rather he examined these new ideas and found them wanting. In his thinking he was helped by Pope Leo XIII's encyclical, Rerum Novarum, Of New Things, which was published the year he entered the lyceum.

The encyclical sharply drew the difference between theories which were based on class struggle, and the principle of Christianity, which led to democracy. Eugenio read it and understood. He could see how the basic concept of communism must lead to self-destruction.

The antagonistic atmosphere of the lyceum was a good thing for him. It honed the edge of his mind to brilliance and rid him of soft thinking. It also offered him the advantages of genuine scholarship that opened the way to the higher levels of learning and taught him how to pursue them. He was much too sensible to disregard materialistic philosophy just because he thought it wrong. Instead he studied it carefully in order to combat it. But unlike many of his fellow students, who thought themselves more tolerant, he also read the Rerum Novarum and the Confessions of St. Augustine.

However, it was all very exhausting. At the end of his second year at the lyceum, Pacelli was more gaunt than ever and though his spirit was as ardent as ever, every nerve and muscle and organ of his body cried for rest.

The Pacelli family still owned the little farm at Onano, and Eugenio's mother proposed that he go there to build himself up for another strenuous winter. Eugenio was delighted. On "the lovely earth," which his grandfather had left to come to Rome, he would renew himself. And there he would make the decision that he had refused to face until now.

Although he was studying to be a lawyer, he had not definitely decided on a career. Now that he was 18, he knew he could put it off no longer. Young Pacelli was very much attracted by the legal profession. On the other hand, Eugenio felt a strong compulsion toward the church. Spiritual and moral rewards were much more important to him than money or fame.

Pacelli did not actually reach a decision at Onano. When he came back to Rome, his family was delighted at how tanned and rested he looked. They did not press him as to his future plans.

The young man felt the necesity for contemplation before finally deciding. He applied to the Canons Regular in the Via Nomentana for permission to enter their house for a short time. He wanted to make a retreat; to retire from the world and live in complete silence for 4 days.

The room he occupied was as bare as a room could be—a cell in fact. Here he passed the greater part of his self-imposed imprisonment. The days were spent in religious exercises. He rose very early and attended mass in the chapel. Except for evening devotion, the rest of the time was passed in solitary prayer and meditation. After those 4 days he had no doubts as to what was right. He decided to become a priest.

Now that Pacelli's career was chosen, there were all sorts of technical details to be arranged. First a seminary must be selected and permission to enter it obtained. Eugenio's parish priest gave him a strong recommendation as a young man likely to persevere in his vocation and to be a worthy addition to the ranks of the church.

The next thing was to be accepted by the bishop of the diocese. A young man cannot just decide to be a priest, enter a college and be ordained. He has to be "adopted" by his bishop; that is, the bishop takes him as a candidate for work in that diocese. There is no such thing as a free-lance priest.

With his fine record and recommendations, the bishop was, of course, happy to accept Pacelli. The young man duly entered the Capranica as a clerical student.

The regimen at the college was very strict. Just outside of Pacelli's door was a big bronze bell, like a ship's bell. At 6 o'clock every morning its clangor blasted him out of bed and echoed through the corridors. At 6:30 there were communal prayers and meditation in the chapel, which was on the same floor as his room. It was very small and awkwardly arranged. The backless wooden benches ran at right angles to the altar, which was set out from the wall and lighted from the back by a large window, whose tinted panes of glass let in only weak light even in summer.

At 7 o'clock the students went to mass; and at 7:30 they had breakfast. As is usual in Europe, this was merely a hot cup of milk mildly flavored with coffee or chocolate.

For the next 4½ hours there were lectures to attend. These were held at other colleges in Rome, as there were no classes in the Capranica. At 12:30 the students got their first real meal for the day. The food was good enough, but it was both monotonous and rather meager.

After dinner was the time of relaxation, for in Italy the siesta prevails even in the cloister. Pacelli and his fellows could rest or study in their rooms if they liked, or they could leave the college precincts and walk through the town, but only in groups. Probably so their minds would not be distracted from their mission, they were not allowed to visit their homes without special permission. Though this was seldom refused, the students were not expected to ask unless there was a real need.

After this recess there was another 2 to 4 hours of lectures before supper. Then came a further period of recreation, which consisted of meeting in the common room and talking shop; that is, about their studies or theology.

Nine-thirty was bedtime, but the students were allowed to study by the light of oil lamps in their rooms. Before and after each meal, and again before retiring, they all met in the tiny chapel for prayers and devotions.

After about a year at the Capranica, the strain proved too great for Pacelli's frail body. He caught a dreadful cold, which evolved into a deep cought that wracked him day and night, shattering even the quiet of his hours of prayer and meditation. When at last he consulted his family doctor, Eugenio received a verdict that was even more disheartening then than it is now—he was threatened with tuberculosis. Nothing would save him but rest and fresh air. Even then one could not tell.

Feeling completely crushed, he went back to the farm at Onano. As it had before, the pure air and serenity of Onano worked its natural miracle. Eugenio's body filled out and became firm again; his skin tanned, and he no longer felt the horrid, skin-pricking rise of fever in the afternoons. His cough quieted to an occasional short bark. When he felt his vitality rising higher than it had for many years, he went back to Rome.

This time the doctor was much more encouraging. The disease was arrested, perhaps even conquered, though the victory was still not complete. Under no circumstances would he consent to his patient going back to the ascetic life of the Capranica. It was the bitterest of blows to Pacelli. How then could he ever hope to become a priest?

While he pondered unhappily at home, word of his situation was carried by friends to the Holy Father. Pope Leo XIII already knew something of his story and was aware of the young seminarian's deep piety and brilliant scholastic record. He determined that such a youth should not be lost to the church because of a technicality. For the only time in the whole long history of the Capranica, the Pope granted a student the extraordinary dispensation to resume his

studies for the priesthood as a day student, without being subject to the rigid discipline of community life.

After he left the Capranica, Pacelli went on to the famous Pontifical University of the Roman Seminary. Stronger now than ever before, with the flame of his spirit adequately supported by his rejuvenated body, he made so brilliant a record at the university that on the day of his graduation, Pope Leo sent for him to come to his apartment in the Vatican.

Through the splendid corridors, past the elaborately accoutered guards, Pacelli walked, all trembling with excitement and awe, his vellum diploma clutched in his hand. At the end of all that magnificence was the Pope's simple apartment, and a little old man in white extending his hand. Almost overcome with emotion, Eugenio knelt to kiss the Fisherman's Ring and receive the congratulations of Pope Leo XIII.

Eugenio Pacelli was ordained a priest on Easter Sunday, April 2, 1899, in the church of St. Mary Major. It is impossible to describe, or even imagine, the waves of exultation and humility that swept his soul during the long ritual by which he was accepted and consecrated to the service of God. When it was over, though he would not himself have thought it, he was as pure and dedicated as St. Augustine himself.

On the following day, in the Borghese Chapel of the same church, Father Eugenio first offered the sacrifice of the Mass.

After his ordination, Father Pacelli went back to Onano. Though he was impatient to begin his ministry, the mental and physical ordeal he had been through had taken a lot out of him. He had to rest or collapse again.

As soon as he felt strong enough to return to Rome, he threw himself into the life of the parish. His post was that of curate at the Chiesa Nuova, where he had first served Mass and first realized the greatness of the priestly vocation. He went about his duties with quiet zeal. Though he had already taken his doctorate of theology, no work was beneath his dignity, no teaching so simple that he would not give his best. In fact, his greatest joy was to gather the children of the parish around him and, talking on their level, explain the meaning of the catechism, teach them simple prayers and listen sympathetically to the confused woes of childhood. He also spent long hours in the little confessionals listening to the sins and sorrows of that overcrowded neighborhood. Frequently at night he would be aroused by a sick call and stumble sleepily through the dark alleys to bring comfort to the sufferer, often to someone who had known him as a boy, and who lay sick, perhaps dying and very frightened.

On Sundays, Don Eugenio sometimes preached at the Chiesa Nuova. Some who remember those days picture him mounting the pulpit with rapid, nervous steps, but speaking with the firm assurance of a Roman to the Romans he knew so well, expounding doctrine to his people, admonishing or exhorting them with an inspired certainty that clothed his youth with authority.

Eugenio loved his work, and when he thought of his future he imagined himself in charge of some similar parish, working thus and striving for his people with contentment.

But though his ambition was so simple, his mind was too fine an instrument to be neglected—no good Christian may hide his talent. In the little spare time he had, Eugenio went to the College of Apollinaris where he won his doctorate of canon and civil laws, summa cum laude. He had previously taken his doctor's degree in philosophy. Thus he ended the preferred simplicity of his life.

Now the church as an organization was as keenly aware of its need of fine instruments to serve its high purpose as any corporation. From Pope Leo XIII on down, its chief dignitaries had their eyes on young Pacelli. Particularly his friend and patron Vincenzo Cardinal Vannutelli brought him to the attention of the Vatican, without Pacelli's knowledge. The young priest had shown himself to be unusually intelligent, and, unlike many intellectuals, he was painstaking and conscientious in his work. He had a thorough knowledge of three important languages, French, English, and German; and was a doctor of theology, philosophy, and canon law. Finally, they took into account that he came from an aristocratic country family who had faithfully served the church for generations. The latter consideration was not snobbery, but simply the realistic estimate that such a background made the young priest even more valuable. It was no great surprise to anyone—not even to Pacelli—when Monsignor Gasparri paid him a visit.

The monsignor was secretary of the Congregation of Extraordinary Ecclesiastical Affairs, which is the Vatican foreign office. There is also a home office called the Congregation of Ordinary Ecclesiastical Affairs, which, in 1901, was headed by Msgr. Giacomo della Chiesa. The overall head of both departments was Mariano Cardinal Rampolla, secretary of state.

After receiving his instructions from Cardinal Rampolla, Monsignor Gasparri paid his portentous visit to Pacelli. Though he was not surprised, the young priest was very doubtful when Gasparri offered him a position in the Vatican foreign office. "This is not what I became a priest to do," he said. "When I made my decision I had no thought of the church needing the sort of work you describe. My desire was and is to work among the people of my parish, this one or another. I have no other ambition."

The monsignor smiled into the earnest black eyes behind the young man's spectacles. "They also serve Him, who work in the administration of His church," he said. "'In my Father's house there are many mansions.' We feel that you will be more valuable because of your special qualifications in our department than at your present work. Also, you will have a little spare time for the parish. We do not want our officials to lose touch with the people. But we want you. Will you accept?"

"What else can I do, Father?" said Eugenio. "Yes, I will come and serve to the best of my ability, but I am disappointed. It is not by my wish."

From that moment Don Pacelli's life changed radically. No longer did his neighbors see the young priest walking every morning toward the Piazza Navona and his college. Instead he headed briskly in the opposite direction toward the Castle St. Angelo.

Pacelli's first position was that of a minor clerk, an epprendista it was called, which might be loosely translated as apprentice. His work was mainly to write unimportant letters—the Vatican was not yet equipped with typewriters—and to copy reports from nuncios all over the world. It could not have been better training; for Pacelli's retentive mind stored up a vast knowledge of the complex problems faced by the representatives of a truly global church. Soon he could smile at his naivete of a few months before. Here indeed was work to be done that was vital, not only to the church, but to all mankind.

Soon after he entered the Secretariate of State in 1901, Pope Leo appointed Pacelli as his envoy to carry his personal condolences to King Edward VII of England on the death of Queen Victoria.

It is surely a very unusual apprentice who learns his trade in such exalted circumtances. At the Court of St. James, Pacelli, who was 25, was most likely the youngest of all the diplomats who hurried to carry the sympathy of the nations of the world to the court of courts on the death of a sovereign who had become a symbol of the stability and grandeur of the British Empire and had given her name to an era in history. He moved at ease among the famous figures of the Victorian age, modest but dignified. Word came back to the Vatican of the fine impression he had made with his quick smile and friendly warmth.

Pope Leo XIII died in 1903. He was sincerely mourned by everyone, for his inspired leadership had done much to rejuvenate the church. Father Pacelli was especially sorrowful, for Pope Leo had been his protector and friend, the first truly great man he had known.

In the first year after the election of a new pope, Pius X, Don Pacelli served out his apprenticeship. In 1904, he was promoted to the rank of minutante, which is a sort of confidential secretary. In that position he attended high-level conferences, prepared secret reports and drafted important state papers. In short, he was taken completely into the confidence of his superiors.

In that same year Pacelli was appointed a papal chamberlain and made a monsignor. This title is not conferred by any special religious ceremony; but is granted by the Pope as a mark of distinction. The award is made known by a "letter patent," which advises the recipient that he is entitled "to all the privileges of place and rank that may accrue."

There are precious few privileges except that, if the new monsignor is in the personal service of the Holy Father, he may work even harder than before.

However, Monsignor Pacelli now doffed the plain cassock of a simple priest. His cassock was still black, but it was made of finer material with all the edges and cuffs piped with red and a long line of red buttons extending from chin to feet. A small shoulder cape was attached to the cassock, and the stock beneath its collar was changed from black to red. When in Rome he wore silver buckled shoes.

In 1905, Pacelli was further honored by being made a domestic prelate, a title of honor and distinction conferred by the Pope for services rendered to the Vatican.

Gasparri, now a cardinal, was still head of the Vatican foreign office and these two worked even more closely together. But all of Monsignor Pacelli's time was not occupied by high-level diplomacy. He continued his work at the Chiesa Nuova, where he still taught catechism, heard confessions and occasionally preached. He also continued studying, and became a part-time lecturer in canon law at his old alma mater, the Apollinare.

The decade from 1904 to 1914 was tranquil on the surface, though underneath the pressures of national ambition and the armament race between England and France and the German Empire were building up to the explosion of World War I. During these last years of serenity, Eugenio Pacelli played a great part in a tremendous task which Cardinal Gasparri had undertaken at the direction of Pius X. It was no less than the codification of the canon law, a labor beside which the projects of Hercules seem simple. For church law had been built up during a thousand years of edicts, papal bulls, instructions, decrees, regulations and precedents, each probably applicable to its era, but often contradictory and by now in such a state of confusion that many ecclesiastical authorities considered codification absolutely impossible.

Cardinal Gasparri had chosen the right man for his assistant. Monsignor Pacelli organized the work, and soon an army of priests all over the world were busily searching through their archives. Their findings were sent to Rome where they were sifted,

indexed, and ultimately codified by Gasparri and Pacelli. The work was finally finished and the first draft sent out to the bishops just after the death of Pius X in 1914. It gave Pacelli a legal knowledge equal to that of any man's who ascended the papal throne.

Even these labors did not keep Pacelli tied to a desk. Twice again he went to England, the first time as assistant and advisor to Cardinal Merry del Val at the International Eucharistic Congress of 1908. Pacelli's third visit to England was in 1911, as a member of the papal delegation to the coronation of George V.

In that same year the Catholic University of America in Washington, having heard of his vast labors in the jungle of church law, offered him the chair of Roman law. He wanted very much to go, for he had a far-sighted understanding of the growing power and importance of America, and realized, as many Americans of those days did not, that the United States would soon be a great factor in international affairs.

Pope Pius, himself, and Cardinal Merry del Val told him they could not spare him. Disappointedly he refused the offer. Soon afterward, in 1912, Monsignor Pacelli was made acting secretary of the Vatican foreign office.

The summer of 1914 was very hot, and apparently serene. But the tensions of the armament race were becoming acute. Advised by Merry del Val and Pacelli, Pope Pius X was anxiously awake to danger. Again and again he warned Europe of the peril of sudden fearful wars that might spring from the diplomatic chess game the great powers were playing, with battleships and armies as the capital pieces and the lives of their subjects as the pawns. Typically, no one heeded the saintly old man in the Vatican.

The pistol shot that killed the Archduke Francis-Ferdinand at Sarajevo was the flash that fired the European powder barrel. Helplessly the Pope, helplessly Merry del Val and Pacelli watched the drift toward war, slow at first, and then, as the days of July ran out, with terribly quickening pace. Now, the very men who had played with the fire, the statesmen of Austria, Russia, Germany, and France tried to halt the spreading flames. But the momentum of mobilizing armies and unbridled speech was too great. Kings and Emperors, the royal cousins of Europe, sent pathetically affectionate, desperate telegrams to each other begging for peace; but family ties were too frail to stem the onrush. On July 28, 1914, the declarations of war went out, and on the frontiers of Europe little flickering flashes of rifle fire from border guards grew as the reserves poured out, and the crash of cannon punctuated the rattle of machineguns in the spreading holocaust.

Three weeks later, on August 20, 1914, Pope Pius X died.

As men by the tens of thousands died in an ever-widening arc of fire from the Marne on the west to the Pripet Marshes on the east, Giacomo Cardinal della Chiesa, archbishop of Bologna, was very quickly elected Pope and named himself Benedict XV.

Benedict's first move showed his appreciation of the necessity for the most expert assistance. He appointed Cardinal Gasparri secretary of state, and Monsignor Pacelli moved up to Secretary of the Congregation of Extraordinary Ecclesiastical Affairs. Thus Benedict acquired a proven team to advise him on the delicate relations of the Holy See with the passion-blinded statesmen of the warring powers. Certainly the name of the department that Pacelli headed was now justified—never in history had the Vatican been involved in such extraordinary ecclesiastical affairs.

Benedict was much too astute a diplomat not to realize that his hands were bound by the prejudices of the leaders of the fighting nations. He knew that there was virtually nothing he could do to stop the holocaust, though that did not keep him from trying. But if he could not arrest the course of the war, there were many things he could do to alleviate its consequences. He placed most of the business of relief in the hands of Monsignor Pacelli.

Pacelli was especially fitted for the job. He knew personally many of the diplomats on both sides with whom he must deal in order to get permission for acts of mercy; he knew how to instruct his representatives as to the best way of approaching them. He also knew the needs of the people themselves, not just the overall pattern of hunger and sickness and destruction, which were universal, but the special local requirements of all those sharply individualistic nations.

The worst situation was that of the prisoners of war. Conscription had produced armies of millions of men, far larger than ever before in history. In the rapid German advance through Belgium and France, the prisoner bag was tremendous. The German General Staff had not foreseen this. They simply did not know what to do with hundreds of thousands of captives; so they just herded them into barbed wire stockades where they began to die like fish stranded on a beach.

On the eastern front the situation was even worse. The Russians had taken many thousands of German prisoners in their advance into East Prussia, and the notoriously inefficient Czarist Army was hopelessly baffled by the problem. In addition, they were, if anything, less humane than the Germans. So the plight of their prisoners was incredibly miserable.

Pacelli determined to use the entire hierarchy of the church to cope with these conditions. Orders went out from the Vatican to the bishops of all dioceses in which there were prisoner-of-war camps to see to it that priests who spoke the language of the captives were enabled to contact each of them personally and to establish communication between them and their families. Furthermore, the bishops were instructed that no distinctions were to be made between race, nationality, and religion. All were to be taken care of as well as was humanly possible.

As soon as the priests got to work, reports began to come back to Pacelli of the many wounded among the prisoners who were dying from lack of care and the despondency of their condition. He promptly opened negotiations with all the belligerents for the exchange of wounded prisoners and interned civilians. Since these unfortunates were a source of embarrassment and a drain on their captors, and no military good to their own countries, the various governments were willing to listen to reason. As a result of Pacelli's efforts nearly 65,000 people were returned to their homes.

In all this Pacelli worked closely with the International Red Cross and the Swiss Government. Neutral Switzerland opened her sanatoriums to wounded and tubercular soldiers of all nationalities.

For 3 years Monsignor Pacelli directed this great network of relief activities. He thought of it as a job to be done once in a lifetime. Had he realized that he was only learning how to handle even heavier responsibilities in a yet more terrible war, the load might have been more than he could bear.

By January 1917, after nearly 3 years of mass slaughter with no decisive results, everybody but the generals was sick of war, and there were signs that even the military were looking for a way out. Pope Benedict XV felt that now there might be a chance for direct action for peace to succeed.

In December 1916 President Wilson had queried the belligerents as to the terms on which they would consider making peace. With Gasparri and Pacelli, the Pope carefully studied their replies and came to the conclusion that there was sufficient common ground to offer a faint hope of peace. Working closely with Pacelli for several months, he drew up his own peace plan.

At this time the question arose as to how best to present it to the nations at war. The Pope did not want to launch it at all if there were no chance of its having at least a hearing. He needed to sound out the various governments ahead of time. This would have been simple enough if he had had diplomatic representatives in all their capitals; but he did not. The nearest thing to an official contact with Kaiser Wilhelm II's government was the Papal Nuncio to King Ludwig III of Bavaria. In February 1917 the Nuncio, Archbishop Guiseppe Aversa, died. The Pope decided to replace him with a man whom he hoped would be able to get to the Kaiser himself and lay the groundwork for peace. Pacelli was the obvious choice. His appointment was announced in April 1917. Pope Benedict decided to consecrate the new Nuncio Archbishop of Sardes. He arrived in Munich on May 25 and went directly to the Nuncio's official residence, a neoclassic palace on the Briennerstrasse opposite the Brown House, which later became the cradle of nazism.

The very next day, Pacelli, who was not the man to waste a moment in the pursuit of peace, secured an audience with King Ludwig III of Bavaria. He lost no time in making the object of his mission clear. In his opening address he told the tottery, white-bearded king of the Pope's desire to act as intermediary in peace negotiations and added, "The task of collaboration in this work of peace has been entrusted to my weak hands in a period that has no parallel in history."

He urged that, with Ludwig's support, it might be possible to achieve the peace so much desired by the Holy Father, a peace founded on the Christian principles of love and justice. King Ludwig agreed to use what influence he had with his imperial master to arrange that Pacelli be received by the German government.

As a result, the Nuncio was invited to Berlin to confer with the Imperial Chancellor, Theobald von Bethmann-Hollweg, on June 26, 1917. Pacelli firmly stated the conditions under which Pope Benedict hoped that peace might be made. The Chancellor was worried, almost distraught, for he realized how desperate Germany's situation was and knew his imperial master's uncompromising nature. He is said to have moaned aloud when Pacelli spoke of the possible restoration of Alsace-Lorraine to France. But he was greatly impressed by the earnest, logical words of the Nuncio.

The fact that von Bethmann-Hollweg was too reasonable a man to suit the megalomaniacal mood of Kaiser Wilhelm's final period. Indeed, the Chancellor was on his way out. But he had just enough influence left to arrange an audience for Pacelli with the Emperor. It took place on June 29.

The German Emperor stood behind the desk, with his withered left arm resting on the hilt of his cavalry saber and the Iron Cross (first class) dangling from the collar of his field-gray tunic. He greeted the archbishop with the minimum of respect due to his office and forthwith began to talk in rapid, explosive French, interlarded with German words.

When the Nuncio finally got in a few words about the Pope's peace plan, the Emperor with a slight sneer suggested that he might have more success if he presented it to a Catholic power.

Despite his discouraging reception at the imperial court, Pacelli's hopes rose again when he went to Berlin to see the new Chancellor, George Michaelis, who on July 14

replaced von Bethmann-Hollweg. Michaelis declared that the German Government was ready to talk peace on the basis of the Pope's proposals.

Days of anxiety, exhaustion and frustration followed for the archbishop. Interview piled on wearisome interview. Diplomatic promises were offered and quickly withdrawn. Pacelli passed through the gamut of emotions from high hopes to blank despair. In the end there was only despair.

By October, Pacelli came to the bitter conclusion that Michaelis had been simply playing cat-and-mouse with him. With no hope left of immediate action, Pacelli returned to Rome to report his failure to the Holy Father.

After a very short stay in Rome, Archbishop Pacelli went back to his post in Munich. Even though there was nothing to be done for peace, there was a tremendous job to do in alleviating misery. He virtually spent the next year on the road traveling around Germany, which was sinking further each week into the gray misery of war and the stupor of imminent defeat.

There was hardly a prisoner-of-war camp or hospital that he did not visit, bringing not only material gifts of foods and medicine from the Holy See, but, since he could talk with all but the Russians in their own language, bringing also comfort and hope.

During the final months of war the allied blockade had reduced the German people to a point just above mass starvation, and many unfortunates fell below that level. Though Pacelli had small use for the militarists, the plight of the civil population moved him deeply.

To help them and the unhappy German poor, who, normally living at a subsistence level, were ground down by the pressures of defeat to actual starvation, he organized a great relief campaign. The work of mercy that Pacelli performed is still remembered in Germany today.

The end came for Germany in November 1918. The Kaiser and his bemedaled court fled to Holland in a special train, while the humble citizens, who now headed the hastily organized republic, undertook the thankless task of surrendering Germany to the victorious Allies. Though the guns fell silent on the western front, there was no peace in Germany.

The Communist revolution came to Munich on February 21, 1919, and after 6 weeks of sporadic street fighting the Communist mob seized the Bavarian government and declared it a separate Communist state. At this point all the diplomats in Munich packed their belongings into automobiles and trucks and scampered across the frontier to the comparative safety of Berlin. Only Nuncio Pacelli announced that he was staying at his post.

During the months since the armistice, Pacelli had increased his efforts toward relief. No sooner had the Communists seized the Bavarian government than they started a campaign of hate against the Papal Nuncio. Returning one day from a visit to a poor quarter of the city, Pacelli saw that the ground floor windows of the nunciature were shattered and its facade pock-marked by machine-gun bullets.

That very afternoon he heard a crash below stairs and raucous voices. Hurrying from his office, he saw that the hall was seething with an angry mob armed with everything from butcher knives to Luger automatics. Pacelli walked straight toward them. There was a sudden silence as they saw his tall, thin figure in black, with a violet sash around his waist and the gleaming cross on his breast.

"You must leave here," he said calmly. "This house does not belong to the Bavarian government but to the Holy See. It is inviolable under international law."

There was a muttering rumble from the crowd and one of the leaders shouted, "What do we care for the Holy See? We'll leave if you show us your secret store of money and food."

"I have neither money nor food," said Pacelli simply. "For, as you know, I have given all I had to the poor of the city."

"That's a lie!" shouted the Communist.

"No; it's true," other voices cried. "Let us go."

Seeing that he was losing control of his band, the leader glared venomously and hurled his heavy automatic at the archbishop. It struck him fair on the chest, denting the jeweled cross. Pacelli put his hand to his breast, but continued to stand looking into the angry faces with eyes full of sorrow and pity.

Even the leader seemed shocked by what he had done. In an embarrassed silence the whole crowd shuffled out of the door.

Pacelli never knew the name of the man who had attacked him, nor why he threw the pistol instead of firing it. Perhaps it was out of ammunition, or perhaps some remnant of grace held him back from murdering a man who wore the livery of Christ. The archbishop kept the badly bent cross and years later gave it to Francis Cardinal Spellman as a mark of his great affection.

The forces of the Republican German Government under the command of General von Epp regained control of Munich in May 1919. His police immediately began hunting down the Reds. One of the first things they did was to call at the Nunciature to get information from Pacelli. But the Nuncio had no desire for revenge and would take no part in betraying his enemies. In June 1919, the new Bavarian assembly met and elected a democratic government.

Archbishop Pacelli began at once the work of negotiating concordats with the German states. Pope Benedict would have liked to make a single agreement with all Germany, but this was impracticable under the Weimar Constitution, which made the German states semiautonomous in such matters. The first step then was an agreement with predominantly Catholic Bavaria. The work of negotiation was interrupted on January 22, 1922, by the death of Benedict XV. Pacelli's personal grief at the loss of a friend was reinforced by his anxiety as to whether his successor would pursue the same policies. This worry vanished when on February 6, 1922, Achille Ratti was elected Pope and took the name of Pius XI.

It took 4 years of hard work and delicate maneuvers to negotiate the much-desired concordat. The solemn agreement, which was finally signed on June 24, 1929, allowed the Catholic Church to function where church and state had been recently separated.

It was an amazing diplomatic achievement for Pacelli in the face of the rising tide of nazism in a country where the kulturkampf was becoming epitomized by atheism and, especially, by anti-Catholicism.

In November 1929, Archbishop Pacelli went to Switzerland for a highly necessary rest. In the healing quiet of a narrow snow-filled valley below the sheer white peaks, he could at last enjoy complete solitude for prayer and meditation of which he had for so long been deprived. There the telegram from the Holy Father found him, announcing that he was to be elected a cardinal at the next consistory and ordering him back to Rome.

Once the official reception was over, while he was waiting for the College of Cardinals to meet and elect him a member, custom enjoined that Pacelli must wait elsewhere for the message to be brought to him. He chose the Palace of the Propaganda, in the Piazza di Spagna, for the few days at his disposal. He could not be present at the meeting of the Sacred College, which was held on December 16, 1929, for the cardinals gathered together as it were in secret, but in the evening a letter was brought to him at the Propaganda Palace. Beginning with his then title of "Excellency," it informed him that His Holiness had been pleased to receive him into the College of Cardinals, and the letter ended with his new title of "Eminence." That was all; a simple letter conferred on him the honor of belonging to the elite group of princes of the church. He murmured his thanks but inwardly prayed that he might successfully carry out the extra duties of his new position.

Three days later, December 19, was the day fixed for conferring the outward sign of the cardinalate—the red hat. The ceremony was brief and not attended by any unnecessary pomp. The cardinals gathered in the Sistine Chapel, and Pacelli, flanked by two attendants, walked with hesitant steps to the foot of the altar and knelt before Pius XI. The folds of his silk mantle fell in a red circle around him and he held his head erect as Pope Pius XI received the hat from one of the servers and let it rest on his brow, pronouncing as he did so, "To the glory of Almighty God, receive this red hat, a sign of the cardinal's dignity. It signifies that you should be ready to shed your blood, if necessary, in the defense of the holy faith and for the preservation of peace among Christians. In the name of the Father, and of the Son, and of the Holy Ghost. Amen."

Pacelli rose from his knees and took his place among the cardinals. When the ceremony was over, the doors of the chapel were closed and another consistory or meeting was immediately held. This was not to discuss matters of moment, but to confer on the new cardinal the right of being able to speak and pronounce judgments in the future meetings of the sacred college.

Again Pacelli knelt before Pius, and the Pope opened the mouth of the new cardinal and then closed it, signifying the right to speak. Pacelli then offered his right hand to the Pope and his holiness placed on the fourth finger a gold ring set with a large sapphire, the symbol of his office and of his authority.

As soon as a cardinal receives the red hat, he is appointed titular head of a church in Rome, whether he is Italian, British, American, or any other nationality. Cardinal Pacelli was appointed to the Church of Saints John and Paul, one of the oldest in the city.

The new cardinal was not given much time in which to resume his duties as a priest. Pope Pius XI had brought him back from Berlin for a definite purpose. On February 11, Pietro Cardinal Gasparri, who had been reappointed secretary of state by Pius XI, asked permission to retire. He was just over 80 years old, and now that the great works of his life, the Lateran Pact, and the codification of canon law were an accomplished fact, he thought that he should hand over his vast responsibilities to a younger man.

When Pius XI had first heard of his intentions, he realized that Pacelli was Gasparri's logical successor. The Pope knew Pacelli well, both as a friend and a diplomat. Both had faced the Communist terror that attacked central Europe after World War I, Achille Ratti in Poland, and Pacelli in Munich. They had worked together ever since with the same high purpose and like-minded methods. Pacelli's brilliant successes in his missions to Bavaria and Prussia, his wide knowledge of foreign affairs, and his record as a peacemaker, which some years later led Father Robert I. Gannon of Fordham University in New York to call him "the cardinal of peace," were controlling considerations. In the letter of appoint-

ment which Pacelli received on February 10, 1930, the Pope wrote, "We make this appointment because of your spirit of piety and prayer, and also because of the great talents which God has given you."

Pacelli knew that he would have to grapple with problems presented by scientific advances and political retrogressions. The most ominous shadow on the picture was the rising popularity of totalitarianism—Facist, Nazi, and Communist. He was prepared to combat all three.

Not all of Pacelli's days as secretary of state were toilsome and harassed. There were happy occasions, and moments of great triumph. Such was his trip to Argentina as papal legate to the Eucharistic Congress held in Buenos Aires in 1934, when the faithful of all the world gathered to honor Christ the King in the sacrament of the Eucharist. These congresses are held in a different world capital each time. It was many years since Pacelli had attended the one in London in a minor capacity.

Ever since his invitation to become a professor at the Catholic University in Washington, Eugenio Pacelli had wanted to go to America. In this he was like most Europeans whose dearest wish was to go to that—in Europe—fabled land. In 1936 Pacelli's chance came. He recognized that the aggressions of totalitarians, of the right and left alike, were part of a worldwide attack on the Catholic Church. And he proposed not to choose between either of these monsters but to rely on strengthening the solidarity of Catholics throughout the world. In line with this policy and to make contacts in the United States, which had no diplomatic ties with the Vatican, he asked the Holy Father's permission to make the trip. The aging Pope replied, "Va figiolo, staccati un instante da me. Viaggia!"—"Go, little son, leave me for a short time. Travel!" This was the first time in history that a papal secretary of state had visited the United States.

Pacelli had been well briefed on the ways of American journalists, and on the way over he had typed out a "handout" himself, which he now distributed to the reporters. In it he emphasized that his visit was purely personal—to see for himself the country where people know how to unite so nobly a sense of discipline with a well-ordered liberty.

The crowding, pushing reporters, the colloquial questioning, and the lightning storm of flashbulbs did not bother him at all. Smiling happily, he walked down the gangway determined to see America like an American.

So he did all of the things a tourist is supposed to do. He shot up to the top of the Empire State Building, and properly admired the skyline of New York. In Philadelphia, he saw the Liberty Bell, and in Washington drove out to Mount Vernon. He thought that ride behind the screaming motorcycles of his escorts was great fun, for he always loved speed.

In Washington he gave an address at the Catholic University, where he spoke a little wistfully of its offer of a professorship saying, "Only the fatherly prohibition of Pius X kept me from accepting such an agreeable invitation, and so it does not seem to be entirely strange that I am here."

During his stay in the Capital he made his only political speech—if you could call it that—to 500 newspapermen at a luncheon in his honor at the National Press Club. Speaking his slow, precise English, he told them of their responsibilities for molding public opinion toward peace, and added, "Glory belongs not only to those who triumph on the battlefield, but to those who safeguard tranquillity and peace."

Then the cardinal chartered an airplane and roared away on a whirlwind tour of the United States: Cleveland, Chicago, Notre Dame—where he received an honorary degree—St. Paul, San Francisco, Los Angeles, and Hollywood—where he enjoyed a visit to a movie studio—Boulder Dam, Kansas City, and back to Chicago. Though he visited many Catholic institutions, he did not confine his interests to them, but endeavored to make contact with every aspect of American life.

As he boarded the ship for his return voyage, Pacelli said with real sincerity, "I am leaving America with sorrow, and yet with gratitude in my heart to all with whom I have come in contact, and with the prayer that Almighty God may continue to bless this great Nation, that its citizens may be happy, and that the influence of the United States may continue to be exercised for the promotion of peace among peoples."

The Cardinal's arrival in Rome was an unhappy return to cold realities. Pope Pius XI was very ill. Pacelli had been appointed Camerlengo of the Church in 1935, which meant that if the Holy Father died he must make all executive decisions until a conclave met and a new Pope was elected. Thus, in addition to anxiety for his beloved Pope, was added mounting cares of state.

February 11, 1939, was the 10th anniversary of the signing of the Lateran Pact and coincided with the aging Pope's 60th year as a priest. A celebration was planned; and Pius and Pacelli began drafting an address which they hoped might yet stem mankind's downward drift. Sick as he was, the Pope refused to conserve his energy. Pacelli, worried by the amount of work the Pontiff was putting in on the speech, begged him to take more rest. To this Pius flashed the reply, "The church is better off with a dead Pope than with a Pope who cannot work."

The inevitable happened. On the evening of February 9, the Holy Father suffered another heart attack. Doctors were called, who pronounced it slight, and when Pius was made comfortable for the night, Pacelli allowed himself to be persuaded to go to bed.

But he could not sleep. At 5 o'clock in the morning of February 10, Pacelli was already dressed and working in his room when he heard confused murmurs outside his door, and a gentle knock. Not even pausing to ask a question, since he knew in his heart the answer, he went swiftly to the Pope's apartment.

He was only just in time to kneel beside the bed of the man who had offered his life for the peace of the world. With his hand clasped in that of his friend and adviser, Achille Ratti died.

Wearily Pacelli rose from his knees, and gently folded the dead Pope's arms across his breast. Then he stooped down and lightly kissed his friend's serene forehead.

Then Eugenio Pacelli rose again from his knees and walked slowly from the room.

In the long corridors of the Vatican Cardinal Pacelli's pace unconsciously quickened—there was so much that he must do. In his office he became, temporarily, an efficient executive issuing the orders that started the vastly complicated arrangements which must be made. First he signed the death certificate, then dispatched messages keyed to the urgency of the moment to 62 cardinals in 15 different nations, officially informing them of the death of their Pope and summoning them to Rome to participate in the election of his successor. The messages went by private courier, by telephone and cable, whichever was quicker. The princes of the church were allowed only 18 days to reach the eternal city; for in February 1939, the world was teetering on the edge of the abyss of war, and the church, which was the best hope of peace, must not be left for long without a ruler.

Then arrangements must be made for the burial of Pius XI, with all the mournful pomp that tradition and his high place demanded. Innumerable details had to be worked out and the elaborate ceremonies planned and timed so that no unseemly confusion should mar their solemnity.

It must have been with pity in his heart that Eugenio Pacelli watched the preparations, for he knew that the new Pope would face a worldwide turmoil and such difficult decisions as, perhaps, no man who wore the Fisherman's Ring had ever known before. Thinking of the awful responsibilities which he knew might well be laid on him, he watched the carpenters and workmen carrying heavy timbers and planks across the marble floors and building wooden partitions in the great galleries of St. Damascus. They divided them into 62 enclosures, each of which was in turn partitioned into three rooms, thus forming small apartments. In these the cardinals, each with two attendants called conclavists, would live until a Pope was chosen. In addition, a small hospital was set up. Kitchens were installed as well as accommodations for the governor of the conclave, the guards, doctors, apothecaries and servants in attendance. Everything was ready for the opening ceremony by March 1.

As he moved through the entrance of the Sistine Chapel, Eugenio Pacelli found that emotion heightened its ancient beauty for him. Sixty-two low thrones were ranged along the walls of the chapel within the sanctuary. Over each throne was stretched a canopy of purple velvet, heavily fringed; and before each was a small writing desk on which were a candle, matches, paper, pen and sealing wax.

The procession of cardinals, moving over the mosaic floor of the chapel with the faint swish of feet, approached the altar, marvelously inlaid with mother-of-pearl, the altar at which the Pope alone may officiate. Before it Eugenio Pacelli sank to his knees and slowly repeated the sacred oath that he would choose freely and deliberately, uninfluenced by political advantage or any worldly consideration.

One by one the other members of the College of Cardinals repeated the solemn oath. After that the cardinals' assistants, the governor of the conclave, the marshal, and all the attendants and servants swore to observe the rules governing the conclave.

Cardinal Pacelli had one more duty to perform before retiring. He personally inspected the hall of the conclavists and the reserved area, making sure that no intruder was present, and that it was sealed off from the world. As he walked through the spacious corridors he could hear bells ringing and the ushers crying, "Extra omnes." The conclave had opened; no unauthorized person remained. The next day, March 2, 1939, was Pacelli's 63d birthday.

When the cardinals were all seated on their shrouded thrones, the senior cardinal drew the names of the three scrutators—the tellers—from a velvet purse. Then, in silence so complete that the faint scratching of pens sounded clearly, the cardinals prepared to register their choice. Each had received a ballot on which was printed in Latin, "I choose as Sovereign Pontiff The Most Reverend Lord Cardinal ———."

When they had finished, the scrutators took the chalice and shuffled and counted the folded ballots. They announced that the number was correct—62 votes had been cast. Seated at the long baize-covered table, they unfolded the slips of paper and read aloud the name written in the center of each.

As the names rang out, Eugenio Pacelli heard his most frequently of all. Before the counting was done the scrutators had called "Eugenio Cardinal Pacelli" 35 times. He had received more than half the votes on the first ballot, but not the two-thirds necessary to elect.

The pens were scratching again; the cardinals moving softly toward the altar to slip

the sealed and folded papers into the chalice for another vote. This time it is known that Pacelli voted for Cardinal Dalla Costa of Florence.

Again the scrutators opened the ballots and read them, and this time they called Pacelli's name more than 40 times.

So Pacelli was elected on the second ballot, for the count was a bare two-thirds of 62. There was a rustle behind the draped thrones of the cardinals. The master of ceremonies moved to proceed with the formal announcement. But those who were there say that Pacelli, greatly agitated, stepped from behind his purple curtains, and humbly begged his colleagues to search their hearts and vote once again. They accorded him his wish.

In the tense silence of the chapel, the pens whispered as the voting began again. The slips of paper were piled on the green table, and this time, with a single exception, the scrutators had but one name to say. The vote was unanimous for Pacelli, save for his own ballot, which this time he cast for Granito, Cardinal di Belmonte, dean of the Sacred College. As the scrutators called his name for the last time, those present say the Pacelli's face was filled with anguish.

When the count of ballots had been verfied, the cardinal-deacon rang a bell and opened the chapel door. The secretary of the conclave accompanied by the master of ceremonies and the sacristan of the Vatican entered. With the senior cardinal, they approached Pacelli's throne. In firm tones the cardinal asked, "Accipisne electionem?"

For a tremendous moment no answer came. Then in an awed whisper the new Pope answered, "Accipio."

Now each cardinal swept back the baldachines; all the thrones were uncovered except Pacelli's which still bore the sign of sovereignty.

Again the senior cardinal spoke: "What name do you wish to bear?"

In a firmer voice came the answer, "Pius."

Then the Pope rose to his feet and walked with grave dignity to the sacristy. There he took off his cardinal's robe and was robed in the Papal cassock of pure white, a color he would never leave off, even in death. He returned to the chapel, and now the cardinals who had been his equals a few moments before knelt in turn before him and kissed his hand and his narrow foot as a sign of their submission to his authority. All the time his lips were moving, and the kneeling cardinals heard him repeating over and over the words, "Miserere mei"—"Have pity on me."

The Pope is officially Supreme Pontiff from the moment of his election, but his coronation has always been looked upon as the symbolic expression of his assumption of that high office. Eugenio Pacelli was elected on March 2, 1939. He named March 12 as the day of his coronation. In order that the spiritual impact of the ceremony should be as effective as possible, he decided that the coronation should be held in full view of the people of Rome.

This would be the first time since before the fall of Rome in 1870 that a Pope had been crowned in public, and the news raced like a flash fire through the city, filling every home with eagerness. The excitement was especially intense in his own quarter, the Monte Giordano, where everyone joyfully anticipated seeing one of their own people assume the triple crown.

Eugenio Pacelli, now 63 years old, was up very early the day of the ceremony. He spent a long hour in silent prayer and meditation, strengthening himself for the ordeal. At about 7:15 he started for the sacristy accompanied by the papal chamberlains and attendant monsignori. There they helped him to vest for the processional entry into the cathedral.

The robing took more than an hour, as the many ceremonial garments were 1 by 1 placed upon him. The Pope's tall, ascetic figure seemed to bow under the enormous weight of his vestments, and when he moved there were deep imprints of his narrow feet in the thick carpet on which he stood. But Pius' face was unmoved except for a moment when he raised his luminous black eyes to the cross above the cupboards and asked help from One who also bore a heavy burden.

The procession had already formed near the courtyard of St. Damaso, and the pontiff now took his place at its end. Down the broad marble steps of the Scala Regia, the royal stairs, it wound into the columned portico of St. Peter's. It halted before the holy door, which is opened but once every quarter century in the holy year. Pius slowly walked toward the door, and seated himself on a small throne that had been placed in front of it. The canons of St. Peter's, forming a double file, came forward and offered their homage to Pius XII.

The Pope accepted it and thanked them for their welcome to the church. Already the taunt skin of his face showed the emotional and physical strain under which he labored, but his voice was strong and clear.

Now the sedia gestatoria, the huge white and gilt sedan chair of ceremony, was brought forward. The Pope stepped into it, and was raised to the shoulders of the stalwart guards who followed the procession into the church.

By 6 o'clock that morning, St. Peter's had been filled by a congregation of more than 70,000 people. All the bells of Rome had been pealing thunderous joy since early morning. At 8:15 they all stopped at once, and the sudden silence seemed a physical thing. Then the soft vibrancy of music was felt rather than heard as the procession entered the basilica. At its head walked the habited superiors of the religious orders. They were followed by the papal valets in red-flowered damask. Then came the monsignori in their red cassocks, befurred with white, the glowing purple of the bishops, the vibrant scarlet of the cardinals. The vested prelates carried white silk cushions on which rested their miters. On one cushion, larger than the rest gleamed the triple crown. Last came the Pope himself carried high above all heads between the gently stirring plumes of white ostrich feather fans, a frail figure in the enshrouding folds of his vestments of white, gold-laced silk. His fine features were rigid, his eyes enraptured, seeming lost in the immensity of the Almighty.

But from the high, gently swaying sedia gestatoria, Eugenio Pacelli could see in the shadowy vastness of the church an infinity of faces all turned toward him, and occasionally his features relaxed and his eyes smiled as he raised his hand to impart the papal blessing to his right and to his left.

At the altar of St. Gregory the ceremonial chair was gently lowered to the floor and Pius stepped out. He assumed the vestments of the celebrant of the mass. But before Pius moved again toward the high altar, a server, holding a silver salver on which were three balls of flax, moved before him. The server set one of the flaxen balls on fire, and, as it flared fiercely and died, he said in loud tones, "Sic transit gloria mundi."

Three times he performed this rite, and each time Pius gravely acknowledged the reminder of the evanescence of earthly glory.

Around the Pope's shoulders now was placed the pallium, a long strip of white wool in which are woven black crosses, the symbol of jurisdiction. As the mass began with all the solemnity accumulated through 19 centuries, he took his place on the throne underneath the chair of St. Peter. The rite proceeded through its stately course. The Epistle and the Gospel were sung in Latin and Greek. At the consecration, Pius came forward and elevated the host to the four corners of the earth. A blare of silver trumpets rang out from high up in the dome, accompanied by a metallic clash as the guards presented arms.

After the last Gospel, His Holiness turned from the altar and facing the multitude, like a white flame in his jeweled chasuble, imparted his threefold blessing.

When the mass was over, the provost presented the holy father with a purse in which were 25 golden coins—the mass stipend. In accepting it Pius knew that he was acknowledging his office as a priest. He gravely thanked the provost, and passed the heavy purse to his trainbearer. The procession now re-formed and moved back up the aisle.

The crowd waiting in St. Peter's Square was so great no man could guess its numbers. The people had climbed on parapets and window ledges and perched precariously on top of the chimneys. Into that vast assemblage the congregation, 70,000 strong, issuing from St. Peter's, slowly forced its way. This took a long time, and it was after midday when the papal standard bearer appeared on the balcony facing the square and set the banner of the church beside the throne on the platform. He retired, and soon a cascade of miter-crested cardinals and bishops in scarlet and purple poured in and arranged themselves to the right and left of the standard. A little moment passed, and the Pope in gleaming white appeared at the entrance, hesitated for an instant in the face of the heaven-splitting crash of cheers, and then walked forward to seat himself on the throne.

The coronation itself was surprisingly brief. A cardinal-deacon stepped toward the throne and removed the miter from the Holy Father's head. As he backed away, the senior cardinal-deacon came forward holding the triple crown in his outstretched hands. There was a flurry of scarlet silk as he made his obeisance. Holding the tiara over the pontiff, he said in slow clear tones, "Receive the tiara adorned with three crowns, and know that you are the father of princes and kings, the pastor of the universe, and the vicar on earth of our Lord Jesus Christ, to whom belongs honor and glory, now and forever, world without end."

Then he slowly lowered the crown onto the dark head before him.

That was all, but as the weight of the great tiara pressed down on Pius' brow, the full import of the ancient formula exalted his mind. He was ruler, father, vicar, and he was no longer afraid.

Still crowned with the tiara, Pius raised himself, and descending the podium, walked to the balustrade. Slight though he was, the majesty of the church seemed to enlarge him as he stretched out his arms to all that throng and all the world. His voice rang clear and sonorous as he said, "May the blessing of Almighty God, Father, Son, and Holy Ghost, descend upon you and remain with you forever."

Republican Hopes To Obtain Control of House of Representatives Following the November 1958 Election

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 22, 1958

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an edi-

torial entitled "No Law Against It," which was published a few days ago in the Mobile Register.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO LAW AGAINST IT

This week's news from Washington has included an AP dispatch reporting:

"Republican House Members heard a pep talk from their leaders Thursday with predictions that they can win control of the House from the Democrats this fall."

House Republican leaders knew, of course, that up to now Congress has passed no law against daydreaming.

Besides, it's an old political custom to make fantastic claims of victory before the votes are cast.

The only chance the Republicans have of winning control of either the House or the Senate in the November election is for the Democrats to fumble themselves out of control.

In the apparent present state of the people's thinking politically as between the Republicans and the Democrats, that would take quite a lot of fumbling.

Still, if daydreaming makes the Republicans feel any better in the improbability that the congressional driver's seat will be fumbled into their hands by the Democrats this fall, why discourage them, when already the world is long-faced enough?

Excerpts From Commencement Address by Prof. Charles McKinley, of Reed College, Oregon

---

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, July 22, 1958

Mr. NEUBERGER. Mr. President, on June 15, 1958, Prof. Charles McKinley, of Reed College, delivered the commencement address to the graduating class of that famous liberal arts college in Portland, Oreg. The title of Professor McKinley's address was "Guidelines for Citizenship."

Charles McKinley is well qualified to speak on that subject to the coming generation of young American citizens. In his career he has successfully combined his work of teaching about government with direct participation in important public affairs in his city, State, and region. Professor McKinley is particularly known for his thorough knowledge and understanding of the role of the different levels of government, in our Federal system, with respect to the wisest development and use of the rich and diverse natural resources of the Far West.

In his commencement address to the Reed College seniors, Professor McKinley referred to this, as well as to other important issues of public policy, which his young audience must continue to face in the future. Unfortunately, it is not possible to include in the CONGRESSIONAL RECORD the entire text; but I ask unanimous consent, Mr. President, to have printed in the Appendix of the RECORD some of the eloquent excerpts from Prof. Charles McKinley's address on "Guidelines for Citizenship."

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

GUIDELINES FOR CITIZENSHIP

(Address by Charles McKinley, professor of political science, Reed College, Portland, Oreg.)

I want to talk to the seniors about citizenship—commonplace as may be the images which this word evokes. I do this because I question the adequacy of your preparation at Reed, or at any college, for that matter, for playing effectively the constructive civic roles with which you will be confronted. I take advantage of your final hour of captivity to "speak my piece" to you. * * *

Of all the western nations the need for enlightened and active citizen understanding and participation is greatest in the United States. It is most urgent here because of the preponderance of economic, military, and political power and influence which, whether we desire it or not, we exercise within the society of western states. Our behavior in international and military affairs and our answers to many domestic questions may carry either great benefit or great woe not only to ourselves but to the rest of mankind. We did not deliberately seek this tremendous responsibility. But it is now ours, and we must do the best we can to meet it. Who turns away in fear or indifference or in blind unwillingness to face these facts and to shoulder as best he can his personal civic responsibility weights the scales against its constructive fulfillment. In a democratic polity one cannot resign, but he can become a political parasite. This he does if he seeks to escape through absorption in art, religion, professional or purely personal interest or whatever sort, and leaves his civic choices to others.

But on you and other college graduates there are special moral claims that your 4 years of advance preparation shall be used not merely for personal ends. You have had 4 years free of the burdens of the work-a-day world, and a large extra community investment in your training in order that you may better equip yourselves for the lives you wish to lead.

* * * * *

The significance of the egalitarian principle which has accompanied the slow growth of democratic systems is found in many aspects of domestic public affairs. It is one of the most essential ingredients of the concept of justice as that is felt not only in western society generally but in the fermenting emotions that deeply stir the so-called backward peoples. Two-thirds of the human race literally hungers for an equalization in the material means of existence. But just as important is their aspiration for the removal of social and political barriers to their acceptance and to many other opportunities. Whoever gives his allegiance to foreign policies that neglect these intangible ethical realities throws his weight against world adjustments by peaceful means. It will be difficult enough, with all the good will and intelligence that can be mustered to work our way through the lowering clouds of war. But the chances of success will be infinitely reduced if these simple ethical goals are not firmly embraced, intelligently implemented, and persistently adhered to.

Another worry of our times is the fact of what is called big government. That term is chiefly used to describe the regulatory and public service functions that have multiplied since the end of the 19th century.

What is often called the "public service state" developed in this country earliest and most rapidly at the municipal level, for there the concentration of large numbers of people in crowded space created urgent need of services essential to health, safety, and enjoyment for even the poorest citizen. Thus we have public schools, the municipalization of the water supplies, the provision of public sewers and other sanitary services, the paid fire departments, parks and playgrounds and many other special urban services.

The National Government's great expansion started with Woodrow Wilson's time but did not fully arrive until the great depression. We should remember, however, that our Nation began as a great landlord and that it ultimately possessed the richest landed estate of any modern nation. Today we take for granted public ownership and management of the national forests and parks. We of the West esteem them so highly for their services as the collecting reservoirs that feed our life-giving streams, for their universally enjoyed recreational values, and their supplies of timber products and forage which support our industries of factory and farm. In our own Pacific Northwest the mountain ranges from the sea to the Continental Divide are blanketed with these verdant and spectacular symbols of the public service state. Yet we are not alarmed. We know that these vast public enterprises can be and are managed not to enslave us but to release our energies and our spirits while preserving the material foundations for much of our regional private economy. We know also that public management of timber resources can be desirably harmonized, much of the time, with private timber ownership and operations—a conclusion well documented by over 30 years of successful collaboration between national, State, and private timber owners in fire prevention and suppression, and by the recent growing juncture of effort to stop the devastating timber insects and tree diseases.

These are but a few examples of the coexistence of public and private enterprise with its freedom from any vestige of enslavement or of the diminution of democratic processes.

* * * * *

The regulatory aspect of big government is likely to grow in importance and, it may be, in difficulty in the years ahead. Two recent essays by Adolph Berle, our foremost student of the business corporation, suggest this prospect. In his Arden-house lecture, 4 years ago, Berle called attention to what he called a new kind of federalism in the United States—an economic federalism in which a few great corporate groups were closely intermingled with the Government as its agents in defense development and production, or as its partners in national and international raw materials procurement and planning (as is the oil industry), or function as the operators of such essential services as transportation, or have become the determiners of nationwide prices through the price leadership system for commodities essential to the whole Nation. The powers and influence wielded by these private corporate groups, said Berle, are far greater than the power possessed by most of the 48 States. In a more recent essay Berle has continued his analysis by noting that not over 600 corporations today control two-thirds of the nonagricultural industrial wealth of the Nation and that less than a third of the 600 control most of this two-thirds. Whether Justice Brandeis was right or wrong in his belief that giantism is incompatible with economic efficiency, it is bigness that, despite all legal efforts to control, has won the day. This is a situation with which only big government has the resources and legal powers to grapple.

Despite all the difficulties involved—and they are many—it seems to me that the time is overdue to boldly recognize that we have an economic system of very mixed private and public enterprise and that this system,

with many changes of the mixture, will continue for the indefinite future. To expect otherwise in an epoch of cold global war which, along with a sudden great increase in population, presses with increased weight upon our natural resources, is to seriously misread history and to indulge in great naivete about the demands of politics in any democratic system. We should spend our civic intelligence and energies in insisting that the essential facts in each changing situation be clearly revealed and that whatever regulation or public ownership is proposed be carefully calculated in terms of probable social consequences.

Another continuing problem of citizenship which will remain acute so long as international tensions and military preparation remain at their present pitch is that of civil rights. I shall touch lightly on this, not because it is not of great importance but because I know that it has received much attention both in and out of the classroom during your stay at Reed. I would make three observations: first, that the panic fear over security which has motivated much of the recent interference with civil liberties stands revealed as self-defeating; second, that despite the decline of McCarthyism it is not dead and the difficulties of reconciling security with civil liberties will be with us so long as the menace of war survives; and third, that the special place at the head of the hierarchy of civil rights which the United States Supreme Court has often recently accorded to the first amendment, though not consistently applied nor always with the most careful discrimination, furnishes as good a guide for civic acceptance as we are likely to obtain.

* * * * *

We, like the French, have many such obstacles to community decision embedded in our political systems. In most of the States we have shackled the urban population, now well over 60 percent of our people, and rapidly mounting, by distortions of legislative representation frozen into State constitutions or by the unpunishable refusal of legislatures to obey their State constitutions. We make our governors take oaths that they will enforce the State laws and administer the State's services and then we withhold from them the power to direct the chief law-enforcing officials and the State administrative agencies through whom these tasks must be exercised. It is no wonder that the recent commission on intergovernmental relations pointed out that before the cry for States' rights can posses reality the States must reform their own power structures.

An illustration of our occasional bedeviling paralysis of national will is afforded by the current story of racial integration in the schools. The Congress and the President for years avoided this issue while the Supreme Court, case by case, slowly moved toward the inevitable requirements of justice. And when it took the last step, it got no help in implementing its conciliatory procedures from the Congress and, until Little Rock, small aid from the Executive department. This vacuum was filled by extremists in the South determined to use force and chicane to nullify the court's decision. Why did not Congress assist? It could not, because it was bound hand and foot by its own internal institutions of veto. A single Senator may talk until all breath is gone before the Senate can vote. The anachronistic cloture rule is now more difficult to alter than it was 10 years ago. It was made that way so that minorities of either Republican or Democratic Senators could block any action with which they disagreed. And in the House the Rules Committee stands at a sturdy wicket which ordinarily only it can open, ready to kill any legislation which its seniority-endowed committee members dislike. Men get congressional committee places not because they represent the community of America through a party duly returned to power, but because they have a local or special interest which is important to their reelection. They attain control of committee gates to legislation by political longevity. And the longest lived Congressmen, who chair its committees, come chiefly from the one-party districts and States.

* * * * *

We must recognize the need for continuous self-reeducation in public affairs. There is no handy aid for this like that available to the practicing physician to whom a tape-recording service can bring daily tested knowledge of new discoveries in medicine and the treatment of illness. It is unfortunately true that with a few distinguished exceptions our newspapers and other mediums of mass circulation do not afford the kind of help most needed. For example, the growth of the great newspaper chains and the consolidations of recent decades signalize the fact that the press today is big business, with the special attitudes associated with such organizations, ever pressing for bigger circulations upon which big advertising and big profits depend. Every presidential election of the past 25 years has been from 70 to 87 percent of the readers of the press served by papers that supported the same party candidate for the Presidency. An equally important fact is the changed character of the news portion of the variety-store mixture served up in the daily press. Max Lerner expresses the news readers' situation as follows:

"Each news event adds another stimulus, batting him this way and that. He finally becomes only a receptacle into which the floods pour and from which they flow out in energy—a receiving and transmitting agent but not a valuing agent. He sees small and large items given the same sensational importance in the daily disaster diet—murders and wars and massacres, sex cases and strikes, personal incidents and revolutions. The result is a debauchery of the meaning and relation of events."

For making social meaning out of this turbulent melange you will have to rely on the journals seriously devoted to public affairs—and they are not too numerous—but chiefly upon books that treat public affairs in depth. Fortunately, the stream of such books flows freely and, through the paperbacks, can often be tapped cheaply. To these sources you can turn. It is within your power to spare for their reading a fraction of your daily time from the pursuit of income or the quest for occasions to buy and be happy.

We can never finish our tests of citizenship or expect ever to be fully educated to pass them perfectly. But if we actively enlist our intelligence in this essential lifetime function which a democratic society demands of us, and if we guide it by the motive power of human sympathy and a keen sense of justice we shall build the only rational foundation for hope that the processes of self-government may yet win through to master the difficult unfolding public problems or seize successfully upon the great opportunities that their mastery would make possible.

Low Down

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 14, 1958

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of July 22, 1958:

LOW DOWN

It has been the habit to point to the Soviet Union's slave camps in Siberia, to its prisoner pits in Poland, and to the Nazis' incinerators and gas chambers for humans as samples of how far the world has sunk into barbarism.

The casualness with which King Feisal and Crown Prince Abdul Iliah were gunned down the other day is further proof (as if it was needed) that humanity and decency have little meaning to many politicians these days in the Middle East as well.

But for completely cold-eyed, perverted criminal intent in high places, we give you yesterday's UPI story of the current official radio campaign, conducted by radio stations of Egypt and its satellites, Syria and Iraq, calling for the assassination of King Hussein of Jordan.

Here we have governments which pretend to be civilized; which want to be called civilized; which want to be accepted as responsible instruments of their peoples, deliberately engaging in cowardly incitation to murder. Not picking up the gun to do the deed themselves but, instead, pimping for assassins.

Mind you, this incitation to crime does not come over some peanut-powered clandestine transmitter run by cranks; it comes over the powerful government radio stations which carry only the official words of the established governments in Cairo, Damascus and Baghdad.

And these governments—Nasser's, that is—blatantly, overtly, call for assassination.

It seems to us that this is proof positive that the Western World cannot now, nor for a long time to come, treat in the usual civilized way such governments, but that is beside the immediate point.

The immediate point is this: Are they or are they not meddling with the Government of Jordan by broadcasting international appeals for the assassination of Jordan's King?

We ask Secretary General Dag Hammarskjold of the United Nations:

Does this constitute interference?

Does this constitute infiltration?

Certainly Mr. Hammarskjold, who was raised in a society built on decency, honor, truth, and trust, can recognize it for what it is: official and deliberate behavior on the part of Nasser's government which is even below the standards of animals.

Address by Fred Blair Townsend Before Rally of Churches of Christ and Christian Churches in Arizona

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 22, 1958

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a speech made to the rally of Churches of Christ and Christian Churches in Arizona, by a close friend of mine, Fred Blair Townsend, attorney at law of Phoenix, Ariz. Mr. Townsend, in his speech, displays a unique understanding of the Communist doctrine as enunciated by Marx and Engels and such latter-day Communists as Lenin and Stalin.

Mr. Townsend's speech created much interest in the State of Arizona and I think that the country at large could benefit from a perusal of Mr. Townsend's message.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS ON COMMUNISM SUBSTANTIALLY AS DELIVERED TO THE RALLY OF CHURCHES OF CHRIST AND CHRISTIAN CHURCHES IN ARIZONA BY FRED BLAIR TOWNSEND ON FEBRUARY 26, 1958

When my good, dear and oldtime friend Dr. Peyton H. Canary, Jr., president of the Southwestern Christian Seminary, called me up one day and * * * asked me if I would make an address to today's session of this distinguished body on the subject of communism, I accepted the invitation right now. I hold Peyton in such esteem and I admire him so much that I imagine that if he had asked me to board a spaceship for the moon I would have as readily consented. * * * However, when I awakened in the middle of the following night and realized that he had asked me to talk on communism, probably the most controversial subject in the world today, I became panic stricken. No 10 people together could cover this subject in a series of speeches of interminable length, so who was I to have such self-conceit that I would think I could cover the subject in a half hour's talk. As I later understood his subject, he asked me to delineate for you the harsh outlines and cruel essence of the Communist system which challenges the ingenuity and resources of free men everywhere.

* * * * *

Forty years ago the people of Russia had revolted against the despotism of the Czar and they chose a constituent assembly, the only freely elected parliament in their history. It was crushed by the Communists after just 1 day's session, January 18–19, 1918. The other day, to remind the world of this grim event "Radio Liberation," an organization of private citizens from free countries of the world, broadcast over powerful transmitters in Russian and 17 other Soviet languages some pointed messages. These were from leaders in the Congress of the United States, also from authors, playwrights, editors, etc. To briefly mention 1 or 2, we have these: Senator LYNDON JOHNSON, majority leader of the Senate, said: "The dissolution of the all-Russian Constituent Assembly was a crushing blow which ended the hopes of the Russian people for democratic Government but the dream of freedom is one that can never be completely crushed, and men of good will everywhere join in the hope that Russia will some day be free."

Senator WILLIAM F. KNOWLAND, minority leader of the Senate said: "In the only free election the people of Russia have enjoyed, we remember that the Communist Party received an overwhelming defeat. All of the people of the free world look hopefully to the future, that the people of Russia will again have the opportunity to select freely their own government and official representatives." My friend, LEVERETT SALTONSTALL, of Massachusetts, who visited me a short while back in Phoenix, said: "I join my fellow Americans in extending to the Russian people our fervent wish which we hold for all peoples of the earth that you may be permitted and that the peoples of all other nations be permitted to establish, as we have, a government of our own choosing."

The communism threat is much more than a question of the relative sizes and comparative orbits of the Russian and the American satellites, although that aspect should not be ignored. We have tried to laugh off Russian advances in science. Just the other day I heard of the two Russians who appeared at the Pearly Gates. Being avowed atheists, their appearance created quite a furor, and when they learned that there was a dispute about admitting them, one of them hastened to explain: "Oh, no, sir, we don't want to get in. We just want our ball back."

Our Government proposes to spend more than $45 billion in just a single year to defend ourselves against Soviet communism. For this economic reason alone it is tremendously important that every American citizen understand exactly what communism is, how it operates, how it controls and contaminates people. It is staggering to imagine a peril so great that in just 100 years it has come to control the lives of more human beings than are today influenced by the great doctrines of Christianity, although we have had the Christian religion for almost 20 centuries. In one-twentieth of that time, communism has come to influence as many people as the Christian and Jewish faiths combined, and it is gaining day by day.

What is communism? It is not the thing that Karl Marx and Engels wrote about 100 years ago. It is not an economic creed. It is not built on the concept that Communists should take from people according to their ability and give to people according to their need. There is nothing particularly inflammable about that, even if it is patent nonsense. There is nothing in such a creed, even though the Communists actually did practice it—which they don't—which would require appropriating $45 billion a year to defeat it or stop it.

* * * * *

The Lenins and the Stalins and the Malenkovs and the Khrushchevs may come and go, but the Communist program of world conquest remains exactly what it was from the very beginning. The goal was described in "The Program of the Communist International", adopted at the Sixth World Congress of the Communist International held in Moscow in 1928. The objective is clearly spelled out: to bring about the world dictatorship of the proletariat, in order to usher in the Communist society—world communism—the paradise on earth for the human animal. At that time, remember, the Communists controlled one-sixth of the world—today they control one-third. So we see that there is a certain amount of basis for their brazen boast of world mastery in the not too far distant future.

In order to understand the magnitude of the threat that Soviet communism poses for our Christian society, it is important to understand what communism is. The word itself came into being in the middle of the 18th century, and as used by the secret revolutionary societies in Paris, referred to the use of property in common. It was at that time no more than a symbol of protest against social injustices. represented the old religious and utopian idea of a social system free from economic inequality. A synonymous term, socialism, was employed early in the 19th century to express the beliefs of the idealistic social reformers, such as Robert Owens, Francois Fourier, Claude Saint-Simon, and Eugene V. Debs.

What is there in the communistic doctrine that made it possible for its adherents to sweep into such great power in so short a time? The first apostle of communism was Karl Marx, exiled from his native Germany at the age of 31 because of his political activity against the German government. He found refuge in England, where he lived in poverty and largely on handouts from his wealthy friend Friedrich Engels. Engels, who had known Marx in Germany, had inherited a factory in England, and was thus one of the capitalists Marx claimed caused all the world's troubles. Marx and Engels wrote out their theories not only in the Communist Manifesto but also in a large and ponderous book entitled Das Kapital. When Marx died in 1883, Engels finished writing Das Kaiptal and published it. He died at the end of the 19th century.

Communism, or Marxism, as it began to be called, passed into more energetic and less idealistic hands. Lenin, the first Communist dictator, was a professional revolutionist driven by one unrelenting passion—to drive the czarist government out of Russia. As a young man, he read a Russian translation of the Communist Manifesto, and for him Marx's theories were the answer to all his problems. He plunged into the work of organizing a secret revolutionary party. In order to give the Communist doctrine the militance he felt it lacked, he published additional ideas of his own on the technique of revolution. Boiled down, the Lenin idea is something like this: In taking over the power of a government, the end justifies any means. It doesn't matter how power is obtained, nor how it is maintained after it is obtained. The important thing is to get and to keep the power.

As a theory, Marxism embodied three principal doctrines. These are (1) historic materialism, (2) surplus value, and (3) the class struggle. The materialistic concept of history claims that all political and social institutions are the inexorable result of the operation of economic forces, and that each of the historic social systems—slavery, feudalism, and capitalism—is based on a particular method of exploitation of the worker, dividing society into classes consisting of the exploited and the exploiters, the rulers and the ruled. The term dialectic materialism was borrowed by Marx from the German philosopher, Hegel, to explain how social processes evolve. According to this theory, every force in social life produces an opposite and resisting force. The collision of these two forces results in the creation of a new force which combines the features of the first two. In this way, Marx explained that capitalism produced the seeds of its own destruction—that is, it provoked a counterforce, or revolution, among the working class—and that from this struggle would arise, sooner or later, a new force which would be the communistic society.

The second doctrine embodied in Marxism is that of surplus value. The reasoning is something like this: The worker is the only creator of value or wealth; the wages he receives represent less than the total value that he creates; the value created by the worker in excess of his wages—that is, the surplus value—is appropriated by the capitalist who exploits the worker. Here, according to Marx, is the root of the inequities and evils of the capitalist society.

In his Communist Manifesto, Marx declared that "The history of all human society, past and present, has been the history of class struggle." Class struggle, he asserted, is inevitable. The oppressed fights the oppressor, the exploited fights the exploiter. The class struggle produces either revolutionary changes in the social structure or the ruin of the contending classes. Marx's view was that the capitalistic society would suffer this fate, that it would end in the revolution of the proletariat, a worldwide revolution of violent nature. He further declared that force and violence constituted the only means of defeating the capitalist system. The working class would be obliged to assume power through revolution, destroying capitalism and organizing in its place a communistic society.

So much for the theory. Let us now take a look at what it has achieved in actual practice. Russian communism is something that not even Marx would recognize. The economic picture in Russia may be summed up by stating that the state—which Marx considered unnecessary—controls all industry, agriculture, trade, and banking. Minerals, metals, forests, fisheries, and all the other wealth of natural resources belong to the state. Practically all the farms have been collectivized, often against the wishes of the farmers and peasants who formerly owned them. The majority of all farm products belong to the government.

The factory worker works for the government and usually lives in a government-owned apartment, shared as a rule by two or more families. If the worker is a loyal party member he may get to be a boss and rent an apartment alone on wages which may be as high as 10 times those of the average worker. As far as most of the population is concerned, such foods as meat, butter, and eggs are great luxuries. A pound of meat costs about 10 percent of the average worker's weekly salary, and about 20 percent is needed for a pound of butter. Consequently most factory workers live almost entirely on bread, potatoes, and cabbage soup.

A court system as we know it does not exist. The Peoples Court is the nearest form to our system of trial by jury, and it is made up of a presiding judge and two citizens, who are empowered to decide questions of both law and fact. There are no private lawyers, and the accused must accept an attorney appointed by the collegium of state defense attorneys. When the government is the accuser, a lawyer usually does no more than try to find excuses for the purported crime and ask for leniency.

It may be, however, that the most important feature of the Communist system is its attitude toward religion. Communism views men as a general views his soldiers in the midst of a desperate battle. It regards men as dehumanized. Dynamic, militant atheism is the root of the Communist system, and that the spread of its atheistic ideas by force is one of its chief features can be proved by endless quotations from the writings and words of the Communists themselves. John Fischer, in an analogy of communism and religion, pointed out the Communist position with cogent eloquence so listen: "The Russian party member," he wrote, "is a dedicated zealot whose body and mind belong to the Kremlin. Lenin is god. Stalin is the son. Marx is the holy ghost. The 13 in the Politbureau are the apostles."

The antireligious attitude of modern communism cannot be ascribed to the corruption of the former Russian state church. Modern Communists, in their militantly antireligious attitude, simply follow the principles and teachings of Marx. He intended and planned communism to be what it is today—the greatest menace to religion, the most determined and the most deadly foe of Christianity. Communism and religion are absolutely incompatible, for communism, in theory as well as in practice, is atheistic.

Listen to these words written by the Commissar of Education of the Soviet Union just a few years ago: "We hate Christians. Even the best of them must be regarded as our worst enemies. They preach love to one's neighbor, which is contrary to our principles. Christian love is a hindrance to the development of the revolution. Down with love for one's neighbor. What we want is hatred. We must know how to hate, for only at this price can we conquer the universe. We have done with kings of the earth; let us now deal with kings of the skies. All religions are poison. They intoxicate and deaden the mind, the will, and the conscience. A fight to the death must be declared upon religion. Our task is to destroy all kinds of religion and all kinds of morality."

Just as there can be no compromise between Christianity and communism, there can be none between democracy and communism. Perhaps some of you recall the story that circulated in Europe. According to the story, a man went hunting. He tramped through the woods for a while and encountered a huge black bear. "What are you doing here in the woods?" asked the bear. "I am hunting a new fur coat," replied the man. "What are you doing?" "I'm looking for my breakfast," replied the bear. "What do you say we drop into my cave and have a talk, and perhaps we can reach some kind of a compromise." The hunter agreed, and they entered the cave together. A short time later the bear came out alone. They had reached a compromise. The bear had his breakfast, and the hunter had his new fur coat.

And we might ask the Marxists just when the state—the dictatorship of the proletariat—is going to wither away, as Marx and Engels said it would and must. Why has the state become omnivorous and omnipotent in Soviet Russia, while in our own decadent capitalistic United States the only thing that has withered away has been the classes. And where, may we ask, are the fierce class struggles that Marx described? Here, our poor, exploited American workers own homes or their own farms. Seventy million Americans have money in savings accounts; more than 115 million own life insurance. Twenty-seven thousand companies and many unions have private pension funds. Over 7 million men and women own stocks in American companies. Probably as many as two-thirds of all working Americans receive at the same time an income from labor and an income from capital. Can it be that the working class is its own exploiter? If this is capitalism, it is not the capitalism that the Communists talk about. It is not the kind of capitalistic society that Marx predicted. Indeed, it may be said to be the precise opposite of what he saw, for to him capitalism generated deeper cleavages among classes and inevitable conflicts among them.

So we see that communism, both as a theory and as a system, is nothing but a colossal fraud, based on a clever concocting of philosophical and economic lies. If it were not for the fact that the Soviet Union is today in such a commanding military position in the world, the whole Communist doctrine could be brushed aside as an absurdity which would collapse under the ponderousness of its own errors. But the lies and the errors of communism are defended by the greatest military force that history has known.

That is what makes communism such a powerful threat to Christianity and to the democratic freedom we enjoy in America. It is up to us to rededicate ourselves to a more faithful understanding of these influences which seek to undermine our spiritual concepts which have permitted this country to become so great, and which are so necessary in this hour of world anxiety. The communistic doctrine, and the force that upholds it, threaten to plunge civilization into moral and social darkness. For the house that it would build for the new humanity is not a palace but a prison, since it has no windows. Let us work for the coming of that "dayspring from on high" which may "give light to them that sit in darkness and in the shadow of death, to guide our feet into the way of peace." For the Christian, that light must always be Christ and not Karl Marx or Nicholas Lenin.

Here is Christianity's greatest challenge. Can we meet it? The answer: Not only we can, but we must and with the help of a gracious and kindly Heavenly Father we will.

The United States Meets the Challenge

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1958

Mr. SCOTT of Pennsylvania. Mr. Speaker, under leave to extend my remarks I am inserting an editorial which appeared in the July 15, 1958, issue of Near East Report. I feel that this editorial is most timely and informative in view of recent world developments.

THE UNITED STATES MEETS THE CHALLENGE

The decision to intervene in Lebanon was inevitable. The administration had no honorable alternative but to fulfill its commitments. It was dictated by moral imperative and national security.

The military coup in Iraq is a staggering blow for the West. It precipitated Lebanon's appeal to Washington and our reply. The bloody attack on Iraq's leaders was jubilantly hailed by Pravda.

For the Kremlin, it is the successful conclusion of a process that began when President Nasser completed the Soviet arms deal.

The forcible overthrow of the Feisal-Nuri as-Said regime may lead to these results:

1. Nasser gains control of Europe's oil. With his seizure of the Suez in 1956 and the annexation of Syria in 1958, he won domination over the oil arteries—the pipelines and the canal. Now he has an oil-producing state and he may tighten his grip on the oil Europe—and NATO—needs so vitally. British economy suffers a critical blow.

2. The Baghdad Pact, which was originally conceived in Washington as a major western defense arrangement, loses its only Arab member. And modern arms, jets, and tanks sent by Washington and London now pass into Nasser's hands.

3. The Iraq-Jordan union, established to block Nasser's advance, ceases to exist. The balance has been upset. Jordan cannot stand alone and may be torn apart by its large pro-Nasser population.

4. Under pressure from Iraq and Jordan on one frontier and Nasser-controlled Yemen on the other, Saudi Arabia may veer away from the west, prejudicing United States oil interests and the Dhahran base.

5. With Iraq out of the alliance, both Turkey and Iran may be under greater pressure from the Kremlin, and oil-producing Iran may be weakened. (The Nasser radio has been inciting a Kurdish revolt.)

6. The Lebanese rebels have been braced. They have been whitewashed by Hammarskjold's observers and encouraged by the Baghdad coup. They will make it harder for Chamoun to arrange an orderly election to pick his successor. Their target: the Eisenhower doctrine.

7. If Lebanon and Jordan go the way of Iraq, Israel will be encircled—as she was when she moved into Sinai in 1956.

Like Lebanon, Iraq is a victim of subversion. Is the U. N. powerless to combat warfare which relies on propaganda, intrigue, and corruption? Yet the concept of collective security ceases to have meaning if Lebanon and Iraq are allowed to fall. Few Middle East countries would confide their future in the West. There would be a compulsion to accommodate themselves to the Cairo-Moscow axis.

Until July 14 there were still some in official Washington who believed that it might be possible to get along with Nasser, to accept his protestations as valid and constructive. But behind these facades of neutralism and nationalism the truth was told with bursting bombs in Beirut, the scream of the street mob in Baghdad, the harangue of Cairo radio blatantly calling for violence everywhere.

Nasser wants to dominate a vast totalitarian Arab empire, swaying Asia and Africa. He calls it neutralism, but it is in fact anti-westernism. Khrushchev told him in Moscow that the Russians wanted solidarity with the Arab people under Nasser leadership and promised "all the help you need from us."

Nasser will give his neighbors no rest and no peace unless they purge every official who wants to remain a friend of the West, unless

they dismantle every western defense interest and unless they sunder every western tie. This is the challenge that faces Washington.

Unless that challenge is met we shall witness the spread of an aggressive military fascism in Asia and Africa, serving the Kremlin, and undermining the capacity of the West to defend individual liberty and the free democratic society.

The Sending of American Troops to Lebanon

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 22, 1958

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "An Anguished Choice," which was published on July 19 in the Florence Times, of Florence, Ala.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN ANGUISHED CHOICE

The President's decision to put American troops in Lebanon clearly was an anguished choice.

He concedes that serious consequences could flow from the move.

What Russia may do after the talk and the resolutions are disposed of is uncertain. That rabid Arab nationalists throughout the Middle East will be enraged is widely taken for granted.

The Marines who landed on the Lebanese coast are presumably under specific injunction not to seek combat but to serve insofar as they can as a strictly stabilizing and protective force. Obviously we hope to avoid another Korea.

Ambassador Henry Cabot Lodge told the United Nations we did not regard our move as ideal and would withdraw our forces at the earliest possible moment.

That we made this plunge in spite of the risks reflects our realization of the immense peril following upon the sudden overturn of Iraq's pro-Western Government by forces allied with Egypt's Nasser.

Our intelligence evidently had warned us of pro-Nasser plots in Iraq, Jordan and one other Arab land.

When the Iraq coup came off, we feared it would spark a chain reaction that would engulf the whole Arab world, including Lebanon, already torn by 2 months of rebellion.

From this could come the almost total disintegration of America's and the West's position in the Middle East.

Secondly, we felt it vital to reassure such stanch United States friends as Turkey and Iran that our pledges of support have genuine meaning. To stand aloof in the face of the direct appeal from the friendly Lebanese government would be to suggest to other friends that dependence upon us is not only futile but dangerous.

Our U. N. resolution urging establishment of a police force, indeed, our whole supporting argument for the troop landings, makes it plain we believe the U. N. really is the proper agency to step into the crisis.

We were disappointed that the U. N. observers' report on Lebanon, in minimizing evidence of intervention by Nasser, did not sustain earlier hopes of a police force. We were not persuaded that the report was accurate.

In fact we believe the events in Lebanon represent a new kind of sneak aggression contrasting sharply with the gross assault upon South Korea. And we fear that if successful outside intervention masked as internal rebellion—or capitalizing upon it—may set an ominous pattern for the future.

For a time we consoled ourselves in the thoughts the U. N. observers by their presence had reduced Nasser's interference and possibly improved the outlook for a solution not entirely unacceptable to the West. But the Iraq revolt ruined that prospect.

Now we have acted, and a train of events has been set in motion whose outcome cannot be foreseen. This could herald the decisive showdown in the long middle eastern struggle.

Leo A. Hoegh

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. DAVIS of Georgia. Mr. Speaker, the United States Civil Defense Council publishes a monthly bulletin entitled "United States Civil Defense Council Bulletin." Hon. Elliott R. Jackson, of Atlanta, Ga., a constitutent of mine, is secretary to this council. In its July 1958 issue of this bulletin, there appeared an editorial entitled "Leo A. Hoegh." This editorial is a fitting welcome to Governor Hoegh who has been appointed recently as director of the agency soon to be known as the Office of Civil and Defense Mobilitzation. This new agency in the Federal Civil Defense program will result from the merger of the Office of Defense Mobilization and the Federal Civil Defense Administration.

I would like to bring this editorial to the attention of all defense-minded people at this time, particularly in view of the critical situation now developing in the Middle East.

Pursuant to unanimous consent, I insert this editorial herewith and commend it to the attention of the Members of the House:

LEO A. HOEGH

The United States Civil Defense Council is delighted with the appointment of Gov. Leo A. Hoegh as Director of the merged agency—Office of Defense and Civilian Mobilization—and soon to be known as the Office of Civil and Defense Mobilization. He understands and appreciates the problems of the city and county director and is willing to talk with you about them. This is something new in the higher echelons of Federal civil defense.

Leo Hoegh has already proved that he is a man who gets things done. In less than a year he has started a program aimed at providing a million radiological instruments within a 12 months period, promulgated a national shelter policy and has drawn up a national civil defense plan to be announced if and when Congress provides the prerequisites.

Sometimes referred to as a hawk with a butch haircut, he has lived up to the reputation in his hawk-like habit of heading straight for the target. Actually Hoegh's name (pronounced "Hoyg") means hawk in Danish. His adversaries will tell you the name fits. He likes a good scrap, whether it's a winning or losing cause. This trait has endeared him to his friends. He gives and receives loyalties with singular intensity.

Hoegh's energy is built-in. As a boy he shined shoes in the Danish community of Elkhorn, Iowa, where he was born—"a nickel for oxfords, a dime for high shoes with mud on them." When he went to Iowa U. to study law he couldn't swim but he quickly learned and became captain of the water polo team.

He and his attractive wife, Mary Louise, and their 2 daughters, Kristin, 14, and Janis, 9, live in a new colonial 4-bedroom house in Bethesda, Md.

This is the man whom President Eisenhower has appointed to head one of the most important departments of our Government. The department is in good hands and we know. We have talked with him man to man and we understand each other.

World War III

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. BOSCH. Mr. Speaker, in these times of anxiety as to what is going to happen in the Middle East—viz is this but the beginning of a definite scheme to explode world war III, I commend to the attention of my colleagues a sound scholarly and factually historical article which appeared in the July 10, 1958 issue of the Ridgewood Times, written by Dr. Charles A. Tonsor, whom I have known for many years. As a matter of fact, he was assistant principal of Boys' High School in the days when I was a student. I believe it contains real food for thought.

The article follows:

THROUGH THE YEARS—WORLD WAR III
(By Dr. Charles A. Tonsor, retired principal, Grover Cleveland High School)

World war III has been going on for nearly a decade. Deluded as we have been that wars must be fought by special weapons forged for the purpose, we have failed to recognize that the use of weapons is but the last stage. Long before the resort to weapons in 1775, the battle of ideas had been going on. It was so in France. It was so in the Civil War, it was so in the Spanish American War, it was so in World Wars I and II. It is so in world war III.

Because I knew the situation in the Far East, I told a class at the American Institute of Banking, that the next world war would break out in two decades from 1919. That statement was made in 1921. And it did. At that time Pan-Asia and Pan-Islam were the ideas spreading across the field of history. Both contained serious threats for the nations of the West, and wars seem to take two decades to hatch out. We are approaching the second decade since the outbreak of World War II, which by the way, was proceeded by a considerable period of educational incubation summarized by Mein Kampf of Hitler, which the world gleefully ignored. Allow two decades from the end of World War II and the situation is still too hot for comfort.

The period of education for world war III has been going on for some time. The anti-American feeling all over the world has been the result; also the wavering of our allies. But one part of this education has been as gleefully ignored as was Hitler's Mein Kampf—Nasser's The Philosophy of the Revolution. I urge every reader who wants to know and understand to get a copy and read it. He will then see that it was no accident that copies of Mein Kampf in Arabic were found on Egyptian officers during the recent Suez action.

Some 4 years ago I told my last class in Vergil's Aeneid, that the next war would break out in the region about which they were reading—Troy. All great wars revolved about that crossing from Europe to Asia, Xerxes, and the Persians invaded Greece about 450 B. C. The Gauls overran Asia about 300 B. C. The Turks invaded Europe about 1470 B. C. World War I grew out of the "Drang noch osten" and this was not forgotten in World War II. Today, Russia has replaced Germany in the "pressure to the east."

World war III will start in the Middle East. Dictator Nasser, aping Hitler, has begun his campaign against the Jews. Russia is aiding and abetting him. Agents provocateurs have already begun their work in Lebanon. Soon Nasser will march in to "defend" Syria and Russia will say "hands off" to everyone else. Then war will be declared against Israel. That will bring in the United States, for if we don't go in, we shall show ourselves before the eyes of the world as unmitigated cowards. If we do go in, Russia has us more completely surrounded than we have her.

Here's the sequence: Nationalist China will be neutralized at once. Japan will be offered revenge—and will take it. Indonesia will be set against the Philippines; India against Pakistan. Russia will come into the Near East and India via Iran, Turkey, a land route, while we have to rely on water and air. Egypt will close the canal. Algeria, Tunisia, Libya will keep France occupied.

A dream? Watch the way events are going. They are being prepared for the war as an expert player prepares for the end of a chess game—far in advance of the actual checkmate, but every move planned to that end. Our moves are checked at every point. Poland, Hungary, Czechoslovakia, central Germany, Austria. Tito could control Greece, but he is not playing ball. Therefore, his country will be invaded—the buildup for this has already started.

I hope the dream does not come true. But I am too well aware of our inept foreign policy (and this from a Republican) and our spineless education that is ashamed to "indoctrinate" for democracy, to refuse to face the facts.

The Crisis in Education

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1958

Mr. ANFUSO. Mr. Speaker, the longer we ignore the crisis in education in this country the more difficult it will be later for us to solve this problem. There is no doubt that Federal leadership is required because this is a problem of national proportions, not a local matter.

The New York Times of July 11, 1958, published an interesting letter on the subject which points up the problem. It is written by three leaders of the Public Education Association of New York and reads as follows:

TO MEET EDUCATION CRISIS—FEDERAL LEADERSHIP TO AROUSE PUBLIC IS DEEMED ESSENTIAL

To the EDITOR of the NEW YORK TIMES:

We read with great interest the incisive letter of Hon. Charles H. Silver, president of the Board of Education of the City of New York, in your issue of June 27 with reference to the recent Rockefeller Fund study committee on educational needs in the United States. We wholeheartedly concur with his conclusion that we can have only as good an education for our children as we are willing to pay for.

The New York Times also published the equally excellent report by United States Commissioner of Education L. G. Derthick, on the competence and quality of the Russian school system. This report, too, in the words of Mr. Silver, should be required reading for every citizen.

Both the Rockefeller and Derthick reports point up the necessity of awakening the American people to the role of the school in our society. It is essential to the accomplishment of this that the administration and the Congress stop sweeping our need for schools under the rug.

The thought that the Federal Government would spend up to $2 billion a year for the next 5 years for school construction would not be a shocking one to the American public, but would be one which they would accept as readily as the fact that we spend over $40 billion a year for our national defense.

MATCHING OF FUNDS

The Nation needs dramatic leadership in the field of education. New school buildings erected with a real assist from Federal funds should spur local school districts to do their part toward matching these funds to meet local needs. More than this, once the school buildings are built it would be an incentive to the States and local districts to fill these buildings with skilled teachers at necessarily increased salaries.

A climate of opinion from the activity of the Federal Government would be created so that education would be given proper consideration by so-called opinion molders. Communities then would more readily vote for local taxes to support education, thus reversing the present trend. Only through Federal leadership with its ability to affect the entire Nation will we be able to meet the present crisis in education.

It must be met now. This, too, is national defense.

WILLIAM B. NICHOLS,
President.
BETHUEL WEBSTER,
Chairman, the Board of Trustees.
FRANK E. KARELSEN,
Chairman, Executive Committee of Public Education Association.
NEW YORK, *July 7, 1958.*

Why Nasser Needs Iraq's Oil

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 8, 1958

Mr. SCOTT of Pennsylvania. Mr. Speaker, under leave to extend my remarks I am enclosing an analysis of "Why Nasser Needs Iraq's Oil":

WHY NASSER NEEDS IRAQ'S OIL

Economic need—as much as the thirst for political power—has heightened Nasser's determination to control Iraq oil. For a long time it has been obvious that the clash between Egypt and Iraq is a conflict between a poverty-stricken "have-not" nation and a weak "have." This situation has been sharpened within recent months as a result of the continuing decline of the UAR ecohomy.

AFTERMATH OF SUEZ

The Suez crisis of 1956 and its aftermath have caused Egypt to adopt commercial and financial policies which may undermine her international and domestic economic position. This impression is conveyed clearly, if cautiously, by the United Nations' most recent report on economic developments in the Middle East. Describing events over 1956–57, the period prior to formation of the United Arab Republic, the report documents a disruption of Egypt's foreign trade, a moderate but distinct inflation, and an increase of government spending and debt.

Egypt's sterling and dollar reserves were blocked by Britain and the United States in response to Nasser's nationalization of the Suez. As a result, Egypt could no longer draw upon her accumulated balances to pay for imports as she had since World War II. Cairo at once imposed harsh restrictions on imports, tried to expand exports, and sought credits from the U. S. S. R. and other countries. The import restrictions had little overall effect because Egypt's wheat stocks had fallen to a dangerous low during 1955 and imports of foodstuffs had to be maintained. The attempts to increase exports met with less success. Egypt's total exports fell slightly in 1956 despite a remarkable rise in the world price of cotton, her principal product. But Cairo was able to persuade certain of her trading partners to accept payment for their exports in Egyptian currency. The U. S. S. R. and her satellites were among the nations which came to Egypt's assistance in this fashion.

TRADE WITH COMMUNIST BLOC

During the first half of 1957, countries within the Soviet orbit and Yugoslavia supplied 26 percent of Egypt's total imports, as compared with 16 percent during the second half of 1956, 12 percent during the first half of 1956, and only 6 percent during 1955. The Soviet bloc also took up a substantial portion of Egypt's exports: 39 percent in the first half of 1957, as compared with 28 percent during 1956, and 17 percent during 1955.

The long-term agreements which generated this expansion of trade between the Communist countries and Egypt disrupted Egypt's traditional commercial and financial connections in Western Europe, thereby threatening to perpetuate Cairo's dependence upon the Soviet Union. Moreover, the Communist countries have apparently dumped a portion of the cotton obtained from Egypt in European markets to the detriment of Egypt's own cotton exports.

Cairo's attempts to balance her international accounts after the Suez crisis had other injurious consequences. The payments arrangements negotiated by the Nasser government to secure goods in exchange for Egyptian currency increased Cairo's indebtedness to other countries and caused a marked depreciation of the Egyptian pound on world markets. During 1956, Egypt's short-term debt to foreign countries increased by some $70 million.

The import controls employed to little effect in 1956 had considerable success in 1957. During the first half of that year, imports were about 10 percent below the level they had reached during the first half of 1956. But this improvement in Egypt's balance of payments position was secured at the cost of additional inflationary pressure. When imports are curtailed by quotas and

tariffs, expenditure is diverted to domestic goods, driving up prices at home. Between 1955 and 1956, wholesale prices in Egypt rose by some 10 percent. Over the first half of 1957, they rose another 8 percent.

This rise in prices reflected, in part, an increase in world cotton prices; the prices of consumer goods and food rose by less than wholesale prices. To some extent, however, it reflects the pressure of domestic demand generated by import controls and by Government spending. During 1956 Government expenditure rose 14 percent because both military and development spending were increased. The Government ran a large deficit which it financed in the most inflationary fashion possible. About two-thirds of the deficit was covered, by selling bonds to Egypt's central bank; much of the rest was covered by sales of bonds to the commercial banks. Both of these methods of finance add to the money supply and make for additional inflationary pressure.

NASSER GOVERNMENT GAMBLES

In 1957, Cairo managed to reduce the Government deficit. It did so, however, largely at the expense of economic development. Only E£28.3 million was budgeted for development in 1957, as compared with E£45.9 million in 1956. Other forms of Government spending, including military spending, were scheduled to rise in 1957. Here, as in its foreign economic policies, the Nasser government appears willing to gamble with Egypt's economic future. As private investment in Egypt has been declining steadily since 1950 and now Government spending on development projects reduced, Egypt's capacity to provide for her rapidly growing population is bound to diminish.

Because Cairo has reached agreement with the Suez Canal Co. concerning compensation for the canal, Egypt has again secured access to her sterling and dollar balances. She can, therefore, finance a temporary increase of imports. These foreign currency reserves, however, are small, compared to the balance of payments deficits which Egypt has run in recent years, and they must be rapidly depleted if import spending returns to pre-Suez levels.

The U. N. report concludes, however, that Egypt's immediate position is not as grim as is sometimes presumed. Dues from Suez, it believes, will more than replace the declining sterling and dollar balances as the means of financing excess purchases abroad. It remains to be seen, of course, whether these revenues and the proceeds of the loan from Moscow will be used to accelerate Egypt's development program or will be dissipated in armaments expenditures. The increase of Government spending planned for 1957 and the reduction of planned development spending to offset this increase and to balance the budget are not encouraging.

CONTRAST WITH IRAQ

Little wonder that Egypt has become increasingly eager to swallow up her rich rival. The plans and performance of Iraq's Development Board contrast strikingly with those of the Nasser regime. Since 1951, Iraq has allocated 70 percent of her oil royalties to economic development. For some years, actual expenditure under this development plan lagged far behind scheduled expenditure. Recently, however, spending has caught up with authorizations and revenue. During the fiscal year 1956–57, Iraq spent 50 million dinars, compared with 39 million in 1955–56 and 21 million in 1954–55. Revenue in 1956–57 totaled 51 million dinars, a reduction from 1955–56 of 10 million caused by the Suez crisis and the decrease of oil sales that accompanied the closing of the canal.

Roughly 40 percent of the development funds have been used for irrigation and agriculture, the country's most urgent need. There is indirect evidence, moreover, of an increase of private investment, probably attributable to the activities of the Iraq Petroleum Co. This trend in private capital formation is also discernible in Lebanon and in Israel, but not in Egypt and Syria. Private investment in Egypt declined by some 30 percent from 1955 to 1956. In Syria, it fell by 9 percent.

Iraq is also distinguished by her comfortable foreign exchange position. Over the years 1953 to 1957, Iraq's foreign currency holdings have risen by 579.7 million dinars. These holdings are surplus oil receipts deposited in London and New York. Naturally, the acceleration of Iraq's development program will reduce the rate at which reserves accumulate. The U. N. economists point out, however, that "oil consumption in western Europe, the main outlet for Iraqi oil, is increasing at a compounded rate of over 10 percent a year; and Iraqi oil production and royalties are likely to grow along with it, provided that larger pipelines and more loading facilities are made available."

Iraq could easily subsidize Jordan, her partner in the Arab Union, without diminishing by much the rate of increase of her own hard currency reserves. Jordan relies heavily upon such subsidies for balance of payments and fiscal solvency; in 1957, Jordan anticipated tax receipts equal to but one-third of her planned public expenditure. In this respect, the Arab Union is a more viable and beneficial alliance than the UAR, for neither Syria nor Egypt enjoys a satisfactory payments position. But its promising prospects now may be dismally dispersed by the bloody coup which may turn Baghdad into a satellite of Cairo.

Small Business Tax Revision Act of 1958

SPEECH
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. SIKES. Mr. Speaker, I want to congratulate the members of the Committee on Ways and Means for their work in behalf of small business and to aline myself solidly behind H. R. 13382. The problems of small business are becoming increasingly magnified as big business becomes more and more monopolistic. The measure before us today is not an all-inclusive one. It lacks a great deal of providing a cure-all. Nevertheless, it is helpful in meeting some of the problems which confront small business today.

House Report No. 2198 which accompanies H. R. 13382 provides a very good explanation of the provisions of the bill and I suggest its careful reading by the Members of the House.

H. R. 13382, among other things, provides for ordinary loss treatment where the original holder of small business stocks sells it at a loss, extends the 2-year net operating loss carryback to a 3-year carryback; thus, businesses will have a 3-year carryback and a 5-year carryforward for losses. Permits businesses to write off 20 percent of the cost of their depreciable, tangible personal property. Increases from $60,000 to $100,000 the minimum accumulated earnings credit representing amounts which a business can accumulate over a period of years without the possibility of the imposition of any accumulated earnings tax. Provides that where the estate of a decedent consists largely of an interest in a closely held business, the estate is to have up to 10 years for payment of the Federal estate tax.

In the great State of Florida, which I have the pleasure of representing, I have been profoundly disturbed by the number of small businesses, once a thriving part of the communities' economy, which have closed their doors because it has become impossible for them to operate at a profit. It is a serious thing indeed when more and more firms which are representative of small business are forced to the wall, and we see that taking place every day. As a result, the small family business, once the very foundation of community economic stability, is fast fading from the scene. Replacing these small firms everywhere are the huge corporations, the chainstores, the mammoth combines, which prosper at the expense of small business. I feel that we must take positive action in the Congress to provide some measure of relief to try to insure that small business will not be wiped out in our time.

Mr. Speaker, I am firmly convinced that these provisions are necessary to provide a "shot in the arm" for small business. These provisions will help to eliminate the fears that have strangled so many small business ventures in the past.

Once again, I want to commend the distinguished members of the House Committee on Ways and Means for their efforts to correct the serious plight facing our small businesses. And, I also urge each of my colleagues to remember that America was founded on the great principle of opportunity for the individual; therefore, I sincerely urge that in the interest of maintaining our economic system of fair competition that they vote in favor of H. R. 13382.

America's Farm Problem

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1958

Mr. WAINWRIGHT. Mr. Speaker, while much has been written on our national farm problem over the past few years, I honestly believe that the article recently written by my good friend, Ned Chase, is the sanest discussion of the fundamentals of the farm policy problem that has been written in the magazine field in a long while.

AMERICA'S FARM PROBLEM

(By Edward T. Chase)

The threat of social and economic dislocation from automation is a very modish topic among feature writers and social scientists, especially the prospect of the automatic factory. Curiously, however, the notion is seldom applied to our largest single industry, farming, which has the most workers, the largest capital investment, the largest gross

value for its output and for nearly a century, ever since the post-Civil War period, has been our biggest single economic headache. Yet dislocation from technological progress is the heart of the farm problem.

The farm problem is really a maze of problems, not the least of which is gross confusion about its nature, and the congressional farm bloc bears a notorious responsibility for this. Its overriding concern has always been short-range relief of symptoms and escape from the displeasure of constituents by means of whipping boys, such as middlemen, the corporate farm, and now Ezra Taft Benson.

Let there be no mistake about it, the problem is a grave one, despite the current evidence of a temporary upturn in farm income (an 8-percent rise in farm prices and income for the first third of 1958 compared with the same period in 1957, cause strictly by Midwest drought and Florida freeze). Statistics alone cannot illuminate what is a complex and poignant human situation, but a handful are quite pertinent. Nearly a third of all nonmilitary Federal expenditures goes to supporting agriculture, the largest single "civil" item. Besides the tax burden this represents, there is also the matter of high food costs, which the technological revolution in farming might have cut in half long ago had it been directed to operate on behalf of the consumer. Meantime, the income-cost plight of millions of farmers has been harsh and their families have suffered from chronic poverty. They have seen their net income drop 41 percent from 1948 to 1957, down from $17 billion to $10 billion, while all their costs have risen. The per capita decline was only 6 percent, from $958 to $902, because of the dwindling farm population, comparing dismally, nevertheless, with an overall United States per capita increase of 33 percent in the same period, from $1,279 to $1,708. And let it be remarked that today's farmer, unfortunately, lives on practically the same cash basis as the rest of us; even buys his eggs in the grocery store. What is especially galling about all this is that we have spent about $45 billion in the last quarter century directly or indirectly aimed at resolving the problem. And we have managed for the most part only to compound it.

This has been a sad and inexcusable failure, when one considers how much man knows about both the historic tribulations of agriculture and the processes of technological displacement. The enclosure movement in English agriculture, for instance, is an instructive analogue for us as we face a mass exodus from the farm (1,800,000 left in 1957, a record migration) and a trend toward urbanism that is now irreversible. This English precedent lacks the cruel complication of our surplus problem, however. This is the further predicament the American has imposed on himself through his science: excess production accomplished through the frenzied race for ever higher yields, creating undistributable commodity surpluses in a world where starvation is endemic. The surpluses, costing us about $1 million daily for storage, relentlessly depress the prices the farmer receives for his industry. This spurs him to create still larger surpluses, a treadmill-like exercise that must be stopped without at the same time destroying its victim, the farmer. This is the general setting of our farm problem.

The displaced English farmer and agricultural laborer suffered severely from enclosure. So did the farmer doomed to a subhuman existence by too small or poor holdings. Nothing much was done about it. On the other hand, however, man responded with belated horror to the uncontrolled barbarism perpetrated in the early phases of the industrial revolution. He fashioned great systems of legislation to ameliorate the machine's impact.

Certainly it is more than high time we quit deploring the maladjustments in American agriculture and applied similar wit and energy to easing the effects of this revolution. Consider the astonishing fact that the American farmer's man-hour output has actually risen more rapidly in the last 20 years than the rest of the economy, and this in a period of unmatched productive expansion. His production has doubled since 1940, he feeds 20 others besides himself, as against 3 others in the 19th century.

To adjust agricultural resources to this productive boom. Mr. Benson has made us fear his real aim is a cataclysmic reversal of farming from a controlled to a completely free status. His current plea for authority for a wider price-support range—between 60 and 90 percent of parity (it is now 75 and 90)—suggested this to many. But Mr. Benson himself has recognized that a sudden change is manifestly undesirable, as well as being a political impossibility. Sudden return to a free market would see the wholesale bankruptcy of much of American farming. Millions of farmers, a substantial percentage of whom undoubtedly lack proper land and other resources to justify their staying in farming, would be thrown upon the untender mercies of urban industry—this during a time of considerable unemployment.

The classic palliatives of recent times are rigid high price supports of certain major crops tied in with acreage allotments; Government storage; and escalator laws that automatically force guaranteed price levels upward as surpluses decline—thereby encouraging new surpluses of the same. What we have is a perpetuation into peacetime of the agricultural production incentives of World War II, an endlessly self-defeating system. It is a palpably absurd system from the viewpoint of economic logic or any other logic, as has been demonstrated clearly by responsible students of the problem. Not to mention the fact that the support system, while originally an incentive system, was later rationalized as a price stabilizing system, but has in fact been used strictly as an income subsidy for the farmer. Even more bewildering is the fact that while this subsidy results in a stimulus to the farmer, the Government at the same time, with the other hand, pays him to stop production by placing his land in a soil bank.

Yet this price-support system, in a bumbling, and increasingly ineffectual way, has transcended logic, so to speak. It has acted as a giant philanthropy financed by all of us to sustain a certain minimal vitality in farm income until we could come up with a real solution to the problem. While the farm bloc has been selfishly shortsighted, the high price-support advocates are to be sympathized with. They have the humanity to appreciate that a brutal readjustment brought about by throwing agriculture on the free market would have a devastating repercussion on something over half our farm families. Nevertheless, this fact has tended to paralyze us, has disarmed us from asking for real solutions from the major political parties, and thus in the long run has served neither the farmer nor society in general.

Our politicians and our farm specialists have not been short of answers. Yet until recently few if any of the answers have been good ones. Dismissing Secretary Benson, for example, just won't do. (The 8 percent farm income rise, plus the tacit acceptance of congressional leaders that votes could not be mustered to override President Eisenhower's recent veto of the bill to freeze price supports at 1957 levels have silenced the Benson-must-go talk.) Surplus disposal abroad helps, but it does not make an appreciably enough contribution to reducing price-deflation excesses, so great are they, and, regrettably enough, it has proved disruptive to friendly trade relations with our allies and friends. Meantime, support programs, acreage allotments and quotas have failed, especially so far as providing any foreseeable termination of the farm problem is concerned.

But one who closely observes the scene can detect a vitally important change occurring in farm thinking—among the experts in Congress, in the Government, among farm leaders, and among economists and farm journalists. It is in essence a realization that the only truly responsible approach to the farmer's problem today is to help him to adjust to the radically altered agricultural scene created by science, not to perpetuate his difficulties by demonstrably hopeless expedients and irrational disinclination to face up to the facts of a changing rural economy.

We see the National Farmers Union at their annual convention this spring, while properly holding to their ideal of the family farm's virtues, not only recognizing that vast changes are rapidly taking place in agriculture but also that industry must be established in rural areas to provide a better balanced economy for agricultural communities. At the same time we see the most important of all the farm organizations, the American Farm Bureau Federation, strongly supporting the presidential veto of the bill to freeze price supports as in the farmers' best interests. Here is powerful evidence the farmers themselves have gone ahead of the farm bloc in their thinking and at last have begun to see the perils of tight governmental controls and the rigid high price-support system.

Meanwhile, in the farm State agricultural colleges there is a new preoccupation with the farmer's adjustment problem in the light of perhaps deplorable but nonetheless unchangeable trends, toward greater farm production; specialization; ever larger but fewer farm units; harder pressed small, inefficient farmers; more part-time farmers; and the implacable evolution to urbanism. (This year, for the first time, Iowa—and Italy—have passed from predominantly rural-farm to urban-industrial States.) We see the establishment at Iowa State College of a new institution called the Center for Agricultural Adjustment, concerned with the farmer's sociological and cultural problems in this era of great dislocation in rural living patterns. Implicit in its establishment is a remarkable change of attitude in the farm country, away from emphasis on ever-greater production to the realization that the farm problem encompasses such once-heretical considerations as training excess farm labor for better economic opportunities in urban industry.

Several developments affecting national farm policy have occurred in recent months that both express and in part account for these fundamental changes in attitude.

In informed circles in Washington there is now the admission, grudgingly given in some quarters to be sure, that Congress can be expected slowly to accede to the realities of the technological revolution and provide new legislation calling for lower price-supports and other recommendations of the administration's farm program.

There is talk of the possibility that much of the administration's farm program may yet go through, though this appears unlikely to this observer. The other day Secretary Benson said that if the agriculture committees would allow Congress an opportunity to pass upon this program, "it would have a good chance. After the evidence the members picked up at home during the spring recess of a grassroots hostility to the old high support and tight controls approach, few would dispute this statement.

The fact is that the virulent power of the farm bloc is becoming a thing of the past as the diminution in farm constituents accelerates. And not only is the drop of farm population to 12 percent of our population (from nearly 30 percent 25 years ago) decisive, but today the farmer shares most of

the consumer interests of the rest of us. Add to this the divisive conflicts of interest within the old bloc, between South and West, and it becomes clear that it will not be able to perpetuate the short-range, rigid, high price-support remedies it has insisted upon in the past.

A remarkable experiment was carried out by the Government recently to determine a direct way in which to bring about constructive (i. e., preservation of the land, not destruction) retirement of farm lands on a purely voluntary basis, with the hope of making a real dent in the surplus acreage problem. In four trial States farmers were invited to submit bids indicating what price rent they would accept per acre in return for taking their entire farms out of production for 5- or 10-year periods. The number of farmers wishing to participate exceeded all expectations (over 50,000), though in fact none of the bids was accepted because the Agriculture Department eventually decided it could not furnish the funds to meet the average high-bid level asked by the farmers. But it was a valuable experiment for the information it produced, and now the Department is weighing new methods and a higher rental level to make the device more practical.

What this farm retirement scheme represents is the most effective way to carry out the objectives of the Soil Bank, in particular the conservation reserve program, which is a vital part of the administration's proposals and is now universally respected. This calls for payment to those who elect to withdraw their cropland from production and put it into a cover of trees or soil-conserving grass. It can be a boon to the terribly hard-pressed low-income farmer, hitherto immobilized by poverty, who is anxious for a chance at a more secure livelihood. At the same time it directly attacks the production problem.

One of the influences behind these plans and the shift in general attitude that has allowed them to come into being is the farm report of the Committee for Economic Development, the private research group of university and business leaders now embarked on a major exploration of America's monetary policies. The distinction of the Committee for Economic Development report and what differentiates it from the series of prior serious proposals we have had (the McNary-Haugen plan, the triple A's program, the Brannan plan, marketing quotas, allotments, supports, etc.) is that it is constructed so as to end the problem, not simply ameliorate symptoms. It is a program with many interlocking, phased steps, but the most important point it makes is that to ease farming into the new era means that a gradual transition must be begun to retire whole farms on a voluntary basis, the problem farms at first, paying the farmers via rentals or outright purchase for putting the land into cover crops. (To correct the resources imbalance, of course, larger farms too must eventually be retired.) A paramount phase of the program is adequate preparation of the farmer and laborer by means of training and by the provision of community employment opportunities to make sure that the lot of the farmer and the agricultural worker actually improves rather than deteriorates.

This will take, initially, funds nearly as large as we are presently spending on the farm problem, but they will taper off as the farm production crisis is brought nearer to control. Our people are going to have to learn that such dislocations as these—and especially those that will be posed in many communities by automation in the years ahead—have to be faced on broad, community-wide bases. This is the great lesson of the farm problem. The Committee for Economic Development's recommendations have powerfully influenced the administration's proposed 1958–59 plans and account for whatever distinction they have.

For those like myself who feel that the historic quality of American life is understandable only in terms of the catalytic effect of the frontier and the vision of family life we have realized for generations on our farms—for all of us, indeed—it is disturbing to see farm life moving so rapidly and so irrevocably into a new era. We must, nevertheless, have the resiliency and wit to cope with this in a way that least damages our national well-being.

In any case, we may take cheer. While it is true that the large corporation farm has become important in certain specialized farming operations, the family farm, thanks to the marvels of technology which allows one family to manage more acres, is at least holding its own in proportion to all those engaged in agriculture. Family labor accounted for 76.5 percent of farm employment a year ago, compared with 75.6 percent just before the last war. Many experts believe this proportion can hold, as we move from the present situation of 12 percent of our people in farming to what will probably be 5 or 10 percent by about 1975–80. That is something. Remember, too, that as the changes we have been discussing make it increasingly impossible for the small farmer with slim resources to lead the good life, the community must see to it that it comes to his rescue in a realistic way and does not turn its back with euphemisms about a kind of family farm that can no longer make its way.

We should realize also that it is silly and worse for us to deplore the fact that the farmer is getting a smaller share of the food dollar when it is we ourselves who are demanding more and more semiprepared foods. This is the explanation for the rise of the middleman, not some arcane conspiracy to do in the American farmer. Like it or not, a new era has come in American farming. It calls for a new era in policy and in public understanding.

Arizona: America at Its Best

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 11, 1958

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD an editorial from the Glendale Herald of July 11, entitled "Arizona: America at Its Best." In this editorial the scenic wonders of Arizona are outlined in a most interesting manner.

ARIZONA: AMERICA AT ITS BEST

Arizona is that geographic rarity—a State which, in the heart of winter, can honestly boast it is one of the Nation's sunniest playgrounds, then 6 months later claim with equal vigor and verity to be an ideal summer vacationland.

Few States have been so bountifully blessed by Mother Nature. Yet the story of Arizona's remarkable double-barreled appeal has never really got around. Most vacationers, particularly from the East and mid-West, think of it as a winter resort, period. When Arizona comes to mind they conjure up visions of one vast, cactus-studded desert, balmy and sun-splashed in winter time, but hotter than a cow-camp dutch oven from June to September.

This popular concept bears little resemblance to the facts. Actually, less than 35 percent of the Grand Canyon State's 114,000 square miles is true desert—the kind that makes warm winters and hot summers. The remainder is a tremendous montage of high, wind-swept plateaus, pine-crested mountains and lush green valleys.

There are a few exceptions, but generally speaking this contrasting panorama of scenic beauty spreads over all the east-central and northern half of the State. For the most part the whole northland, as it is known locally, offers the vacationer dry, pleasant days and crisp, invigorating nights. In some mountain areas the weather even tends to be downright nippy. Often during the summer months places like McNary, Alpine and even Flagstaff pop up on weather charts as the coolest spots in the Nation.

The fact that 80 percent of Arizona's population is concentrated in the desert region gives the northland a built-in vacation market. For example, in a matter of 2 or 3 hours over good highways, Phoenix and Tucson families can trade the 100-plus temperatures of the desert for some cool, pine-scented retreat beside a babbling mountain stream. This no doubt explains why the northland has continued to boom in spite of the rampant misconceptions by out-of-State vacationers.

To generalize, Arizona's most popular summer playground areas probably are Prescott, the Flagstaff-Oak Creek Canyon area, the Tonto Basin and the White Mountain area.

Prescott, the onetime territorial capital of Arizona, is a colorful Old West city located 100 miles north of Phoenix on the mile-high slopes of the Prieta Loma Mountains. Cool pine forests bracket it on three sides and green rolling hills spread out northward into the fertile Chino Valley. One of the town's big tourist attractions is the old mud and log territorial capital, which is now preserved as a museum. Its most famous midsummer attraction is the impressive Smoki Ceremonial, August 9, during which a unique organization known as the Smoki People recreate dances and rituals of the Western Indian tribes.

Fifty miles northwest of Prescott on U. S. Highway 89–A lies Sedona and the awe-inspiring Oak Creek Canyon. Next to the fabulous Grand Canyon itself, Oak Creek probably rates as Arizona's most scenic attraction. Flaming red buttes and cliffs wall an emerald ribbon of oak, sycamore and cottonwood trees for more than 12 miles along boulder-strewn Oak Creek. Sedona itself is a picturesque little village, made up mostly of artists, writers and summer colonists. Because of its spectacular beauty, Oak Creek has long been a favorite spot for Hollywood movie companies. Rustic lodges (rates from $50 to $70 per week), trailer courts and public camping areas are spotted every few miles along the shaded floor of the canyon.

Only a half-hour from the dizzying climb out of Oak Creek Canyon is Flagstaff, the cultural and commercial center of northern Arizona. A booming, bustling city of 15,000 Flagstaff is the seat of Arizona State College and the railroad for the colossal Glen Canyon Dam project. On top of that it is a favorite base of operations for tourists who want to make side trips to the myriad attractions of the northland.

Immediately surrounding the city is the world's largest ponderosa pine forest; on its outskirts is the fascinating Museum of Northern Arizona, and towering over it to the north are the snowcapped San Francisco Peaks, which rear skyward more than 12,000 feet. Thirty-two miles east along United States Highway No. 66 is the pleasant little tourist town of Williams, gateway to the Grand Canyon, and 52 miles further north is the spectacular canyon itself. Within an

hour's drive of Flagstaff are such diversified attractions as Wupatki National Monument, Sunset Crater, Walnut Canyon and Meteor Crater. By driving a little longer eastward on United States Highway No. 66 you can take in such wonders as the Petrified Forest, the Painted Desert, and that vast stretch of desolate multicolored buttes and dunes known simply as the Indian country.

The Indian country is a fascinating land in itself. Actually it is the reservation home of America's largest Indian tribe, the Navahos, and their strange, custom-bound neighbors, the Hopi. The two reservations, empty and treeless, form an awesome tableau of primitive beauty stretching 22,000 square miles over the entire northeast corner of Arizona.

Within its boundaries are such breathtaking wilderness areas as Canyon de Chelly (pronounced de-shay) and Monument Valley. Prehistoric cliff dwellings dot the whole land, and in the Hopi Villages, off Reservation Route 3, travelers can see life and customs which have remained changeless over hundreds of years. Only one really adequate road—Route 3 from Window Rock to Tuba City—slices through the Navaho-Hopi country. The remaining roads vary from fair down to impassable, and local inquiry should be made before venturing too deep into this strange country.

One summer area of Arizona that has scarcely been touched by out-of-State vacationers is the cool, verdant Tonto Basin, 2 hours out of Phoenix over the new Beeline Highway. Tucked between the Salt River lakes and the towering Mogollon Rim, the Tonto Basin country has been long held back by the absence of an arterial highway. Aside from camp, picnic and summer cabin areas, the only real settlements are the rustic little cow town of Payson and the crossroad community of Young, focal point of the bloody Pleasant Valley cattle war during the 1880's.

However, it is the same beautiful and historically-fascinating country which inspired many of Zane Grey's popular Western novels.

Perhaps the fastest-growing summer playground in the whole State is the White Mountain section of eastern Arizona. This area is traversed by two principal highways—U. S. 60 east and west and U. S. 666 north and south.

The towering forestland ranges from 6,000 to 9,000 feet above sealevel, and is speckled with shimmering lakes and gurgling trout streams. Progressive, tourist-minded towns like Springerville, Show Low, McNary, Alpine and Pinetop offer just about anything vacationers need in the way of motels, lodges, and trailer facilities.

Even the million-and-a-half acre Fort Apache Indian Reservation is being developed as a summer vacation mecca. From their tribal headquarters in sleepy little Whiteriver, the once fierce White River Apaches have launched a multi-million-dollar tourist development program to supplement their ranching and lumber enterprises.

Already they have built a $250,000 motel and trailer park just west of McNary, and more than 650 campsites are either completed or near completion.

The whole White Mountain area is a trout fisherman's dream. Hundreds and hundreds of miles of trout-filled brooks and rivers swirl through the network of spectacular canyons and gorges. Nonresident anglers pay only $10 for a year-round trout license, or they can get a 5-day combination trout warm water permit for $5. In addition, if you fish in Apache waters, you'll need a special tribal permit costing 60 cents a day.

So whether it's fishing, camping or just plain relaxing in some breeze-swept motel, chances are you can find it in the sprawling northland of Arizona.

House Should Vote Down S. 3420 and Pass Simple Extension of Public Law 480

SPEECH
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. JUDD. Mr. Speaker, the American Farm Bureau Federation was the original sponsor of the proposal to sell our surplus agricultural commodities abroad for foreign currencies, the program that became Public Law 480.

On the whole, the program has worked well. But this year the Committee on Agriculture, instead of bringing out a bill to extend a good program for another year, presented us yesterday with a bill that makes far-reaching changes in the program, including mandatory barter and broad new purposes for which the foreign currencies acquired may be used. These changes are so undesirable that the American Farm Bureau Federation has had to come out publicly in opposition to the mutilations of its own brainchild.

The Farm Bureau, like all the rest of us, wants a continuation of Public Law 480, substantially as is. Why tinker with it? Especially when the changes are opposed by those who have been closest to it from the beginning and by those who will have to administer it?

Tomorrow, the vote will come on this bill. Why not vote it down—and have the committee bring back here within 48 hours, as it easily can, a simple bill to extend Public Law 480 so that we can go ahead with what is fundamentally sound in the program and not get it all mixed up with new proposals whose ultimate results no one can foresee, but which at the very least will be confusion and uncertainty, and at the worst, bad both for the program itself and for our relations with other countries. No harm will be done by voting this bill down, and a lot of trouble avoided.

Mr. Speaker, under unanimous consent, I include with my remarks a letter received today from the American Farm Bureau Federation opposing the new barter provisions and the authorizations for entirely new and, in some instances, unwise uses of the foreign currencies such as putting the United States Government into practically unlimited operation of all types of educational institutions in foreign countries:

AMERICAN FARM BUREAU FEDERATION,
Washington, D. C., July 22, 1958.

Hon. WALTER JUDD,
House of Representatives,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN JUDD: Public Law 480, the Agricultural Trade Development Act, was passed by Congress and signed by the President in July 1954. It was designed as a 3-year program and $700 million was authorized for sales for foreign currency.

The three main objectives of the Public Law 480 program were: (1) to reduce surpluses by making possible sales of farm products in addition to the normal dollar sales; (2) to establish private trade channels for sales of farm products which could be continued with dollar sales after the termination of the program; and (3) to use part of the currency received from such sales to develop new markets or expand old markets for farm products. In our opinion these objectives are still sound.

In 1955 and 1956, authorization was increased from $700 million for foreign currency sales to $3 billion. In 1957, Congress extended the act for 1 year and authorized $1 billion for fiscal year 1958.

Public Law 480 has been successful in moving substantial quantities of agriculture products into export markets. However, when Public Law 480 was passed on July 10, 1954, CCC had title or held loans on $6 billion worth of agriculture surpluses. Today our surpluses amount to approximately $7.3 billion. We have not been successful in making substantial reductions in the amount of our surpluses, but we have been able to halt the rapid accumulation which would have taken place had it not been for this effective export program. These facts, together with the prospects of large production this year—especially of wheat—make it necessary to again extend this program. It is unfortunate that we have delayed the extension in the manner that we have. The Senate passed a bill extending the act last March. It is now July and the program expired on June 30. This delay has caused a serious breakdown in negotiations of title I, foreign currency sales. As of March 30, 1958, approximately $840 million of the $1 billion Public Law 480 authorization was obligated. Since March 30 the program has been operating on a small reserve. This has made it impossible to begin negotiations on a number of large programs. It is important that negotiations be concluded on these large programs in time to allow orderly shipping. These exports should be scheduled over the entire year, rather than attempting to move them in a 3- to 4-month period.

If the fiscal year 1959 authorization had been known by the Department of Agriculture it would have been possible to have concluded the agreement early in the year and perhaps we could have prevented heavy accumulations of surpluses in the fall. It should be borne in mind that extension of Public Law 480 also was delayed last year for over 4 months. Very few important agreements were signed between June and October of 1957 due partially to the delay in enacting such an extension.

The sharp decline in foreign exports during this period had a drastic effect upon American shipping and was very disruptive to the normal commercial trading facilities. As long as this program operates, it is essential that it operate with proper continuity and careful programming, rather than extreme peaks of activity for a short period and then a virtual cessation of operation. Valuable time has already been lost due to the delay in enacting an extension bill. If we are to have proper administration of this program, it is important that we take prompt action.

We do not mean to indicate that we should change the nature of the Public Law 480 program. It is a temporary program. Throughout its legislative history it has been emphasized that these sales for foreign currency are an emergency measure and not a permanent part of our agriculture exports. For example, the report from the Committee on Agriculture of the House of Representatives (Rept. No. 432, dated May 9, 1957) stated, "This committee would remind those in charge of administering this law that it is not intended as a permanent part of either our agricultural or our foreign-trade program. It is an emergency law designed for the sole purpose of making the best of a bad situation by providing for the disposal

of agricultural surpluses in a manner which will return some benefit—if possible, a permanent benefit—to the United States."

A program of sales for foreign currency can benefit American agriculture only a limited length of time before markets start orienting to this way of doing business. The trade becomes acclimated, as it were, to such sales. In short, customer nations start to consider unconsciously or consciously, the Public Law 480 operations as a normal part of commercial trade. There are indications that just this already has happened in some instances. We view with serious concern evidence that some countries are adjusting their dollar exchange so that very little of it is used for the purchase of American farm products. They are taking for granted that they will be able to purchase a substantial portion of their food and fiber needs from the United States with local currency. This places United States farm products in a very vulnerable position and jeopardizes future dollar markets.

S. 3420 has been amended by substituting the language of H. R. 12954. Section 101 of H. R. 12954 extends authorization for foreign currency sales for 1 year and provides a $1.5 billion authorization. This is an improvement over the Senate bill which provided an open-ended authorization. This type of authorization for Public Law 480 would tend to destroy the temporary nature of the program.

Sections 103, 104, 105, 106, 107, and 108 of H. R. 12954 expands authorized uses for foreign currency generated under Public Law 480. This multiplicity of possible uses could greatly complicate the proper administration of the program. We must not forget that Public Law 480 is a trade development act and foreign currency should be used efficiently and effectively to accomplish this primary purpose.

We are opposed to section 102 of H. R. 12954 and feel that this section should be deleted. It represents an effort to tie the Secretary of Agriculture's hands in administering the barter program. We are for a barter program vigorously implemented; however, it must be conducted with proper safeguards. Section 102 of this bill amends section 303 of Public Law 480 and directs the Secretary of Agriculture to barter farm products for strategic and other materials up to $500 million annually. This section forbids the Secretary to restrict countries into which surplus-agriculture commodities may be sold under the program, except when the Secretary makes a specific finding as to a particular transaction, that such transaction will replace a cash sale for dollars. This places a burden of proof responsibility on the Secretary which, in our opinion, would make proper administration of the program impossible. Such a provision could cause an unrealistic barter program which could tend to displace substantial amounts of dollar sales. This would have the effect of channeling an even greater proportion of our agricultural exports into government programs.

We must recognize the danger signs. Over 40 percent of our agricultural exports moved under Government programs in fiscal year 1957. Farmers' position in normal commercial trade must not be jeopardized. We must work toward expanded sales for dollars through private commercial channels. A barter program which merely displaces sales for dollars achieves no benefits for American farmers. It does not expand exports; it simply diverts them from private trade to government programs.

However, a properly administered, properly implemented barter program can expand agricultural exports. The Secretary has this authority. We are assured that he will use it.

Section 303 adds no new authority, but merely makes proper administration more difficult, if not impossible. Section 102 of H. R. 12954 should be deleted in the long-run interest of the American farmers.

Respectfully,

GEORGE J. DIETZ.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Mathematics and Science Education in Indiana Schools

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 23, 1958

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Mathematics and Science Education in Indiana Schools," written by Wilbur Young, State superintendent of public instruction in Indiana.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MATHEMATICS AND SCIENCE EDUCATION IN INDIANA SCHOOLS

(By Wilbur Young, State superintendent of public instruction)

Russian advances in the field of satellites have been responsible for criticisms of our science and mathematics education by cirtics of our educational system. Because of the interest expressed by the school people and the citizens in the veracity of these criticisms, the State superintendent of public instruction appointed a 14-member committee with Clarence Manion, former dean of the Notre Dame Law School and a member of the Commission on General Education of the Indiana State Board of Education, to investigate and appraise science and mathematics education in the schools of Indiana. This in part, was necessitated because the schools were being blamed for the failure of the United States to launch a satellite before Russia's Sputnik I, and in part because the school people and the citizens wanted to know the truth about Indiana's educational adequacy. The committee has scientifically studied the schools in Indiana to determine the actual facts in five areas of our educational program pertinent to the teaching and achievements in the mathematics and science courses. These areas are as follows: (1) Teacher qualifications; (2) high school offerings; (3) pupil participation; (4) achievement of pupils; and (5) the need for scholarships for talented pupils. To obtain pertinent data the committee used the records of the teacher training and licensing division, the statistical division, and the research division of the State Department of Public Instruction. In addition to this, questionnaires were mailed to all of the 707 Indiana high schools. The fact that 100 percent of the questionnaires were returned is indicative of the excellent cooperation and true interest shown by the school administrators in aiding with this quest for the truth. Investigation of the five areas listed above has been completed and a summary of the results is as follows:

TEACHER QUALIFICATIONS

The courses taken in colleges and/or universities by all the teachers of mathematics and science were studied by examining their credentials filed in the teacher training and licensing division of the Indiana State Department of Public Instruction. These records show that all mathematics teachers in Indiana have a minimum of 24 semester hours of college credit in mathematics. Data from these files also reveal that approximately 80 percent of the biology, chemistry, and physics teachers have a teaching certificate in their specific area which, in fact, means that the biology teachers have a minimum of 24 semester hours of academic biology, and the chemistry and physics teachers have a minimum of 18 semester hours of academic chemistry and academic physics. All of the other teachers, with the exception of a very small percent, have had at least 15 hours of science. For only 2.2 percent of the biology teachers, 1 percent of the chemistry teachers, and 2.2 percent of the physics teachers were our records incomplete.

HIGH-SCHOOL OFFERINGS

The idea has been prevalent that our high schools no longer offer the challenging and solid courses in mathematics and science. The facts are that during the 1957–58 school year 85 percent of our high schools were offering physics; 83 percent were offering chemistry; 88 percent were offering second-year algebra; 72 percent were offering trigonometry, and 62 percent were offering solid geometry. All of these schools did not offer these subjects each year but offered the courses in alternate years.

PUPIL ENROLLMENT

During the school year 1957–58 the records showed that 100 percent of the graduating seniors had at least 1 year of mathematics; 34 percent had 2 years of mathematics; 15 percent had 3 years of mathematics, and 11 percent had 4 years of mathematics. Dr. James B. Conant, former president of Harvard and former United States High Commissioner to Germany, recently used in a nationwide telecast our data that 11 percent of Indiana graduates have 4 years of secondary mathematics, as an indication of the strength of the American comprehensive secondary school. Of this year's (1957–58) graduates, 100 percent had 1 year of science; 26 percent had 2 years of science; 15 percent had 3 years of science; 2 percent had 4 years of science. These figures indicate that about as many high-school pupils in Indiana today are enrolled in advance science and mathematics courses as could profit from the accelerated study of these subjects. This statement assumes that it is the most capable and talented students who are enrolled in these advanced courses.

ACHIEVEMENT OF PUPILS

The science and mathematics committee tested the ninth-grade pupils in mathematics and science. The California Test Bureau of Los Angeles, Calif., was selected to provide the tests in mathematics and science. Schools were invited to participate on a voluntary basis. Of the approximately 63,000 pupils enrolled in the ninth grade, over 44,000 students took both the science and the mathematics tests.

The results of these tests have very definitely established the high caliber of our students both in past and present achievement and in the prognostication of their future scholastic ability and achievement.

The tests were validated on the national norms previously established and grade placements were also derived and ascertained from these national norms.

In the area of mathematics, the median grade level for Indiana's 9th-grade students was at the 10th grade. Approximately 27 percent of the total number of 9th grade students taking the test showed a grade equivalent of 13 (college level) or more, while approximately 58 percent showed grade equivalents at or above the 10th year grade level.

In the area of physical science, the median grade level for these 9th grade students was at the 9th grade level; however, 36 percent of the students taking the physical science exam showed a 10th grade equivalent or more.

In the area of biological science, the median grade level was the ninth grade, the same as in the area of physical science. Thirty-four percent of the 9th grade students taking this test placed at the 10th grade equivalent or more.

Results show that 61.6 percent were above the national norms in mathematical reasoning and mathematical fundamentals, and 50.7 percent were above the national norms in physical and biological sciences. More students were above the national norms in physical science than in biological science because many city schools offer biology to 10th grade students while the test was given to 9th grade students.

THE NEED FOR SCHOLARSHIPS FOR TALENTED PUPILS

A questionnaire was sent to the 707 high school principals in Indiana asking the following question:

"How many students in your school qualify by the way of interest, ability, and aptitude in science and mathematics to perform successful college work; how many do you estimate are unable to attend college because of lack of financial resources?"

The replies to this question indicated that there were approximately 2,000 students who had the interest, ability, and aptitude for science and mathematics but lacked the funds needed for higher education.

A 4½-hour comprehensive examination in science, mathematics, English, and social studies was given to all seniors wanting to take the examination. Of the estimated 2,000 qualified pupils who needed aid as reported on the questionnaires, 703 of these pupils took this comprehensive examination and the results were sent to Yonkers, N. Y., where they were machine scored.

There were 199 of the 703 pupils who ranked above the 90th percentile in mathematics and science based on national norms. The 199 pupils were then divided into 4 categories:

1. Twenty-seven pupils were counted in group I that included all pupils making above the 90th percentile based on national norms in each of the four fields of mathematics, science, English, and social studies.

2. Seventy-three pupils were counted in group II that included all pupils making above the 90th percentile in mathematics and science, and a percentile average of above 90 in the 4 areas tested.

3. Ninety-nine pupils were counted in group III that included all pupils ranking above the 90th percentile in mathematics and science but making a percentile rating of 90 or lower in English and social studies.

The committee decided to consider at this time any of those pupils in the group III for scholarship aid who had a percentile ranking of 95 or above in mathematics and science. This consideration included 179 of the 199 students. These students were asked concerning their ability to finance their

higher education. Twenty-three students did not reply and it was assumed they had financial resources for attending college. Fourteen students stated that they had sufficient funds to attend a college or university of their own choice for 1 year. Twenty-five students advised the committee that they were going into fields other than mathematics and science in higher education therefore automatically eliminating themselves.

A need formula was applied to the 117 remaining and qualified pupils. This formula has been widely used throughout the United States to determine, first, the financial need necessary and, second, the amount of financial aid required in order to guarantee 1 year of college work.

Sixty-four students were eliminated by the formula, leaving 53 qualifying for aid for amounts from $10 to $1,200. Of the 53 qualifying for financial aid, 37 already had scholarships ranging from $25 to $750.

The committee learned that the problem at hand was not to provide scholarships as only 16 are needed and can be taken care of but the problem concerns provision for financial assistance for those already having scholarships in order to guarantee 1 year of college work.

A plan is being devised whereby the 53 needing financial aid in order to complete 1 year of college education may secure that aid providing, of course, they enroll in college this fall and make satisfactory grades.

The results of the study of these five areas have shown conclusively that the training and education directed to our students do not in any way preclude their ability to achieve and to meet the challenges of our changing world.

The facts do show that our schools are very adequately meeting the needs, interests, and abilities of the pupils. Therefore, there is no basis whatsoever for unfavorable criticisms concerning Indiana's educational system. The aims, the objectives, and the philosophy of our schools sharpen and challenge the working tools of the pupils. Since progress is an important product, our youth will not mark time but will keep pace with all the developmental tasks that our culture expects of them.

BRIEF SUMMARY OF THE FIVE AREAS

Teacher qualifications: The records of Indiana's mathematics and science teachers show that they are well qualified to teach in these subject areas.

High school offerings: Indiana's high schools are definitely offering adequate mathematics and science courses to meet the needs of our challenging students.

Pupil enrollment: The records show that Indiana's high school seniors for 1957–58 had a firm and substantial background in both mathematics and science.

Achievement of pupils: Results of a mathematics and science test showed that in the area of mathematics, the median grade level for Indiana's 9th grade students was at the 10th grade. A large percentage of these students ranked at the grade equivalent of 13 (college level) or more.

In the science area, the median grade level was the 9th grade, while a large percentage ranked at the 10th grade equivalent or more.

The need for scholarships for talented pupils: A 4½-hour comprehensive examination (essential high school content battery, form BM.) was taken by 703 qualified high school seniors.

One hundred and ninety-nine or 28.3 percent of these 703 seniors made a percentile ranking, based on national norms, above 90; however, the committee decided not to consider for scholarship, at this time, those students who had an average percentile ranking of 94 or below in the areas of mathematics and science, and an average percentile ranking of 90 or below in the areas of English and social studies. This eliminated 20 of the 199 students.

By process of further elimination according to pupil interest, course of study pursued, and a financial need formula; only 53 students, who were still qualified, remained.

A plan is being devised whereby those 53 students needing financial assistance may obtain this aid from private sources in Indiana. The committee is convinced that Federal assistance on this program is neither necessary nor desirable.

Alaska Statehood and District of Columbia Suffrage

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, July 23, 1958

Mr. JAVITS. Mr. President, on Tuesday, July 15, President Eisenhower sent United States marines into Lebanon, the U. N. Security Council began considering sending a police force to the Mideast, Great Britain prepared to send paratroopers into Jordan and the United States Senate was obligated to consider and pass bills permitting the District of Columbia Commissioners to alter overhead wiring regulation, expanding the charter of the St. Thomas Literary Society in Washington and permitting and permitting clerks of the District of Columbia Municipal Court of Appeals to administer oaths.

While these bills are innocuous in and of themselves and merited enactment, legislation such as this could best be considered by a locally elected body in the finest tradition of our governmental heritage rather than by the Congress of the United States which was elected by the people of the States to serve as our National Legislature rather than as a municipal city council.

Now that Alaska has been admitted into the Union, very serious and active consideration must be given to giving to the citizens of the District of Columbia their rights of citizenship and giving to them such modicum, at the very least, of self-government. There is legislation presently pending on the calendar of this body providing for home rule in the District of Columbia; I hope very much that such legislation will be enacted into law.

The Reporter Dispatch of White Plains, N. Y., on Tuesday, July 8, 1958, carried a ringing editorial urging that the people of the District of Columbia be divested of their second-class citizenship and restored to full citizenship.

I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FAIR PLAY FOR HOME-GROWN AMERICANS, TOO

There's been almost unanimous approval—excepting perhaps some prideful Texans—on admission of Alaska as the 49th State of the Union. It's anticipated that Hawaii won't have to wait very long to become the 50th.

Yet, while we're welcoming Alaska, which we acquired in 1867, and preparing to lay down another red carpet for Hawaii, which joined us in 1898, we stubbornly hold back in the awkward status of less than second class citizenry the 800,000 residents of a mainland section which has been with us since the Revolution.

While we tie in Juneau, Alaskan capital as far distant from Washington as is London, we still push back from statehood, or even territorial status, the home of the National Capital itself.

Alaska and Hawaii to be States? But residents of the District of Columbia not to be given even territorial rights? Doesn't sound exactly like fair play, does it?

Population of the District is just a little bit more than that of Westchester. It's four times that of Alaska. Yet, while Alaskans are getting ready to elect State and congressional officers, folks in the District of Columbia can't vote for even a dogcatcher.

Oh, they're allowed to pay taxes, real estate taxes, personal income taxes, corporation taxes—but they don't have legal rights to even a whisper as to how those taxes shall be used. Instead, that function is given by present law to nonresidents, to Members of Congress who live and have personal interests many hundreds of miles away.

How would we feel here in our community if an authority reported that the salary level of our public school teachers was "not only a disgrace but fails to enable the board of education to recruit properly trained teachers"? And how much worse would we feel if we knew the statement to be absolutely true but were completely helpless to do the least little thing to correct it? Yet, that's the situation in the District of Columbia.

Why, even such a comparatively minor matter as whether the District, entirely urban, should have daylight saving time took up hours of debate in the Senate, hours which might have been far better given to discussion of weighty national and international issues. Senators from Western agricultural States whose constituents are congenitally opposed to daylight saving objected to giving the boon of an extra hour of summer daylight for relaxation of District residents.

Consider our own Senator JACOB K. JAVITS. He's on the Senate District Committee. In that role he has all the responsibilities and headaches of a Mount Vernon alderman or a Westchester supervisor. The time he should be able to give to global issues he must surrender instead to questions of sewage treatment and garbage disposal. Is that good?

Then, there's our other Senator, IRVING M. IVES, who has been named to a joint committee to iron out differences between Senate and House on the District's budget. He faces the unpleasant task of imposing taxes upon property owners who can't say a word about how big that budget can be, how it should be raised, or how it must be spent.

Who was it said away back in our early colonial days: "Taxation without representation is tyranny"? And if true then, why not now?

Is this what we sent our Senators and Representatives to Washington for? Is this local government a burden we must put upon them when they need all their time and energy and brains to meet pressing national problems?

Senator JAVITS, realizing the situation, has helped to introduce a home rule bill for the District of Columbia. Its passage will give fair, honest, American-type representation to residents of the National Capital. It will also relieve Senators and Representatives of petty annoying details of city-level administration, and thereby make that time available for the more important and more proper work of Congress.

Of course, there may have been away back there in 1790 some reason to exclude District of Columbia residents from local voting rights. There may have been some slight substance for fear of local control of the National Capital.

But that fanciful bugaboo evaporated from the dim mists of capricious imagination many decades ago. It's laughable now to advance the supposition that to give the vote to the District of Columbia would endanger the basic principles of the Nation.

So, while we're preparing to recognize the civic equality of Alaskans and of Hawaiians, how about giving a bit of fair play consideration to the rights of mainland Americans in our National Capital?

Supplemental Appropriation Bill, 1959

SPEECH
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

The House in Committee of the Whole House on the State of the Union had under considering the bill H. R. 13450 making supplemental appropriations for the fiscal year ending June 30, 1959, and for other purposes.

Mr. FORD. Mr. Chairman, will the gentleman yield?

Mr. TABER. I yield to the gentleman from Michigan.

Mr. FORD. I would like to ask the chairman of the committee, or someone familiar with the matter, a question in reference to a statement in the committee report appearing on page 48 having to do with the reactor-development program. The committee has recommended, according to the report, the following:

The budgeted program includes $1,250,000 for development work on fast-reactor systems. In keeping with the position taken by conferees on the bill last year none of these funds are to be charged against the contract between the AEC and the Power Reactor Development Co.

It is my understanding that during fiscal year 1958 none of the funds made available for the fast-breeder reactor were specifically charged to the PRDC contract but that benefits from AEC research on the reactor-development program could be made available to the PRDC project. Do I gather from the words in the committee report that the same arrangement will be carried on in fiscal 1959?

Mr. RABAUT. The answer is "Yes."

Mr. FORD. That arrangement is satisfactory, as I understand, to the PRDC and the AEC. Therefore I am glad to hear that this bill for the fiscal year 1959 will carry out that arrangement in the future.

Mr. RABAUT. The Congress has never approved the contract between the AEC and PRDC but, as far as the gentleman's question is concerned, the answere is "Yes." The situation is the same.

Mr. FORD. I thank the gentleman from Michigan. He is as concerned about this matter as I am. I think the answer is very satisfactory.

Mr. BEAMER. Mr. Chairman, will the gentleman yield?

Mr. TABER. I yield to the gentleman from Indiana.

Mr. BEAMER. Mr. Chairman, I would like to make a comment and ask a question of the committee, particularly with reference to the matter referred to on page 5 of the committee report. This has to do with emergency conservation measures. The Congress several years ago appropriated $24 million for disaster relief in areas that had been devastated by floods and other acts of nature. Now, as I understand, there is about $18 million or $19 million remaining of this fund. The question is this: Does this bill extend that public law, which I understand was Public Law 85 and Public Law 170?

Mr. TABER. I understand it does.

Mr. BEAMER. Well, the reason I asked that question, I represent a district and I think many others represent districts where there have been tremendous flood losses this year in various farm areas. Now, the other question that I would like to ask is this: Is this amount of money on a matching basis, or is it on a loan basis? Could that be answered?

Mr. TABER. I think I would have to yield to a member of the agricultural subcommittee to answer that question.

Mr. BEAMER. As to the language on page 2 of the bill, emergency conservation measures, is that money available on a matching basis or is it an outright grant?

Mr. WHITTEN. It is an outright grant to repay money expended by local people to remedy the damage done in times of natural disaster. The law itself limits the area and conditions under which the funds are available. The State must determine the disaster, and the President must agree. We have, for a period of years, each year extended this disaster fund in line with the legislation. The budget request was that we extend it now for 6 months. In view of the restrictions and limitations in the law itself, which protects the funds, we felt it was better to continue the fund on an indefinite basis.

Mr. BEAMER. I discussed this with the chairman of the subcommittee, the gentleman from Mississippi, and I think it is an excellent move, but I did want to get this question answered.

Mr. WHITTEN. Permit me to go further by saying that actually this is a reimbursement to the people in the area who do certain work incident to recovery from a disaster which the Federal Government and the State determined did exist.

Mr. BEAMER. And it must be declared a disaster area?

Mr. WHITTEN. That is right; which comes from the Federal Government and the State Government, and that precedes the allocation of money from this fund.

Mr. BEAMER. I compliment the committee for including it and extending this particular legislation.

Nixon Pens Own Story of Latin Communists

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the San Diego Tribune of July 15, 1958:

NIXON PENS OWN STORY OF LATIN COMMUNISTS

(By RICHARD NIXON)

WASHINGTON.—I appreciate the opportunity Victor Riesel has afforded me to report through his column on an important aspect of my South American trip, which, because of the understandable interest in the violent demonstrations which occurred, has not been adequately covered in the press.

I have often been asked why I insisted that State Department officials arrange meetings with labor-union leaders in the countries I visited wherever my schedule would permit.

The answer is that a free trade-union movement is one of the strongest bulwarks against communism.

The proof of the truth of this conclusion is that the growing trade-union movement in Latin America is a major target of Communist infiltration.

TRADE UNIONS GROW FAST

In the United States we can be grateful for the fact that our trade-union leaders were among the first to recognize the insidious character of the international Communist movement and the threat it presented to all free institutions. Men like George Meany, for example, were never fooled by the popular-front tactics of the Communists and they have fought the Communists skillfully and effectively through the years.

The trade-union movement in Latin America is comparatively small but it is growing fast, and in countries where former governing classes are losing their influence the trade-union leaders, together with leaders in the universities and public-opinion media, form a powerful and sometimes decisive force in determining the makeup of governments and their policies.

The Communists recognize this. That is why they are concentrating their efforts primarily not on government and business officials who may be in power today, but on the union leaders, the university students, and the public-opinion molders who may be in power tomorrow.

TALKS VERY FRIENDLY

What progress have they made as far as unions are concerned? We would be deceiving ourselves if we were not to recognize that they have made and are now making serious inroads in the union movement in Latin America. The Red labor network, organized under the direction of Vincente Lombardo Toledano, is well-heeled, efficiently organized, and ruthlessly aggressive.

Even in those countries where the Communist Party is outlawed, Moscow-trained and directed labor leaders are working and planning for the day when they will come to power. In other countries they openly boast of their Communist affiliation and are waging unceasing warfare on those they realize are their most effective opponents—the free trade-union leaders.

But there is another side to this story—an encouraging one from the viewpoint of those who support the cause of freedom. I

saw this side first hand. In every country I visited, with the exception of Venezuela, I met with free trade-union leaders.

The meetings I attended and the discussions I had with these leaders were without exception always friendly. That does not mean that they agreed with me on all aspects of United States policy. But in each instance it was a friendly disagreement from which a better understanding of the true attitude of the people of the United States toward those of Latin America resulted.

Since I have returned to the United States, I have received scores of letters from these democratic labor leaders deploring the incidents that so grossly misrepresented the true sentiments of the people of South America toward the United States. To note a few among many, Augusto Malave Villalba, of Venezuela, wrote that the organized workers of his national emphatically repudiated the incidents that took place.

The Confederation of Labor of Peru rejected the demonstrations as "contrary to their ideals of democracy, freedom, and inter-American trade unionism." And it should also be pointed out that in the demonstrations that took place there was no participation whatever by free trade union members.

SPLENDID JOB RELATED

I found in my converastions with trade union leaders that they recognize the threat which communism presents to the true interests of the working people of South America. They say there is no place in the Americas for the kind of foreign controlled dictatorship which mowed down workers by the thousands in the streets of Budapest. They realize that a Communist government would mean the end of the right to strike and all the other powers that a free trade union must have if it is to survive and grow.

Much of the credit for the successful fight against Communist infiltration of the union movement in Latin America goes to the International Regional Labor Organization (ORIT) with which the free labor organizations are associated.

And I am happy to point out that the American trade union movement through the AFL–CIO is doing a splendid job in Latin America, as well as in other parts of the world in encouraging the development of free trade unions as opposed to Communist unions.

STRONGER PROGRAM NEEDED

I would not suggest that this battle for organized labor in the Americas is won. I believe we should step up our activities in this struggle in several respects. We should strengthen the labor attaché sections in the embassies in Latin America. We should increase in quality and quantity the labor union phase of our leader exchange program.

And probably most important of all, through our information program and every means possible we must get across to the great masses of people in Latin America that the policies of our Government and our enlightened 20th century private enterprise are dedicated to the ideal of producing there, as in the United States, not just a good life for the few but a better life for the mnay.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 23, 1958

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed to me by Harold W. Handley, Governor of Indiana, with regard to Federal aid to education.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

STATE OF INDIANA,
EXECUTIVE DEPARTMENT,
Indianapolis, July 21, 1958.

Senator WILLIAM E. JENNER,
United States Senate Office Building,
Washington, D.C.

DEAR BILL: A hypothesis is only a hypothesis until it is proven or disproven by facts. Following the launching of Sputnik I, we in Indiana began a thorough factfinding study of our education system, particularly regarding science and mathematics courses, enrollments, and pupil aptitudes. The entire project was conducted by a representative committee of citizens and educators, headed by Dr. Clarence E. Manion, former dean of the University of Notre Dame Law School.

Every Indiana ninth grade student received an identical test, the results being evaluated by a professional laboratory. We also gave an extensive test to high-school seniors to determine exceptional individuals. Then we inquired of these exceptional seniors as to how many wished to enter college and how many would need financial and scholarship assistance.

The results of these tests and inquiries are detailed in the attached summary. Because there is now before the United States Congress proposed legislation for Federal scholarships, we feel that you might be particularly interested. We are convinced that Indiana does not need such Federal assistance, and that if similar factual inquiry were made in the other States the same conclusions would be tenable regarding them.

Once started, a system of federalized scholarships would never be terminated. The cost would run into the billions and institutions now independent or State supported would become completely subservient to the new bureaucracy in Washington which would quickly establish its self-perpetuating existence.

Indiana wants no part of such so-called Federal aid, and it needs none. The self-sufficiency, initiative and enterprise of the American people are national characteristics. Education problems can continue to be handled locally and individually.

Sincerely,

HAROLD W. HANDLEY,
Governor of Indiana.

Living Theater, Music, and Ballet: A Wedding of Business and the Arts

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, July 23, 1958

Mr. JAVITS. Mr. President, there is presently pending before the Senate Committee on Labor and Public Welfare, S. 2081, to establish the United States Arts Foundation, a measure which I introduced on May 15, 1957, to establish an independent agency in the executive branch of the Federal Government to give assistance to the performing arts—living theater, music, and ballet. Stimulation of interest in culture and the arts has long been regarded as almost solely an academic prerogative; however, interest in the living arts is not so restricted but rather encompasses our whole national life. This is especially true in these days when we seek deeper content and motivation in our national spirit. Illustrative of this is an article appearing in the Wall Street Journal of March 13, 1958, Aiding the Arts, detailing the activities of businessmen in the promotion of living theater, music and the ballet and the dividends, spiritual as well as material, which accrue.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AIDING THE ARTS—MANY BUSINESSMEN JOIN CITIES' DRIVES TO SPUR MUSIC, DRAMA, DANCE—THEY PUSH BIG NEW CENTER IN NEW YORK, BACK FESTIVALS IN FORT WAYNE, BIRMINGHAM—A GOAL: REVIVING DOWNTOWN

(By Jerome J. Zukosky)

NEW YORK.—Around the green baize-covered board-room table in General Foods Corp.'s Park Avenue headquarters, 15 men and women sat down recently for an unusual conference.

Its subject: "How To Ask for a Million Dollars."

Around the table were the heads of some of the Nation's biggest banks, brokerage houses and industrial concerns. The lesson in fund solicitation, conducted by Clarence Francis, retired chairman of General Foods, was part of a meticulously plotted campaign to coax from corporate treasuries contributions to a relatively new venture in business philanthropy: Culture.

CULTURAL CLUSTER

The executives at this meeting and other volunteer solicitors are seeking $75 million for Lincoln Center, an 11-acre cluster of halls to be built near Manhattan's Columbus Circle. The center eventually may house opera, symphony, dance, drama and other performing troupes. Construction is scheduled to start later this year, with completion of the entire center due by 1964.

It will be the largest privately financed cultural project ever built in the United States. Some $7.5 million is expected to come from corporations, the rest will be solicited from private, noncorporate sources.

"It bothers some people to ask their friends or associates for a million dollars, especially when they know they are asking for more than their company or they themselves can give," comments John McNuty, a fund-raising counselor to the group. "We've tried to show them how."

The culture crusaders' embarrassment, however, isn't the only problem. "Lincoln Center is selling a new idea," says Edgar Young, associate of John D. Rockefeller III, active head and a promoter of the project. "Business support for the arts now is at the stage where corporate aid to education was 10 years ago and aid to medical and welfare work was 30 years ago. We want to set a spectacular example to establish support for the products of man's leisure and spirit as well as his health and vocational training."

OTHER CITIES WATCH

Other cities are watching Lincoln Center's development with keen interest. The decay of downtown areas has long been a major problem for most metropolises. Many experts in urban affairs believe that if downtown areas in cities around the country can reemerge as places where the best in entertainment and cultural activities is available, it may trigger an overall revival in commerce,

housing, and other fields. Thus cities as diverse as Seattle, Pittsburgh, and Winston-Salem are planning construction of new civic auditoriums for performing arts companies. Birmingham, Louisville, Boston, St. Paul, Cincinnati and Fort Wayne, among others, are stepping up promotion of arts festivals using existing facilities. In addition, a Fort Wayne group is trying to raise $3 million for a permanent music, drama, and dance center.

Behind the increasing zeal of the culture campaigners, too, is a growing respect for other practical benefits of ballet, opera, and theater.

"We want to attract top-notch technical people here," says a General Electric Co. official in Louisville, "but their wives badger them to settle in New York or some other city where the kids can enjoy the cultural advantages they think we don't have here. What has Louisville got other than horses and whisky, they ask?"

CONTINUING GROWTH

Adds Dr. John E. Bryan, director of Birmingham's Committee of 100, composed of leading local businessmen, "We want to continue our industrial growth and we have to attract the people to do it. The men our firms want always ask what the community has to offer. And they mean cultural activities as well as good schools and such."

Dr. Bryan, for 11 years superintendent of schools in Birmingham, says over 100,000 persons attended the 75 theater, ballet, opera, orchestral, and art programs during the just completed Festival of the Arts in Birmingham.

The Lincoln Center idea already has won widespread praise from New York businessmen. The reason is simple: Planners of the project figure it will attract some 2,500,000 additional persons annually to cultural events—an influx which naturally would be a boon to merchants.

Recently, New York City condemned the land on which Lincoln Center will stand and sold it for $4 million to the nonprofit corporation that will build and operate the enterprise. That was far less than the land cost the city; the Federal Government makes up two-thirds of the city's loss under the slum clearance program.

Lincoln Center's costs so far have been paid from some $15.5 million contributed by three philanthropic foundations. The first unit to be built is a 2,800-seat concert hall, to be ready late in 1960.

COMPANY CONTRIBUTIONS

According to David Church, director of the American Association of Fund-Raising Counsel, the $7.5 million being sought from business for Lincoln Center probably is more than all United States corporations have given directly to the performing arts in any 1 year. A survey made 2 years ago of contributions by 138 corporations showed only 2.5 cents of each gift dollar went for "civic and cultural" activities, "and probably only half that went to the arts," Mr. Church notes. American companies gave away some $520 million last year in all forms of philanthropy, the association figures.

There have been some notable cases of corporate financial aid to the arts, to be sure. One came a few years ago when the Detroit Symphony was resuscitated by a $260,000 grant from 26 corporations. The companies pledged to continue the aid for 2 years.

But many fund managers say business aid has been sporadic and unplanned, at best. Direct grants generally have come only after desperate, emergency appeals.

Many communities recently have unified their cultural fund raising on the lines of local community chest campaigns.

"It is now much easier to solicit gifts from company leaders who formerly were reluctant to give to one organization such as the Louisville Symphony only to be deluged with dozens of requests from other groups," asserts Richard H. Wangerin, director of the Louisville fund, now busily collecting $131,000 in its annual appeal. The money will help rub out deficits of the Kentucky Opera Association, the symphony, a junior art gallery, and several other organizations.

LAYING THE GROUNDWORK

Notes Leslie C. White, manager of Cincinnati's Institute of Fine Arts, another united fund: "We collected $250,000 in 1948, our first united drive, about $50,000 more than the total collected by all the individual cultural groups in town the year before." Now the drive garners $325,000 a year and has between 13,000 and 14,000 contributors. About $160,000 was donated last year by corporations and business firms.

Most united fund drives are handled by community arts council, which also administer certain office chores and business details of the cultural organizations that are to share in the collected funds. There are some 50 councils now, compared with 5 or 6 a few years ago, says Mrs. Helen Thompson, president of the American Symphony Orchestra League, which coordinates their activities.

The councils range from new and struggling groups, such as Fort Wayne's Fine Arts Foundation, which has not yet launched a united fund drive and whose director recently painted his own office, to well-oiled organizations such as Winston-Salem's Arts Council. A proud North Carolinian boasts the Winston-Salem group has a volunteer battery of three lawyers to iron out tax tangles and a punched-card machine that will, for example, come up with the names of likely contributors.

Unified funds may help spur culture contributions, but they don't solve all the problems facing the money raisers. Some company executives, for example, fret over possible stockholder opposition to corporate philanthropy. Lincoln Center's directors went so far as to have the New York law firm of Milbank, Tweed, Hope & Hadley draw up a lengthy brief asserting the legality of such grants.

RECESSION TROUBLES

"The recession isn't exactly helping us," says Allen K. Holding, fund-raising counsel to the Lincoln Center campaigners. Mr. Holding observes, however, that none of the leading corporations approached by the Center has declined to consider the request.

"Art isn't a critical and tangible need," says ex-public relations man Richard Gibeau, who heads Ft. Wayne's effort to secure $3 million to endow a permanent group of buildings for the performance of music, drama and dance. He describes his work as "low pressure and long range."

The Ft. Wayne Fine Arts Foundation distributes a bulletin to about 2,600 families, sponsors a four-night-a-week program of serious music on local radio stations and presents lectures by visiting artists several times a month. Much of the annual budget of $17,000 comes from 14 local concerns such as the Rea Magnet Wire Co., Inc., whose president, Samuel A. Rea, is head of the foundation; Lincoln National Life Insurance Co.; Magnavox Co., and Fort Wayne Corrugated Paper Co. Sighs 37-year-old Mr. Gibeau: "It takes enthusiasm and a lot of faith."

BIBLE BELT STRATEGY

Sometimes enthusiasm stimulates unusual strategems. "We're in the so-called Bible Belt," drawls R. Philip Hanes of Winston-Salem. "So we had all our preachers one Sunday deliver sermons on the good of artistic endeavor. We put up religious pictures in the churches painted by art classes supported by the Arts Council, and had notes printed on church programs indicating what choir members took part in the choral societies in town."

The problem of how to finance the performing arts in America currently is under study by the Ford Foundation. W. McNeil Lowry, a Ford Foundation official, notes one plan under consideration by the Foundation is a setup similar to the National Merit Scholarship Corp., Inc., and the National Wilson Fellowship Program, Inc. Both are nonprofit corporations originally endowed by Ford and others to encourage corporate donations to education by providing central administration of funds.

Many business and cultural leaders hope that through centralized private administration of such funds this country can avoid direct Government intervention in the arts. Great Britain, France, Italy, Germany and Russia, among others, funnel government funds to state opera houses, ballet and theater companies and orchestras and send them abroad as national troupes.

"We hope our groups will fulfill a similar function—and it's fitting they will be privately financed," says Lincoln Center's Mr. Young. Planners hope the Center will serve as a home base for touring troupes.

The center also will have an educational role. Some $20 million of the $75 million to be raised will be used for scholarships and subsidies for untried productions. The Juilliard School of Music will cut its enrollment from about 1,400 now in its present quarters near Columbia University to about 400 when it moves into its new plant at Lincoln Center. The change will enable it to concentrate on only the most talented students and to advance instruction to the postgraduate level.

The remainder of the funds raised will be spent to build a new house for the Metropolitan Opera, a replacement for Carnegie Hall for the New York Philharmonic Orchestra, buildings for Juilliard, the first new dramatic theater in New York in two decades, a dance theater, library, museum, band shell and a landscaped plaza. Under the plaza will be an 800-car parking garage owned by the city.

The Metropolitan Opera, the Juilliard School and the other organizations will lease space from Lincoln Center. But rents are likely to be lower than the organizations might pay if they were to rent comparable facilities from a landlord intent on piling up profits. The nonprofit Center is chiefly interested only in collecting enough in rents to cover maintenance of its properties. Also helping to hold down rents will be the fact that all capital costs will have been covered by contributions.

Lincoln Center, like similar but smaller projects in Seattle and Pittsburgh, is part of a broader urban-renewal project. The New York venture consists of a 45-acre site being rebuilt under title I of the National Housing Act. Besides the arts facilities, there will be a midtown campus of Fordham University and several housing developments. All of the new buildings will replace tenements and rundown commercial buildings. Estimated cost: $200 million, of which $42 million consists of Federal and city grants for land acquisition.

As a result of these subsidies, Lincoln Center bought its land at about half the cost to New York City, with the Federal Government absorbing two-thirds of the city's loss.

The housing developments and Fordham University's buildings, like Lincoln Center, will be privately owned, and they, too, will benefit from Federal and city subsidies to cut the cost of their land.

The redevelopment project has not been without controversy. In fact, some tenants and owners of buildings now on the land have gone to court in an effort to block the entire project. Their contention: Land subsidies to Fordham University, a Catholic institution, violate constitutional provisions on separation of church and state.

The New York State Court of Appeals will hold hearings on the issue March 24, after

which the Federal district court in New York City also will hold hearings. Until final disposition is made, no tenants can be evicted from the site.

An attorney for Lincoln Center says the risk taken by the center in buying its land and planning the project is minimal, but that it is possible Fordham's plans may be affected by the court actions. "We wouldn't have sunk $4 million into the land if we didn't think the center would go through," the lawyer notes.

Mr. Nasser

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Press, St. Marys, Pa., Saturday, July 19, 1958:

MR. NASSER

A Nasser who begged for his life in 1956, today has become an arrogant egotist, bloated out of size by implied support of Russia in the Middle East crisis.

In less than 2 weeks the Egyptian Army Nasser claimed was unbeatable, was scattered all over the Gaza Strip and Sinai Peninsula 2 years ago by armed Israel forces, and Nasser himself fled from Cairo, fearing capture.

He was restored to power by American intervention when this country persuaded Israel, Great Britain, and France to withdraw their armed forces from Egyptian soil without getting an iron-clad agreement from Nasser the Suez Canal would remain an international waterway. Another case of our bumbling foreign policy.

A couple of weeks after this country hinted Marshal Tito of Yuugoslavia would be welcomed back into the fold and thus become eligible for added American aid, the Yugoslav leader granted formal recognition to the rebels in Iraq who had killed their king, friendly to American interests.

There is hardly a spot in the world where American diplomacy has been worth a tinker's dam and this goes back to the Roosevelt and Truman administrations.

Mr. Nasser has a nuisance value to the Kremlin. He can trade on Arab nationalism, incite his followers to overthrow governments inimical to his personal interests, and grab off valuable oil-producing territory without raising the living standards of the Arabian people one iota.

Today he is a pawn of Russian imperialism and when he has served that country's purposes he will be liquidatd or sent into comparative oblivion like Molotov and Malenkov.

Nasser is this generation's symbol of Hitlerism ever on the march to increase his personal power without thoughts of the consequences.

There seems little doubt now but for American and British intervention, Lebanon and Jordan today would be under Nasser guidance and the Middle East would be entirely lost to the Western World.

A veto by Russia in the United Nations Security Council last night sidetracked passage of a resolution backing the American-British stand as votes in this body have to be unanimous.

An emergency meeting of the United Nations Assembly may be in the making for Monday or early next week as a showdown nears on whether further U. N. security forces are to be sent to the Middle East.

And while all this debate is going on the man on the street, unlearned in diplomacy, dumb in the art of doublecrossing, wonders why United States does not demand the ouster of Russia from the U. N., as she has contributed nothing but trouble since she became a charter member in 1945 with extra veto voting power granted no other nation.

Russia has been a thorn in the side of amicable relations with every country in the world that wants to see peace restored to this global hemisphere. She has been represented in the U. N. by men who consider moves toward peace signs of exterior weakness, inward cowardice.

With some exceptions President Eisenhower's decision to send marines into Lebanon has won almost universal approval. Even Truman who seldom has anything good to say about the man in the White House, okayed the move as one dictated by necessity.

It may be recalled he took similar moves when President in halting the Communist tide running toward Greece and Turkey and won instant American approval for that broad step.

It's a touchy situation that faces United States today following the marine and paratroop landing in a country far from the shores of America, but it is one time when unity should prevail among Americans, and let the pot shooting to Russia and members of the United Arab Repubic.

It was inevitable a showdown had to come sometime between the free and the communistic world—that time may be here now. At least the Kremlin now knows Uncle Sam is no longer bluffing.

Plea to President Eisenhower To Retain National Guard at Full Strength

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mrs. KNUTSON. Mr. Speaker, commendation is in order on the action of the House yesterday in passing House Concurrent Resolution 333, expressing the sense of the Congress that the National Guard strength should not be reduced below 400,000 nationally. In line with this action, under unanimous consent, I include letters sent to the President and to Secretary of Defense McElroy urging the President to reverse his proposed decision to reduce the National Guard strength:

JULY 18, 1958.

The Honorable DWIGHT DAVID EISENHOWER,
President of the United States,
Washington, D. C.

DEAR MR. PRESIDENT: May I respectfully, but strongly, protest the reductions in National Guard strength throughout the country, and urge, instead, an increase in the guard's unit strength and number of units. Minnesota is probably no harder hit by the proposal than other States, but the net effect of the proposed reduction in Minnesota is shattering.

I am enclosing a copy of the letter I have received from the Honorable Orville L. Freeman, Governor of Minnesota. Governor Freeman ably evaluates the effect of the proposed cut for Minnesota. For all intents and purposes, the cut spread thinly throughout the country will destroy the effectiveness of the guard—and its usefulness in the national defense picture.

The greatest moral force in our country has always been the quiet patriotism and dependability of our people. In any kind of crisis, the people gather their spiritual strength to do "what has to be done." They accept their responsibilities as you accept yours. Our people willingly provide the civilian army which has made it possible for this country to win every war in which it has been engaged throughout its history. The National Guard is the exemplification of this sense of responsibility of the citizens of this country. It performs its duties in peace and in war. It is composed of people who serve and train voluntarily. It is a "grassroots" arm upon which the military must depend.

Today, we are faced with serious international troubles, different from the troubles of past years. Today the threat of terrible destruction from nuclear forces hangs heavy over every head and every heart. Despite this, the people of the country, according to news reports, have accepted your decision on the Middle East with reactions ranging from resignation to approval, whatever they may think are the reasons and causes of our present difficulties in that area. This is the way the American people perform.

Persistence with the decision to cut back the National Guard will be not only detrimental to the morale of the people, but it will also seem to them, unwise and shortsighted in the extreme. The times demand forthright action. If a mistake has been made in proposing the cutback, the administration should be willing, for the safety of the country and the morale of the people, to reverse the decision and withdraw the proposal at once.

Respectfully,
Congresswoman COYA KNUTSON.

[Copy to Secretary McElroy.]

STATE OF MINNESOTA,
EXECUTIVE OFFICE,
St. Paul, July 14, 1958.

The Honorable COYA KNUTSON,
Member of Congress, Washington, D. C.

DEAR CONGRESSWOMAN KNUTSON: The proposed reorganization of the Army National Guard to conform to the Army's concept of military requirements for modern warfare has given me, as I know it has given you, deep concern. While we have been in full agreement with and fully support reorganization and modernization of the Army, which, of course, includes the Army National Guard, our concern has been that in effecting the reorganization, the Pentagon planners would administratively do that which the Congress never has, or would legally do, authorize the emasculation and relegation of the National Guard to an inferior position in the Nation's scheme of defense. There is strong evidence that there is a desire among military planners in the Pentagon to do this, and the proposed plan for the reorganization of the reserve elements of the Army is indicative of this desire.

Yesterday my office received a tentative list of the proposed Army National Guard troop basis for the State of Minnesota, and I am attaching hereto a statement drawing a comparison between the present and proposed troop basis. It will be seen that we now have 107 company, battery, and detachment size units in Minnesota organized in 65 communities, and we are being asked to reorganize on the basis of 80 comparably sized units in the reorganization program. Spreading these units thinly over the 65 stations in which we now have armories and strong and active units organized, it may be possible to continue to carry on National Guard activities in these communities through the medium of splitting some unit

between 2 communities, a practice in which we have not heretofore engaged and one which does not contribute to an efficient and effective military unit. We have been given to understand that the troop basis is subject to negotiation, and we will make strong representation to increase the unit allotment beyond 80.

Our immediate concern is in connection with the maximum strength authorized under the proposed reorganizaton. Currently the Army National Guard of Minnesota has a strength of 8,792 officers and men available for service and we are 67 percent of authorized war strength. Under the proposed reorganization, all but a few of our units will be authorized to be organized on only a 52 percent of war strength basis, with a maximum of 7,150. This will result in a loss of over 1,600 officers and men and will be seriously felt in all of the 65 communities in Minnesota in which the Army National Guard is organized. It is evident that this proposed allotment of 7,150 officers and men is predicated on a national overall strength of the Army National Guard of 360,000 and not the 400,000 which Congress has heretofore authorized and is in the process of authorizing for the current year. I sincerely trust that you will strongly support the strength figure of 400,000 in the respective committees and on the floor of Congress for this is vital to reducing the seriousness of the impact of this reorganization throughout the State of Minnesota.

I wish to also add that it is apparent that once the 400,000 strength is authorized by the Congress, it will be necessary to vigorously follow up the authorization to see that administration officials proceed with the reorganization of the National Guard on a 400,000 strength basis in accordance with the will of Congress and the desires of the States.

It is quite evident it is the intent of the Department of Defense to ignore the Congress and the strong position in support of a nationwide strength of 400,000, which the governors of all the States and Territories took at their recent Miami conference, in the Army's announced action establishing the Army National Guard on the basis of 360,000. In the light of the international situation and our scores of global mutual-security agreements, reduction of the National Guard both as to units and officer and enlisted strength at this time would appear to be ill conceived if not dangerous. It is difficult to understand that the announcement of the Secretary of the Army concerning this reorganization of Reserve Forces should, on the one hand, contemplate the destruction of well trained units in being of the National Guard and the organization of 15 of the National Guard Divisions at less than full organizational strength, while directing the organization of new units of other elements of the Reserve and prescribing an organizational plan for Reserve divisions, which authorizes all organizations of the division to be organized. There exists a strong suspicion in the minds of many of our governors, which I am beginning to share, that there are many in authority in the Pentagon and perhaps elsewhere in Washington, who do not like the State-Federal status of the National Guard and would destroy it or render it impotent. I am sure that this is not the will of our people and that you and I and all others who may reflect their voices and actions in supporting a strong and virile National Guard, will be ever vigilant in seeing that this does not occur.

Yours very truly,

ORVILLE FREEMAN,
The Governor, State of Minnesota.

State of Minnesota Army National Guard—Allotment of troop units

PROPOSED ALLOTMENT OF UNITS

Type of organization or separate unit:	Number of units
1 State headquarters and headquarters detachment	1
1 field artillery battalion 155-millimeter howitzer tow	5
1 signal area operation battalion	5
1 transport truck battalion	4
1 Infantry division (less 2 battle groups)	65
Total number of units	80
Maximum authorized strength	7,150

CURRENT ALLOTMENT OF UNITS

1 State headquarters and headquarters detachment	1
1 infantry division (less 1 regular combat team)	87
1 transport truck battalion	4
1 antiaircraft artillery group	15
Total number of units	107
Present strength	8,792
Total proposed reduction in units	27
Total proposed reduction in strength	1,642

JULY 18, 1958.

Hon. NEIL M. MCELROY,
Secretary of Defense,
The Pentagon, Washington, D. C.

DEAR MR. SECRETARY: Since you are the President's chief civilian adviser in the military and on military matters, I am taking the liberty of forwarding to you a copy of a letter I have just sent to him, urging reversal of the decision to cut back the National Guard strength.

May I respectfully ask that you use your influence with the President to secure withdrawal of the proposal to cut back which would do immeasurable damage to this portion of our citizen army. As a civilian, you will perhaps regard these matters a little differently from the President whose views naturally are colored by his long service in the military. Your understanding of the basically civilian-minded nature of the people of this country will perhaps be of assistance to the President in his review of the need and importance of the National Guard.

I wish to thank you in advance for your courtesy and coperation in this important matter. As time is pressing, may I ask an early reply to this request.

Respectfully yours,

Congresswoman COYA KNUTSON.

Public Law 480

SPEECH
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. BREEDING. Mr. Speaker, as Representative of the Fifth District, Kansas, one of the largest wheat-producing districts in the United States, I am very concerned with the surpluses in our Nation today. Therefore, I would like to take this opportunity to make known my full support of Public Law 480 for the following reasons:

This law has helped to reduce the surplus of farm products in our country for both public and private interests. Storage space is at a premium in my area. We must dispose of a great portion of our present surplus to make room for this year's crops. This is the first good crop that my district has had in 6 years. Under Public Law 480 we are exchanging wheat and other surplus farm products to friendly countries. We are taking foreign currency and using it to improve the living standards of these countries and also to bear the expense of maintaining our own Government officials and military in those countries.

I feel that if this program can be maintained, it will not only tend to make better understanding of countries throughout the world but will pave the way for peace and good will throughout the world.

Mr. Speaker, under this law the United States has exported nearly $4 billion in farm products since its enactment in 1954. This amount is nearly one-fourth of all our farm exports during that time.

Donations of these surplus products of ours has been a life source in countries who have been hit by famine, drought, and other disasters; thereby creating good will in many depressed areas of the world.

By putting a great portion of our surpluses into this program we have been able to moderately reduce our surplus at home and to save millions of dollars in storage and loss.

Also, under the barter system, which is a part of this law, we have been able to trade for many strategic materials necessary for our security and welfare. Nearly $900 million of the total amount of this program has gone into this barter transaction.

Also, for the needy people here in our own country, over 3 million Americans received commodities under this program last year.

Our school lunch program is also included in Public Law 480 and has received many supplies.

Mr. Speaker, an amazing thing to me and one that all our farmers are proud of is the fact that we farmers of America, with modern methods, producing from 280 million acres of tillable land with approximately 6 million farmers, can produce more than 170 million American people can consume and dispose of. Yet Russia with nearly 430 million productive acres and over 50 million farmers can hardly feed herself. It proves to me that our ability to produce agriculturally is perhaps our greatest asset for the security of the free world.

In short, it may be said that Public Law 480 has made it possible to utilize surplus farm products to pay a part of the cost of diplomatic and military missions in friendly countries; to pay a part of the cost of military and economic aid; to acquire additional strategic materials through a barter system to create economic development loan funds in friendly countries through sales for foreign currencies; to utilize American food surpluses for famine relief; and donations of food to religious and other charitable relief agencies.

As a result of exports under Public Law 480, we have exported 664 million bushels of wheat since its enactment; this is two-thirds of a normal year's crop in our country. A moderate reduction in our surpluses has been achieved.

In conclusion, Mr. Speaker, I would like to say again that I concur heartily with the provisions of Public Law 480 and recommend its passage.

The Hopeless Hope

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 23, 1958

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Hopeless Hope," written by Dr. Frederick Brown Harris, and published in the Washington Sunday Star.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE HOPELESS HOPE

(By Dr. Frederick Brown Harris, Chaplain of the United States Senate)

The hopeless hope, is a pungent phrase coined by one of the world's outstanding women—the First Lady of the Republic of China, Madame Chiang Kai-shek. It connotes the hopelessness of allowing any psychology of fear to determine the attitude and action of the free world as it faces the Communist conspiracy. This talented Christian leader who, on her visits to these shores, always captures America by her courage, her conviction and her charm, recently delivered a notable message at the University of Michigan. Facing boldly the contemporary hand wringing over the horrors of modern war, she declared, in a timely warning, that for some people, freedom and the value of human dignity which we were taught to cherish above all else had begun to be secondary to biological survival. "It is a tragedy," she said, "that some powerful minds have allowed themselves to be enmeshed in arguments over means such as relaxation of tension, appeasement, and finally slavery better than annihilation, groveling in the hopeless hope that life would be spared them." Then she added that those who take that attitude are ignoring the fact that if total darkness should fall upon the world, it would be they who have made the Communist conquest possible by destroying the will to fight.

Here is a practicing Christian, always bearing witness to her faith, declaring that the will to fight, the will to stand firm, must be kept at any cost. There were voices in the recent conference of Anglican bishops at Lambeth who represented those who, with quaking knees, are venturing to say that rather than bring the holocaust of nuclear war upon the earth, it would be better to allow the ruthless Soviets to accomplish their avowed goal of world domination. Such an attempt for peace in our time, Madam Chiang warns, is a hopeless hope. The hope of the world is in that knightly battalion of resisters, of which that great woman of free China is so inspiring an example as she sounds the solemn warning about the hopeless hope of coexistence. She and the generalissimo, living and serving as they do on the very edge of the Marxist inferno running its terrible course on China's mainland, belong to the noble army who have dared for a high cause to suffer, resist, fight, if need be, to die.

The clarion warning brought to America regarding the hopeless hope finds the sound of a great Amen in many editorials and columns in the public press. It is here, again and again, that genuinely Christian pulpits are set up. Here are ringing sentences lifted from one such recent statement, infinitely more Christian than the shameful suggestions of surrender from the lips of some ecclesiastics. "We have too great a faith to heed the craven voices—to say farewell to all our greatness, to surrender and submit. All the clanking apparatus of an iron empire with its many millions of slaves in uniform, with all its menace and threats, will not overwhelm this land nor terrify our people. Americans have fought before. They will fight again that freedom and mercifulness and goodness of heart shall not perish from the face of the earth." And to that, from millions and millions of true American hearts, comes thunderous approval.

Because of the faith which is the very breath of our democracy, where the rulers are not the elect, but the elected, America will continue to challenge the sinister system which we faced in spite of consequences in the horror and glory of the Korean struggle. Had we thrown Korea to the wolves of aggression, America could never have lived with herself again without loathing. And she must never rest until Korea's sundered body is united. If America stood aside now, while free nations are enslaved, she would be signing her own national doom. And so we insist that the pertinent message of Madame Chiang about the hopeless hope belongs under spires. For every spire is the symbol of a righteous sword. A peace gained by constant retreat because of the threatening blackmail of superior force is not peace, but war. Whenever a system with a completely unethical purpose to conquer the world reaches the stage of aggressive hostility a part of its technique is always to develop disarmament propaganda in the nation against whose life it is plotting. To weaken the national striking power is to vote to make it inevitable that the democracies shall be forced to do the bidding of moral perverts who have been allowed to fashion a preponderance of swords. Of course, force is never the last word. At best it but clears the way for the constructive agencies of friendship, good will, and cooperation to do their healing work so that at last swords can be turned into plowshares.

Men and women of religious faith, for whom the spiritual verities, denied and derided by the present-day rampant "gates of hell," to use a term which fell from the lips of Jesus, are now facing evil in forms as ugly and malignant as that which lifted Christ on two crossed beams of wood at the place called Calvary. Nothing but slavery awaits democracy, which, at its best, is the political expression of Christianity if it deigns to bargain in the deadly conflict now raging. Any appeasement of the heinous forces on the rampage directed by the mad master of the Kremlin would be but surrender on the installment plan. Every true democrat is a soldier in the front line trenches in this massive assault of demonic forces which trample with scorn upon the spiritual verities which flame in the teachings of the prophets of Israel and which are at the heart of the Christian revelation.

But this is the victory that overcometh even our faith. And we shall win, not because God is on our side, but because with a cross that turns not back we are on God's side. We shall fight to victory for the sovereignty of God, the omnipotence of love, the dignity of man, and the worth of moral values. But someone, looking with poignant desire at the hopeless hope for some face-saving pact with deviltry, says plaintively as he shudders at the possible cost of resistance: "But a man must live."

"But is it so? Pray tell me why
Life at such cost you have to buy.
In what religion were you told a man must live?
There are times when a man must die.
Imagine for a battle cry this coward's whine,
This liar's lie—a man must live.
The Saviour did not live. He died.
But in His death was life for all mankind."

Public-Be-Damned

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. LANKFORD. Mr. Speaker, the recent action taken by the House Appropriations Committee in deleting from the supplemental appropriations bill funds for land acquisition for extension of the George Washington Memorial Parkway was a tragic mistake. Study after study has been made of the Washington area and the problems brought about by the polluted Potomac. It has long been recognized that the Potomac River could be one of Washington's greatest assets. There is no question in my mind that its shores must be preserved from undesirable uses. The parkway would extend from the District line to Fort Washington in Prince Georges County, Md. The authority has existed for this parkway since 1930. The vast majority of my constituents feel most strongly that the parkway should be built and that park land should be provided along the shores of the Potomac. With the ever increasing pressures of metropolitan expansion, if this parkway is not provided, the land adjacent to this historic river will be carved up into subdivisions which would in turn be subject to health hazards and all other forms of inappropriate development. Millions of visitors each year visit Mt. Vernon. To allow unsightly developments to be created across the river from this magnificent memorial is unthinkable. Plans have now reached the advanced stage for the construction of the Woodrow Wilson Bridge which is to connect directly with the George Washington Memorial Parkway. Unless these two great projects are coordinated, land costs and values will mount to the point where it will be economically unfeasible to acquire the parkway land. It is my earnest hope that the Senate will restore this project which is so important to our Nation and that the House conferees will accept the Senate's action.

I wish to commend to all Members editorials which appeared in both the Washington Post and Times Herald and the Evening Star pointing up the need for extension of the parkway.

For the committee to base its action on the fact that local roads now serving the area are adequate, to me, indicates

an unawareness on the part of the committee as to the road situation in that area. I would like at this point to insert a letter from Mayor Clifford R. Armhold, of Forest Heights, Md., who has so effectively rebuffed the committee's statement:

[From the Washington Post and Times Herald of July 20, 1958]

NOSE-END VISION

The attempt of the House Appropriations Committee to kill the George Washington Memorial Parkway between the District and Fort Washington and to withhold funds for the purchase of land needed for the municipal stadium is nothing short of a public-be-damned attitude. Congress authorized the parkway project 28 years ago. Every year since then the need for conserving the waterfront along the Potomac for park and parkway purposes has become more evident. Yet the committee now says that funds for acquisition of the land will not be granted and that the private owners should feel free to go ahead with their developmental plans. The denial of funds to buy the 3 acres essential to round out the stadium site handicaps a project that Congress had specifically authorized only a few days previously.

Incredible though it seems, the committee voted to sabotage the parkway on the theory that local roads now serving the area are adequate. This seems to mean that its vision of the Nation's Capital for the future contains no better connecting link for a rapidly growing suburban area than the congested, substandard, two-lane Indian Head Road. Aside from this, the 1,150 acres of riverfront land sought by the National Capital Planning Commission in this area are designed to serve as a regional park. What the committee is now saying in effect is that the blindness of its present members should deny the benefits of this proposed park to all future generations.

It is true that Congress has procrastinated so long in buying this land that 16 houses have been built in the area. But the acquisition of these houses wuold be a minor expense compared to the tragic loss of this proposed park forever. It is difficult to believe that the Senate will acquiesce to this scuttling venture. The Maryland legislature has already voted to repay half of the $2 million that the NCPC is seeking to purchase this land. Congress cannot fail to do its part in regard to either the parkway or the stadium without inflicting a critical blow on the cause of good planning and sound development of the Capital City.

[From the Washington Evening Star of July 21, 1958]

A BAD DECISION

The House Appropriations Committee's rejection of emergency funds to save the George Washington Memorial Parkway in Prince Georges County is a distressing mistake, which should be reversed promptly by the House.

Involved is a request for $2 million, to purchase nearly 8 miles of right-of-way along the Potomac River between the District line and historic Fort Washington.

These funds would buy about 70 percent of the 1,150 acres needed for the parkway. And Maryland has agreed to repay $1 million of the amount in annual installments. The committee denied this request, and strongly suggested that the entire project be abandoned. Its stated reasons for doing so, however, were so untenable that they hardly could have been based on anything but misunderstanding.

The reasons were that the costs are not justified in view of other demands on the Federal Treasury, that adequate roads already exist in the area and that the parkway project has caused "confusion and unsettled conditions" among property owners.

The facts are that the parkway has been authorized by Congress for 28 years, as part of the Capper-Cramton Act of 1930. Any "confusion" among property owners in Prince Georges at this late date is no more valid than in Montgomery, Arlington, or Fairfax Counties, where the completion of land acquisition for other sections of the George Washington Parkway is still under way. Indeed, the real reason Maryland and planning commission officials made the present request is that new urban development is threatening to send land costs out of reach. Now, land is still cheap.

As to the contention that adequate roads already exist, the parkway is much more than a highway. Its roadways would be bordered by attractive parks, picnic areas, and waterfront facilities—1,100 acres of public open space which Washington will sorely need as urban growth continues. This park would become an invaluable asset to the National Capital, just as is its counterpart on the Virginia side of the river between Alexandria and Mount Vernon.

In the years since 1930, Congress has shown a traditional sympathy for the parkway, designed as a unit to extend from Great Falls on both sides of the Potomac to Mount Vernon in Virginia and to Fort Washington in Maryland. If the House commitee's ban holds up, we have no doubt Congress will regret it in years to come. And then it may well be too late.

OFFICE OF THE
MAYOR AND TOWN COUNCIL,
Forest Heights, Md., July 22, 1958.

EDITOR, WASHINGTON POST AND TIMES HERALD,
Washington, D. C.

DEAR SIR: The attempt of the House Appropriations Committee to kill the George Washington Memorial Parkway between the District and Fort Washington on the theory that local roads now serving the area are adequate indeed is incredible. On behalf of the residents of Forest Heights, Md., I should like to invite the committee's attention to an urgent need for modernization of the South Capitol Street-Indian Head Highway access and the need for supplemental roadways between the District and suburban southern Maryland. The South Capitol Street-Indian Head roadway is the only direct radial link between downtown Washington and a huge area lying directly south between Route 5 and the Potomac River. An especially critical 2-mile section lies between the South Capitol Street-Nichols Avenue intersection and the northern extremity of Forest Heights. This section is so heavily burdened by local and through traffic as to constitute a severe bottleneck seriously limiting the overall capacity of this entire suburban artery. Rush-hour traffic clogs this busy area for hours while the frequent addition of theater, racetrack, and Sunday-driver traffic creates even greater congestion. The close to 4,000 residents of Forest Heights and the many thousands of other motorists using South Capitol Street and the Indian Head Highway daily, as well as the businessmen plying it commercially, would greatly benefit from long-overdue action to increase the traffic capacity of this congested artery and to provide alternate routes, particularly one which also would bring with it such a much-needed regional park as has been proposed by the National Capital Planning Commission.

Very truly yours,

CLIFFORD R. ARMHOLD,
Mayor.

(Identical letters sent to the editors of the Evening Star and the Daily News.)

Relations With Russia

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 23, 1958

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "If United States Broke With Kremlin," written by George Todt, and published in the Valley Times, of North Hollywood, Calif.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IF UNITED STATES BROKE WITH KREMLIN

(By George Todt)

"And ye shall perish among the heathen, and the land of your enemies shall eat you up."—Leviticus XXXVI: 38.

"Why continue any longer to treat a bandit government as a civilized entity?" is the question put to his readers this week by David Lawrence, one of the Nation's truly great editors, in his editorial contained in U. S. News & World Report. "Why accord the ruthless men in the Kremlin the prestige of membership in the family of governments?

"Why not instead indicate to all the peoples behind the Iron Curtain that the United States will maintain diplomatic relations with any government regardless of its economic ideology—but only if such a government is truly chosen by its people and is not a menace to the peace of the world."

I think we should buy that. It is a terrible thing to give the present Soviet cutthroat leadership our diplomatic recognition when this reacts to the detriment of the millions of enslaved humans behind the Iron Curtain who are struggling for liberty from their cruel taskmasters—and are humiliated in such efforts by seeing America in the foul embrace of the worst tyrants the world has ever witnessed until this time.

What is not generally known, because it is downplayed by most of the press and the ever-lovin' communications mediums of the United States for some strange reason today, is that there is a tremendous underground movement now going on—as there has been for many years extending into the past—inside Russia to liquidate the Communist conspiracy and thereby win liberty for the Russian people.

The latter hate their Communist overlords worse than we do, which is natural. After all, nobody knows the hatefulness and evil of the Red totalitarians more so than do the Russian masses themselves. They have been ground under the heels of these subhuman beasts of prey for 40 years—and in the process some 60 millions of their fellow citizens have been tortured, starved and eventually murdered. They are our best and perhaps most faithful allies. What are we doing to aid them?

The answer is: nothing at all which is helpful. But we are doing much to hurt their legitimate aims for freedom from the bestial tyranny imposed upon them by the Kremlin autocrats. For some reason, which is maddening to Russian patriots, our Government—as well as other ruling bodies of the Western Alliance centered in the North Atlantic Treaty Organization (NATO)—persists in making eyes at the Red leaders and doing little short of jumping in bed with them. Perhaps that will come later. Have we taken leave of our senses?

Now it is the considered opinion of some brilliant emigrant Russian minds—something of a white underground—that the greatest assist we could give to their compatriots in Mother Russia would be to break off diplomatic relations with the U. S. S. R. immediately. If America should do this, they say, then it would give renewed hope and strength to the freedom fighters inside the Soviet Union.

But when and if the time comes that we should do this, then we ought, at the same time, to send a message of sympathy and assurance to the Russian people themselves—telling them that we stood ready to help them with material assistance to rebuild their nation if they might be successful in overthrowing their hated Communist dictatorship which has held them in bondage. And also assuring both the people and the leadership of the presently constituted Red armed forces that we would, under no circumstances, have any territorial ambitions at the expense of a future Russian government, but would fully respect the integrity of Russia as evidenced through the self-determination of her peoples. This could easily rock the Kremlin back on its heels.

Give the Russians a chance to revolt and only God knows what the answer might be—but what could be worse than the present state of affairs in which we now find ourselves? We are being steadily pushed back on the world stage because we unheroically decline to take an offensive posture. But the militant Reds are not afraid to do so. They keep constantly probing, probing, probing our defenses. They are moving into many critical areas which are vital to us because of lack of effective countermeasures and pressures on our part.

It is useless to attempt to make friends with these amoral atheists housed in the Kremlin. They have broken faith with everyone who ever attempted to do business with them: Worst of all, their own downtrodden people. Can we ever put our arms around this moral leper in the family of nations and remain clean ourselves?

The American Legion is one large patriotic organization, among many others in the United States today, which is increasingly calling for a diplomatic break with the Red brutalitarians. Their drive is making headway in all parts of the land. Which bodes well for our future. For America cannot afford to traffic with the Devil. Some of his red paint would be bound to come off on us in the process.

And at least some part of the red paint would be the blood of the 60 million humans murdered by the Kremlin despots since 1917—their own people! Pretty gruesome, what?

Achievement in Space

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of Tuesday, July 22, 1958:

ACHIEVEMENT IN SPACE

It is significant that the Army now has declared, without qualification, that the so-called reentry problem has been satisfactorily solved. This confident new note is based on the fact that a full-scale nose cone or warhead of a Jupiter intermediate-range ballistic missile—the one fired at Cape Canaveral on Thursday—has been recovered intact.

Since the same thing was accomplished with a Jupiter 2 months ago, and since there have been similar earlier successes with small-scale nose cones, the Army, with the Air Force and Navy agreeing, no longer has any serious misgivings about being able to launch IRBM's and intercontinental ballistic missiles whose warheads will not be disintegrated or literally burned up, as they reenter the earth's atmosphere. Not long ago the problem of protecting such warheads—the problem of insuring that they would survive the tremendous friction generated by their return, at a speed of about 10,000 miles an hour, through the heavy blanket of air around us—seemed to some to be almost insoluble. But now there appears to be no doubt that the scientists working with our Armed Forces have definitely solved it.

In a military sense, the chief meaning of this achievement (the Russians conceivably may lag behind us in it) is that it indicates impressive progress in the development of effective American ballistic missiles. More than that, in the nonmilitary field, it suggests that our country is rapidly acquiring the know-how for the safe recovery of both machines and humans launched into space for peaceful research and exploration. Buck Rogers certainly is beginning to look quite real.

Khrushchev and the Moslems

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of July 22, 1958:

KHRUSHCHEV AND THE MOSLEMS

Nikita S. Khrushchev's recent efforts to appear before the world as protector of the Middle Eastern peoples' independence and freedom would be funny if they were not made in so tragic and grave a political context. We have referred earlier in these columns to the incongruity between Khrushchev's recently discovered passion for noninterference in the affairs of foreign nations and the reality of Soviet conduct in the Hungarian Revolution less than 2 years ago. There is no less incongruity between the current Soviet effort to pose as a friend of Moslem political rights and the reality of Soviet subjugation of millions of Moslems who have the misfortune to live under the Russian rule.

The Moslem peoples of the Soviet Union are generally believed to number between fifteen and twenty million persons. They include a variety of nations: the Azerbaidzhanis in the Caucasus, the Uzbeks, Turkmen, Tadzhiks, Kirgiz and Kazakhs in Central Asia, as well as other peoples. In terms of history, religious background, culture, and language, the ties of these peoples are with Turkey, Iran, and the other Moslem nations of the Middle East, but politically and economically today they are subject to the very different people who are known to history as the Great Russians of Moscow. In that respect, the Russian Communists such as Khrushchev have acted as true successors to their predecessors in imperialism, the Russian Czars, who first conquered these Moslem nations, destroyed their self-government and began the continuing efforts to destroy their Moslem religion, culture, and traditions.

Premier Khrushchev pretends to great and righteous indignation these days about American troops in Lebanon and British troops in Jordan. But what are Russian troops doing in Baku, in Tashkent, in Alma Ata and the other great centers of the Moslem peoples who live under the Soviet yoke? Why are the Kazakh people being buried under the deluge of Slavic settlers from European Russia, settlers who are plowing up the Kazakhs' pastures and turning what was once a great Moslem nation into a small minority in its own homeland? If self-rule is good for Egyptians and Iraqis, why is it not good for Uzbeks and Azerbaidzhanis?

Premier Khrushchev makes a mistake, we suggest, if he thinks that these questions do not occur to the Moslem peoples he rules. But an even greater mistake is being made by any Moslems who forget the history of Soviet misrule in the Caucasus and Central Asia and think there is anything genuine in the tears Khruschev now sheds over the Middle East.

United States Slowly Easing Ban on Trading With China

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I am submitting for inclusion in the RECORD an article written by Robert T. Hartmann, which appeared in the Los Angeles Times July 13, 1958, entitled "United States Slowly Easing Ban on Trading With China."

This article reviews various highly significant happenings relating to trade with the U. S. S. R. and the Communist bloc, which I believe should be brought to the attention of all Members of Congress.

The instances discussed of where barriers are being eased against trading strategic and strategic-type goods with the Communists are very disturbing. Let us not be deluded. Every inroad made by the Communists in the arena of world trade will be a victory for the U. S. S. R. in its economic offensive against the free world.

We should never for a moment forget that Communist trade is dedicated to one thing—the strengthening of the Communist strangle-hold over all the people it can manage to trap in its ideological snare. Any economic gains that might accrue to countries of the free world through trade with the Communists are bound to be illusory and short-lived. By its own pronouncement, the Communist world is engaging in economic warfare to crush us. With monumental hypocrisy and deceit it is seeking from the nations of the free world the tools to fulfill its grim mission.

The article follows:

UNITED STATES SLOWLY EASING BAN ON TRADING WITH CHINA—BREAKDOWN OF QUARANTINE OF ASIA REDS SEEN AS INEVITABLE MORE THAN YEAR AGO

(By Robert T. Hartmann)

WASHINGTON, July 12.—It can now be reported that the Eisenhower administration more than a year ago decided to accept as inevitable the gradual breakdown of barriers to free world trade with Communist China.

The United States as yet is not prepared to lift its total embargo on doing business with the Peiping regime. But it is, and for many months has been, resigned to the fact that its major allies, led by Great Britain, are going after Red China trade regardless.

President Eisenhower's principal concession to Prime Minister Diefenbaker during his Ottawa talks this week at last puts his public approval on this proposition. The United States agreed to make exceptions to its legal restrictions, under the wartime Trading With the Enemy Act, for Canadian subsidiaries of American firms who get orders from the Communist Chinese.

FORD OF CANADA CASE

The cause celebre in this political hot potato was a reputed inquiry to Ford of Canada from Red Chinese trading agents, who have been circulating freely in Canada lately, about buying 1,000 vehicles. Since this coincided with layoffs in the automobile industry, the CIO–UAW and Canadian politicians blew the firm's refusal up into an international incident of America extraterritorial interference.

Ford has denied this and Secretary of State Dulles never received any formal complaint from Canadian authorities, but nevertheless it was No. 1 topic of the Eisenhower-Diefenbaker talks from the standpoint of public interest.

United States Government sources are minimizing the importance of their decision, as they have each previous inch the administration has given in the controversy. They allege the Chinese Communists dangled an order before the Canadians only to damage the ordinarily excellent relations between the United States and its northern neighbor, and doubt that Peiping will put cash on the barrelhead.

But many Canadians, including Minister of Trade Gordon M. Churchill and James Muir, president of the Royal Bank of Canada—the dominion's biggest and most conservative financial institution—think otherwise. They are going all out to expand Canadian trade with the Chinese mainland while the rest of the West—especially the United States—warily hangs back.

The President's decision to give Canada its way should come as no surprise, however, to careful observers who have followed the sequence of events since he met with Prime Minister Macmillan in the spring of 1957.

Macmillan, at the Bermuda meeting, pressed for drastic relaxation of the Co-Com and Chi-Com lists of strategic items which most of the NATO powers (plus Japan in the case of Red China) voluntarily agreed not to ship to Communist countries. The Co-Com list, covering the Soviet Union and its European satellites, included mainly military items unavailable in Russia. But the Chi-Com list—applicable to Red China and its Aisatic appendages—was much more extensive. It included numerous (and profitable) controversial products which the West withheld from the Chinese mainland during the Korean war and afterward.

EXPERTS GIVEN TASK

It was announced in the Bermuda conference communique only that the technical experts of the two powers would get together and talk over revision of the forbidden lists, with a view to bringing them closer together, which was what the British wanted. The United States will continue its own embargo as far as China is concerned, however.

The experts have been meeting in Paris almost continuously ever since. Their conclusions are almost final, and although they have not been announced, it can be reported authoritatively that the two lists have now been merged into one.

In other words, henceforth it will be all right with the United States for any of its allies (and this includes Japan) to sell the Chinese Communists everything they sell the Soviet Union.

We will continue our total ban on traffic with Red China, North Korea, and Viet Minh, but the variety of goods United States businessmen may sell to Russia will be considerably increased when the new list finally takes effect. Meanwhile, the Commerce Department is on record as favoring equal opportunity for American businessmen to compete with British and European competitors in the Soviet market.

REVERSAL OF POLICY

The Times last March disclosed a secret reversal by Secretary of Commerce Weeks of a long-standing ban on selling United States tire-making know-how to a British combine building a $42 million ultramodern tire plant in the U. S. S. R. Two things were significant about this ruling, in the light of the top-level administration decision now known to have preceded it.

First, the reversal by Weeks authorized United States rubber engineering firms to sell their data directly to the Russians, or via the United Kingdom. Nobody had asked permission to deal with Moscow, so this was a gratuitous precedent, later explained as an "ad hoc" ruling (each case on its own merits) in denying it altered United States trade policy. (Presidential Press Secretary Hagerty used the same ad hoc phrase in Ottawa to mask the Canadian concession.)

Second, the Times followup of the tire-plant shift revealed it was the first such case under the Export Control Act to reach the Secretary of Commerce for decision in more than a year, that it had the approval of the State Department and other administration agencies, although the Pentagon admitted strong misgivings.

DISCUSSED MANY TIMES

It has now been confirmed from the most reliable sources that the subject was discussed at the Cabinet and National Security Council level many times prior to and after Weeks' ruling. Specifically, the Ford of Canada commotion was studied by Secretary Dulles and Secretary of the Treasury Anderson, who administers the Trading With the Enemy Act, and a United States policy determined before the President went to Ottawa.

Canada has held a middle position between Great Britain, which rushed in to recognize the Chinese Communists almost before their conquest of the mainland was complete (primarily for trade reasons), and the United States, which still refuses recognition.

The Northern Dominion has no diplomatic relations with Peiping, but does trade in anything not prohibited under the NATO ban. There is some support for recognition in Canada, but the Conservative Government has not yet espoused it.

UNITED STATES HOLDS OUT

The United States, though yielding gradually to the pressure from its allies, holds out on Red China trade and recognition (regarding them as substantially the same) for both political and practical reasons. The strong popular revulsion to Red China resulting from thousands of Americans killed and wounded by the Chinese in Korea has not diminished, as it has in countries whose contributions and casualties in the U. N. forces were relatively light. Senator KNOWLAND still speaks for these widows and bereaved parents in the United States Senate, and he is not alone.

Secretary of State Dulles has additional, potent diplomatic reasons for continued refusal to treat with Red China. The Chinese Communists still hold four Americans prisoner, and no concessions can be made until they are freed. Moreover, the effect of any accommodation with Red China on free Asian allies of the United States, especially Chiang Kai-shek's Formosan regime, must be carefully weighed.

This is the reason the administration's acceptance of the futility of forever quarantining the aggressor Chinese Communists is being exposed to the American public as slowly and softly as possible.

Still a mystery, however, is what logical answer can be given to American businessmen when Red China's commerce with the non-Soviet world begins to boom and they demand their cut of it. Even sooner, what will the United States Government tell foreign subsidiaries of American companies all over the world who want the same exceptions granted to Canada?

Luzerne County (Pa.) Residents of Lebanese Extraction Unanimously Support United States Intervention in Lebanon

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Wilkes-Barre Times Leader of July 18, 1958, disclosing that residents of Luzerne County of Lebanese Extraction unanimously support the intervention of the United States in the Lebanon situation:

LEBANESE HERE BACK UNITED STATES INTERVENTION

Wyoming Valley residents of Lebanese extraction—most of them residing in the Rolling Mill Hill section of Wilkes-Barre—are unanimous in their commendation of this country's intervention into the affairs of their strife-torn homeland.

Queries to religious and civic leaders among the Lebanese, many of them natives of the Middle East country now in ferment, have brought responses indicating high favor with the sending of United States Marines to Beirut, the Lebanese capital.

Rev. John Koury, pastor of St. Anthony's Maronite Church, Park Avenue, a native of Lebanon, said he and his 1,000 parishioners have been watching the developments with deepening interest.

CRY FOR JOY

"Some of my people cried for joy when they heard the Marines had been sent to Lebanon," Rev. Father Koury asserted this morning. He explained that most of the Lebanese in this country had fled their native land to escape the Moslem yoke, and asserted they have found liberty and opportunity in this country, in addition to the religious freedom they sought. In North and South America, he said, about 2 million Lebanees have settled, and of that total, about 85 percent are Christian.

Rev. David ElMouallem, pastor of St. George Maronite Church, Loomis Street, said the 600 members of his parish "have prayed continually for the success of this country's move of intervention. Many of us still have peo-

ple in Lebanon, and we pray for the peace of that country.

REBELS THREAT TO PEACE

"Believe me, if it weren't for the timely intervention of America, the rebels would have taken over that country, and would have imperiled the peace of the world." Rev. Father ElMouallem said conditions in Lebanon from which he emigrated 24 years ago, are poor, and poverty is everywhere. Each week, he said, he and his parishioners receive letters from that country, asking that aid in the form of foods and other items, be sent. He added that special prayers will be said in his church Sunday for the liberation of Lebanon from the Reds.

Rev. Herbert Nahas, of St. Mary's Syrian Orthodox Church, High Street, whose congregation of 1,000 includes about 200 from Lebanon, said they are all in accord with intervention in the Middle East.

Concerning the Syrian members, who comprise the majority of his parish, he stressed that the Christian Syrians are not part of the Syrian strife in the Middle East. Moslems comprise the vast majority of those now in Syria, he asserted, and the Christian Syrians here fled their homeland to escape persecution by Moslems. The Syrians in America, he said, are 95 percent Christian, while Syrians in Syria are 90 percent Moslem, Reverend Nahas pointed out.

Thomas C. Thomas, local produce merchant and civic leader, said he and others of Lebanese extraction in this area strongly support the sending of United States Marines to Lebanon.

"This country has been good to the Lebanese here, and to the country of Lebanon," Thomas said this morning. "We have found this country to be the best nation in the world, and we are strongly in favor of going to the aid of Lebanon to save it from the Reds' grasp in the Middle East."

Thomas, born here, recalled that both his parents, the late Mr. and Mrs. Charles Thomas, were born in Lebanon. His parents, he said, took the family to Lebanon and shortly thereafter, his father decided to return here. He boarded the ill-fated liner *Titanic*, and was lost when it sank in mid-Atlantic in 1912. Mr. Thomas' mother later returned to this country with the children.

Need for Facilities for Vital Army Activities at Fort Lee

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. ABBITT. Mr. Speaker, we are in a critical and perilous time, internationally speaking. The Mideast is in an uproar, as we all know. The United States has made many commitments and I am indeed shocked to see that the House Appropriations Committee has made such drastic cuts in the administration's request for construction of permanent buildings and facilities of the Armed Forces.

This is no time to pull in and cut down on the Armed Forces program. The only thing that has prevented another world war has been the might and destructive force at our command. I do not know what motivated the committee. I do know, of course, that they have done what they thought was best and just under the evidence before them at the time they considered this bill. It seems to me, however, that since the hearings were conducted before the subcommittee the entire picture has changed. New demands are being made on our Armed Forces and their functions and programs have been vitally affected. I believe that the whole matter needs to be restudied in view of this situation.

I cannot speak authoritatively for the necessity for all of the projects contained in the request of the Defense Department. No doubt certain of these cuts maye be in order but I do know, however, that the new construction items requested at Fort Lee, Va., in my Congressional District, are badly needed. The original request from Fort Lee for fiscal 1959 contained several items which were later deleted within the Department but the two principal items deleted by the committee are essential to the proper functioning of the vital Army activities at Fort Lee. This is the home of the Quartermaster Training Command and is one of the most important Army installations.

The Quartermaster Corps has requested the construction of a permanent academic building for the quartermaster school and from my knowledge of the situation this is badly needed and will greatly benefit the quartermaster program. I feel that the deletion of this item will be detrimental to the training of quartermaster personnel. I earnestly hope that the Congress will approve the necessary funds to construct this academic building as it not only is a benefit to Fort Lee and to my district but to the entire country inasmuch as the quartermaster training there performs a vital service for the entire Army.

In addition to the academic building the committee has deleted funds for a nurses' quarters and this, too, is vitally needed at Fort Lee where a new hospital is shortly to be built and considerable medical activity is necessary.

I expect to pursue this matter further with the committee as well as in the other body. Of course, I have already taken this up with the Department of the Army and I can report that the Army is very upset about the action of the committee.

It is my feeling that we must keep our Armed Forces as strong as possible and provide these essential items.

The Welcome Increase in Employee Purchases of Stock in American Corporations

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, July 23, 1958

Mr. WILEY. Mr. President, down through the years I have always felt that one of the important methods by which we can, and should, encourage greater cooperation between labor and management is to help give labor more of a stake in American industry.

For that reason, I have always supported, in principle, the concept of sound employee stock purchasing plans.

I am glad to say that these plans are on the increase.

An article by the distinguished president of the New York Stock Exchange, Mr. Keith Funston, as published in the Saturday, July 19, issue of the Janesville (Wis.) Gazette reported that no less than 45 percent of all of the companies listed on the exchange now have stock purchase, or stock option, plans for their employees.

In praising this trend, I am referring not merely to the plans whereby top-management can, as a bonus, receive stock at a stipulated figure; rather I am thinking, basically, of the plans whereby masses of employees—factory workers, white collar employees, and others—can regularly, or irregularly, buy stock in the companies for which they work.

I point out that these plans, necessarily, must be worked out extremely carefully.

EMPLOYEES SHOULD BE PROPERLY BRIEFED

The full cooperation of trade unions must be secured. Employees, themselves, must have a very clear idea of what they are subscribing for, and how, and when, and at what price.

They must not be oversold. They must realistically recognize that stocks will fluctuate; even in the very best so-called "blue chip" corporations.

In that way employees will not be disappointed when and if stocks go down, as they occasionally will, and if they stay down for a period of time.

After all, ours is a free-enterprise system which means that there may be loss, just as there may be profit. But good stocks held for a period of time should appreciate in value and should pay dividend returns as well.

AMERICA'S FUTURE IS BRIGHT

Fortunately, with the growth of the American market at home, and with the increase of the world market, with rising standards of living, with huge, unsatisfied demands still to be met, there is every reason to believe that American industry will continue to prosper.

Stocks are a worthy investment if soundly bought by individuals who can afford to buy them. I mean individuals who have already set aside money for other basic needs, including life insurance, their own home, cash to meet emergencies, and individuals who will take the time to study what they are doing.

Well over 8½ million Americans already own equity in United States business.

I stress investment—not speculation; for, although speculation has its legitimate place in the American risk-taking system, it should be indulged in only by those who can actually afford it.

Mr. Funston's article, to which I have previously referred, states the rising practice of "pay-as-you-go" methods, in particular, in purchasing stock.

I ask unanimous consent that the text of his article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COMPANIES WANT EMPLOYEES AS STOCKHOLDERS—SAVINGS FROM PAY OFTEN MATCHED

(By G. Keith Funston, president, New York Stock Exchange)

NEW YORK.—A huge plus can be scored for the astuteness of business management these days—employee stock-purchasing plans are on the increase.

In fact, nearly 500 companies listed on the New York Stock Exchange alone have adopted stock-purchase or stock-option plans for their employees during the past 10 years. (This now represents about 45 percent of the companies listed on the exchange.) Many other companies, of course, have such plans and some listed companies have had them for as long as four decades. Sears, Roebuck, for example, first set up its plan in 1916; Pitney-Bowes inaugurated a stock-purchase plan in 1929.

The results of this encouraging trend are twofold: First, it provides employees with a new sense of loyalty and enthusiasm for the companies they work for—and own. Second, it helps instill in employees a growing awareness of the competitive problems of running a business and thus contributes to their understanding and efficiency.

There is the case of the accountant for an oil company. He is literally on a one-man crusade to boost business. His stock ownership has helped make him as enthusiastic as the company's best salesman when it comes to convincing his friends and acquaintances to use his firm's products. And he is so persuasive that his friends reason that the company must deserve their business. Or, consider the lathe operator who unashamedly admits that since becoming an owner in the business he is doubly careful about keeping his equipment in the best possible working order.

These may seem like minor incidents, but they represent, I believe, the enthusiasm of ownership. Individually, these employee shareowners don't own huge blocks of stock. Their investments total only a few hundred out of millions of shares outstanding. But they're employee-owners, not just employees. That difference makes all the difference.

DEDUCTED FROM PAY

Company presidents are quick to acknowledge the value of these plans. W. H. Wheeler, Jr., president, Pitney-Bowes, says: "We feel the plan has been successful * * * and * * * has stimulated our employees' personal and active interest in the growth and development to a degree clearly beyond that which can be expected through employment only."

And R. J. Cordiner, president, General Electric, says his company's experience justifies General Electric's strong endorsement of the plans as part of a well-rounded program of employee benefits.

Or listen to Joseph L. Block, president, Inland Steel Co., who believes his company's stock-purchasing plan is "one of the reasons—and a significant one—for the favorable showing our company has been making."

Plans vary but the majority have some characteristics in common. They are voluntary, convenient, and—as a protection to employees—limit the amount that may be invested in stock purchases. All, of course, encourage thrift and spell out the risks, as well as the rewards of ownership.

Among the most popular of the stock-purchase plans are those in which employees save through payroll deductions, and their thrift is rewarded with a bonus of the company's common stock.

General Motors, for example, contributes $1 for each $2 of employee's savings. Half of the employees' savings is invested in Government bonds and half in General Motors common stock; the company's contribution is invested entirely in common stock. General Motors reported recently that 92,000 salaried employees (83 percent of those eligible) invested more than $48 million in the savings-stock purchase plan in 1957.

The General Electric variation of this plan, which was started in 1917, permits employees to buy an annual maximum of $525 in United States savings bonds by payroll deductions and deposit them with the company. If the bonds are left for 5 years, General Electric adds a stock bonus equivalent to 15 percent of the cost of the bonds. If the bonds are withdrawn during this time, the bonus is cancelled, but not the accrued income. At the end of 1957, employees participating in the plan had purchased $279 million worth of bonds and the company credited to their accounts more than 1 million shares of General Electric stock with a current market value of some $60 million.

USE MONTHLY PLAN

At DuPont, the company contributes $1 in common stock for every $4 employees invest in Government bonds. Nearly 60,000 employees are enrolled in the plan, and their assets total $57 million in Government bonds and $14 million in DuPont common stock.

The stock option plan allows employees to subscribe for common stock—usually at a discount and pay for it through payroll deductions over a specified period, frequently 3 years. The company usually pays interest on the savings. In this plan, an employee may realize a paper profit if the stock rises before the option is exercised and the stock is purchased. And by electing to cancel his option at any time, an employee can protect himself against a loss because of a downward trend in the stock price.

The pay-as-you-go method of acquiring stock is still another variation. The employee decides on the amount to be deducted from his salary—usually not more than 10 percent—and acquires his pro rata shares of stock through regular purchases made on the open market by the company with these pooled savings.

A most recent development of the pay-as-you-go principle is the plan instituted by American Motors. It utilizes the popular monthly investment plan offered by member firms of the New York Stock Exchange. Employees may buy American Motors or any other of the 1200 listed stocks available under monthly investment plan and have as little as $40 a quarter deducted from their salaries. Employees have the advantage of an inexpensive, systematic investment program under the company's long-established payroll deduction service. Furthermore, as a result of regular purchases under monthly investment plan, employees may take advantage of dollar-cost averaging—acquiring more shares of stock when the price declines and fewer when the market price rises.

It's clear, I believe, that stock purchasing plans—of all types—are growing in popularity much to the satisfaction of employers and employees alike. In the process, more and more employees are being provided with a direct interest in American business and an increasing awareness of the problems and responsibilities of management.

Small Business Administration Does Effective Job for New York Businessmen

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, July 23, 1958

Mr. JAVITS. Mr. President, I am sure my colleagues will be heartened, as was I, by the letter I received from a constituent, the Taffet Radio & Television Co., of Woodside, N. Y., regarding the effective assistance rendered by the Small Business Administration. This concern, a small manufacturer of electronic equipment, suffered an unfortunate fire several years ago, and had it not been for the timely assistance of the Small Business Administration the company may well have concluded its existence as another figure in the statistics of small-business failures.

I ask unanimous consent that a letter from Mr. Milton S. Taffet, president of Taffet Radio & Television Co., recounting his favorable experience with SBA, be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

TAFFET RADIO & TELEVISION CO.,
Woodside, N. Y., June 19, 1958.

Senator JACOB JAVITS,
Senate Office Building,
Washington, D. C.

DEAR SIR: May I take this opportunity to intrude upon your very busy schedule and call to your attention the tremendous assistance that our company has received from an agency under your jurisdiction.

Our company, a small business in the true sense of the word, has been fabricating equipment for a number of years for various Government agencies including the United States Army Signal Supply Agency (Signal Corps.), the United States Air Force, the United States Navy, and the Civil Aeronautics Administration. We enclose, purely on an informational basis, a copy of our facilities list, and a copy of a list of the contracts which we have satisfactorily completed for these various agencies.

Approximately 2½ years ago, our company suffered a series of setbacks—we had a fire in one of our plants which not only cost us considerable financial loss, but also caused a number of months of production delays in our shipments. Although we managed to keep our contracts within contractual delivery schedules, we lost much efficiency, and as a result our financial picture suffered greatly. The above unfortunate incidents forced us into serious financial difficulties. As a result, recently when we bid on any sizeable contracts for various Government agencies, we were turned down on purely financial considerations, in spite of our excellent performance record. However, due to the foresight of Congress in setting up the Small Business Administration to handle just such cases as ours, we were able to continue to receive a number of sizeable awards. We have just recently been awarded a contract as a result of a certificate of competency No. COC–II–297.

I am happy to report that our financial picture is gradually improving to the point where shortly we will not require the help of the Small Business Administration in these matters.

Since the Small Business Administration was set up by Congress, we would like to express our deepest appreciation for the help of the Small Business Administration, and to you as a representative of Congress.

We know that often people do not hesitate to write letters of complaint about the various agencies under your control, and for this reason we feel that it is only fair to write and let you know how helpful this Agency has been. Would you, on your behalf, express our thanks to the Small Business Administration, and in particular to the New York office which services our area.

Very truly yours,

TAFFET RADIO & TELEVISION CO.,
MILTON S. TAFFET.

Fund for the Republic Finances FBI Smear

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. SCHERER. Mr. Speaker, the American Legion's publication Firing Line has always been one of the most effective and accurate documents dealing with the threat to the internal security of this Nation.

The issue of July 1, among other things, refers to the recent controversy with Cyrus Eaton in which I was involved. I feel that my colleagues in the House who have received material from Mr. Eaton's public relations department should have the benefit of the other side of the issue as presented by the American Legion.

The article from Firing Line follows:

FUND FOR THE REPUBLIC FINANCES FBI SMEAR

Two months ago, the Ford Foundation's Fund for the Republic, in association with the American Broadcasting Co., commenced sponsoring a series of 13 television programs entitled "Survival and Freedom." Cyrus Stephen Eaton appeared on the fund's second program on May 4, 1958, and was interviewed by Mike Wallace. Eaton, a wealthy, aged, foreign-born industrialist, with a peculiar penchant for adopting the Soviet viewpoint, was the cat's-paw used by the fund to viciously smear the Federal Bureau of Investigation.

The immediate reaction of several Congressmen to Eaton's remarks was a rally to the defense of the FBI. On May 8, 1958, the Honorable A. PAUL KITCHIN stated that Eaton, "innocently or otherwise * * * has done much to ingratiate himself to the international Communist conspiracy. Like the Soviets, he (Eaton) has not allowed the facts to influence his inane babblings." Congressman KITCHIN quoted an editorial from the Miami News of May 6, 1958, in rebuttal of Eaton's attack upon the FBI which concluded as follows: "Mr. Eaton is noted as a shrewd and capable businessman of vast interests. He has done this country a disservice by his thoughtless and baseless charges against the FBI." (See CONGRESSIONAL RECORD, May 8, 1958, p. A4280.)

According to the CONGRESSIONAL RECORD of May 12, 1958, Congressman GORDON H. SCHERER declared that Canadian-born Eaton again made a tremendous contribution to the Soviet cause when he viciously attacked the FBI and the security systems of this Nation. "Eaton's scurrilous attack on the FBI and our security system climaxes a series of his public utterances which are being beamed by the Soviet propaganda machine to the four corners of the earth. Do not think that the Fund for the Republic did not put him on this program by design. It knew of Eaton's previous pro-Russian positions. It is more than coincidence that in December of 1955 the official Russian governmental organ, Izvestia, hailed Eaton for his expressions on peaceful coexistence; that another organ of the Communist international apparatus, New Times, in October 1957, contained an article by Eaton in which he rapturously extols the virtues of the Soviet Union."

Congressman SCHERER referred to a significant statement made by the late Georgi Dimitrov, a former instructor of the U. S. S. R.'s revolutionary Lenin School of Political Warfare, who taught that "one sympathizer is generally worth more than a dozen militant Communists * * * one who is outside of our (Communist) ranks but defends Soviet international policy is worth more than a thousand party members." In drawing a comparison, Representative SCHERER stated while Eaton is "not a Communist, but who defends, as Dimitrov said, the Soviet Union and Soviet international policy is worth more than a thousand party members." On May 13, 1958, the Honorable PRINCE H. PRESTON added his voice to those colleagues who expressed "righteous indignation at the scurrilous attack" launched by Eaton against the FBI. Congressman PRESTON remarked: "In recent years, Eaton has won an eager following of Iron Curtain officials. He has entertained Soviet representatives at his country estate and has provided quotations for the Communist propaganda mills. He * * * has accused the United States of baiting the Russians and being primarily responsible for the tension which exists between our two countries." (See CONGRESSIONAL RECORD, May 13, 1958, p. A4377.)

In a resolution adopted by our 39th national convention, the American Legion called for a congressional investigation of the Fund for the Republic and the cancellation of its tax-exempt status. On March 26, 1958, Congressman FRANCIS E. WALTER, chairman of the House Committee on Un-American Activities (HUAC), sent a letter to the Secretary of the Treasury, transmitting a staff study and questioning the tax-exempt status of the fund. The committee's study pointed out that "while some projects of the fund appear to be objectively presented, the majority of its operations are based on biased investigation and result in findings which not only fail to present both sides of a given question, but even further, actually conceal facts necessary for an honest understanding of the subject matter."

Congressman WALTER charged in his letter that "the program of the fund has been principally one of action and not of education. Among its chief targets have been congressional investigations of communism, Government security procedures, loyalty oaths and regulation of immigration. The fund has spent several million dollars opposing the denial of employment to security risks in Government and defense and other industries. The fund has financed attacks upon newspapers, magazines and individuals expressing positions with which it disagrees. It has financed preparation and distribution of books, magazines and articles to influence legislation. The fund has also financed attacks, unsupported by competent evidence, upon the loyalty, integrity, intelligence and mental stability of all confidential informants of the FBI who have testified in public trials or proceedings."

Replying to Eaton's assertions, Richard Arens, staff director of the HUAC, was granted equal time on an ABC television program on May 19. Arens announced that Eaton has been subpenaed by the HUAC "for questioning about his attack on Federal Security agencies and his defense of some Soviet policies." While stating that Eaton "is not a Communist," Arens declared Eaton "has extolled the virtues of the Soviet Union, attacked what he rather curiously characterizes as the anti-Russian belligerance of the United States and expresses his firm conviction that the masters of the Kremlin desire only peace." (See the Evening Star, Washington, D. C., May 20, 1958, p. A-4.)

In 1955, the Senate Internal Security Subcommittee published a report entitled "Soviet Political Treaties and Violations." The committee studied "nearly a thousand treaties and agreements * * * which the Soviets have entered into not only with the United States, but with countries all over the world. The staff found that in the 38 short years since the Soviet Union came into existence, its Government had broken its word to virtually every country to which it ever gave a signed promise."

COMMUNISM IN THE BALTIMORE-WASHINGTON, D. C. AREA

On May 13, 1958, Superior Court Judge John T. Tucker, of Baltimore, sustained a ruling of the board of appeals of the State of Maryland Department of Employment Security which refused to allow compensation to Mrs. Jeanette K. Fino of 3105 Mondawmin Avenue of that city. The case stemmed from Mrs. Fino's discharge from the Sunray Drug Co. following her appearance before the HUAC on May 8, 1957. When questioned before the HUAC, Mrs. Fino invoked the fifth amendment many times regarding membership and activities in the Communist Party, United States of America. (See the Sun, Baltimore, Md., May 14, 1958, p. 38; and HUAC, Investigation of Communist Activities in the Baltimore, Md., Area, pt. 1, 1957, pp. 997–1004.)

In upholding the State of Maryland's position, Judge Tucker ruled "that a person who invokes the fifth amendment in an investigation of Communist activities may be denied unemployment compensation on the grounds that her conduct was deliberate and willful insofar as her employment is concerned." Testifying before the HUAC on May 7, 1957, Clifford C. Miller, Jr., a former confidential security informant of the FBI, identified Mrs. Fino as a member of the Communist Party. During Mrs. Fino's appearance before the HUAC, "she persistently invoked the fifth amendment when the committee displayed to her canceled checks drawn by her and payable to the F. & D. Printing Co., which (printed) the Daily Worker. Some of these checks were dated as recently as March 1957."

Irving Kandel, a Maryland chess champion, of 932 Brooks Lane, Baltimore, was removed from the Maryland Chess Federation on May 7, 1958, for his alleged membership and leadership in the Communist Party. Kandel, who was identified before the HUAC in 1957 as a former head of district 4 (Maryland-District of Columbia area) of the party, was the subject of a bitter controversy among the federation's 9 affiliated chess clubs. In April 1958, a spokesman for the Arion Chess Club, declared that "his club would resign from the federation rather than play with Mr. Kandel." (See the Washington Post and Times Herald, May 9, 1958, p. A–9; the Evening Sun, Baltimore, Md., April 10, 1958, pp. 51 and 60; and HUAC, Investigation of Communist Activities in the Baltimore, Md., Area, pt. 1, 1957, p. VIII.)

Emphasizing the seriousness of the situation, the Arion Club claimed many of its members had "worked for the Government on top-secret projects involved with the defense effort * * * (and) * * * to associate in a social organization with a man identified as a Communist would be exercising poor judgment." Members of the Glenn L. Martin Company Chess Club "objected to Mr. Kandel's membership and indicated they would withdraw from the federation if it remained in force. * * * Many of the Martin Club members felt they were jeopardizing their security clearances by remaining in the federation." (See the Evening Sun, Baltimore, Md., April 10, 1958, p. 51.)

Faced with the possibility of complete dissolution, the federation established a new organization called the Maryland Chess Association "based on individual rather than club membership." Following transfer of its "powers and funds" to the association, the federation "voted itself out of existence" which resulted in the cancellation of Kandel's membership. Kandel appeared before the HUAC on May 7, 1957, and invoked the fifth amendment 27 times when asked about alleged activities in the Communist Party.

He also took refuge behind the fifth amendment when questioned regarding "his present or past leadership of district 4" of the party. (See the Washington Post and Times Herald, May 9, 1958, p. A-9; and HUAC, Investigation of Communist Activities in the Baltimore, Md., Area, pt. 1, 1957, p. VIII.)

Victor Perlo, an identified leader of an important Soviet espionage apparatus which functioned in the United States Government prior and during World War II, reportedly spoke at a meeting sponsored by the Washington Citizens Area Forum on May 14, 1958 at the Cultural Center, 4402 Georgia Avenue NW., Washington, D. C. The Communist background of the Washington Forum was disclosed in the April 1, 1958, Firing Line. Both Whittaker Chambers and Elizabeth T. Bently have testified before congressional committees that Perlo was affiliated with Soviet intelligence activities while employed in strategic positions in the Federal Government. (See Senate Internal Security Subcommittee report, Interlocking Subversion in Government Departments, July 30, 1953, pp. 2, 3, 6, and 9; and HUAC, The Shameful Years, 1951, pp. 58–61.)

RECENT SUPREME COURT DECISION FAVORS A COMMUNIST LAWYER

On May 19, 1958, the Supreme Court of the United States summarily reversed a 6-month contempt of Congress conviction of veteran Communist attorney Harry Sacher, who refused to testify before the Senate Internal Security Subcommittee in 1955, whether he was a past or present member of the Communist Party. In ordering the dismissal of Sacher's indictment, the Supreme Court based its decision on the Court's John T. Watkins ruling of June 17, 1957, which held that a witness could not be convicted of contempt unless a congressional committee "made clear to him the pertinence of its questions." (See the New York Times, May 20, 1958, p. C-23; and Senate Internal Security Subcommittee, report, Significance of the Matusow case, 1955, pp. 86 and 87.)

Justice Tom C. Clark filed a dissenting opinion with Justice Charles E. Whittaker concurring. In his dissent, Justice Clark "said at least 1 question about Mr. Sacher's possible Communist affiliation 'was vital to a matter in which the (Senate) Committee properly was interested—petitioner's (Sacher) role in a Communist conspiracy to procure (Harvey M.) Matusow's recantation'." According to Senator JAMES O. EASTLAND, chairman of the committee, the "remand of the Sacher case in the first instance, allegedly under the doctrine of the Watkins case, was an unjudicial act * * * The Court was attempting, through its dicta in the Watkins case, to make the law of general applicability; and the Court has now applied such judge-made law to the Sacher case * * *"

Sacher, who has been a member of the Communist Party in its higher echelons", is a veteran defender of Communist cases. In 1952, he served a 6-month prison term for contemptuous harassing and defiant courtroom tactics while playing a major part in the defense of the 11 Communist Party national leaders who were on trial in 1949. The Senate Internal Security Subcommittee stated that if any single quality can be said to characterize Mr. Sacher's appearances in defense of Communist cases, it may be said that it is his attitude of defiance toward constituted authority, thus repudiating the oath he took as a member of the bar to respect that authority.

A supporter of many subversive organizations since the 1930's, Sacher has been an active member of the National Lawyers Guild. Sacher was elected to the executive board of the guild during its 1957 convention. (See New York Guild Lawyer, March 1957, p. 8; and Senate Internal Security Subcommittee, report Significance of the Matusow case, 1955, pp. 103–107.)

Wisconsin's Fine Record of Conservation Accomplishments

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Wednesday, July 23, 1958

Mr. WILEY. Mr. President, as we recognize, the country needs long-range, as well as immediate, programs to strengthen the economy of the country—including conservation of our natural resources.

Extremely important among these, of course, is the particular need for carrying out effective conservation practices for conserving our soil and water.

I am proud to point out that Wisconsin has a splendid record in this field. During 1957, for example, our Wisconsin farmers had a top year in conservation accomplishments.

Among the major achievements were:

Over 1,700 basic soil and water conservation plans were developed by farm families with assistance of Soil Conservation Service personnel. More than 550,000 acres of soil surveys were completed, bringing the total to 11.7 million acres mapped to date.

The acreage of contour cropping established in 1957 topped 52,000 acres. Over 1,600 miles of waterways, terraces, diversions, and surface drains were installed. More than 2,000 acres of land were smoothed.

In addition to these accomplishments, pasture renovation amounted to nearly 30,000 acres; more than 26,000 acres of farm woodlots were protected from grazing; and nearly 3,000-odd acres were developed for wildlife habitats.

This fine record, of course, has been established through the splendid efforts of our farmers in cooperation with the high-quality leadership of the members of the Soil Conservation Service, members of the College of Agriculture, and others interested in the program.

Today, I call attention to the anniversary of a particular conservation project: The Coon Creek watershed project.

The project was organized a quarter century ago, by cooperating pioneer-spirited farmers. At that time, they established a 92,000-acre watershed in Vernon, La Crosse, and Monroe Counties. Thus, the Nation's first, large-scale demonstration of soil and water conservation was begun in October 1933. This erosion-control plan established a pattern of land use now prevalent throughout the Midwest.

Currently, second-generation, conservation-minded farmers are taking over the soil-saving practices started by their fathers in 1933. Interestingly, the concern for soil conservation is not limited to the farmers. Happily, the townspeople and businessmen of the valley, too, deeply sense the value of conserving soil and water.

According to Lincoln Knutson, cashier of the Westby-Coon Valley Bank: "Soil conservation has brought life to the community."

The current issue of the Wisconsin Agriculturalist and Farmer—which has served Wisconsin farm families for 109 years—has an excellent article entitled "A Quarter Century of Conservation." This article outlines the historical development of the Coon Creek watershed project, up to the present time; in addition, it portrays the constructive way in which hardy, second-generation farmers—as well as other folks in the community—are carrying on dedicated work for soil and water conservation.

I request unanimous consent to have the article, preceded by a thoughtful quotation from Dr. W. C. Lowdermilk of the Soil Conservation Service on safeguarding the riches of the soil, printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"Thou shalt safeguard thy fields from erosion, thy living waters from drying up, thy forests from desolation, and protect thy hills from overgrazing by thy herds, so that thy descendants may have abundance forever." (Dr. W. C. Lowdermilk, Soil Conservation Service.)

A QUARTER CENTURY OF CONSERVATION

(By Bernie Manuel)

Leaving behind his native Gulbransdalen in Norway to search for new land, Helgi Gulbrandson walked from the Mississippi River to the center of the fertile valley in 1849.

The rich land of Coon Creek Valley attracted many other pioneers, who like Gulbrandson were interested in clearing the land for cultivation. Removal of the timber stand and poor tillage practices coupled with other forms of land abuse soon threatened the economy of the valley, however.

Good land, as well as poor, was broken by gullies which grew larger each year. The results of erosion and runoff caused loss of land from productive uses, and led finally to ruin and abandonment of many farms.

This was the situation when the Coon Creek watershed project was organized a quarter of a century ago. The pioneer spirit still clung to the farmers in the valley and they gave full cooperation in establishing the 92,000 acre watershed in Vernon, La Crosse, and Monroe Counties.

The Nation's first large scale demonstration of soil and water conservation got underway in October 1933, and the erosion control plan established a pattern of land use now prevalent throughout the Midwest.

Technical assistance for the project was provided by personnel of the Soil Conservation Service and the Wisconsin College of Agriculture.

Spurred into action by a pressing need for conservation practices and free materials provided by the Government, valley farmers used practices that had a healing effect on the scars caused by erosion.

Strip cropping of 8,000 acres was one of the principal practices used to combat the erosion. Terraces were constructed on 1,769 acres and trees planted on 725 acres. Better rotations and use of fertilizers also helped to improve conditions in the valley.

Today, 25 years later, a second generation of conservation-minded farmers have taken over the soil saving practices started by their fathers in 1933 and are just as enthusiastic.

"I've always known conservation farming," says Arlin Manske of Vernon County. "An erosion control program was started on this farm by my father when the watershed was first organized."

The memories of erosion caused by land abuse still cling to Wilfred Kotek, who fol-

lows the pattern set by his father, 25 years ago.

"I was 13 years old when the Coon Creek Watershed Project was organized," says Kotek, "but I still remember the old method of farming and the soil erosion that went with it."

Another firm believer in conservation practices is Ted Kamperschroer. "Erosion control methods that I have used since 1934 have raised the yield of my crops by at least one-third," he says. "Sure, fertilizer has been partly responsible, but what good is fertilizer when it's washed down the slope?"

Farmers in the valley are just naturally conservation minded, according to Artiz lean, president of the Coon Creek Flood Control Association. "They work together closely," he says, "and that is what it takes for a successful soil erosion and flood control program."

"The interest of the second generation in soil conservation is not limited to farmers. It extends into the townspeople and businessmen in the valley. Take Lincoln Knutson, cashier of the Westby-Coon Valley Bank.

"Soil conservation has brought life into the community," he says. "We are aware of conditions before the erosion control program of 1933 and the effect on the farm economy. Our bank is very interested in proper farming and conservation practices."

A new challenge of flood control now faces the valley and Knutson is backing a control program with the determination of his father, I. N. Knutson, who was instrumental in the organization of the soil demonstration area 25 years ago.

Erosion control work continues in Coon Valley today. Farm planning is much the same as when the project was first organized. The only difference is a new look on the hillsides where contour strips and terraces hold the soil in place.

Kwame Nkrumah, Prime Minister of Ghana

EXTENSION OF REMARKS

OF

HON. ROBERT N. C. NIX

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1958

Mr. NIX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times magazine entitled "Saturday's Child of Ghana":

SATURDAY'S CHILD OF GHANA—HAVING FAR TO GO, KWAME NKRUMAH HAS GONE FAR, FROM AN AGITATOR ONCE JAILED BY THE BRITISH TO AN APOSTLE OF PAN-AFRICAN LIBERATION

(By Kenneth Love)

LONDON.—That old verse of folk prophecy, "Saturday's child has far to go," has reached a peak of fulfillment in Prime Minister Kwame Nkrumah of Ghana, first elected leader of Africa's new 16-month-old state. He has jumped in a few years from an impecunious student and agitator, a man jailed by the British for revolutionary activities, to a militant statesman of continental stature and continental ambition—a Bolivar of the African bush.

This week his travels take him to Washington as a guest of President Eisenhower—a far distance from the steaming West African village of Nkroful where, by his own account, he was born "a yelling and kicking Saturday's child" nearly 49 years ago. (His tribe, the Nzima, names a child according to the day of his birth—Kwame is the name for boys born on Saturday.)

Although most Americans have eaten Ghanaian cocoa in their chocolate bars and many wear Ghanaian gold in their wedding bands, few could spot Ghana on a map or spell Nkrumah. Kwame Nkrumah, on the other hand, is well acquainted with the country he is visiting, for this will be his third trip here.

The Ghanaian Prime Minister's earlier visits were back in the days when his country was a British colony called the gold coast and he was a fiery, unsatisfied nationalist.

On his first trip—from 1935 to 1945—his main objective was study. And though he was obliged to garner money at a variety of jobs, and devoted further energies to pan-African organizations, he earned a total of four degrees—from Lincoln University, in Chester County, Pa., and the University of Pennsylvania.

He made his second visit in 1951. By then his circumstances had improved. He returned, an imorpant figure in the gold coast's largely autonomous colonial regime, to accept an honorary doctorate of laws from his alma mater at Lincoln.

The exchange of correspondence preceding his present visit began last winter when Dr. Nkrumah sent a personal message to President Eisenhower outlining Ghana's need for help to build a power dam and aluminum refinery on the Volta River. The President promised that his request would receive a sympathetic hearing by United States experts, and in March invited Dr. Nkrumah to make an official visit to Washington.

This time Kwame Nkrumah appears in America in the role of a respected national leader and as a powerful voice for all the emerging peoples of Africa.

It is difficult to escape his presence in Ghana. His portrait is replacing that of the British sovereign on coins, stamps, and currency notes.

A larger-than-life statue of him in prison garb has been erected in front of Parliament house in Accra. One side of its pedestal bears the legend "Kwame Nkrumah—Founder of the Nation," and on another are inscribed three of his own sayings that sum up his political philosophy:

"Seek ye first the political kingdom and all things shall be added unto you."

"We prefer self-government with danger to servitude in tranquillity."

"Our task is not done and our own safety not assured until the last vestiges of colonialism have been swept from Africa."

As these quotations attest, at the core of the Ghanaian leader's thought is an implacable anticolonialism. He believes that all dependent territories, African or others, should be granted independence as soon as their inhabitants are willing to take on the responsibility of self-rule. If the colonial power refuses to grant independence, Dr. Nkrumah advocates Gandhi's method of strikes, boycotts, propaganda, civil disobedience and other tactics short of violence.

He is determined to make Ghana a base for pan-African liberation—an enlargement of his original goal to free all the British and French West African colonies and weld them into a West African federation. And he has made it a part of government policy that his country shall afford an asylum or refuge for all Africans who suffer from religious, racial or political persecution and intolerance.

In a recent speech he warned that "colonialism is not dead," adding that its new methods include "economic penetration, cultural assimilation, ideological domination, psychological infiltration, and subversive activities even to the point of inspiring and promoting assassination and civil strife."

Out of his passionate belief in anticolonialism flow these major conclusions: to make political independence a reality, the newly created nations must be economically free; they dare not wait for economic freedom, and socialism is the quickest way to their goal.

This is the way he has put it: "What other countries have taken 300 years or more to achieve, a once dependent territory must try to accomplish in a generation if it is to survive. Capitalism is to complicated a system for a newly independent nation," he continues, "hence the need for a socialistic society. But even a system based on social justice and a democratic constitution may need backing up, during the period following independence, by emergency measures of a totalitarian kind."

At one time Dr. Nkrumah was described in newspapers as a Communist. Indeed, he once had a party card but he never signed it. Now he calls himself a Marxist Socialist, and roots known Communists out of government service.

The momentum of the anticolonial struggle has not carried Ghana toward the Communist bloc. The country's economic and political ties, including commonwealth membership, and its outlook remain predominantly Western. Nevertheless, Ghana recently agreed to exchange diplomatic missions with the Soviet Union, and the Prime Minister has said he wants normal relations also with China in his hope to achieve friendship with both sides in the great power rivalry.

Calling his policy one of positive nonalinement, he explains that "It is only by avoiding entanglement in quarrels of the great powers that we shall be able to assert our African personality on the side of peace."

The country Kwame Nkrumah governs has a population estimated at 4,800,000—about equal to that of New Jersey, but in an area 13 times as large. Geographically, it presents a varied landscape of broad, flat plains along the coast, steeply rising tropical rain forests farther inland, leveling off into gently rolling grasslands. The inhabitants are divided into dozens of tribes—Ga, Ashanti, Fante, Ewe, Nzima—many of which still exercise enormous power over their members. In the great forest belts to the south the Ashanti maintain what is almost a separate kingdom.

The mainstay of the economy is the export of cocoa. Thus the country's biggest worry at the moment is the swollen shoot parasite, which feeds on the cocoa tree. Dr. Nkrumah's government has pursued the politically difficult but only sure remedy for saving the cocoa crop—farmers are required to kill every infested tree, a hard thing to ask of men unaccustomed to taking the long view. But the fight against the parasite is slowly being won.

Ghana's one-crop economy poses serious problems which the Nkrumah government is trying to overcome by a vigorous program of economic diversification. The most vital project is the proposed Volta Dam, which would enable Ghana to harness its one great river for hydroelectric power.

Israel, seen by Ghanaians as safely free of colonialist ambitions, and at the same time knowledgeable of the problems involved in starting an economy from scratch, is participating extensively in Ghana's development. She has supplied capital and personnel to help establish Ghana's Black Star shipping line, which now operates five ships, and is helping to start a merchant marine academy and a national construction company.

But Ghana needs foreign aid on a scale larger than Israel can offer. Also, Dr. Nkrumah wants to avoid obtaining too great a proportion of his aid from any single country—an example in the economic sphere of his policy of positive nonalinement.

The Prime Minister's character, like his career, is full of contrasts. His private behavior is engagingly modest. But his public conduct tends to be authoritarian, and he is capable of actions which his critics regard

as flights of megalomania and his admirers can only view with embarrassment. His critics charge Dr. Nkrumah with dismissing public officials who hold opposition views. They add that he fills the government-owned radio with propaganda for his Convention People's Party (the strongest and best organized political party in Africa).

The latest manifestation of Dr. Nkrumah's strong-arm policy is the Preventative Detention bill introduced by his government this month. It provides for the detention of persons for up to 5 years to forestall actions prejudicial to national security or the foreign relations of the state.

He was criticized for shifting the Governor General out of the windy, sea-sprayed splendors of Christiansborg Castle and taking up official residence there himself. But, say his supporters, this move was designed primarily to convince the unsophisticated Ghanaians that they had truly thrown off the British colonial yoke, despite the remaining symbols that go with Commonwealth membership.

Dr. Nkrumah faces as well the charges of those in Ghana who bitterly resist all change. From the very outset of his taking office, he has been under attack from the Ashanti and northern chiefs for his continuing pressure to diminish their feudal powers.

The authority of the chiefs is being deliberately eroded by laws and regulations, propaganda among the tribesmen, and bureaucratic intimidation. Dr. Nkrumah is aware that his appeal is fundamentally to the detribalized African. He offers a place in the modern scheme of things to the African who has lost or rejected the security of a place in the tribe.

In addition, Dr. Nkrumah offers a pride in Africanness, regarding even paganism as a part of the national culture that he hopes will produce an African way of doing things as an alternative to imitating western ways. He isn't above pouring libations on the ground at public ceremonies or purifying himself by walking barefoot through the blood of a sacrificed sheep.

Until his recent marriage, his eligible bachelorhood made him a choice subject for Accra's able gossips. Dr. Nkrumah has laughingly reported that they described him variously "as a Don Juan, an impotent man, and even a eunuch." And he adds that he is "a very normal man with probably more than average self-discipline." In explanation of his bachelorhood, he used to say that the shape of his fingers made it impossible to keep a ring on. This year he married Fathia Rizk, a somberly attractive 26-year-old Egyptian of the ancient Coptic Christian faith.

A captivating personality, he is a man of photogenic good looks, who likes to be with people. He loves the bustle and animation of international conference and official tours abroad. The excitement of crowds stimulates him to a flow of vivid speechmaking (he is a notable orator, provided he speaks off the cuff). At the same time, he professes a longing for solitude, and wishes he had a state yacht to escape in from time to time.

The Prime Minister's great charm is responded to by all segments of the population. Ghanaians call him "Kwame"—with no titles. He will share a bowl of fu-fu (mashed yams) with a nearly naked villager in the dusty doorway of a grass hut as readily as nibble caviar at a brilliant reception.

Some say his profound and unselfconscious identification with the people springs from his humble birth and early experiences. (A powerful northern chief has said that the Prime Minister's trouble was that he did not come from a good family.)

He was the only child of one of the wives of a gold trinket smith, who worked at Half Assini, 40 miles west of Nkroful. His mother was a mammy trader, one of those female entrepreneurs typical of the west African coastal tribes.

A few facts about his birthdate are certain: It was about noon on a mid-September Saturday in one of the years from 1909 to 1912 (Dr. Nkrumah opts for 1909 on the basis of some childhood memories). His mother had him baptized a Roman Catholic, and while still a young man he planned to enter the priesthood. Later he left the church, and now describes himself as a "nondenominational Christian." He was educated at Catholic mission schools and the famous Achimota College near Accra.

While continuing his studies in the United States, Nkrumah first encountered Jim Crow. He asked for some water at a counter in a Baltimore bus terminal, and the waiter suggested that he drink out of the spittoon.

Last October, in a more celebrated incident, a restaurant in Dover, Del., refused to serve Komla Gbedemah, his Finance Minister and chief political lieutenant. President Eisenhower, to make amends, invited Mr. Gbedemah to breakfast at the White House 2 days later.

It was Gbedemah who coached Nkrumah's Convention People's Party to its landslide victory in February 1951, while Dr. Nkrumah was serving the 11th month of a 3-year prison sentence for agitation and sedition.

To direct his party's progress, Dr. Nkrumah smuggled manifestoes and directives to Gbedemah, written with a pencil stub on sheets of toilet paper—the only paper obtainable in prison (he used to gamble or trade soap and other small articles for it). The publication of these writings during his internment provoked among his primitive followers the legend that he slipped out between the bars every night in the form of a white cat.

With his party's victory at the polls, Dr. Nkrumah was summoned from prison by the Governor, Sir Charles Arden-Clarke, to form his first government.

It must have seemed then to the young leader that he had reached the apex of his career. Today, as the horizons of emerging Africa widen, it looks as if Saturday's child has still farther to go.

Appeal for Development of Coosa-Alabama River

EXTENSION OF REMARKS
OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1958

Mr. ROBERTS. Mr. Speaker, the members of the Alabama delegation are joined in a concerted effort to appeal to our colleagues for development of one of the Nation's greatest waterways, the Coosa-Alabama River.

The Senate has seen fit to appropriate $150,000 for planning and design of the Millers Ferry lock and dam on the Alabama River. Soon, the House and Senate conferees will meet to decide what the public works appropriations shall be.

It is our sincere hope and desire that this appropriation for the Alabama River will be approved.

Those of us along the Coosa-Alabama Basin have written to the House conference members, appealing for their support in retaining the Millers Ferry item.

This letter, which I wish to insert in the RECORD, is signed by Congressmen BOYKIN, GRANT, RAINS, SELDEN, and ROBERTS, of Alabama, and by Congressman MITCHELL, of Georgia. It was addressed to each of the House conferees.

The letter follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., July 3, 1958.

MEMBER OF CONGRESS,
House of Representatives,
Washington, D. C.

MY DEAR COLLEAGUE: As a member of the conference appointed on H. R. 12858, the 1959 public works appropriations bill, you are no doubt aware of the action of the Senate Appropriations Committee amending this bill to include an item of $150,000 for planning and design of the Millers Ferry Lock and Dam on the Alabama River in the State of Alabama. We are taking this means respectfully to urge you and the other House conferees to accept this item as provided in the Senate version.

It is our sincere belief that an early beginning of construction on this already authorized project would not only benefit Alabama and the South, but would provide vast benefits for the entire Nation.

The Coosa-Alabama River, draining a basin 650 miles long and covering 22,800 square miles, flows from Rome, Ga., to Mobile, Ala. It is the second largest river flowing from headquarters in the Appalachian Mountains. Among the major centers along its bank are Rome, Anniston, Gadsden, Talladega, Montgomery, and Selma. More than 1.4 million people live in this basin and the great cities of Birmingham and Atlanta lie just outside its boundaries.

Full development of this waterway and basin would mean adequate hydroelectric power for industrial purposes, employment for its people, cheap water rate transportation, freedom from floods, and enjoyable recreation areas. The defense bulwark of our Nation would be substantially aided by the fast, safe movement of vital defense elements such as petroleum, chemicals, pulp, building materials, and ore. For the Coosa-Alabama Basin is rich in resources. Steel and iron mills along the river use ore coming into this country through the port of Mobile. Vast coal deposits are available for wider distribution if afforded river transportation.

Recognizing the staggering potential of this waterway, the 79th Congress in 1945 enacted Public Law 14, authorizing development of the Coosa Alabama, including construction of a multipurpose dam at Millers Ferry, and two other dams on the Alabama River. Since then, a private concern, the Alabama Power Co., has begun a multimillion dollar series of dams on the upper stretches of the waterway. The Federal Government has not kept the pace, and the work authorized 12 years ago on the Alabama River remains unstarted.

We believe that the time for this construction is compelling. We express the sentiment of the entire Alabama delegation, and affected sections of Georgia, when we again ask that funds in the amount of $150,000 be appropriated for this purpose at this time.

Very sincerely,

FRANK BOYKIN,
Member of Congress.
GEORGE GRANT,
Member of Congress.
ALBERT RAINS,
Member of Congress.
KENNETH ROBERTS,
Member of Congress.
ARMISTEAD SELDEN,
Member of Congress.
ERWIN MITCHELL,
Member of Congress.

The Court, the Constitution, and the People

EXTENSION OF REMARKS

OF

HON. EDWIN E. WILLIS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1958

Mr. WILLIS. Mr. Speaker, recently the chief justice of the Supreme Court of Louisiana delivered an address before the students of Southwestern Louisiana Institute in Lafayette, entitled "The Court, the Constitution and the People."

Chief Justice Fournet has had a distinguished career as a practicing attorney, a public servant, a lawmaker and an outstanding jurist. Before his elevation to the highest court in his native State, Chief Justice Fournet served as lieutenant governor of Louisiana and as presiding officer of the State senate.

By virtue of his profound knowledge of law and his long years of training and practical experience in government, I know of no man better qualified than Chief Justice Fournet to talk before a student body about the court, the Constitution and the people. He knows so well that in practical operation our form of government resembles a three-lane highway, one lane being occupied by the legislative branch, represented by Congress, whose function is to make the laws and nothing else; the second being occupied by the executive branch, headed by the President, whose duty is to enforce the laws and keep the peace and nothing else, and the third lane being occupied by the judicial branch, represented by the courts, whose province is to interpret the laws and nothing else. And I know his deep concern about the fact that just as, if one motorist overlaps the lane of another someone will get hurt, so also, if the temporary servants in one branch of the government undertake to preempt the functions of one or both of the others, the rights expressly reserved by the 10th amendment to the States and the people will certainly be seriously impaired, if not ultimately destroyed. And yet, as befits the dignity of the high post he occupies, Chief Justice Fournet handled his assigned subject before the students of that outstanding institution in my congressional district calmly and dispassionately.

I procured a copy of this address for the use of the special subcommittee created last year to study questions raised by recent decisions of the Supreme Court of the United States, and I commend it to the careful study of all my colleagues in this body.

The address follows:

Meeting with you tonight is but the continuation of a day that will linger long in my memory as it is relived again in future transient reflections. It furnishes abundant proof of the fact that one does not live long before he realizes how short is a lifetime and how many added lifetimes he will need to deserve the kindness the world shows him in the first. For this reason I am thankful I enjoy good health. A weaker man might well be overcome by the kindness that has been showered on me on this day alone.

I was already overwhelmed this afternoon when inducted into honorary membership in the Pi Lambda Beta prelaw fraternity and the Pi Gamma Mu social science fraternity. Following this was the wonderful party given Mrs. Fournet and me by the Lafayette Bar Association. This banquet is indeed a fitting climax to a really wonderful day of wonderful experiences. Of course, I could add that it would be even more wonderful if I didn't have to make this after-dinner address. The mood in which I find myself at this moment is certainly more conducive to sitting back, relaxing, and enjoying myself.

Seriously speaking, while rank sentimentalism should never enter such festivities, I must give expression to the natural emotions evoked and begin by thanking all who have given so generously of their time and talents to those details that have made the occasion possible. I am very grateful to my good friend, J. J. Davidson for acting as toastmaster, and to your great President Fletcher for his kind words of introduction. My special thanks go to Jewel Parkerson Roy, who first conveyed to me the news I would be the recipient of these honors, and who has had such a large part in planning and coordinating the details that have made it a glorious success. To all who are here tonight—including those who have no other reason than personal friendship—thank you for the luster your presence adds to this already memorable day.

In informing me of my selection for honorary membership in Pi Lambda Beta and Pi Gamma Mu, Jewel wrote these were being conferred for my "long and distinguished service to our people in the fields of work represented" by these respective fraternities. If the performance of my duties in accordance with my oath of office—that is, to the best of my understanding and ability—merits this special commendation, then I am naturally filled with a deep sense of gratification, for the esteem of my fellow men is, in itself, the brightest medal, the highest award, I have ever hoped to receive. It is in this spirit that I have, with all humility, accepted the honors conferred upon me today. They will serve to stimulate my desire to raise to even loftier heights all future efforts I may be privileged to exert in promoting a better understanding by our people of the role the law and social sciences play in molding their lives under our constitutionally guaranteed government of freedom and happiness.

Many occasions arise that require me to speak to lawyers and judges—perhaps too many. For this reason I ask that my professional brothers bear with me as I address my remarks primarily to the student members of the host fraternities and to their faculty leaders. These teachers are, after all, the advance guard on the frontiers of human knowledge that is now forging for our students the vital link that will weld into their solution of the staggering problems of this space age the wisdom that has come to us from the ancients.

It is well known that when a Texas is asked to make a speech—in or out of Texas—the first subject that comes to his mind is Texas. I suppose it is almost as well known that when a judge is asked to speak, his mind turns automatically to the law and the courts. This is true in my case.

The judiciary was not originally my ambition in life. The advocacy of the cause of others and the political arena were more to my liking. But a man is not the architect of his own destiny, and, with the donning of the judicial robes, I turned from advocacy and politics and have made the law and the improvement of justice my life's work. To this end my paramount desire, outside of my regular court duties, has been to instill in our people a greater understanding of and reverence for the judicial branch of our Government.

That desire finds roots in an abiding conviction thatour American way of life depends upon public confidence in our courts and honor and respect for the men who wear the black robe upon its benches. This is so because under our system of government the courts occupy a unique position of extraordinary importance. Underlying their obvious function of reconciling the conflicts of individuals with themselves and with the State is the inherent task of keeping separated in their respective orbits of influence the State and Federal governments, and of maintaining in proper perspective those delicate checks and balances that prevent encroachment by the legislative, executive, or judicial divisions upon the prerogatives of the others. To this end the courts enjoy the high privilege of interpreting the Constitution under which we live and of judging the nature and extent of their own perimeter of influence. Judges are, consequently, with the exception of the people themselves, from whose hands alone can come the supreme law of the land, the final architects of our governmental structure. And the only restraint the Constitution places upon their exercise of this high function is that of self-restraint.

Justice Story—the great author, educator, lawyer, and jurist—once emphasized the importance of the role of the courts in our lives in this way, and I quote: "Where there is no judicial department to enforce rights, the Government must either perish by its own imbecility, or the other departments of Government must usurp power * * * to the destruction of liberty. The will of those who govern will become, under such circumstances, absolute and despotic; and it is wholly immaterial whether that power is vested in a single tyrant or in an assembly of tyrants."

Because, therefore, of a deep love of country, a consecration to our American way of life, and an empassioned belief in the God-given rights of man as set out in our Declaration of Independence and guaranteed in our Constitution.

I feel impelled tonight to comment upon the implications inherent in the recent trend of decisions in the Highest Court in our land that is causing much dissension and confusion among our people. This trend is not only undermining the confidence our people have long reposed in the Court's ability to preserve the fundamental and essential elements of government under a written constitution, but is having a marked effect upon the solution of the many problems that face our way of life in all of its many aspects.

It is not my purpose tonight to review the decisions of the United States Supreme Court that are subjecting it to the most adverse criticism it has had to weather in its long and honored history, even though this criticism is unquestionably exciting widespread concern for the Court's attitude to its proper governmental role and enveloping it with a thickening shadow of disrespect. Suffice it to say there is today a growing alarm among the people who feel this Court is gradually arrogating unto itself legislative power and executive functions never surrendered to the judicial branch of the Government or even contemplated by the leaders who molded the Original Thirteen Colonies into a united whole and which none of the illustrious and learned men who, until recently, graced that august bench, would have dreamed of exercising.

As a result, large segments of our people contend that something is happening to the law of our land and the supposed sovereignty of our States. Serious thinking and discussion by leaders in all walks of life is leading them to conclude that at no period in the history of our Republic has this country strayed further from the sound philosophy and principles upon which it was founded. Many are convinced that the Court is now—

before nebulous public resentment can become hardened public resistance—engaged in reshaping the form of our Government with a speed that will leave little recognizable in another generation. And, realizing that the easiest and quickest way our Constitution can be destroyed is in the Court, they read into this—whether rightly or wrongly—a suggested method whereby communism, reaching its deceptively paternal but erosive tentacles into even this high tribunal can, with confidence, undertake, in this vulnerable spot, its long-range plan of wiping from existence our beneficient guaranties of individual freedom under law.

These expressions on the part of so many of our people evidence a growing fear that our Republic will be destroyed if government under written law is permitted—unchecked—to give way to government of expedience dependent upon the will or whim of men swayed by shortsighted popular passions of the moment. To prove this fear is real and not imaginary, these dissidents point to rulings which they assert evidence the fact that the Court—with the stroke of a pen and without a vote at the polls or in legislative halls—is tipping so crazily our structure of triple checks the symmentry of the whole is becoming the trepidation of the balance.

Almost daily we find commentators, authors, and speakers, reaching unfortunately, a wide audience that is not entirely sure of the exact meanings conveyed, asserting that these revolutionary and far-reaching decisions are casting into oblivion the constitutional barriers that have long shielded the States from the creeping paralysis of an encroaching Federal Government, thus depriving the individual States of their sovereign rights so meticulously reserved in the Constitution. They say, further, that the Court with an increasingly nationalistic attitude is creating a Federal citizenship supposedly immune from State regulation and control, and also, in an overpaternalistic attitude, is, by resort to novel theories and unreasonable technicalities of construction, hedging individuals about with rights never intended by the Constitution, with the result that law enforcement is breaking down and peaceful citizens find it dangerous to venture onto our streets, while criminals walk them without fear of reprisal. In the process the Court has unwittingly trespassed upon two of the most basic rights of the States, that is, the police power whereby they maintain law and order, and the right of State courts to try and punish those who contravene State laws.

Possibly the gravest concern is being voiced by those who feel the trend of the Court's decisions shows a marked solicitude for subversives, and, in this way, furthers the cause of communism. The decisions evidencing this trend, it is asserted, are those that hamstring legislative investigations—so necessary for the proper functioning of our lawmaking bodies—by denying the right of committees to question the communistic leanings and actions of witnesses; strip from the Secretary of State his congressional authority to discharge known Communists in his ranks; nullify the right of States to ferret from their official family adherents of communistic ideologies under the pretext Congress preempted the field, although a contrary intention is expressed in the legislation itself; compel States to admit to the practice of law known Communists tainted with criminal backgrounds, despite the fact the State courts have, traditionally, been the sole judges of the moral fitness and character of those who would practice before them; and prohibit the States from removing Communists who have infiltrated strategically vulnerable positions in our educational institutions for the purpose of undermining—in their formative years—our impressionable youth, upon whose shoulders will rest the task of securing in tomorrow's world the liberties we have enjoyed in today's.

This alleged solicitude caused an Indiana Senator to say last year, in proposing legislation to restrict within constitutional bounds the Court's deflective wanderings from its judicial function, that "no conceivable combination of votes in Congress could have done as much damage to our legislative barriers against communism and subversion as the Supreme Court of the United States has done by its recent opinions."

Particularly alarming to the members of the legal profession is the fact that studies being made by Congress, bar associations, and other organizations reveal this usurpation of power by the Federal judiciary is being exercised without reliance on statutory law, constitutional mandate, or recognized legal principles developed in the jurisprudence, but, instead, upon books, treaties, committee testimony, articles, and pseudolegalistic papers that are without foundation in law and are, in fact, inimicable to our entire concept of government.

This brings to mind the unusual vision and foresight of Edward Douglass White, the only Louisianian to sit on our land's highest bench, when first ascending that bench in 1895 he pinpointed the danger inherent in a total disregard for constitutional precedents that have withstood all challenges for so many years. I believe his views in this respect, as well as his exposition of the function of the Court in upholding the Constitution, are well worth repeating, and I quote:

"My inability to agree with the Court in the conclusion which it has just expressed causes me much regret. Great as is my respect for any view by it announced, I cannot resist the conviction that its opinion and decree in this case virtually annuls its previous decisions in regard to the powers of Congress on the subject of taxation, and is therefore fraught with danger to the Court, to each and every citizen, and to the Republic. The conservation and orderly development of our institutions rests on our acceptance of the results of the past, and their use as lights to guide our steps in the future. Teach the lesson that settled principles may be overthrown at any time, and confusion and turmoil must ultimately result. In the discharge of its function of interpreting the Constitution, this Court exercises an august power. It sits removed from the contentions of political parties and the animosities of factions. It seems to me that the accomplishment of its lofty mission can only be secured by the stability of its teachings and the sanctity which surrounds them. If the permanency of its conclusions is to depend upon the personal opinions of those who, from time to time, may make up its membership, it will inevitably become a theater of political strife, and its action will be without coherence or consistency.

"There is no great principle of constitutional law * * * which has not been ultimately defined by the adjudications of this Court after long and earnest struggle. If we * * * are to appeal to the writings of economists in order to unsettle all these great principles, everything is lost and nothing saved to the people. The rights of every individual are guaranteed by the safeguards which have been thrown around them by our adjudications. If these are to be assailed and overthrown * * * the Federal Constitution is * * * of little worth. My strong convictions forbid that I take part in a conclusion which seems to be so full of peril to the country. I am unwilling to do so, without reference to the question of what my personal opinion on the subject might be if the question were a new one, and was thus unaffected by the action of the framers, the history of the Government, and the long line of decisions by this Court.

"The wisdom of our forefathers in adopting a written constitution has often been impeached upon the theory that the interpretation of a written instrument did not afford as complete protection to liberty as would be enjoyed under a constitution made up of the traditions of a free people. Writing, it has been said, does not insure greater stability than tradition does, while it destroys flexibility. The answer has always been that, by the foresight of the fathers, the construction of our written Constitution was ultimately confided to this body, which, from the nature of its judicial structure, could always be relied upon to act with perfect freedom from the influence of faction and to preserve the benefits of consistent interpretation.

"The fundamental conception of a judicial body is that of one hedged about by precedents which are binding on the court without regard to the personality of its members. Break down this belief in judicial continuity, and let it be felt that on great constitutional questions this Court is to depart from the settled conclusions of its predecessors, and to determine them according to the mere opinion of those who temporarily fill its bench, and our Constitution will, in my judgment, be bereft of value and become a most dangerous instrument to the rights and liberties of the people."[1]

While this warning apparently had a salutary effect, as the Court for many years clamped upon itself a proper judicial restraint, as above stated, we find that within the last two decades the Court is again, as the late Chief Justice Vanderbilt said, "fumbling at the task allotted it under the Constitution," in that its members seem determined to use the Court not as an agency for constitutionally shaping law, but as a forum for broadcasting individual theories and philosophies.

The really serious question all of this discussion, criticism, and confusion is bringing to the forefront is whether our Government under a written constitution is breaking down: whether the American theory that tried and true principles of government may be enshrined in a written constitution and entrusted to the courts for protection is proving to be illusory. Upon the way in which that question is answered depends the future of our Republic.

Let me hasten to assure you that although the conviction is growing the Court has done much damage to our Constitution and has strayed far from the sound philosophy in which it was conceived, this adverse criticism has not, as yet, done irreparable damage to the faith of our people in the Court as a necessary institution of orderly government, and the Court has not wandered so far from its assigned role it cannot be returned to its proper sphere. We do not, therefore, stand poised today in the center of such a crisis that hastily conceived plans must be accepted in the immediacy of the moment.

Mr. Justice Frankfurter very aptly pointed out in one of his concurring opinions[2] that "The accretion of dangerous power does not come in a day. It does come, however, slowly, from the generative force of unchecked disregard of the restrictions that fence in even the most disinterested assertion of authority." The converse is equally true. Dangerous power, once assumed, cannot be destroyed in a day, or corrected with the stroke of a pen. The solution does not, therefore, lie in a rash of impulsive and lightly considered measures. In such a course lies as great a threat to the equilibrium that maintains the proper checks and balances in our political triumvirate as do

[1] *Pollock* v. *Farmers Loan & Trust Co.* (157 U. S. at p. 650).

[2] *Youngstown Sheet & Tube Co.* v. *Sawyer* (96 L. ed. at p. 1170).

the present deflective tendencies of the so-called runaway Court.

The approach to the problem must, therefore, begin with confidence in the belief that enlightened and dispassionate public criticism of the Court's decisions will, in time, cause its members to reexamine their assigned function of interpreting, not making, the law; and to interpret that law in accordance with the intention of its redactors, leaving law revision and amendment to the people and their elected representatives. Only if this fails should resort be made to carefully considered plans for restricting the Court's jurisdiction in Congress within the authority vested in that lawmaking body by the Constitution. This way seem a slow method to an impatient man, but the alternative is misrule and a return to the tyranny from which our forefathers fled to found our Nation.

For this action to be effective, however, today is the time to carefully study the Court's traditional role in Government. Now is the time to formulate the constructive criticism and carefully considered disapprobation of the Court's departures from established constitutional doctrine that can, if voiced with sufficient force and volume, make itself heard in all three halls of Government.

Because citizen indifference and lethargy often reflect lack of information, it should be the duty of the legal profession to afford some leadership in directing the public's attention to this threat and to assist in the formulation of wise public opinion. But this responsibility does not rest alone upon the shoulders of the lawyer and the judge. It rests upon all citizens. And it does not rest heaviest upon the old and the retiring. It rests equally upon the maturing generations—the seedbeds generating today those forces that will determine the harvest of tomorrow.

It may be felt I have chosen an inappropriate audience of young, unseasoned minds before which to place such a weighty matter. I do not think so. It is among such young students as we have here tonight that lies the nucleus of the minds that will, in the not too distant future, take over the reins of government. In them, therefore, lies our hope for a return of the proper balance in our triumvirate of government and the preservation of our constitution if our way of life is to survive.

It is difficult for one generation to understand those who will one day supplant it, or for the newcomers, trying their strong young wings for the first time, to look upon their elders as capable of meeting on equal ground the foibles and complexities of a new age. Yet each succeeding generation seems to carve for itself its own special niche in the framework that has been built by those who have gone before, and, together, there is no task we cannot, with faith in our individual and collective resourcefulness and initiative, accomplish.

It is for this reason that I draw much comfort from the intelligent and courageous countenances of my audience, and particularly the younger members. My brief conversations today with these young college students has confirmed what I find everywhere. The youth of this Nation are conscious of the precious legacy of constitutional government to which they stand in heirship. And they can be relied upon to accept their responsibilities as citizens in their search for guidance in the future in the tradition of our country's glorious past.

I would admonish them tonight, however, to guard against, as Congressman WILLIS said in a recent speech, becoming so engrossed in the present-day emphasis on the sputniks and the muttniks, the brilliance of the atomic bomb, the speed of the guided missile, and the supposed progress Russia is making in the scientific field they will be weaned away from the erosions occurring in our constitutional government.

Instead, live closer to our constitution, and endeavor to fully understand its true meaning. Learn of the manner in which it was created, what its antecedents were, who wrote it, their philosophical and political aims, and how they devised this document as the necessary implement to the preservation of liberty as we know it. Recapture that meaning, revitalize the Spirit of '76, and make both an integral part of your educational heritage as free Americans. Let time increase—never diminish—their significance. Only when you fully know your rights under the Constitution and your power to change or protect it, can you make it serve to safeguard your freedom.

Young ladies and young gentlemen, the future is yours, and the opportunities for service and distinguished citizenship were never greater. I have full confidence that you possess the vigorous, imaginative, and courageous leadership so vitally needed today for tomorrow's world. And I have every faith that, with your guidance, our glorious heritage of freedom under the Constitution will be preserved, inviolate, for the generations that follow.

Outstanding University of Wisconsin Summer Course Emphasizes the Importance of Speech Therapy for the Nation's Children and Adults

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, July 23, 1958

Mr. WILEY. Mr. President, in the Nation's summer sessions at colleges and universities, a great many fine courses and institutes are being held.

Today, I should like to single out one, because it symbolizes, I believe, education at its best. Moreover, it symbolizes man's interest in helping others to help themselves.

OUTSTANDING LEADERS AT JULY COURSE AT MADISON

On July 14, there commenced at the University of Wisconsin, in Madison, a summer course which will conclude the coming Saturday, July 26. The course is entitled "The Rehabilitation of the Adult with Language and Auditory Disorders."

To this postgraduate course have come some of Wisconsin's most outstanding experts in the field of speaking and hearing. They have been joined there by leaders from other universities and speech and hearing centers and organizations in other States.

MAN MUST COMMUNICATE

So far as a layman is concerned, he may not realize offhand how important it is that youngsters or adults who may not speak or hear well should be enabled to improve their faculties.

Yet, as I have previously pointed out, notably in my Senate statement of April 3rd, which appears on page A3221 of the CONGRESSIONAL RECORD, ours is a communications age. We must communicate with others; others must be able to communicate with us.

CHILDHOOD IS THE TIME TO BEGIN

One can hardly estimate the impact on the mind of a sensitive child if his schoolmates laugh at him and taunt him because he cannot speak or hear well. Can any human being estimate the amount of human misery that has been caused and the human suffering and anguish when, for example, a handicapped child runs away in tears because his playmates have teased him beeause of a lisp, a stutter or some other impairment?

Thanks, however, to speech and hearing therapists, those impairments, whether because of physical or emotional reasons, are being overcome with the inspired aid of inspired people.

This Nation needs more speech and hearings therapists, just as it needs more therapists to deal with other human needs.

THE SOUTH TAKES A CONSTRUCTIVE LOOK AT ITS PROBLEMS

I cite, for example, a splendid, frank report issued in 1955 by the Southern Regional Education Board, at 830 West Peachtree Street NW., in Atlanta, Ga. The report is entitled "Teachers for the South's Handicapped Children." The notable Commission on Training of Teachers of Handicapped Children reported that the South's handicapped youngsters needed 26,000 teachers, but that at that time only 3,700 such special teachers were available to cope with all such handicaps.

The largest group of handicapped children in the South—no less than 450,000 in number—is composed of those who have speech defects. Two thousand two hundred and fifty speech correctionists would be needed, according to the usual professional estimate. Yet, only 427 speech correctionists were available.

The report states that in the South there are 90,000 hard-of-hearing children. Three thousands teachers were need for them; but only 56 teachers were available for that work.

Let me say that these statistics regarding the inadequate number of therapists should not be regarded as a reflection on the South or as indicating that only the South is faced with this problem. On the contrary, the South is to be commended for the leadership it has shown. Moreover, if comparable figures were available for the Northern States, they would also show a shortage—possibly less acute, but nonetheless severe.

In connection with this problem, let no man point the finger of criticism at any State of the Union. Each of us should work to the fullest extent possible to meet the needs, both in our own State and in the entire Nation.

In the South there are a great many outstanding educators, outstanding therapists, outstanding school districts, and outstanding leaders. Our task is to encourage and stimulate the pioneering work in special education which has been done in the South and everywhere else in the Nation.

I send to the desk three items which I believe will illustrate the points I have made thus far.

LETTER FROM PROFESSOR IRWIN, IN MADISON

The first comes from my own State, and it is accompanied by excerpts from a fine letter to me from Prof. John V. Irwin, director of the Speech and Hearing Clinic of the University of Wisconsin. So I submit excerpts from the university's publication on the summer course, including a list of the noteworthy visiting and home faculty.

The second item consists of excerpts from a letter from another honored director of a hearing and speech center, Dr. William G. Hardy, of the famed Johns Hopkins Hospital, in Baltimore. Earlier this year, Dr. Hardy submitted an informal analysis to an interested individual. The analysis is so helpful that I commend it to the attention of my colleagues.

JANESVILLE CHILD HELPED BY THERAPISTS

Third, I submit an article, from the Janesville (Wis.) Gazette, which explains how one youngster, born with a cleft palate and lip, is being helped to overcome her speech defect.

As Dr. Kenneth O. Johnson, executive director of the American Speech and Hearing Association, wrote to me:

The State of Wisconsin has excellent representation in the field of speech and hearing.

Dr. Johnson went on to point out that Wisconsin and other States would be helped if Congress enacted legislation to stimulate the use of therapy in this vital field.

America will pay a great price if it does not attend to this need—a price not simply measured in dollars and cents, but one measured in human distress, maladjustment, and inadequacy. Is it not far better to pay the more modest financial price of constructive and effective Federal, State, and local action? Are we not thereby helping to preserve human values?

I ask unanimous consent that these items be printed in the Appendix of the RECORD.

There being no objection, the excerpts from the letters and bulletin, and the article were ordered to be printed in the RECORD, as follows:

THE UNIVERSITY OF WISCONSIN,
DEPARTMENT OF SPEECH,
Madison, June 10, 1958.

Senator ALEXANDER WILEY,
United States Senate,
Washington, D. C.

DEAR SENATOR WILEY: A copy of your newsletter of March 13, 1958, has been called to my attention. In it I noticed with considerable interest the picture of you with the 1958 polio poster youngsters, and the accompanying statement that you made concerning your interest and efforts in connection with handicapped children.

It is, indeed, encouraging to those of us who are working at the grassroots level to find the kind of support that you are offering. As senior Senator of the State of Wisconsin, I hope you will continue to regard the investment of time and money in the training of those who will work with the handicapped as a legitimate function of Government.

I thought you might be interested in the summer programs of the University of Wisconsin at Madison with the speech handicapped. The brochure on the 2-week course in the Rehabilitation of the Adult With Language and Auditory Disorders describes one of our programs in this field. You will be interested to know that this particular short course has largely been made possible by the support of the Federal Office of Vocational Rehabilitation.

The bulletin of the department of speech describes on page 7 the children's clinics that will function this summer. Funds from a variety of sources support this fine program.

I should be very pleased to supply you with further information about activities in this field at the university.

Sincerely yours,

JOHN V. IRVIN,
Professor of Speech; Director, Speech and Hearing Clinic.

NINETEEN HUNDRED AND FIFTY-EIGHT SUMMER SESSIONS—A 2-WEEK COURSE IN THE REHABILITATION OF THE ADULT WITH LANGUAGE AND AUDITORY DISORDERS, THE UNIVERSITY OF WISCONSIN, MADISON, SPONSORED BY THE FEDERAL OFFICE OF VOCATIONAL REHABILITATION, THE DEPARTMENT OF SPEECH, THE SUMMER SESSIONS

SPECIAL FEATURES, JULY 14–JULY 26, 1958

Ten outstanding authorities in speech and hearing.

Twenty $100 traineeships available.

Completely air-conditioned classrooms.

Closed-circuit TV clinical demonstrations.

Registration for credit or for audit.

VISITING FACULTY

Virgil A. Anderson, Ph. D., professor of speech; director, speech and hearing clinic, Stanford University, California; author of Training the Speaking Voice and Improving the Child's Speech.

Harlan H. Bloomer, Ph. D., professor of speech; director, speech clinic, University of Michigan, Ann Arbor; particularly known for his clinical and experimental work pertaining to organic speech disorders; contributing author to Handbook of Speech Pathology.

Leo G. Doerfler, Ph. D., director, department of audiology, University of Pittsburgh, Pa.; vice president, ASHA, 1958; authority on galvanic-skin response audiometry and consultant in audiology to the Veterans' Administration.

Jon Eisenson, Ph. D., professor of speech; director, speech and hearing clinic, Queens College, Flushing, N. Y.; president, ASHA, 1958; author of Examining for Aphasia and coauthor of Speech Disorders.

LeRoy D. Hedgecock, Ph. D., consulting audiologist, Mayo Clinic, Rochester, Minn.; contributing author to Hearing Therapy for Children; speech-reading consultant for OVR-Hear Lip Reading by Television Series.

James F. Jerger, Ph. D., assistant professor in audiology, hearing clinic, Northwestern University, Evanston, Ill.; active contributor to recent significant audiological research.

Kenneth O. Johnson, Ph. D., executive secretary, ASHA, Washington, D. C.; formerly chief, audiology and speech correction for the Veterans' Administration, and more recently director, San Francisco Hearing and Speech Center.

Frank M. Lassman, Ph. D., associate professor of audiology and speech, department of otolaryngology, University of Minnesota, Minneapolis; consultant in audiology to the Veterans' Administration.

J. M. Nielsen, M. D., clinical professor of medicne (neurology), school of medicine, University of California, at Los Angeles; author of Agnosia, Apraxia, and Aphasia.

Joseph M. Wepman, Ph. D., head, speech clinic, University of Chicago, Chicago, Ill.; author of Recovery From Aphasia and coauthor of The Halstead-Wepman Aphasia Screening Test.

GENERAL INFORMATION, COURSE DESCRIPTION

Title: The Rehabilitation of Adults With Language and Auditory Disorders.

Purpose: The purpose of this course is to provide postgraduate study and training at a professional level for practicing speech and hearing therapists to enable them to work more effectively with adults suffering from language and auditory disorders.

Staff: The teaching staff of the course consists of 10 national leaders in the fields of adult language and auditory rehabilitation, plus 5 members of the staff of the University of Wisconsin.

University of Wisconsin staff members: Arnold E. Aronson, Ph. D., assistant professor of speech; John Z. Bowers, M. D.; dean of the medical school; Claude S. Hayes, Ph. D., assistant professor of speech; John V. Irwin, Ph. D., professor of speech; Edward P. Roemer, M. D., associate clinical professor of neurology.

Lectures: Closed-circuit TV demonstrations; discussions; integrated films, slides, transcriptions, original text materials.

THE JOHN HOPKINS HOSPITAL,
Baltimore, Md.

* * * * *

There are many ramifications in this matter of helping children with hearing, language, and speech disorders. In the first place, their numbers are growing. This apparently results from three things: (1) Prevalence of these disorders naturally grows as one aspect of general increase in population; (2) many children these days are being brought through stormy prenatal and perinatal environment who 15 years ago would have been on the lists of infant mortality; and (3) diagnostic differentiation is improving. The fact is that there are many more multiple handicaps among relatively well children than there used to be.

You may know of a survey made a few years ago by the Southern Regional Education Board, a general inquiry of all the colleges and universities in the 14 Southern States directed toward finding the facts regarding training facilities, number of trainees, number of employed teachers, number of teachers needed, and the like, relative to the atypical child (all types and kinds).

* * * * *

There are multiple problems regarding procurement of trainees, financing training programs, providing scholarships, and so on.

The other side of the picture has to do with the work of paramedicine, in terms of prevention, diagnosis, treatment, rehabilitation, habilitation, and so forth, particularly in the preschool years. These are the main interests of an organization like my own department, and we all work closely with the people in the NIH, in several other departments of HEW, and at the State and local levels. It is important to attack these problems at the level of fundamental science and careful research investigation. This is equally true, of course, in education; much remains to be learned about specific procedures in training, so that these many crippled children can best be guided to develop the tools of learning which are explicit in hearing, in language-development, and in speech, as well as in reading. Excellent work is underway in many places at the local level, in health, and school-health programs; this needs manifold extension, in both health and education.

Various programs are underway, or in development, in many States, centering, for the most part, under the health departments and dependent on funds supplied by the Children's Bureau in maternal and child care and in crippled children's services. Having been the consultant in audiology for many years with the Children's Bureau, I have had an opportunity to watch (and in some part, to help) these programs develop. Much more needs to be done.

In other regards, many more trained researchers are needed. To this end, the National Institute of Neurological Diseases and

Blindness, has instituted a new training course in otolaryngology. The work needed far supercedes traditional clinical training, and it will be necessary to interest more and more young professionals in the academic and research sides of medicine.

So, too, with the supply of teachers, particularly at the preschool and elementary levels. Every category of atypical children is in short supply, and there are relatively few teachers who can work at the public school level in hearing and language and speech. Much more has traditionally been done for the deaf child in residential education. Recently, however, there has been a definite trend toward developing better special educational services in the various communities. This cannot continue and mature until and unless more teachers can be interested in special education. This, in turn, requires the development of more and better departments of special education at the college level of teacher training. Some of the lag is financial; some reflects a longterm disinterest on the part of the typical educator in the problems of the atypical children. We meet this last almost daily. This probably involves a real job in public relations.

These, then, are a few of the aspects, all too briefly presented. One cannot buy intelligent, devoted teachers, clinicians, researchers, and college and university specialists: They must be trained and developed. Despite some of the current hue and cry about our national needs in high science, there are other needs that are quite as pressing. One wonders about the long-range objectives of a stellar program of defense (necessary as this is) when the evidence mounts so rapidly to demonstrate that larger and larger groups of our population are coming along as atypical, exceptional, defective, retarded, or otherwise deviant children, whose needs are not being met. Perhaps some of this in larger form will be forthcoming in the 1960 White House Conference on Children.

* * * * *

Yours sincerely,

WILLIAM G. HARDY, Ph. D.,
Director, Hearing and Speech Center, Associate Professor of Otolaryngology, and Environmental Medicine.

[From the Janesville (Wis.) Gazette]

PLAYING GAMES HELPS THERAPIST OVERCOME CHILD'S SPEECH DEFECTS

(By Bernice Warner)

Little Martha Anderson, 4-year-old daughter of Mr. and Mr. John E. Anderson, 509 East Milwaukee Street, is one of those unfortunate children who was born with a cleft palate and lip. But, unlike children of an earlier era who were doomed to go through life with a disfiguring handicap, Martha is facing a future just as bright and full of hope as every other child.

Thanks to modern surgery, understanding parents, and the help of a trained speech therapist, Martha will enter kindergarten fully equipped to meet the challenge of a whole new world.

An exceptionally bright youngster, Martha is making such splendid progress under her therapist, Mrs. O. D. Miller, 521 North Ringold Street, that her lessons will end in the very near future. She is one of the lucky ones. An operation while she was still a baby was unusually successful. Only the retraction muscles were left affected, so that her greatest speech difficulty lies in the "S" sounds. The "L" gives her some trouble, but this comparatively minor.

Mrs. Miller has been working with Martha for some time, helping to restore the muscle movement of her mouth and lips. She is convinced that by the time Martha enters kindergarten, her speech will be completely normal.

THERAPY WORKED AS GAMES

Because of Martha's age, working with her has presented some problems, but Mrs. Miller has solved them by turning the speech therapy into games a 4-year-old can understand and enjoy. "Pounding the nail" involves a "tuh" sound and is repeated at increasingly fast rate; imitating the sounds of various motors gives exercise to the weakened muscles.

One of the most popular games with Martha is hide and seek, in which her teacher hides picture cards for Martha to find and identify. Another is follow the leader, with the pupil imitating the sounds the teacher makes, or vice versa. The earliest training was based on learning whether or not Martha recognized the difference between a correct and incorrect sound, and for this Mrs. Miller evolved a game that combined recognition with important muscular exercises. The teacher would show her pupil a picture of a simple object and then pronounce the name. If she pronounced it correctly, Martha would blow a feather into the air; if incorrectly, she was required to blow a ping-pong ball across the table. Originally unable to purse her lips, Martha now, through corrective exercise, has excellent muscular control in the affected area.

Mrs. Miller describes the Andersons as ideal parents who cooperate fully with their daughter's training. Sometimes work accomplished by a therapist is completely undone in the home, but this is not true in Martha's case. The Andersons work continuously and patiently with their daughter and have been an important factor in her remarkable progress.

Example of Sportsmanship

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. WESTLAND. Mr. Speaker, at a time when the world is on edge and tempers flare, it is good to read of an example of sportsmanship between peoples.

The following story has been read by millions of sports-minded people. I am pleased that a crew representing my State of Washington has perhaps brought a bit of better understanding by its members' conduct, their sportsmanship and their ability.

Under leave to extend my remarks, I would like to include in the RECORD the story, written by George N. Meyers, sports editor of the Seattle Times.

P. S.—The Huskies Won.

The article follows:

HUSKIES THRIVE ON BORSCH AS DAY OF BIG RACE NEARS

(By Georg N. Meyers)

Moscow, July 17.—If borsch is the secret source of Russian rowing prowess, the Washington Huskies may make trouble for the Soviet shells in their international regatta Saturday.

Leningradskaya Hotel chefs have been serving the stuff in big ladles to the first American crew ever to row here.

"It tastes fine to me," said John Bisset, Washington coxswain. "As far as I'm concerned, it's a floating meal."

The oarsmen also are sampling beef stroganoff—the original version—and Siberian ravioli soup. Coach Al Ulbrickson forbids them to have anything to do with Moscow water; they drink synthetic fruit juice instead.

NONE BRAVE ENOUGH FOR KVAS

No one in the Husky party has been adventurous enough to try the Russian workers' favorite drink, kvas. It's a pale liquid made from dry bread.

Russian cake and ice cream, the Huskies find, go down as easily as at home.

The Huskies are taking their daily routine in Moscow in stride. Even without an interpreter they are brave enough to step up to a counter and buy postcards, using sign language.

Russians in the bigger hotels also are getting used to the Yanks. Some 1,600 American tourists now are visiting the Soviet Union.

VIEW FROM NO. 5 SEAT NOT ENOUGH

"I wish we could see more of this country ourselves," said Chuck Aim, Husky captain. "You don't see much from a No. 5 oar."

Ulbrickson is holding acceptance of entertainment invitations to a minimum. He figures his main job is making a respectable representation in the rematch with the Leningrad Trud Club Saturday.

The Huskies got a tremendous thrill last night out of attending a soccer game in vast Central Lenin Stadium, along with 100,000 cheering Russian fans.

The Huskies rowed as usual this afternoon on Khimkinskoe Reservoir, scene of Saturday's race. They were unaware of a political demonstration by 2,000 Russians at the American Embassy.

The time of the Huskies' Saturday race today was set at 8:10 a. m., Seattle time.

Segregation at Levittown

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. ASHLEY. Mr. Speaker, in the July issue of the Bucks County Traveler there appeared an article by Alan Miller, editor and publisher of the magazine, commenting upon the recent announcement of Builder William Levitt that his Levittown in Burlington, N. J., will be limited to whites only. The subject of this article is a matter for the conscience of Congress and the American people.

LOOKING OVER THE COUNTY

"When in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty and the pursuit of happiness.

"* * * And for the support of this Declaration, with a firm reliance on the protection of Divine Providence, we mutually

pledge to each other our lives, our fortunes, and our sacred honor."

National holidays seem to lose their commemorative essence, especially when they fall on a weekend. There is something about the prospect of a few days of leisure, the lure of the road, the feel of the fishing rod, that betrays us into forgetting how hard won these holidays come to us. The brilliance of fireworks and the happy furor of parades have a tendency to obscure rather than emphasize the fact that men suffered, fought, died to give us almost every one of our major national days off.

It would be an utter negation of the spirit of their efforts even to imply that they did so grudgingly, and to indicate that anything less than joyful celebration of their success would be in order; we print the foregoing words from the Declaration of Independence, as a reader service and reminder for those who may find refreshment in a moment of rededication to great human aims.

Controversy is normally foreign to the intent of the Traveler, since there always seem to be enough people around to pick up cudgels of various sizes for causes of various merits. Once in a rare while, though, we think that the proprietorship of paper and print carries an obligation of good conscience and a word for the right.

Such an occasion arises with the recent announcement by Builder William Levitt that the privilege of purchasing a home in his new projected Levittown in Burlington, N. J., will be limited to whites only. He has further announced that 27 bankers have promised to provide $200 million in mortgage money for buyers.

Several organizations were quick to protest the announcement of this policy, and the State of New Jersey is at present holding the issue in prospective contest at law. We have scanned the press, both local and national, however, in vain search of comment, and we feel that there are a number of words to be said on the subject.

To be sure that they are said clearly, let us specify our own position in the matter. This is no attempt to say that anyone must be forced to live next to a Negro; individual right dictates a free choice of neighbors. Nor is it our purpose here to defend the Negro as a human being and citizen; that is the province of others, and still a matter of personal belief and preference. We are concerned, though, and distressed, by Levitt's violence to reason and principle, lovely daughters of the human mind.

On the 10th anniversary of Levittown, Long Island, Levitt loftily announced: "A purchaser is not just buying a house; he's buying a way of life. * * * A community builder who faces up to his responsibilities is a good citizen." It was even conceivable that despite the fact that he refused to comment on the disturbances of last fall in Levittown, Pa., some regret at the consequences of his policy might have entered Levitt's consciousness and tempered his future judgment. He has, to do him justice, personally piously deplored segregation, and has ruefully characterized it as an economic exigency of mass marketing of houses; sadly but adroitly he shifts part of the blame to the 27 bankers; and regretfully scoops up a profit which should not amount to less than $2 million on a venture of this size.

Levitt's houses are good value, and ownership of one of them is to an extent a privilege, an economic advantage. What a shame it seems to confer privilege and advantage on the man to whose level Levitt sinks in endorsing the emotional fallacy of racial desirability. What a remarkable gesture it is for a man who claims to face up to his responsibilities as a good citizen to place all the economic might and prestige of $200 million in support of the easy viciousness that insists that intermarriage is the Negro's fondest wish, that ritual infanticide is Jewish law, that the Pope has an office picked out in the White House.

It would seem reasonable to us that a man who is merely making an extra $2 million might do just as well to devote some effort to the constructive aim of proving that the Negro who enjoys sufficient economic status to own a Levitt house can be an acceptable neighbor to the man who has the good will to let him prove that economic circumstance can be a greater determinant of social desirability and self-respect than racial bloodlines.

All of this will displease some hasty readers. We hope, though, that they will understand that it is prompted not by disrespect for their preferences, but by great sadness at Levitt's position, which is offensive to logic, and degrading to human dignity. If he insists on attaching his name to each community he erects, could that name not stand for something more than an inverted ghetto?

Tallassee Tribune Honored

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. ROBERTS. Mr. Speaker, one of Alabama's and one of the Nation's finest examples of good journalism is the Tallassee Tribune, which serves and is dedicated to the growth and prosperity of greater Tallassee, Ala.

This fine weekly newspaper, under the guidance of Editor-Publisher Herve Charest, Jr., has reaped many awards.

Among these awards was, in 1956, the National Editorial Association citation at third place winner in its circulation class in the general excellence classification.

Recognition again has come to the Tribune. At its annual convention recently, the National Editorial Association listed the Tallassee newspaper as one of 192 small-town journals to receive awards.

Bringing the Tribune award home was Paul Banister, veteran Linotype columnist-operator, whose column Flowers for the Living, took second place honors in competition with newspapers from over the Nation.

Mr. Banister's series of articles regularly chooses one of Tallassee's citizens to pay tribute to the citizen's contributions to community life.

I know the Members of the Congress join me in congratulating the Tallassee Tribune and Paul Banister for the splendid way in which they are dedicated to the highest ideals of American journalism.

Under leave to extend, I wish to include an editorial from the Tribune which appeared following the award presentation:

FLOWERS FOR BANISTER

Last year our coworker, Paul Banister, conceived the idea of writing a column bestowing flowers for the living on some of Tallassee's solid citizens.

The idea was to honor some of our everyday garden-variety citizens who by virtue of going about their daily business had, in some way brightened the lives of their friends and neighbors and made our community a better place in which to live. It was assumed that our more prominent citizens, by virtue of their wealth, social position or even business leadership, were subjects for newspaper stories week in and week out.

The column, like the idea, was good and our readers responded with a splendid show of enthusiasm.

Last week in Detroit, Paul's venture paid off in still another way. His column was awarded second piece in the national better newspaper contest conducted annually by the National Editorial Association. It marked the second national honor to come to the Tribune staff in 3 years. It was well deserved and we feel sure our readers will join us in congratulating Paul on this recognition.

And this is probably a good time to repeat the old saw, "If you build a better mousetrap (or write a better column) the world will beat a path to your door."

Defense of Freedom

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. WESTLAND. Mr. Speaker, the following editorial in the July 17, 1958, issue of the Seattle Times, I believe, expresses the views of the vast majority of people in this country. I recommend it for all to read.

IN DEFENSE OF OUR OWN FREEDOM

The American people do not rejoice to see United States Marines debark in battle dress on foreign shores.

To many, the United States position appears awkward in view of United Nations Secretary-General Dag Hammarskjold's apparent opposition to sending any sizable U. N. military force into Lebanon.

There is no call anywhere in our land to strike up the band or break out the colors.

Propagandists in Moscow, in Cairo and elsewhere to the contrary, we are not imperialists.

But we do intend to defend ourselves. And that, in essence, is what we are doing in Lebanon.

Modern defense frontiers do not begin along the 49th parallel or the shores of the Atlantic and Pacific. Nor do they all exist only in a strictly military sense.

The modern defense frontier cannot always be drawn on a map. Nor can the status of our defenses ever be measured precisely.

Involved are such intangibles as degree of influence, power, prestige and control in certain key areas of the globe. These intangibles bear direct relationships to such tangibles as air fields, oil fields and election results.

It is well in the present circumstances to remind ourselves of a fact that often has been pointed out before: There is more than one way in which our freedom, our security, and our independence can be lost.

This country could be the object of a direct and massive military attack. But it also could be nibbled to death. In area after area around the globe, our influence could progressively diminish, and that of our enemies could grow until our land becomes a fearful garrison state, and we are forced to live a rigid, wretched, rationed existence, surrounded by hostility—ready for the kill.

To prevent such a development ever from occurring, we defend various types of fron-

tiers thousands of miles to the east and to the west.

There are physical frontiers such as the Elbe River in Germany, the Strait of Formosa, and the center of Korea. And there are less easily defined frontiers having to do with maintaining certain positions of strength, control or influence in such areas as Southeast Asia and the Middle East.

Our position in the Middle East rests in part upon certain formal and informal understandings with allies in the area. The revolts in Iraq and Lebanon this week brought the United States to the point where it either had to take military action in accordance with those understandings or back down from them.

Just as in Korea, this country did not choose to back down. But also as in Korea, we are acting with legality, with caution, and with restraint.

We are not aggressors; we are not adventurers. We are defending a position that must be maintained. And it is our prayerful hope to do so without fresh bloodshed.

The arrival of British paratroopers in nearby Jordan gave notice that our strongest and closest ally is prepared to share the hazards and the problems of this undertaking.

The bipartisan support given President Eisenhower's action by congressional leaders reflects the general support of the American people.

Farm Bill Compromise

EXTENSION OF REMARKS
OF
HON. ROBERT D. HARRISON
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. HARRISON of Nebraska. Mr. Speaker, I invite the attention of my colleagues to the following editorial that appeared in this morning's Washington Post:

FARM BILL COMPROMISE

The House seems to have recognized the necessity of passing some farm legislation at the present session, though its tentative vote on Monday for an inadequate surplus disposal bill was disappointing. If the measure cannot be improved before the decisive vote is taken today, the conference committee will have an enormous adjustment task. Yet the important fact is that the House is moving to revive the authorization to sell agricultural surpluses abroad for foreign currencies. The law under which substantial quantities of price-depressing surplus commodities have moved abroad in recent years expired in June, and requests for more than $600 million worth of American surplus crops at world prices must be held up until Congress acts.

It is especially desirable to have a new authorization on the books before the harvest advances any further so as to avoid the cost of storing surpluses that are to move abroad. The best course for the House would be to accept the Senate bill, which provides for a 2-year instead of a 1-year extension, and a $3,500 million authorization instead of $1,500 million. The operation of such a program on an annual basis puts it under a serious handicap. The House bill also contains an unwise barter provision which is opposed by Secretary Benson on the ground that it would interfere with normal trade sales for dollars.

The same reasoning that is pushing the surplus disposal bill toward enactment should operate in favor of the Senate Agriculture Committee's production adjustment bill. This measure provides new programs for cotton, rice, corn and feed grains. In general it looks toward less Federal regulation and lower price supports. It represents a reasonable compromise between the Senate agricultural leaders and the Department of Agriculture, and for that reason seems to merit special consideration.

The House Agricultural Committee recently advanced an omnibus farm bill apparently designed to force the Eisenhower administration to abandon its farm policies or go into the congressional campaigns bearing the onus of a major farm bill veto. But the House itself rejected this measure, and, with net farm income running 22 per cent above the level of last year political pressure for the enactment of farm legislation has been greatly relieved. Yet failure of Congress to pass the Senate bill or something equivalent would leave cotton and rise farmers in a difficult economic predicament, for the liberalized quotas for those commodities expire at the end of this crop year, and acreage would have to be drastically cut next year if Congress should fail to act.

This situation ought to bring the earliest possible action on S. 4071 in the Senate. The House will then have to accept the compromise bill or take full responsibility for denying farmers the benefits of a reasonable program on the eve of the congressional elections.

Depressed Areas Need Help of Congress Now

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. VAN ZANDT. Mr. Speaker, a request for a rule on area-redevelopment legislation, House-Senate bill 3683, is now pending before the House Rules Committee. With Congress scheduled to adjourn early next month unless the Rules Committee grants a rule immediately on this important bill, there will be no area-redevelopment legislation enacted by this Congress.

In the July 22, 1958, issue of the Harrisburg (Pa.) Patriot, the following editorial furnishes many good reasons why this Congress should approve area-redevelopment legislation before adjournment.

The editorial follows:

DEPRESSED AREAS NEED HELP OF CONGRESS NOW

The fate of the area redevelopment bill at this session of Congress will be on the line when the House Rules Committee finally gets around to holding a hearing on whether or not to allow the legislation out on the floor for a vote. And riding along with it will be the hopes of people living in the Nation's chronic pockets of unemployment for a new economic lift.

Pennsylvanians have a vital interest in this legislation. It would provide aid for these depressed areas, and the Commonwealth has more than its share. It's only fitting, therefore, that this State's congressional delegation is trying to push the bill out for action through the logjam of apparent indifference that exists toward it in the House.

This is no recession year legislation. Pennsylvania's hard coal regions have been feeling the pinch for years. These areas will need some Federal aid if they are to experience an economic revival through new industries and new jobs.

Neither is this a Federal handout. A Senate-passed bill, which the proposed House measure closely follows, would establish an Area Redevelopment Administration to handle revolving loan funds of $100 million each for industrial redevelopment areas, rural redevelopment areas and for public facilities to improve commercial opportunities.

For Pennsylvania at least, this is not a case of States and local communities asking Uncle Sam to do something they won't do for themselves.

The Commonwealth has an admirable record of achievement in this field through the Pennsylvania Industrial Development Authority, which in the first 20 months of its existence has loaned out or committed $5,866,062 for factories in 30 communities. It has helped establish 47 new plants providing 3,800 new jobs. And 2 weeks ago, Governor Leader cited the self-help record of northeastern Pennsylvania communities which, in the 12 years before PIDA, financed 67 projects and created 17,730 factory jobs.

But this is not enough. Before this biennium is over, the $8 million appropriated by two consecutive legislatures is expected to run out. Congressional action is needed to supplement the effort on the State and local levels.

As Governor Leader said recently, "People are not interested in which party gets the credit for this legislation—what they want is action now and they have every right to expect it."

Pennsylvania's Representative HUGH SCOTT thinks the Rules Committee vote will be a close one. Close or not, this bill should be given its chance before the full House. There are no good reasons for killing this legislation again. The national blight of the depressed areas will not disappear by itself. It will take the sort of enlightened aid envisioned by this bill.

Wool Industry Needs Law

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. BERRY. Mr. Speaker, it is impossible to impress upon the Members of this body the absolute necessity for the extension of the National Wool Act prior to the adjournment of this Congress.

I appreciate that there are many on Capitol Hill who are saying that since the present act does not expire until March of 1959 there is plenty of time next session to extend the act.

I want to emphasize, Mr. Speaker, that the wool business is a great industry, a great private industry dependent upon private financing. I want to impress upon the Members of this Congress that within the next 30 or 45 days the sheep and wool men will have sold this year's crop of wool and lambs and will be going to their banker to arrange for financing for next year's operation. I want to impress upon each of you that no banker is going to finance any industry if that industry does not know or have a pretty good idea what its income will be.

When a sheep rancher has sold his wool, when he has sold his lambs, he

takes his checks to the bank and makes settlement with his banker, and at the same time he arranges for credit for the following year's operation. Unless the National Wool Act is extended, the banker will be forced to compute the income of his client on the basis of 35-cent wool instead of on the basis of about 65-cent wool. I need not tell you what this means to the sheep men. It means putting a great many of them out of business.

At this time when the Nation is so gravely concerned over our national defense, it would be pretty stupid for Congress to further reduce the national output of one of the most critical of all defense commodities, namely wool, and compel this Nation to depend for two-thirds or more of its wool supplies upon ocean shipments of from 5,000 to 10,000 miles.

The National Wool Act was instituted to build up the domestic wool industry. The build-up has started. Certainly this is no time to junk a program as vital to our national defense as the National Wool Act.

Observance of the 100th Anniversary of the Emancipation Proclamation in 1963

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. DIGGS. Mr. Speaker, January 1, 1963, will mark the 100th anniversary of the issuance of the Emancipation Proclamation by President Abraham Lincoln. I am introducing today a joint resolution which would establish a Commission to develop and execute suitable plans for the observance of this historic event in 1963. The significance of this document as a milestone in forwarding the principles of democracy throughout the world is so tremendous that the Federal Government of the Nation which declared its concept would be remiss not to take the initiative in developing plans to commemorate and honor its issuance.

Historically, the Emancipation Proclamation has taken its place alongside of all of the great democratic movements of the ages. Historians place it in background against the growth of humanitarian feeling in the age of enlightenment in the 18th century, the spread of the doctrine of the inherent equality of men in the Rousseau movement and others, and the French Revolution in its battle for the rights of man—all leading to the increase of democratic sentiment and consequently to a growing attack on slavery.

While the Emancipation Proclamation was executed by Lincoln as a measure of military necessity and its provisions of freedom were limited to persons held as slaves within specified areas in rebellion against the United States, yet it is record in history that because it was the majority will of the people this edict did in fact result in abolition becoming a war aim. The Emancipation Proclamation is, therefore, in reality the ax which laid the first major blow to the shackles of slavery of millions of bondmen. Moreover, it was the Emancipation Proclamation which led to the reaffirming in our National Constitution of the guaranties of life, liberty, justice, and equality inherent in a democratic government for all people. On January 13, 1865, the United States House of Representatives proposed the 13th constitutional amendment, using the language "in honor of the immortal and sublime event." To remove questions of the legal validity of the proclamation as issued under the war power of the President and to liberate slaves everywhere in America and to assure their status from legal doubt, this national measure of ultimate emancipation was effected by the antislavery amendment to the Constitution.

It is herein that the massive and lasting significance of the Emancipation Proclamation lies. Democratic government is the product of a national faith that only in liberty, without hindrance, are the creative powers of men released that they might be what God intended them. The conflict between its founding principles and its practices had long bitten hard upon the conscience of the Nation. Freedom for all men, the prohibition of slave trade, was discussed when the Constitution of the United States was drawn up. Even earlier than this, on July 13, 1787, the Congress under the Articles of Confederation had passed the ordinance creating the Northwest Territory in which was provided that there should be neither slavery nor involuntary servitude in the said Territory otherwise than in punishment of crimes whereof the party shall have been duly convicted. Congress, itself, by summer of 1862 had imposed emancipation of slaves as a sweeping penalty upon rebels.

The Emancipation Proclamation, reaffirming the fundamental concepts of democracy, thus placed itself before the world as another landmark in man's undying struggle of the ages for civil, political, and personal liberty. For the Negro citizen of America, it is the base from which he has carried forward his struggle for the safeguarding, guaranty, and enforcement of these liberties to the present-day issues of enforcement of voting rights, school desegregation, the right not to be denied job opportunities because of race, the right to travel in human dignity, to be safeguarded by equal protection of the laws—all of the like matters of human rights with which we are today concerned as a Nation. The pursuit of liberty moves forward and will not be turned back.

The profound significance of this first effective document to apply the principles of our national faith to all men is seen today in the world all about us. That the desire for liberty is deathless and unrestrainable is evidenced in the revolts which engulf the world. Our own willingness to bear the costliness of our faith in liberty is starkly dramatized as we move today, as a nation, to give our assistance in preserving democracy.

In initiating now plans to honor the occasion of the issuance of this document on its 100th anniversary in 1963, the Government of the United States will again be reaffirming its faith and again giving leadership in a time when democracy is in crisis.

More Comments From Union Members Concerning Needed Labor Legislation

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include another series of comments which I have received from union members concerning needed labor legislation. I believe the membership will find these comments to be of particular interest, since they express the views of the individual member.

I think labor has a right to spend money for the kind of legislation it wants. I do not favor donating funds to the Democratic Party or a particular candidate for office. I know the individual union members do not like this either but they have very little to say about it. Union leaders are too often dictators of the very worst sort. It is inconceivable that our Government and its police agency are unable to do anything about the proven crooks and embezzlers, but allow them to stay where they are to continue their depredations. (Foreman, General Motors Corp.)

I, for one, would like to know where all the money has gone that the CIO has collected for the last 20 years. They should have the books audited and reported the same as any corporation, for the money belongs to the members, or does it? (Inspector, steering gear.)

I am a union member and it burns me up to have them spending my money on the Democrats. I don't think they should be allowed to support either party. Everyone knows the money is not donated as they claim.

I am in favor of laws to really clean the skunks out of organized labor. (Factory worker.)

I am not in favor of using any dues that I pay into a union to support a man that I am not in favor with.

Although I have been a member of a union for over 50 years, I am not in favor of the checkoff system. A person that does not want to join a union for his own good is of no use to the union as he is liable to be just a stool pigeon. (Retired locomotive engineer.)

So long as we are a democracy, I am against anything or anyone who insists that one has to pay for the privilege of working at any chosen profession or occupation, as the unions of today are doing.

At the start, the labor unions were for the working people but today, the exact opposite is true. Just a chosen few are prospering at the expense of the worker.

You can't control economy or anything else until this vicious circle of higher wages plus higher costs plus higher wages and so on, is broken. (Carpenter.)

My husband is a union member and works in a closed shop but he is not in sympathy with the wild demands the unions are trying to force on the automotive industry. Basically, the unions are good but now they have gotten out of control and need some changes. (Housewife.)

We have had too many elections where our ballots haven't been properly counted. By all means discontinue closed shops. (Pipefitter.)

In the labor department I believe the closed shop is unconstitutional. There should be no law that says a man or woman must belong in an organization in order to earn a living. When a man has to belong to any organization, he then fails to get as much out of it as he would if he could belong as a matter of choice. (Laborer.)

It is also very essential to clamp down on dictatorship in our labor unions. I am a member in good standing but I do not like to be pushed around. I favor a secret ballot in all union activity and also to make sure the ballots are counted right, especially under State or Government control. Maybe some of our brass hats would not be around very long. (Laborer.)

Visit of Ghana Prime Minister to the United States

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mrs. BOLTON. Mr. Speaker, today we are honored to welcome a distinguished visitor once again to our country, the Honorable Kwame Nkrumah, Prime Minister of Ghana. As one who has ejoyed the warm hospitality of the Prime Minister and his countrymen on two separate occasions, I should like to extend my heartfelt greeting to the Prime Minister and members of his delegation. It is my sincere hope that this visit will further strengthen the bonds of friendship between our two countries, and enhance our understanding of one another.

It has been only little more than a year ago—March 6, 1957—that Ghana attained its independence from Great Britain, thus becoming the first African-governed Dominion in the British Commonwealth. The excitement of that moment has remained in the memory of those of us who were privileged to attend the independence ceremonies in Accra. Emotion rode high as the old assembly was dissolved upon the stroke of midnight, and jubilation swept the massed thousands who stood on the Polo Grounds outside. Born in an atmosphere of confidence and determination, the new nation is best symbolized by the Prime Minister himself.

To Kwame Nkrumah, long champion of freedom for his people, has fallen the responsibility of guiding the young State in its formative years. To bring his country safely out of tribal law into the freedom of a Republic as we understand the term is a grave undertaking. He and his councilors will undoubtedly make mistakes. Let us hope that each such experience may bring him greater tolerance and wisdom, for all of Africa looks to Ghana, the symbol of the hope of all Africans south of the Sahara for eventual independence. Upon Dr. Nkrumah's success in dealing with these problems will depend in large measure the date of independence for millions of others. I believe that the Prime Minister is well aware of his responsibility to all of Africa and so to the world.

Much has happened since independence day. The first conference of independent African States was held in Accra; representatives to the United Nations and to certain countries have been appointed; development projects are receiving assistance at the rate of over $2,800,000 per month; trade missions have been exchanged with West Germany, India, Pakistan, Ceylon, Burma, and Israel; technical and economic assistance agreements have been entered into with the United States, the United Kingdom, and the United Nations; the Black Star shipping line has been inaugurated and a Ghana airline is in process of being negotiated; construction of a $22 million harbor is underway at Tema; pure water systems and electric power are being made increasingly available; road improvements in all regions of the country are underway; health campaigns have been organized; and educational facilities are being constantly expanded. In fact, no less than $36,400,000 have been allocated to education services in all fields at primary, secondary, teacher-training, technical, and university levels since the accelerated plan for education was commenced in 1951.

Nature has been generous to this small country of 4½ million people—a generosity that needs only the technical and economic assistance of more-developed nations to unlock her storehouse of abundance. Gold, manganese ore, bauxite, diamonds, palm oil, rubber, and timber are but a few of the resources with which she has been endowed. Water resources abound providing a potential source of vast industrial power, but as yet remain largely untapped. The great Volta Dam project symbolizes Ghana's industrial future. As the technological leader of the West, it is quite properly to us that the people of Ghana look for the assistance that is so necessary to the development of their economy.

I am confident that the Prime Minister and his people will not find us unresponsive to Ghana's needs and aspirations. Recognizing that her sound economic and political growth is in the best interests of the free world, we should be prepared to extend whatever technical and economic assistance we are able, consistent with her ability to progress. Already an American team has been dispatched to survey the possibilities of large-scale production of electric power and aluminum on the Volta River. A United States Technical Cooperation Mission has been established and projects initiated to help expand the cattle industry, establish a veterinarian and farmer's training institute, develop an agricultural extension service, and conduct further surveys of agricultural and livestock potential. Let us hope that this is only the beginning of a long and constructive era of cooperation between our two nations.

Mr. Speaker, in conclusion may I once again express my pleasue on this occasion of Prime Minister Nkrumah's official visit to the United States. It is my profound belief that both our countries will be enriched by this experience. That it be followed by an increasing interchange of people and ideas, of understanding and of common interest is my hope.

Visit of Prime Minister Kwame Nkrumah of Ghana

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. DIGGS. Mr. Speaker, we are pleased to have the Right Honorable Kwame Nkrumah, Prime Minister of Ghana, pay us a state visit this week. Dr. Nkrumah's visit has especial significance in its timing. It comes when the smoldering political hotbed in the Middle East begins to erupt into open flame. It comes following a tete-a-tete between President Gamal Abdel Nasser of Egypt and Premier Nikita Khrushchev of the Soviet Union, with Nasser thereafter openly proclaiming his intention to bring all of Africa and most of Asia under the domination of the United Arab Republic. It comes when the Congress has been trying to resolve the question of how much money to appropriate for our 1959 mutual security program.

Prime Minister Nkrumah and other Government officials in Ghana frankly express their hope for close ties with the United States, as the recognized leader of the free world. It is of paramount importance to the free world that leaders like Dr. Nkrumah and President Tubman of Liberia be upheld in their determination not to swap their precious political independence for economic or military dependence on the Communist bloc.

The countries of Asia and Africa make a third of the membership of that most important body, the United Nations. Generally, these countries have maintained neutrality as between communistic and free-world concepts. If their good will and the balance of power they hold are lost to democracy's cause, Communist domination through the United Nations Assembly is assured.

Last week's coup d'etat in Lebanon is part of a well-organized campaign, Communist inspired, to overthrow the forces of democracy in the Middle East. Even as the United Nations argues the propriety of United States action in sending requested military aid to the duly constituted Government of Lebanon in its valiant and desperate struggle to keep its alliance with the forces of democracy, radio Cairo is blasting forth with intensified effort to incite the people of neighboring Jordan to rise up and

slay their leader who also sides with democracy.

If the independent countries of Asia are to succumb one by one to communism under the guise of Arab nationalism, while the United Nations ponders its ability under the U. N. charter to cope with this type of indirect aggression, the continent of Africa will become the only remaining frontier toward which the free world can look with hope—the last line of defense to block the forces of worldwide communism. If the free world does not win Ghana and other independent nations of Africa as permanent allies, the alternative will be their alliance with the Communist bloc as its satellites. Africa, with its vast untapped or underdeveloped resources will ultimately become the focal point in the struggle between democracy and communism for domination of the world. We recognize this, and the Soviet Union is acutely aware of it, too. It is no secret that the Communist bloc is perhaps the most ardent wooer of Africa's expanse of potential wealth. We know, for example, that the Soviet Union already has diplomatic relations with Ethiopia, that it has been trying to establish such relations with Liberia and with Ghana, and that it has concentrated economic and military aid on Egypt and Sudan. Our Special Study Mission to the Middle East and Africa reports instances of cultural exchanges between the Soviet Union and Ghana. The Soviet Union has offered scholarships to Ghanian students and has invited Prime Minister Nkrumah and a delegation from the Ghana Parliament to visit the Soviet Union. Communism, as such, is banned in Ghana, and the people eagerly embrace democratic concepts and institutions. The Soviet Union, however, is not discouraged by this setback. Through its scholarship and cultural exchange program, it plans to train a corps of individuals, indoctrinated in Communist concepts, who can initiate Communist front organizations within the country.

Aside from such offensive moves to gain a strong foothold on the African Continent, Communist countries have concurrently taken full advantage of every opportunity to undermine the confidence of African peoples in leading countries of the free world. Communist propaganda machines play upon racial discrimination and segregation practiced against Negroes in the United States. It capitalizes on instances where individual Africans suffer the indignity of racial discrimination in the United States and in Great Britain. The objective of such propaganda is to portray democracy in a most unfavorable light and hold Communist countries up before the eyes of the peoples of Africa as the real champions of racial equality.

One conclusion reached by members of our special study mission to the Middle East and Africa is that African nations are not now ready for independence and that, their colonial regimes removed, they will require economic assistance far into the unforeseeable future.

I cannot agree that the countries of Africa are not ready for independence simply because they are not economically self-sufficient—because they are not able to accomplish their own aims without external aid or cooperation. What nation—even among the long-established free nations of the world—is able to do so? The inability of nations to produce independently all the things their people need and want has been increased by higher living standards and by the fact that modern-day living has cosmopolitan aspects and strong tastes for foreign goods have been cultivated. Let us take the United States for an example. With all our wealth of natural resources, we are economically dependent upon the Continent of Africa for 100 percent of our diamonds, over 50 percent of our cobalt, and large percentages of our chromite and manganese. Thus, the interdependence of nations is more a natural and a technological phenomenon, not an index of weakness or a justifiable reason for excluding any of them from the society of free men. We have for years been going to the military and economic assistance of other independent nations, and I firmly believe that the interdependence of nations is by now well established enough for us, as the free world's leading power, to cease debating the idea of foreign aid or mutual assistance as if it were some untried and unproven principle and get on with the all-important task of seeking the most effective means and areas for applying the greatest amount of aid we can give.

I am aware that many Africans will themselves readily admit that they are not prepared to assume the full financial burden of self-government. But two world wars have brought strong hope to the colonial peoples of Africa as to those elsewhere. Thousands of them fought in World War I and more thousands in World War II. They witnessed in these wars the collapse of colonial empires. They have, meanwhile, watched the progress of India and other nonwhite governments in the Middle East. These developments have keenly whetted their appetites for independence and they are willing to learn to govern themselves the hard way, if necessary, through their own trials and errors. It is a key factor that the fires of nationalism have been unextinguishably kindled throughout Africa. Therefore—the continuing economic dependence of the area notwithstanding—the only question left of major concern is, Who is going to render the necessary aid—the free world or the Communist nations? With the intensity between democracy and totalitarianism mounting to explosive proportions, it is foolish to ponder whether we can afford to give necessary aid to the underdeveloped areas of Africa. More appropriately, can we afford not to give it? Our military bases in Africa are vital to the defense of the entire free world.

The Government of Ghana strongly desires to reinforce its political independence by strengthening its economic independence. Undoubtedly, other countries in Africa recognize this same necessity. On the anniversary of its independence, Ghana reported on its progress during the past year and its aspirations for the future. It was unanimously welcomed into the United Nations shortly after independence. It lost no time in establishing diplomatic relations with England, India, France, Liberia, and the United States. It has sent ministerial delegations to other independent nations in Africa and Asia. It has joined the International Bank for Reconstruction, the World Bank, and the International Monetary Fund. Its basic crop is cocoa, but Ghana is working toward greater agricultural productivity. Research programs are underway to eliminate tropical diseases and to stimulate employment. Efforts are being made to broaden the scope of education, to improve roads and other internal facilities, and to encourage foreign investments.

It is of foremost importance that other colonial regimes in Africa pressing toward independence are looking to leaders like Nkrumah to develop independent African states which prove to the world the equal capabilities and potentialities of the black man once he is freed of his yoke. These colonial regimes will be guided in their resistance to Communist penetration by the success of Ghana and other independent nations in obtaining needed, effective aid from the United States and the rest of the free world.

The free world has an edge over the Communist nations, inasmuch as African nations express an overwhelming preference for democratic concepts. We cannot, however, afford to take an attitude of nonresponsibility with respect to their economic needs, for, as drowning nations, they would have no alternative but to grasp eagerly even the straw which communism would offer them.

In my visit to Africa last year to attend Ghana's independence celebration, I was keenly impressed by the evident confidence and belief in the dignity of man I witnessed, the dignity which comes only when man is truly free. Most assuredly, those people have no intention of trading their European masters for totalitarian rulers. As Vice President NIXON pointed out last year after his visit to Africa, it is not enough that we talk democracy, we must practice it in our domestic affairs and in our relations with other nations. Any assistance we give to other free nations must not be offered in an air of superiority or paternalism. There must be no question that we value and respect their friendship. And true friendship is a horizontal relationship. It does not follow vertical paths. You do not look down on friends; you look across at them.

In this spirit and cognizance, I join with the rest of the citizens of this country in extending a most cordial welcome to Prime Minister Nkrumah.

Soviet Schools Good—and Tough

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. BOLAND. Mr. Speaker, the amazing progress of education in the Soviet Union is the subject of the third in a series of articles written by Walker Stone, editor in chief of the Scripps-Howard newspapers, who has been traveling in Russia and its European satellite countries during the past several weeks. With permission to extend my remarks in the RECORD, I include this article, which appeared in the Washington Daily News today, for printing in the Appendix:

SOVIET SCHOOLS GOOD—AND TOUGH
(By Walker Stone)

In the days of the czar, illiteracy was widespread in Russia and only the favored few could get an education. But the few schools of czarist Russia were good schools, and an educated Russian was a well-educated man.

The stern disciplines of the old czarist schools, and the high value placed on scholarship, have been retained in the Communist educational system. It has opened its doors to all Russians, adult as well as youth, and has achieved one of the world's highest literacy rates in a nation of 200 million.

The Soviet Union's preoccupation with mass education is exceeded only by its drive for industrial, military and political power—and is harnessed to that drive.

STATE ASSETS

The primary purpose of Soviet education is not to produce the "well-rounded man" in the classical sense. It is to produce more proficient men and women, whose knowledge and scientific training can be counted on to contribute to the productivity, the achievements, the military power and glory of the Communist state.

Despite rapid and vast expansion of the Soviet school system, there is no teacher shortage. Teachers are as well paid as doctors, and often much better. They enjoy a prestige in Communist society such as teachers have not known in America since the early days, when we too were trying to banish illiteracy and thought education something worth striving for.

COMPETITION

There is intense competition for teacher jobs. Only 1 out of 5 who apply is admitted to teacher training institutes.

The incentive motive—the carrot and the stick—applied so effectively in all lines of Soviet endeavor, also pervades the educational system.

A teacher in a secondary school has a norm teaching schedule of 18 1-hour classes per week. But he can double his salary by teaching 36 1-hour classes.

Scores of American educators have been surveying Soviet schools over the last couple of years under the cultural exchange program. They have been astounded by the lavishness and completeness of the physical plants of the Soviet schools and by the students' thirst to learn.

PRAISE

The principal of a high school in Westchester County, N. Y., sat beside me on a plane flying from Moscow to Warsaw. He had been in Russia a month, visiting schools, talking with teachers and students.

"Mine is one of the richest school districts in New York," he told me. "We have one of the finest plants. But I wish we had laboratories for physics, chemistry, and biology like I have seen in Soviet schools. And I wish we had students so eager to learn."

There is little "goofing-off" in Soviet schools—it is too important to the student to try to gain entrance to a university.

His income, his living standard and his position in Soviet society depends on how far he climbs the educational ladder.

In the first 10 grades—starting at age 7—there is some tolerance for slow learners, and tutors are provided to help them along. But once in a university, the student is on his own. Not only are the university teachers paid according to the quality and quantity of their work. Students are, too.

Because the Soviet state thinks it needs more scientists and engineers, students pursuing those difficult courses earn higher fees.

An A student earns a higher stipend than a B student, whose stipend is higher than a C student. And a student whose marks fall too low will be ousted from the university, and handed a shovel to dig ditches or engage in some other menial toil.

The heroes of the Soviet Union are the scientists. A scientist of distinction will enjoy a living standard of a Rockefeller or a Morgan heir in this country, with a rural estate, a chauffeur, and servants. His publicity in the Soviet press will rival that of such an American personage as Elvis Presley or Babe Ruth.

An American youth, whose papa pays the bill to let him enroll in a fraternity and join a college for the convenience of having a football team to root for, will not be well prepared to compete with the Soviet man of tomorrow.

Research Money Urgently Needed for Chemical Control of Pests

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 14, 1958

Mr. REUSS. Mr. Speaker, great strides have been made in the development of chemicals to control insects and other pests. But we have also learned that the good done by some pesticides is far outweighed by the harm they cause to fish and wildlife.

The Congress has recognized the need for specific chemicals and poisons that will fight pests without destroying desirable life. Legislation is about to be enacted authorizing the Secretary of the Interior to conduct continuing research on insecticides, with fish and wildlife protection in the forefront. I hope that the authorization bill will be quickly followed by the full appropriation urgently needed to carry on this important work.

I include in the RECORD the following editorial from the Milwaukee Journal pointing out the need for, and the success that can be expected from, detailed research in the field of chemical pest controls:

CHEMICAL CONTROL OF PESTS REQUIRES DETAILED RESEARCH

The manner in which sea lamprey larvae were killed without harm to fish and other aquatic life, described by R. G. Lynch in the Sunday Journal, is a potent argument for research in the field of chemical controls.

Man is resorting more and more to the use of poisons to fight insects. Such chemicals are invaluable to the housewife, the gardener, the farmer, the forester. But the Nation has had many a shocking demonstration that sometimes these things can do more harm than good—or so much harm that the net benefit may not be worth the cost.

The lamprey larvae could have been killed in Great Lakes streams with many poisons which also would have killed fish and other aquatic life. But the fish and wildlife service persisted in its search for one which would kill the pest alone—a "specific." After more than 5,000 chemicals had been tested, the researchers found what they wanted. So far, the researchers know of no bad secondary reactions.

Congress has before it legislation calling for similar research on all chemical controls. It takes time and money to search for specific poisons. Quite likely none can be found in some cases and then a decision must be made. But the case of the lamprey larvae dramatically proves that sometimes one can be found, and that the saving in other wildlife—in this case valuable food fish—will be well worth the effort and the cost.

Minnesota's Centennial

SPEECH
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. JUDD. Mr. Speaker, some people love and appreciate a State because they were born in it; a person always is attached to the place of his birth and the familiar surroundings of his youth. But perhaps to as great an extent as almost any State in the Union, most of the people in Minnesota until quite recently were not born there, they came there. I am one of those many persons who are not Minnesotans by birth, something beyond our own choice. We voluntarily chose the States as ours. I was born and educated in Nebraska and got into Minnesota when I went to the Mayo Clinic years ago to work there as a young doctor. We liked the State and its people so much that Mrs. Judd and I decided it was the place where we wanted to live and work and bring up our children. We have never regretted that choice. The worst thing about serving in the Congress these 16 years, a change of occupation we never thought of at that time, is that we are not able to spend more time in Minnesota—its lakes in the summer, its snows in the winter, its warm-hearted friendly people the whole year round.

People of about 36 nationalities have participated in the building of the State of Minnesota, but there has been no racial or cultural friction in the history of the State. The early settlers had some trouble with the Indians a few times, due to difficulties usually brought on more by the white men than by the Indians.

A few years ago at the annual dinner of the Minneapolis Junior Chamber of

Commerce to which the young businessmen invite their bosses, the older generation of leading executives, I was reminded how recently so many of us had come to Minnesota. It included all the leaders who participated in the program. The mayor of the city was born in Sweden. The Governor of the State was the son of an immigrant from Sweden. The man who responded for the bosses, was the son of an immigrant from Norway. The president of the junior chamber of commerce was born in Greece. The program chairman was born in England. There was, of course, one from Canada. The man who was honored as the Young Man of the Year in Minneapolis was a Negro, grandson of a slave. Yet no one of them thought of himself or of any of the others except as fellow Minnesotans.

It seemed to me that this was typical of our country and of our State at their best. The only thing that counts is what the individual is himself.

The people who came to Minnesota were not driven there; they were drawn there. They were not refugees or displaced persons. They deliberately chose to leave lovely places in home countries that were at peace to come to Minnesota. The opportunities there, of all sorts, were so attractive that they were willing voluntarily to pull up their roots in their native lands in order to come to this goodly land and sink down here new roots and build their homes and their families and their churches and their schools and their farms and their highways and their industries and all the things that we are proud of there today.

Minnesota has been under four different flags. First she was under the French. St. Anthony Falls, where my own city of Minneapolis was started because of the waterpower there, was discovered by Father Hennepin. He and Father Marquette, Father Nicollet, and others were the pioneering French fathers who first explored the rivers and the land. Then for a time it was under the British flag, then under the Spanish flag until the Louisiana Purchase, when it came under the United States flag.

People in other States have come to think of Minnesota as Scandinavian, and it is true that the Scandinavians—that is, people from Sweden, Norway, Denmark, Iceland, and Finland—make up the largest ethnic and cultural group in our State. It is not generally realized that there are more people of German ancestry than any other single nationality.

By and large the predominant groups of immigrants were people skilled in forestry, agriculture, and the mechanical arts. Minneapolis, St. Paul, and our other cities have relatively few large mass production industries, such as the great flour mills, Minneapolis-Honeywell, Minneapolis-Moline, and so on. But there are literally hundreds of industries which employ 50 to 500 workers manufacturing articles that require precision work with metals and machines. The attention to detail and superior skills and proficiency required in their work carry over into their citizenship. They are generous supporters of causes and programs that build good communities.

Among the earliest attractions of the State, of course, were its waters and its woods. "This is the forest primeval, the murmuring pines and the hemlock," as Longfellow immortalized them, mostly in the northern half of the State. The people who were especially drawn there came largely from northern Europe, because the woods and the climate of Minnesota were so much like the lands from which they came. Unfortunately, a great many of those forests were slashed before scientific forestry was understood. Only now is a second crop beginning to mature, and a few sawmills are being set up here and there for the new crop of pine.

Agriculture developed in the southern half; not great fields of wheat and small grains as in States farther west and south, but family-size and family-operated farms. Specialized agriculture, particular dairy farms with milk, butter, and cheese, chickens, and eggs, and turkeys, thrived, because of the combination of climatic, soil, feed grains, and other conditions which are most favorable for those products.

Then the great Mesabi Range of iron ore deposits in the region from which our colleague [Mr. BLATNIK] comes, was discovered at the head of the Great Lakes. Minnesota added another string to her bow—mining. Most of the steel in the buildings of the whole United States and most of its bridges were constructed from iron ore out of the soil of northern Minnesota. And how many of the cities along the Great Lakes from Duluth through Detroit, Toledo, Cleveland, Erie, and Buffalo—cities from which so many of our colleagues come, owe their growth and prosperity to iron ore from Minnesota.

Then, of course, in the most recent years, perhaps the fastest growing industry has been recreation. As has been said, we have sports all year round. We have 11,300 lakes—a few hundred more after 2 years of good rains. When I went to England one fall during the war and had opportunity to sit in on a briefing after a group of bombers came back from a raid over Germany, the first question one of the Minnesota boys asked me was, "How was the fishing this year?" The second boy asked, "What is the matter with our Minnesota football team this year?" I suppose that was not unique. If there is any family in Minnesota some of whose members do not go fishing a few times during the year and talk about it all the rest of the year, I have seldom run across that family. We not only fish in the spring, summer, and fall, but thousands sit hour after hour in little shacks fishing through the ice in the wintertime. We have other sports for every season—duck, pheasant, and deer hunting, canoeing, camping, sail boating, skiing—all of the great outdoor sports. More and more people in other States are discovering how good it is to spend the summers in Minnesota, even if they spend the winters in California, Arizona, Texas, or Florida. I think there will be an increasing semiannual migration of people, just as the birds do each spring and fall, going south for the winter and coming to Minnesota for the summer.

The great progress the State of Minnesota has made in the field of education has been mentioned. We have the third largest university in the Nation and some of its schools have worldwide recognition for the quality of their scholars and their instruction. We have several extraordinarily good colleges, standing at the very top in our Nation. To public life, Minnesota has contributed many outstanding leaders. Two of its present day sons occupy unique places in the hearts of our people, Charles Lindberg and Lauris Norstad, the commander in chief of NATO.

In politics Minnesota and her neighbors to the east and west, Wisconsin and North Dakota, have tended to experiment a little. We have almost always had a third, and sometimes a fourth sizable political party. We do not stick to tradition and party lines as do most people south of the Mason-Dixon line, for example. Therefore, you can never be quite sure what is going to happen in Minnesota politics. That is a part of the nonconformist spirit and the creative pioneering of the peoples who have helped to develop this State to such a wonderful extent in just 100 years.

Our human resources in the end are our greatest resource, our most valued wealth. Concern for its people has been the primary concern through all the years since the first pioneers came.

Mr. Speaker, we are grateful for the nice things that have been said about our State here today. We shall try to be worthy of a splendid past, and demonstrate that worthiness by making the second century even better than the first.

May I close with the opening line of our State song: "Minnesota, Hail to Thee."

Methodist Commission on World Peace Offers Constructive Proposals for Crisis in Mideast

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, July 23, 1958

Mr. PROXMIRE. Mr. President, today I received a statement by the Commission on World Peace of the Wisconsin Conference of the Methodist Church which offers very carefully considered recommendations for dealing with the crisis in the Middle East.

I have always been impressed by the constructive and intelligent thinking which the religious organizations of America have contributed to the problems which confront our Nation in its international relations. In my opinion, because of the great degree in which moral considerations are involved in our international relations, religious leaders are especially qualified to help us to

think through these problems and to help us find solutions. There is no doubt, for example, that the work of religious agencies of all faiths in the field of technical assistance, relief, and rehabilitation among the people in war areas and economically depressed countries has been one of our best assets in our foreign relations.

Mr. President, I especially want to say a word about the chairman of the World Peace Commission, Mr. Lawrence Giese, of Milwaukee, Wis. Mr. Giese's work in the field of world peace has earned him wide respect and appreciation among public officials and others who are interested and responsible observers of our international policies. Mr. Giese is the chairman of my own Advisory Committee on World Peace problems, and he has been exceptionally helpful to me in that capacity. I depend upon his advice, and I have learned to have great respect for his competence and knowledge in this field.

The recommendations of the Methodist World Peace Commission deserve thoughtful consideration. Accordingly, I ask unanimous consent that this statement be printed in the Appendix so that it will be readily available to all Members of Congress.

There being no objection, the statement was ordered to be printed in the Appendix, as follows:

STATEMENT ON THE MIDEAST CRISIS BY THE METHODIST COMMISSION ON WORLD PEACE, WISCONSIN CONFERENCE OF THE METHODIST CHURCH

We regret the use of arms by the United States Government in Lebanon. It has inflamed the Arab world, has given the Communists a powerful propaganda tool in the Mideast, and has enormously increased in risk of armed collisions involving major powers.

A major change in United States Mideast policy is called for. The present policy is founded largely on the belief that peace and stability can be achieved in the Mideast, and Communist influence kept out of that area, by uniting the Arab nations with the West in military alliances. Surely the inadequacy of this policy has now been amply demonstrated through Mideast events of the past several years.

We call upon the United States Government to reshape its Mideast policy into one that will replace the military emphasis with an effort to safeguard the vital interests of all those legitimately concerned with the Mideast, and with an emphasis upon a concern for the needs of the people of the Mideast. We believe that only thus can Mideast peace be achieved.

Such a new policy must guarantee protection to the Arabs against external interference in their drive for pan-Arabism, protection to Israel and the Arabs against armed attack from each other, assurance to the West that it will not be shut off from Mideast oil and that the Mideast will not go into the Communist orbit, and assurance to the U. S. S. R. that its Mideast neighbors will not be in hostile hands.

We believe that, in an effort to satisfy those basic requirements for Mideast peace, the United States Government should propose:

1. The complete neutralization of the Mideast. This would require ending shipments of arms into that area by either the West or the Communist bloc. A U. N. inspection system in the Mideast could give assurance that such arms shipments had actually halted.

Neutralization would require ending the Baghdad Pact, which is already practically demolished by the Iraqi rebellion. It would mean closing the British and United States military bases in the Mideast. But these are rapidly becoming obsolete with the advent of the missile age.

It would indeed be a profitable trade if, by relinquishment of these military factors of increasingly dubious value, the exclusion of Communist military interests from the Mideast could thereby be achieved.

2. A Mideast Development Authority that would seek to free the people of the Mideast from their grinding hunger and poverty, through such means as regional development of river systems, and exploration for and encouragement of the development of natural resources by private capital and Mideast governments.

This Development Authority could be supported by levies on oil shipments from Mideast ports, by giving the Authority control of Mideast oil pipelines and their revenue, and by contributions from the United States of America, Britain, and the U. S. S. R. These contributions would cost those three governments less than the military expenditures they are now making in that area, and would bring to them far greater security than do those present arms expenditures.

3. A Mideast disarmament plan for the Arabs and Israel that would involve reduction of those nations armed forces to the level necessary for internal order, with a U. N. inspection system to give each Mideast nation assurance that the others are abiding by the disarmament plan, and a U. N. force to guarantee the security of Mideast nations against attack from one another.

It is quite probable that the Mideast situation has become so inflamed that no reasonable policy or program will be accepted by the nations involved. But the possibility of a total and civilization-destroying war springing up in that area is so real and ominous that we are compelled to recognize that the self-interest of each can be served in the Mideast only as the common interest of all is made secure.

Leadership by the United States Government for the above suggested program will require a new sense of vision and purpose, one that is willing to subordinate temporary advantages in the cold war to the long-range task of ending the cold war.

We commend those Members of Congress, and the various newspapers who have exercised vision and courage at this time of aroused passions, and have stood firmly against the sending of United States troops to Lebanon.

We commend the United States Government for now seeking to settle the issue through the U. N. The church has a vital interest in the U. N. Believing that the U. N. is the world's best political hope for peace, the Methodist Church has worked vigorously for the support and development of the U. N. We urge all national governments to use the U. N. to the fullest in their relations with one another, and to comply with the decisions of the U. N.

We would suggest that the U. N. could be more effective in its work for peace if the nations would work through the U. N. at the "take off" point in their international policies, rather than waiting to call upon the U. N. when those policies have produced a "crash landing."

Who Owns Middle East Oil

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, July 23, 1958

Mr. PROXMIRE. Mr. President, an editorial appearing in a recent issue of the Milwaukee Journal brings up to date and in complete form exactly who owns the Middle East Oil.

This article provides a solid factual basis for an understanding of the economic stake this country has developed in the past 10 years in the Middle East. It shows that Middle East oil production has jumped by a huge fivefold between 1946 and 1955, and that American financial interests increased their holdings from about a one-third interest in 1946 to a solid majority interest of 58.4 percent today.

Mr. President, I ask unanimous consent that this editorial be printed in the Appendix to the RECORD at this point following my remarks.

There being no objection, the editorial was ordered to be printed in the Appendix to the RECORD as follows:

[From the Milwaukee Journal of July 21, 1958]

WHO OWNS MIDDLE EAST OIL

The Middle East, as the crossroads of Europe, Asia, and Africa, was for centuries of tremendous strategic importance in any international power struggle. That is why practically every great power of history was drawn there and every conqueror of note trod its sands.

In today's world, however, the Middle East is vital for another reason. This is its oil, essential to the industrialized nations of the free world—to keep their industrial machines whirring, their military machines operating, their economies prosperous.

The Middle East today produces more than one-quarter of the free world's oil supplies. It contains more than two-thirds of the free world's known reserves of crude oil. As demand increases, it will have to supply an increasingly larger share of the world's needs. Not until atomic power is widely available in the free world—10 to 25 years—will dependence on Middle East oil lessen.

Significance of Middle East production is shown by these 1956 (estimated) daily production figures in barrels: United States, 7 million; Venezuela, 2.4 million; total Middle East 3.3 million; Saudi Arabia, 1 million, tiny Kuwait, 987,000 and Iraq, 633,000.

World crude oil production increased from 2.7 billion barrels in 1946 to 5.6 billion barrels in 1955. Middle East oil production jumped from 265 million barrels to 1,190 million in the same time. Since 1946, approximately $2 billion has been spent in developing Middle East production and reserves. Much of this has been by American firms. American oil interests have a financial interest of 58.4 percent in the oil of the Middle East today. The 1946 interest was 35.3 percent.

The oil companies hold concessions from Middle East governments. With slight variations depending upon local conditions, the profits are split 50–50 between the governments and the oil companies. Direct payments made to the 6 major political oil-

producing governments in 1955 were around $900 million. The countries receive many indirect benefits—wages paid to native employees and expenditures within the countries by foreign employees and the companies. Allied industries provide employment for many thousands more. Indirect benefits add an income equal to one-half of the direct payments.

Following are details of ownership in major production areas:

Saudi Arabia: Concessions to 1999 and 2005 owned by Arabian-American Oil Co. (Aramco). Ownership of Aramco—30 percent by Standard of New Jersey, 30 percent by Standard of California, 30 percent by Texas Co., and 10 percent by Socony Mobil Oil Co.

Kuwait: Concessions to 2006. Owned on 50-50 basis by Gulf Oil Co. (American) and British Petroleum Co.

Bahrein: Concessions to 2024. Owned on 50-50 basis by Standard of California and Texas Co.

Iraq: Concessions to 2000. Owned by Iraq Petroleum Co. Ownership of IPC—23¾ percent to British Petroleum Co., 23¾ percent to Royal Dutch-Shell, 23¾ percent to Campagnie Francaise des Petroles, 23¾ percent to Near East Development Corp., and 5 percent to the Gulbenkian estate. Near East Development is owned 50–50 by Standard of New Jersey and Socony Mobil Oil Co.

Iran: Concessions to 1979, plus 15 years optional. Ownership an international consortium. Consortium division—40 percent to British Petroleum Co., 14 percent to Royal Dutch-Shell, 6 percent to Campagnie Francaise des Petroles, 7 percent to Standard of New Jersey, 7 percent to Standard of California, 7 percent to Texas Co., 7 percent to Gulf Oil, 7 percent to Socony Mobil Oil Co., and 5 percent to Iricon Agency. Iricon is comprised of nine American independents—Richfield, American Independent, Standard of Ohio, Pacific Western, Signal, Atlantic Refining, Hancock, Tide Water, and San Jacinto.

Bathing

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1958

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpt from a broadcast over radio station WINS, New York, Sunday, July 20, 1958:

BATHING

And now I turn to a subject on a lighter vein, but nevertheless, one that is very much a part of our daily existence. This topic was sparked by an account I read, emanating from the Public Health Service, as a result of some questions involving procedures to keep well.

Among the questions was, Are fewer baths advisable in winter? Public Health Service says that the skins of some people dry out in winter, but this is attributed to the low humidity in heated rooms or from harsh soaps that remove oil from the skin. Most bath soaps are mild. Public Health Service goes on to say how frequently you bathe is up to you to decide.

The Public Health Service mustn't read those soap ads, which very clearly imply that if you wish to be socially acceptable and not have your best friends not tell you, you had better climb in that old tub each and every day—rain or shine—hot or cold.

Upon looking into the origins of the ritual of the now daily bath and the relentless battle to keep Junior clean behind the ears, I came upon some odd but interesting bits of information. Such as—prehistoric man had a bed, shelves, and something like a cupboard—but no bath. Europe's first written records, the Bronze Age epics of Homer, indicate that the Greek tribes used to bathe in their rivers. If you couldn't swim, you weren't in the current social swim of that age and the Joe Miller of that day, commenting on unpopular foreigners, uttered the canard that they got washed but three times in their lives—when they were born, when they were married, and when they died. In the old days, the women washed their clothes with themselves—a trick they might be able to do today, considering how much nylon the ladies are wearing.

In the Old and New Testaments, many incidents relating to washing and the magical properties of water are recounted.

In India, Gandhi wrote of an acquaintance that he would pour water over himself—but never washed. The Hindu bathing customs go back some three or four thousand years and from the earliest records, the orthodox carefully sprinkled themselves, using little jars for the water, with the idea of spiritual purification rather than physical cleanliness. These ablutions were believed to be watched by demons and a detail overlooked could bring on disaster.

The priests of ancient Egypt drenched themselves with Nile water, often several times a day. They hoped to remove their sins—not their skins.

Besides the sprinkling, Hindus have given great importance to the idea of full immersion in water. It is considered a sort of insurance premium—to secure good luck or to avoid reincarnation as a maggot or a mango. For unknown centuries, Indian pilgrims have been making arduous journeys to holy rivers, pools, wells, and reservoirs connected with shrines.

The early Christians resorted to triple immersion for baptism. The practice of a single immersion for baptism was not adopted until the last years of the sixth century and persisted for 1,500 years. Today, a child may be baptized by anointing his head with holy water.

The Russians developed the most elaborate of bathing techniques from an ancient ritual of dipping newly born infants through a hole in the river that had been blessed. The Scythians, who inhabited what is now the Ukraine, on special occasions, would soap and rinse their heads and then crawl into small tents made of fleece draped over wood tripods. Inside, would be a dish of red hot stones, on which the bather threw hempseed. The smoke turned the tent into an excellent vapor bath and while sweating it out, the bather would apply plasters, made of moistened sawdust from aromatic trees. These were kept on overnight and the next day, the ancient would emerge sweet-smelling and glowing. The American Indians followed a similar technique before they ever laid eyes on a white man, as did the Mexicans. A similar arrangement was discovered in Ireland, and, of course, the Finns enlarged on this basic idea to accommodate 10 or more people. After beating themselves with birch twigs, the Finns take a brisk plunge in the snow.

The ancient Greek washed himself at a bath—rather than in one. You were expected to be clean then—but not too clean.

The use of hot water in the bath was roundly condemned by Homer and Hesiod as an unmanly practice. Although many Greeks were fond of open-air plunges in thermal springs—opinion for many years was against the use of hot water in the family basin or public wash houses. An old Athenian law actually forbade it. Nevertheless, most of the latter-day Greeks were oiled, scoured and rinsed—and with hot water—every day. Small and somewhat luxurious bathhouses for men had sprung up during the fifth century B. C. There were others for women. You followed a cold wash with a warm one—a custom afterward reversed by the Romans. All was quiet and respectable. Hippocrates advised that a bather should be orderly and reserved in his manner and it was considered the last word in boorishness to resort to a song in the bathroom.

During the heyday of Julius Caesar's grandfather, a 9-day interval between baths was quite common. There were a few public baths from 312 B. C. onward, but cold water was the only water on tap. Under the emporers, however, public bathing was popularized on a vast scale, and by the fourth century A. D., there were some 952 baths in Rome and the fad—shall we say—had spread elsewhere. * * * Gaul, Spain, Algeria and—less opulently—in Britain. Two famous baths were named for despotic emperors, Caracalla and Diocletion. Diocletion's was a trifle smaller than Madison Square Garden. It included a fair sized theater and a swimming pool 290 feet long. Caracalla's had lecture rooms and a library, the forerunner, no doubt, of the magazine rack in our modern bathrooms. The wealthy maintained smaller versions in their mansions and some of these so aroused Seneca, the tutor of Nero, that he held forth about the decadent luxury of the rich.

In those days, bathing was restricted by law and custom to an hour or so in mid-afternoon. The routine in these baths seems somewhat like that in our modern Turkish bath, the Romans not adding much to Greek practices. It is interesting to note that centrally placed furnaces supplied the heat for the various rooms and the rich could relax in smaller rooms where they listened to musicians, discussed busines deals and drank wine served by waiters. There were lotion rooms, and scent rooms, lined with beautiful mosaics—and all this cost but a few coopers and if you were poor, you could get it at public expense. The fall of Rome has been attributed to many things but there are some historians who maintained that the cause was due to the Romans spending so much time at the baths.

After the Arabs conquered former Roman territory, some of Mohammed's followers—despite his opposition—took over the baths at Alexandria and later generations, regardless of the religious tradition, built their own public baths, which were on a much more modest scale.

Down through the centuries, many people objected to bathing—but it made slow progress. Medieval Europe originated the bath proper—a functional piece of furniture, which, on some occasions could accommodate two people, with a tray stretching between them for meal service. Some were oval—some were circular—and some had tentlike superstructures—and some looked like sabots but in the 18th century, the bathtub as we know it today, began to shape up. Its evolution is much more easily traced in France and it is reported that one of Napoleon's relatives was the first in France to use a truly modern type bathtub.

The 17th century, it is believed, proved the stimulus for the revival of washing in general, altho some royalty were considered rather malodorous through the years, perhaps in more ways than one. The Grand Monarque of France, for instance, had the most sumptuous bath then in existence but he rarely went near it.

The Japanese are considered the cleanest people on the face of the earth. There was usually very little privacy in their baths. Every house in Japan has a bathroom with a big wooden tub and in 1895 there were 800 public baths in Tokyo, serving 300,000 persons a day. The Japanese believe in the psychological benefits derived from the

water. The tired laborer is expected to sing and feel at peace, once he is immersed.

Surprisingly enough, baths for private homes were denounced in America as repugnant to the American way of life. The White House did not have a bath until 1851, with President Fillmore standing firm against the most intense opposition. Americans may lay claim to inventing the shower as we know it in our well-equipped bathrooms and I think Americans may well lay claim to the steadfast barrage of information as to the effectiveness (socially and otherwise), of our soaps and detergents. Oil was used as the first washing material. Then soap, made of boiled goat's tallow and causticised beech ashes. Soap came into wider use in the latter part of the Middle Ages in Italy, and then in France, and in the 13th century, a factory at Marseilles made soap cakes with olive oil. England made soap from the 14th century on. American pioneer women made their own. Modern soap making dates from the discovery, in 1791, of the Leblanc process for the manufacture of soda from brine.

Speaking for myself, I think there is nothing more relaxing then a good warm shower or bath, with plenty of soapsuds, old Homer notwithstanding.

Commemoration Marking the 25th Anniversary of the Transatlantic Flight of Darius and Girenas

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. BYRNE of Illinois. Mr. Speaker, this past weekend I was home in my district and had the great pleasure of attending two gatherings in honor of the Lithuanian heroes, Captain Darius and Lieutenant Girenas who made that fatefully tragic flight from New York to Kaunas, Lithuania, on July 20, 25 years ago. These brave men had served the United States cause of freedom as volunteers in World War I. Then as today, the love of God and freedom knows no boundaries.

One of my colleagues, ALVIN O'KONSKI, graciously accepted my invitation to address the American Legion Post called Darius-Girenas, on Sunday. He gave a most inspiring address and I am sorry that he had no advance text so that I could insert it in the RECORD. He will attest to the fine occasion Sunday and I am sure he was warmed as I was in noting the many thousands who viewed the parade of the Darius-Girenas Post commemorating the 25th anniversary of the sad flight of two great flyers.

Another splendid address was delivered Sunday by Mr. Joseph Kajeckas, Chargé d'Affaires ad interim of Lithuania here in Washington. It is an address containing a message of hope to those in Lithuania and a message which makes those of us living in America and other free nations more thankful than ever and more dedicated to preserving our heritage. Here is Mr. Kajeckas' address:

The following is an English summary of a speech delivered by Joseph Kajeckas, Chargé d'Affaires ad interim of Lithuania, at Marquette Park, Chicago, Ill., at a commemoration marking the 25th anniversary of the transatlantic flight of Darius and Girenas:

"For the benefit of those less or not at all familiar with the Lithuanian language, I should like to give a very brief summary in English of my speech.

"First of all, however, I would like to express my personal gratification at the presence here with us this afternoon of the honorable mayor of Chicago, Richard J. Daley. I know that his attendance, as well as that of our distinguished friends from the Congress of the United States, Congressmen ALVIN EDWARD O'KONSKI and EMMET F. BYRNE, is deeply appreciated by all of us.

"The transatlantic fliers Darius and Girenas, the 25th anniversary of whose flight we commemorate today, sought to see their beloved Lithuania free and independent. As volunteers in the United States Army during World War I, they had fought for the principle of self-determination of nations. After Lithuania became independent, they sought to raise her glory by the transatlantic flight.

"The nobility of this bold attempt is revealed in their last will and testament, in which they dedicated their flight to the spirit of resurrected Lithuania, wishing to inspire the youth of Lithuania to still greater deeds. And indeed, if we think of the Lithuanian youth rising en masse many times against the Russian Communists, even in the chains of Siberian slavery, we see that they have learned well the lesson of sacrifice and dedication that Darius and Girenas taught.

"We are reminded on this occasion that July, the month of Darius' and Girenas' great sacrifice, is a commemorative one. It was during this month in 1922 that the United States recognized the Baltic States de jure. It was also during July that the United States condemned in unequivocal terms the Soviet occupation of Lithuania, Latvia and Estonia. It is very gratifying that America, the adopted country of our brave flyers, continues to recognize prewar Lithuania.

"It is during this same month in 1920 that the Kremlin signed a peace treaty in which it solemnly pledged itself to renounce forever all sovereignty in regard to Lithuania, a peace treaty that was broken at the first opportunity, according to the now-familiar Soviet way of doing things.

"Finally, the American Declaration of Independence, also belonging to the month of July, affirmed that all men are endowed by God with inalienable rights to life, liberty, and the pursuit of happiness. The declaration has great meaning for Lithuanians, for, as Abraham Lincoln pointed out, it promises freedom, not only to the people of this country, but hope for all peoples for all times.

"In conclusion, let us remember that, throughout all the pages of history, we find the glory of a proud nation reborn in the deaths of its heroes. Though the flight of Darius and Girenas ended in tragedy, it has lived to become a great triumph for Lithuania through the realization that men are willing to sacrifice their very lives for her greater glory. Today, 25 years after their flight, let the image of Darius and Girenas winning their way eastward toward the rising sun remind us that for those who look sunward, the shadows always fall behind. Let us remember that faith in an ancestral land is the sacred prerogative of all men; that individual courage in the face of overwhelming odds is the mark of a whole nation's character. And if Lithuania and the cause of her liberation always remain for us a matter of ardent love and dedication, then Darius and Girenas will live on in union with their ideals and greatest hopes. Then truly, their beloved fatherland, Lithuania, shall live on to see a new dawn of freedom."

Accomplishments of Congress

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. VANIK. Mr. Speaker, the following article by Doris Fleeson in the Washington Star of July 21, 1958, entitled "Accomplishments of Congress" merits the attention of every Member of this body. The effectiveness of the 85th Congress truly dwarfs the ineptitude of the administration with which it is encumbered:

ACCOMPLISHMENTS OF CONGRESS—LITTLE-NOTICED EFFICIENCY DRAWS PRAISE IN FACE OF INDIFFERENT ADMINISTRATION

(By Doris Fleeson)

In a remarkable reversal of their traditional roles, the 85th Congress is making a better-than-respectable record of governmental housekeeping, for which the Eisenhower administration will doubtless get the lion's share of the credit.

Congress has done this in spite of an indifferent President, an arrogant and parochial White House staff and a Cabinet whose congressional contacts are coolly formal when they are not absent entirely. Not even the dinner napkin appeal nor great personal warmth—those tried and true greasers of the political machinery—have been present.

The average Member of the House and Senate rarely sees the President and gets no attention whatever from the headline personalities of the administration, who prefer to entertain each other. It is harder for a politician to see Sherman Adams or his assistant, Gen. Wilton Persons, than it used to be to see Presidents Roosevelt and Truman.

Nonetheless, Congress has been practicing its art to considerable effect. It is true that it has proceeded with rare exceptions along well-trodden ways to which the President has also given lipservice. This is perhaps the reason why its pace-setting role has had so little general notice.

It is true also that the technical efficiency of the Democratic leadership arouses mixed emotions in the party. Party managers and intellectuals simply do not believe it can flourish as a mere upholder of the status quo; they want it to lead in the country's social and economic expansion. They are stoutly backed by labor and minorities, which are indispensable to party triumph nationally, and by most governors.

In both parties this is the era of the great drought so far as ideas are concerned. It does not alter the picture of Congress as an effective one within the limits it has set itself.

The President's debt to able individuals of the House and Senate is enormous. Last weekend furnished two examples.

The Senate Armed Services Committee gave him a Pentagon reorganization bill he can live with and got the Senate to approve it 80 to 0. It is a vote which puts heavy pressure on the House conferees, who must defend a bill the President doesn't like.

A Democrat, Senator STUART SYMINGTON, of Missouri, who frankly believes that our relative defense position is getting worse all the time, bucked members of his own party to push the new bill. Chairman RICHARD RUSSELL, of Georgia, put it together by hand, and committee members, both Democrat and Republican, cheered them on unselfishly.

Senator MIKE MONRONEY, of Oklahoma, climaxed his long effort to do a public-interest job of policing the airways by pushing to passage a civilian-controlled Federal aviation

agency to control airspace. It goes to the House, where, ironically, Representative OREN HARRIS, of Adams-Goldfine fame, expects to secure its approval by force of his knowledge and prestige.

A special laurel wreath is due to the Republican Senate leader, WILLIAM F. KNOWLAND in all these matters. At least the majority leader, Senator LYNDON JOHNSON, and Speaker RAYBURN get some press attention for their accomplishments.

Senator KNOWLAND has stayed on the job here though his own campaign for governor of California, with all it means to his future, is bogging down. He has kept his promises to his Democratic opposite numbers and muffled criticism of a White House of whose acts he disapproves often more severely than any Democrat. It is evidence of that character which makes it hard for informed observers to get mad at KNOWLAND, whatever they may think of his views.

Closing a Loophole in Our Tax Laws

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 14, 1958

Mr. KEATING. Mr. Speaker, on March 27 of this year I introduced H. R. 11691, a bill to amend the Internal Revenue Code in order to prohibit the deduction of expenses or losses incurred in illegal wagering. This measure was prompted by the Supreme Court's recent ruling that operators of gambling enterprises may deduct as ordinary and necessary business expenses amounts expended to lease premises and hire employees, even though their business is illegal.

As the law now stands, therefore, the bigtime gamblers of America are provided an open invitation to deduct just about any item they feel is essential to their operations, including police protection and thugs to intimidate competitors. My bill would put an end to this by prohibiting any such deductions if the expenses were incurred in furtherance of a gambling enterprise which is illegal under State law.

This proposal has gained wide support from various groups all over the country. Among the many editorials and articles which have come to my attention dealing with this subject, I enjoyed particularly a piece penned by Fred G. Stickel. In his weekly column, The Judge Says in the Caldwell Progress-Verona News of June 20, 1958, Mr. Stickel expresses his thoughts in a most readable style. I commend this unique column to the attention of all Members of Congress. I hope it will help spur action on this vital measure. Under leave previously granted, I insert it at this point in the RECORD:

THE JUDGE SAYS
(By Fred G. Stickel, Jr.)
THE LOOPHOLE

Many of the United States Supreme Court decisions have recently been under severe criticism from highly responsible and knowledgeable sources. Defenders of the Court have contended that loose or improperly drawn legislation has made necessary decisions censured by some and that the decisions do not constitute judicial legislation or invasion of the province of the legislative branch of government or the imposition of personal policies and viewpoints or unrealistic reasoning stemming from inexperience and too long residence in an ivory tower and not enough exposure to the stream of life. The case of *Commissioner* v. *Sullivan*, decided by the Court in March of 1958, might well be seized upon to illustrate the views of critics and supporters of the Court. And, incidentally, the decision was unanimous, which of itself is something for which the Court might be praised.

The question was whether amounts expended to lease premises and hire employees for the conduct of alleged illegal gambling enterprises were deductible as ordinary and necessary business expenses within the meaning of the Internal Revenue Code.

The Court held that they were so deductible even though the taxpayers received income from bookmaking establishments in Chicago, Ill., and even though the Tax Court found these enterprises were illegal under Illinois law, that the acts performed by the employees constituted violations of that law, and that the payment of rent for the use of the premises for the purpose of bookmaking was also illegal under Illinois law.

Another unnecessary blow to law enforcement, a decision favorable to the law violator, and against the law-abiding and at the expense of the taxpayer, say the critics. Why should not the Court have cooperated with Illinois in the enforcement of its laws against gambling, continue such critics.

But, say the Court's defenders, the job of the Court is to interpret the law, not make it, and one of the criticisms of the Court is that too often it does make law.

The Court itself said: "Deductions are a matter of grace and Congress can, of course, disallow them as it chooses. At times the policy to disallow expenses in connection with certain condemned activities is clear." Here in the opinion of the Court the policy of Congress wasn't clear. "If we enforce as Federal policy the rule espoused by the Commissioner in this case," says the Court, "we would come close to making this type of business taxable on the basis of gross receipts, while all other business would be taxable on the basis of net income." And that probably was what Congress intended but declares the Court, "if that choice is to be made, Congress should do it." Admirable judicial restraint which the critics would say the Court might have exercised in decisions involving congressional intent as to legislation designed to curb Communists, where the Court was able to discover that Congress intended to preempt the field in legislating against the Communist and thereby to deprive the States of such power despite the long held and often praised system under which the State legislatures operated as laboratories in which to test out and experiment legislatively.

But the fact is that the congressional act which allowed deductions for "the ordinary and necessary expenses paid or incurred * * * in carrying on any trade or business" did not expressly limit the deductions to legal trade or business or expressly exclude illegal trade or business although the tax court found no difficulty in reading the act as not allowing deductions, in determining net income, where the deductions consisted of expenditures made in connection with illegal acts.

The Supreme Court was able to reverse the tax court view by recourse to the regulations of the Commissioner making the Federal excise tax on wagers deductible as an ordinary and necessary business expense. "This," said that august Court, "seems to us to be recognition of a gambling enterprise as a business for Federal tax purposes. The policy that allows as a deduction the tax paid to conduct the business seems sufficiently hospitable to allow the normal deductions of the rent and wages necessary to operate it * * *. We said," continues the Court on the cited case, "that the fact that an expenditure bears a remote relation to an illegal act does not make it nondeductible."

Ain't law wonderful.

However, fortunately for the taxpayer, Congressman KENNETH B. KEATING, Republican, of New York, disagrees with the Supreme Court interpretation. He recently stated in connection with a bill he introduced in Congress designed to correct the law as laid down by the Court, H. R. 11691, that "The Supreme Court has given organized crime a big break by ruling that gambling operators can deduct from their gross income the expenses of illegal operations. Congress has a moral obligatoin to close this loophole. * * * The Court in effect has said that since Congress has never expressly disapproved of these deductions there is nothing it can do. They have left the determination up to Congress. In my opinion there is no earthly reason why Congress should hesitate one moment in setting the Court and the gambling world straight as to its intentions."

Right you are Congressman and we not only wish you success in your efforts to close the loophole revealed by the Supreme Court and which it did not consider it could close, but we urge our readers to let their Congressmen know that Congressman KEATING should be aided in his effort. While that effort may strike only a relatively minor blow at organized crime, every blow as the Congressman says "counts in the struggle to eradicate the syndicates and their undesirable operations. They have been feeding on the good people of this land far too long. When it comes to paying taxes, they should be treated as what they are—not law abiding businessmen but out and out racketeers."

However, Congressman be sure that the congressional intent is crystal clear, so clear that he who runs may read—lest another loophole be uncovered.

Why is it that so often the law aids the violator? Maybe someday either a Court or the Congress will allow the homeowner to deduct his losses on the sale of his home in determining net income instead of confining him to including his profits in his income should he make any on such a sale. I repeat ain't law wonderful—I had almost said wonderfully funny. But then as Jefferson said: "Consistency is the last resort of fools."

Wrong Ones at the Summit

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. BRAY. Mr. Speaker, I wish to insert an editorial from the July 22 issue of the Indianapolis Star. I believe the comments expressed show a very realistic approach to the problems in the Near East. It would seem the course of logic to discuss the problems in the Near East with some of the principals involved, and perhaps gain a greater understanding of those from whom we are becoming increasingly separated. I trust the administration is giving careful consideration to proposals in this direction.

The editorial follows:

WRONG ONES AT THE SUMMIT

There is no reason at all to agree to a summit meeting with the Soviet Union now, despite the Middle East crisis. In our relations with the Soviets nothing has changed. There is still no agreement on what will be discussed; what agreements we want to make or try to make. And the Soviet Union, which has violated every agreement it has ever made with us in the past, has demonstrated no change of policy in that respect either.

What has changed by American intervention in Lebanon is the Middle Eastern situation. There is good reason to have a summit conference about this, but not with the Soviet Union. The kind of summit conference we need now is the kind proposed by former President Truman on Sunday. Truman proposed that President Eisenhower invite President Nasser of the United Arab Republic to the United States for a discussion of Arab problems. This is just plain good sense. For it is Nasser and his UAR, Nasser and his "positive neutrality," Nasser the symbol and inspiration of Arab aspirations for political and economic unity that is the central force with which the United States has got to deal in the Middle East.

We invited Kings Saud and Feisal of the old feudal Arab regimes, which Arabs are now trying to shake off, to come to America. But we have ignored and snubbed the one man who represents to the majority of the Arab world the renaissance of Arab culture, Arab progress, and Arab political union. We have treated Nasser as though he were an enemy while we let the real enemy, Soviet communism, walk into the Middle East almost at our own invitation. We have opposed Arab unity and self-determination while we let the Soviets support it. We have intervened in Lebanon to protect the status quo. But the Arabs don't want a status quo. That is what they are struggling against in their attempts to emerge from their colonial cocoon into the free air of national union and Arab independence.

If the United States wants a conference let's have it with somebody who can represent the Arab world and its hopes. We have got to face facts and Nasser is a fact. Arab unity and Arab nationalism are facts. We have got to deal with the Arab world as it is, not as we would like it to be.

We never thought we would be proposing that President Eisenhower take ex-President Truman's advice. But Truman is right as rain. We hope the President will take his advice this time, and ask Nasser to come to Washington.

Substitute Your Own Title

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1958

Mr. MULTER. Mr. Speaker, the following article by Gerald W. Johnson, which appeared in the New Republic magazine of July 21, 1958, makes most interesting reading, even if we think his title shows disrespect for high office:

DUMB CLUCKS AND RASCALS

(By Gerald W. Johnson)

There is a verse in the Bible that used to puzzle me greatly. It is in the 18th chapter of the First Book of Kings, where it is related that Elijah the Tishbite having made a weather forecast of the end of the current drought, called a conference at the summit of Mount Carmel and there saw his prophecy fulfilled. But how it was fulfilled. Fire plunged from heaven and consumed not only the sacrifice drenched with 12 barrels of water, but even the stones of the altar on which it lay. The priests of Baal were liquidated on the spot to the number of 850. A cloud no bigger than a man's hand suddenly loomed over the whole sky and the King, aghast, leaped into his whirlybird and hastily took off for Gettysburg or the equivalent thereof. Then comes the verse that long astonished me, ending the narrative and the chapter with these words: "And the hand of the Lord was on Elijah; and he girded up his loins, and ran before Ahab to the entrance of Jezreel."

Even as a child in Sunday school I could understand what impelled the King to scram out of there, but why did the prophet outrun the chariot? He had foretold the event, and they had razzed him unmercifully, called him a prophet of doom and gloom. Then when things turned out as he had predicted it seemed to me that he should have been blandly complacent, rather than scared into breaking the sound barrier.

But I begin to understand now. A few days ago while looking through the files I came across a sentence published in this place on May 23, 1955. It read: "Judging by its first 27 months, the epitaph of the Eisenhower administration may be, 'It lacked mentality.'" The quotation was what a Republican Senator had said about Warren G. Harding in 1920.

Now I am no professional prophet, not even a good amateur, merely a dub; but today I know that when one's prophecy turns out to be not merely right, but too right, too godawfully right, the prophet's dominant emotion is not complacence but a powerful yen to get off the premises as if jet propelled. No wonder Elijah bolted.

He had one advantage over me. There is sound of abundance of rain, and I would fain take cover, but I have not the faintest idea in which direction lies Jezreel. In fact, I don't think there is any Jezreel, for we are stuck with this administration until January 1961, and that is a long time to endure lack of mentality in high places. For a very superficial study of history is enough to show that the state rarely, if ever, suffers as much damage from the depredations of a brainy rascal as it does from the dumb cluck who stupidly repeats the errors of his predecessor, even though he may be, morally, no worse than the average politician.

It is the dull repetition of previously exposed folly that is the most ominous sign at the moment. Lebanon, Little Rock, and Castro the bandit, have been fumbled, heaven knows, but they are, in some respects, new problems. Truman, Acheson, and Forrestal left no blueprints for dealing with them, and the worst that can be said of administration policy in these matters is that it lacks ingenuity.

By the same token, if present-day delators were charging certain lackeys of the administration with barratry, ecclesioclasm, defenestration and other malversations of an arcane and extraordinary quality, one might say that the rogues at least are ingenious. But when they repeat the exact stupidities that they were lately deriding in their predecessors, even that cold comfort is denied us.

When JENNER, BRICKER, KNOWLAND, and others asserted, as if it were an accusation, that the Eisenhower administration had borrowed its ideas from the New Deal, they were talking through their hats. If an idea is a good one, a man of sense takes it over, regardless of its origin. But now that it is apparent that some understrappers of this administration have borrowed from some understrappers of the Truman administration their snide and slippery procedures, the charge that the present regime has no ideas of its own gains weight.

First-rate statecraft ought to be copied, as there is usually nothing better available. But to copy methods of chiseling whose stupidity has just been exposed argues a barrenness of imagination that is beyond description.

This terrific fulfillment has jarred the prophet of 1955 loose from any feeling of complacence and filled him with an impulse to take to his heels, if he only had an idea which way to run. But with flight impossible, we can only brace ourselves to sweat it out. After all, Lady Luck may still be with us. Perhaps the recession has already touched bottom. Perhaps the Middle East will not take fire from Iraq. Perhaps Castro has by now recovered his senses. Perhaps despair will not drive the Arkansas Negroes into disastrous folly. But our hope is in the mysterious ways of providence, not in the mentality of King Ahab's court.

Agricultural Development and Assistance Act of 1954

SPEECH

OF

HON. WILLIAM A. DAWSON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1958

Mr. DAWSON of Utah. Mr. Speaker, again today as has been the case with farm legislation since 1955 we are confronted with legislation that—in my opinion—is almost a 50–50 mixture of good and bad.

This bill today incorporates an extension of our very successful foreign disposal program under Public Law 480 as it was inaugurated in 1954 and as it has been so successfully administered by Secretary of Agriculture Ezra Taft Benson. Under this program we have been able to reduce the national wheat surplus by over 100 million bushels. This program has served to build up our foreign markets without affecting the domestic price of our own farm produce.

A simple extension of this act is all that is required.

Yet—what are we presented with today? Much more than a simple extension. Under the provisions ordering the Secretary to barter away up to $500 million of our farm surpluses, we grant him an extension of power that would permit this country to do for schools in foreign nations what we have not allowed for our own schools. As I read this bill, the Secretary under this program is authorized to expend foreign currencies paid for our produce for the construction and support of private, nonprofit schools abroad sponsored by or founded by American citizens. How can we justify this program? How can we go back to our people and say that we feel our own public schools should be supported locally by local taxes and at the same time admit that we voted for a program that would give their taxes to schools in foreign countries for the education of foreign nationals?

I say we cannot. The section that embarks the Secretary of Agriculture on the foreign school financing spree should be eliminated.

The Secretary of Agriculture already has limited power to barter for disposal of farm surpluses. He opposes the expansion of authority this bill gives him. We are forcing upon him a program he does not want. And, I repeat, this Federal aid for foreign schools will be mighty hard to defend in the little red schoolhouses back home.

Seaway Will Open Five Lakes Full of Rivals

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. ROONEY. Mr. Speaker, on May 6, 1954, in the 2d session of the 83d Congress, this House had two rollcall votes on a bill known as S. 2150, which provided for the development of the St. Lawrence seaway. Representing, as I do, the major portion of the Brooklyn waterfront in the port of New York, I voted to recommit that bill to the House Committee on Public Works and voted against it on final passage.

The following newspaper article by Eckert Goodman entitled "New York's Port in a Storm" published in this morning's New York Daily News portrays the harmful effects of that bill upon the port of New York, its foreign trade, and the whole economy of the city of New York:

NEW YORK'S PORT IN A STORM—SEAWAY WILL OPEN FIVE LAKES FULL OF RIVALS

(By Eckert Goodman)

The St. Lawrence seaway, whose opening next year will touch off incalculable new competition for the already hard-pressed port of New York, has been described as "America's fourth coast" and a "gateway to the world's eighth sea."

It has also been called one of international shipping's biggest bundles of unknown quantities.

A 360-mile-long chain of interlocking lakes, locks, canals, and dredged riverbed between Lake Erie and Montreal, it will provide a continuous 27-foot channel for ocean freighters.

Thus the seaway is a vital link in a 2,400-mile inland waterway leading from the Atlantic Ocean north of Nova Scotia into the heart of America's Midwest, which claims two-fifths of the country's manufacturing and almost half its farm production.

Disregarding the $650 million St. Lawrence power project, whose three dams now pen up in a 25-mile-long lake what used to be the International Rapids, the seaway is largely an improvement of an existing 14-foot waterway which has been in use on the St. Lawrence for over a half a century.

IT'S BIG ENOUGH FOR MOST FREIGHTERS

But its 27-foot depth and 7 new 800-by-80-foot locks will enable an estimated three-fourths of the world's ocean going shipping to reach such inland cities as Buffalo, Cleveland, Detroit, Chicago, and eventually Milwaukee and Duluth.

The waterway's joint United States-Canadian Tolls Committee has estimated that it will attract some 25 million tons of shipping in its first full year of operation and more than 50 million tons annually by 1967.

Half a dozen United States steamship companies, including the Grace, Isbrandtsen and United States Lines, have announced that they intend to operate on the seaway; and its recent designation by the Maritime Administration as part of essential foreign trade routes to Europe and South America assures them of operating subsidies.

About 80 percent of seaway cargoes are initally expected to consist of bulk commodities like wheat, coal, and iron ore. But there are confident predictions that the proportion of high-revenue-producing general cargo, which every port on the Great Lakes is hoping to attract, will rise from a base of a million tons a year to nearly 7 million tons annually within a decade.

COULD COST US ABOUT 200,000 JOBS

Five years ago, Port of New York Authority analysts estimated that the seaway could divert more than 3,500,000 tons of general cargo a year from New York, an amount which could ultimately result in a loss of 200,000 jobs and a $1 billion payroll.

Since the study was made, the figures have been revised downward, but it is still generally agreed that the seaway will be a constant threat and could have a seriously damaging impact on the port's foreign trade and, hence, the city's whole economy.

The main advantage, claimed for the seaway is, of course, lower shipping costs. At present, the average Midwest shipper has to spend about as much to get his merchandise on a New York pier as it costs him to ship it to Europe. Even with toll charges and the extra distance they'll have to sail, steamship operators are sure they can do a lot better than that—and some of them seem to have more or less proved the point.

INLAND STUDY SHOWS A 20- TO 40-PERCENT SAVING

A group of Great Lakes manufacturers recently announced that a careful study, including generous allowance for unknown factors, had convinced them that the seaway would reduce their freight costs to Europe by between 20 percent and 40 percent, depending on the type of commodity.

A Milwaukee manufacturer has reported that he saved $5,000 in transportation charges by shipping a power shovel to France aboard one of the small, specially built foreign freighters which have been plying the St. Lawrence for years. And another claims an economy of $30,000 on the piecemeal movement of a medium-sized cement plant to Spain by the same little ships.

Midwestern seaport enthusiasts also like to point out that, by seaway, Cleveland will be 200 miles closer to Hamburg, Germany, than New York, and Duluth is almost 500 miles nearer Rotterdam by water alone than via New York by rail and water.

AND NOW THE OTHER SIDE OF THE COIN

But even the most ardent seaway devotees are forced to admit that all is not clear sailing ahead, and a good deal remains to be spent and done if the trade route is to measure up to their highest expectations. Here are some of the problems:

1. The seaway will be closed down every year for 4 months, between early December and mid-April, by ice plus winter storms which make inland navigation hazardous.

2. The 27-year-old Welland Canal, which circumvents Niagara Falls and its rapids by lifting and lowering ships 326 feet in 8 locks between Lakes Erie and Ontario, is already jampacked on occasion and could easily become, with its partially one-way passage, a serious bottleneck.

3. The seaway's 27-foot-deep channel—in contrast with New York Harbor's 45 feet and Philadelphia's 37—cannot be safely navigated by ships with more than 25½ feet of draft, and is too shallow to admit more than 5 percent of today's American merchant marine freighters fully loaded.

4. It will cost at least $141 million in Federal expenditures to dredge deeper channels between the Great Lakes and leading into its harbors, and an outlay of some $100 million more by the 57 ports themselves to open the entire 2,400-mile route to sizable ocean commerce.

5. It is still hard to estimate ship operation costs accurately, because definite tolls, while suggested, have not yet been set, and use of the present waterway is free.

6. A whole new midwestern maritime industry must be created and trained to insure efficient financing, insuring, forwarding, and handling of foreign general cargo.

BUT SEAWAYERS SAY THEY HAVE ANSWERS

But seaway proponents claim to have answers to most of these problems. During the winter, while the St. Lawrence is closed down, they explain, bulk cargoes can be safely and economically stored; and railroads and trucks can be reutilized, even at their threatened higher rates, to transport general cargo to eastern seaports.

Besides, a method of preventing ice from forming by the release of air bubbles from underwater pipes has proved successful in certain Canadian and Scandinavian harbors, and eventually it may even be feasible to pump relatively warm water from the Great Lakes into the river to keep it from freezing over.

The capacity of the Welland Canal, which supposedly can handle double the 23 million tons of shipping a year it now accommodates, can be doubled again by construction of a new set of parallel locks, when traffic warrants the expense. Meanwhile a schedule can, perhaps, be worked out to prevent traffic jams.

As for the seaway's 27-foot depth, most steamship companies say they can operate their freighters profitably even if they aren't loaded down to their Plimsoll lines, by taking on and discharging portions of their load at Quebec and Montreal, or by carrying cargo which is bulky but relatively light.

THEY'RE ORDERING SHIPS SPECIALLY FOR SEAWAY

In addition, both Grace and United States Lines report that they have on order freighters specially designed for seaway use. This is also the case with several European companies, one of which, Holland's Oranje Line, has announced that it will put two specially built cargo-passenger vessels into service between Chicago and Rotterdam next summer.

Contracts totaling $42 million for dredging and deepening Great Lake channels have already been let by the United States Government, and work is proceeding apace under supervision of the Army Engineers Corps in such farflung areas as the Detroit River and St. Mary's River, which flows out of Lake Superior, 600 feet above sea level.

The Great Lake's ports themselves have earmarked millions of dollars for waterfront reconstruction and harbor improvements, and are cautiously contemplating the expenditure of millions more. Chicago, for instance, which has embarked on a $37 million port expansion program, anticipates spending 3 times that amount within the next 10 years.

Milwaukee is in the midst of building an $11 million pier and general cargo terminal; Duluth has begun construction of a $10 million waterfront installation; and Toledo, with a new $8 million railroad dock near completion, envisions spending $25 million more on port expansion as soon as it has been assured of a 27-foot channel.

It's in the export fields in which New York is now predominant—automobiles, industrial machinery, electrical apparatus, steel products, and fresh and frozen meat—that

the port is apt to be most sorely challenged by the seaway.

WE NOW HAVE 83 PERCENT OF AUTO EXPORTS

Last year 83 percent of the Nation's automotive exports passed through the port of New York. While most cars are shipped in knockdown condition for assembly after arrival, some are not; and a Milwaukee businessman pointed out a few weeks ago that from $160 to $200 a car was being saved on vehicles sent unboxed from Great Lakes ports.

Remarked the general manager of Willys Motors recently: "When it costs us $5.50 to get a jeep to the pier in Toledo, as against $53.62 when the port of New York is used, we are talking about a competitive advantage we thus have in the foreign country where the jeep is delivered."

THE GREAT LAKES ARE IN THE BIG LEAGUE

Another ominous note for the future was sounded by President Lewis A. Lapham of the Grace Line, speaking before a group of Wisconsin industrialists.

"The port of Milwaukee," he advised them, "may not immediately rise to such fame as the Braves, but they are both in the big league to stay.

"Ships always follow the cargo * * * and you need have no fear, the house flags of the world's fleets are in the lakes to stay."

Arms for Israel

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1958

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the text of a letter which I sent to President Dwight D. Eisenhower, urging that mutual security aid be accorded to the State of Israel so that the free nation will be equipped to defend itself against aggression in the seething Middle East.

I have also asked that if it will result in swifter arms assistance for the Israelites, that the Israeli Government be permitted to purchase arms on the open market pending the closing of agreements entitling them to mutual security aid.

I also include a press release on this vital subject.

The letter and press release follow:

JULY 18, 1958.

Hon. DWIGHT D. EISENHOWER,
President of the United States,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: It is essential that the United States mobilize all possible strength to oppose the current threat to those nations of the Middle East which have demonstrated their friendship for the United States and look to the United States for support.

The State of Israel during the decade of its existence has effectively demonstrated its opposition to international communism and its determination to defend its independence at all costs.

In view of recent developments in the Middle East, and because the recent meetings between Nasser and Khrushchev may result in the Soviets furnishing additional arms to the United Arab Republic headed by Nasser, Israel has urgent need for adequate supplies of modern weapons and military equipment. I respectfully urge that you make use of the authority which you possess under the Mutual Security Act to provide such weapons and equipment to Israel on a grant basis, and, if such action would expedite the sending of arms and equipment, that you authorize the immediate sale to Israel of items most urgently required pending the completion of other arrangements.

Sincerely,

ALBERT P. MORANO,
Member of Congress.

Representative ALBERT P. MORANO, Republican, of Connecticut, has asked President Eisenhower to authorize shipments of modern weapons to Israel.

MORANO, a member of the House Foreign Affairs Committee, suggested in a letter to the President that due to the critical situation in the Middle East Israel should be furnished military weapons under the mutual security program.

He emphasized that Communist arms have been going to the Arab forces, and that additional armaments were certain to result from the recent Nasser-Khrushchev meeting, making it imperative that Israel be equipped to defend its territorial borders and the cause of freedom should developments require such action.

MORANO said that if bringing Israel into the family of nations receiving mutual security aid would entail too much delay, then Israel should be permitted to purchase arms on the open market at once, pending the signing of MSA agreements.

"It is essential that the United States mobilize all possible strength to oppose the current threat to those nations of the Middle East which have demonstrated their friendship for the United States and look to the United States for support," MORANO said.

Reign of Pope Pius XII

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1958

Mr. ANFUSO. Mr. Speaker, previously I had inserted into the RECORD an article from the magazine Wisdom on Pope Pius XII, dealing primarily with the life of this great religious leader until the time he was elected to the highest office in the Catholic Church. The same magazine also published an article on the period covering his reign. In order to complete the picture, I am inserting also this article, which is as follows:

POPE PIUS XII: HIS REIGN

(By Nazareno Padellaro and Robert L. Reynolds)

Pius XII received the tiara as though it were a helmet, for Europe was in arms.

The objects of Pius XII during the 6 tragic years from 1939 to 1945 are easily summarized: to bring to bear all the moral authority of the Holy See to avert war; to do all he could to limit it when it had once begun; to keep Italy from participation; to seek by every means to mitigate its horrors; to help the invaded countries; to save Rome; and to denounce unceasingly all tyranny and all crimes against humanity.

As he lifted his hand in the first of the countless apostolic blessings he was to give as Pope, what must have struck him above all else was his utter aloneness.

As Eugenio Pacelli, the new Pope always had been a man of ascetic life and considerable reserve. Now, his relationships with even his closest acquaintances were on a radically different footing. Visiting the sickroom of his old friend Francesco Cardinal Marchetti-Selvaggiani soon after his election, the Pope saw the venerable churchman try to raise himself out of his bed. The effort was beyond him, and he said apologetically, "I beg Your Holiness' forgiveness if I am unable to render due homage." With a smile at once reassuring and wistful Pius answered: "Don't fatigue yourself. For this evening, let us be just Eugenio and Francesco."

It was a particularly difficult time to be without close friends. As the pontificate of Pius XI had drawn to a close the Vatican had seen the systematic violation of the concordats it had signed with several nations.

The Italian press talked about sowers of panic, alternating threats with abuse. But the Pope, in every allocution—and he delivered 14 during the month of May 1939—had one subject alone, which was peace. He addressed pilgrims and young married couples, recalling the foundations of the democratic virtues and assuring all who heard him of his profound anxiety over the uncertain fate of peaceful relations between the nations. He broached a theme to which he was to return vigorously many times: what fate would the future hold for those who sought to make strength triumph over justice? "The hand of Constantine," he said, "which built this temple to the glory of God, was the same as that which broke the cruel tyrants and gave freedom to the Church."

The Holy See exerted itself in every way possible to bring one gleam of reason into those last few tormented months. Less urgent business was postponed. A prudent reserve was maintained at the Vatican, but hope had not yet been abandoned:

"We do not wish, we have not the heart even now, to abandon hope that a sense of moderation and reality will at length avert a conflict which, by common consent, would exceed anything hitherto experienced in the way of spiritual and material ruin."

Paternal affection may have caused the Holy Father to turn a blind eye to the evidence. But other words show that this evidence could not forever be ignored; it dispelled the last vestiges of generous illusion. "In the present circumstances, we desire that this blessing shall be a pledge of peace: peace for Italy, for Europe, or for the world."

The signatures were hardly dry on the Nazi-Soviet pact in Moscow when Pius XII spoke in tones of solemn warning to the nations and their rulers who were rushing headlong toward disaster. Over the Vatican radio the voice of the Pope, the voice of truth, was raised, above base passion, in all its clarity: "If is by force of reason, not of arms that justice prevails; empires not founded upon justice are not blessed by God. Politics divorced from morality betray the very people who treat them as such." It was a prophecy. "Nothing is lost through peace. All can be lost through war." These grave words, slowly and solemnly uttered, were true then and will remain so.

On September 1, Cardinal Maglione was called to the telephone by Monsignor Orsenigo, who informed him that the German Army was already marching toward the Polish frontier. The secretary of state conveyed this news to the sovereign pontiff. Pius XII withdrew to his chapel to pray and weep: men who had always admired his imperturbability saw him shaken by sobs. Pius XII's personal Golgotha had begun.

As Primate of Italy, the Pope was afraid that the sufferings, misery, and privations entailed by war would be followed by a collapse of spiritual values among his people. If neutrality could be preserved, Italy would be an oasis of peace in Europe; but if Rome were caught up in the vortex of war many nations would find themselves cut off from the Holy See, notwithstanding the guaranties of international law and the Lateran treaties.

In spite of all the Holy Father's efforts, Italy now hurled herself into the furnace. The bells of St. Peter's seemed as though trying to drown the din of martial music. They seemed to carry the sad echo of that prayer whereby the Sovereign Pontiff, like a parish priest when great storms threaten the fertile fields, begs God to turn aside His wrath.

Now that the cause of peace had been lost, the Pope devoted himself exclusively to the interests of truth and charity. His addresses and letters together form a complete commentary on the situation. Strange as it may seem, they create a sense not of depression but of exaltation, proclaiming the Christian duty to ameliorate a world made hideous by war.

Victory seemed already within the grasp of the enemy, but Pius XII, addressing the peoples of the world, raised his voice against that triumphant might which proposed in its arrogance to establish a new order.

Christianity, said Pius XII, is invincible. This, he proclaimed, was so certain that the masters of the hour could never construct an enduring new order. The principles of their social morality did violence to the rights of nations, oppressed minorities, seized and monopolized economic resources; while they themselves practiced total warfare, depended upon the ever-increasing production of armaments and were guilty of religious persecution. The Pope condemned the characteristics of Hitler's new order as violations of the natural law of nations, unmasking to the world all that the so-called liberators were and all that they had done. "Within the limits of a new order founded on moral principles there is no room for the violation of the freedom, integrity, and security of other states, no matter what may be their territorial extension or their capacity for defense."

Pius XII decided to reorganize the charitable work of the Holy See. Its central offices were in Rome, and it was in touch with correspondents all over the world. Twice a week, hundreds of parcels and letters were sent out to destinations in every continent. Those in internment camps and prisons began to live and hope anew. So as not to arouse the suspicions of censors whom nothing escaped, a special technique was used in the transmission and reception of news. Little by little, a vast card-index system was built up in which every card represented a personal tragedy and a personal hope.

In the year 1943 alone, 244,692 messages were transmitted in many languages by the Vatican radio.

The Vatican Relief Organization, on the other hand, worked in silence. It received gifts from many quarters, but no one will ever know by what secret paths the Holy Father's unlimited compassion reached the misery and hunger and despair of so many unfortunate people. Relief was sent to France, Belgium, and Holland; food and medical supplies to Greece, Finland, Norway, Abyssinia, Malaya, and the Philippine Isles.

But these are only examples; apostolic nunciatures and delegations all around the world did likewise. The gifts to prisoners of war, the assistance sent to the afflicted, showed that charity had never so many hands, nor hands so full.

Every department of ecclesiastical learning—theology in all its branches, scriptural exegesis, canon law, and liturgy—was provided for in prison camps. Professors and students alike were drawn from among the inmates themselves. It is impossible here to describe all that the Holy See did to assist the victims of war; but some idea may be obtained from the archives of the Swiss Catholic mission at Friburg, which sent out such material as scientific and other textbooks, as well as light literature and even gramophone records.

The Holy See took full advantage of its neutrality in working for prisoners in Japanese hands. In 1942 the Japanese Government appointed M. Harada as Minister to the Holy See. President Roosevelt had been forewarned of this; he raised no objection, and the work of the nuncio in Tokyo was greatly facilitated.

The Roman sky was clear and undisturbed; suddenly the antiaircraft defenses went into action. On every hand the cry was raised, "Rome is being bombed." People had no time to reach the shelters before the first bombs fell. The Basilica of San Lorenzo fuori le mure was hit. The attack continued for about 2 hours; incendiaries were used, and Romans noted a coincidence—on that date, almost 19 centuries earlier, Nero fired the city.

Houses were still collapsing, bombs still exploding, when Pius XII left the Vatican to see what damage had been done. His presence was stronger than that of death; many people left their shelters and gathered in the Piazza del Verano to pray with the Holy Father, who knelt, it is said, on a coat spread for him by a workingman. Then he had seen the diplomatic representatives of Britain and the United States, telling them that every time Rome was subjected to the outrage of aerial attack he would share the dangers to which his children were exposed.

Rome was declared an open city, and the Italian Government accordingly requested the Holy See and the Swiss Federal Council to notify the Governments in London and Washington that appropriate measures had been taken. The Romans in thousands went to the piazza before St. Peter's to express their gratitude to the Pope.

The King fled with his government; war was now at the very gates of Rome, and gunfire could be heard at night. The doors of St. Peter's remained closed for 3 days.

The Vatican now had Hitler's Germany on its frontiers, and two German sentries guarded the demarcation line at the far end of the piazza. A terrible manhunt began. Basilicas, churches, and presbyteries, convents, colleges, and hospitals all served as places of refuge for those who feared persecution. The Pope, precisely because he was so anxious to do all he could for the relief of the oppressed, had to prevent them from taking refuge in the Vatican, as many tried to do. If deserters and fugitives had found asylum in the Vatican, there would have been pretext for reprisals.

But if the Vatican could not open its doors, no one was turned away who sought refuge with a priest; indeed, many of those wanted by the Germans had disguised themselves as clerics or religious.

The sovereign Pontiff was the last hope of the Jews. He had already paid 12 kilograms of gold to save 200 members of that race, when the Nuncio to Italy, Msgr. Borgongini Duca, visited the concentration camps where foreign Jews were held and heard them ask in anguish whether they were to be delivered to the Germans. The Nuncio assured them that the Pope would intervene on their behalf; and, despite repeated demands from the German authorities, he managed to do so. Meanwhile, the clergy did all they could to hide the Jews, though at least one priest, Don Aldo Mell, of Lucca, was shot for doing so. In July 1944, a month after the liberation of Rome, the chief rabbi in Italy, Dr. Israel Zolli, made a solemn declaration in the Roman synagogue, paying tribute to the Holy See for having condemned the anti-Semitic laws and diminished their effects.

With the spring of 1945 the war drew to its end. What must be the first step in the work of restoration? The prompt and swift return of prisoners and the interned, military, or civilian, to their homes. The Pope, expressing the anxiety of countless families, demanded that the chains should be allowed to fall from those in bondage. He asked also that men should once more embrace the spirit of love, of concord, of goodwill; that they should have done with all hatred, distrust and bitterness. Recalling the words of the prophet Ezekiel, he prayed God to fulfill His promise: "I will give them a single heart, I will breathe into them a new spirit, and I will tear out from their bowels a heart of stone, to replace it with a heart of flesh."

Most observers thought, 18 years ago, that Eugenio Pacelli was elected to the papacy primarily because the church needed an experienced hand to guide her through the labyrinth of international politics. He had the requisite skills and he has performed this task well. But history may remember him for achievements quite different and, in the long run, more important.

First. He has used the powers of his office to make catholicism a good deal more meaningful to the faithful. He has relaxed certain regulations surrounding the Mass and the sacraments and encouraged increased participation by the laity in the ceremonies of the church.

Second. He has brought the papacy closer to the people. During his pontificate he has seen and spoken to more people than any other pope.

Third. While Pope Pius has generally remained aloof from the political struggle between East and West, he has been an intellectual and moral leader in the fight against communism.

Fourth. He has stressed the teaching role of the papacy. The burden of his words has been to remind men that life means little without respect for human dignity, faithful service to one's vocation and a continuing devotion to peace.

Over and above these specific achievements there has been, for the Catholic at least, the strengthening example of the man himself. Ever since the beginning of his reign, Pius XII has been photographed often, and his words and deeds have been widely reported. As they have watched the lines of age, illness and struggle etch themselves on his face, and as they have read his vivifying words, Catholics all over the world have been confirmed in their faith.

Among what might be called the specifically religious acts of Pius XII there are many which will insure his reign a lasting remembrance. Foremost among them is his encouragement of more intelligent participation by every Catholic in the church's official worship, called the liturgy.

In two encyclicals, one on the liturgy itself, the other on the music which accompanies it, he has repeated his conviction that the laity, who are required to attend Mass, should not remain dumb and idle spectators but should be urged to participate and taught how to do so. To make it easier for them to get to Mass and to receive holy communion, he has relaxed the fasting regulations associated with the sacrament and permitted Mass to be said in the afternoon. And to increase popular understanding of ceremonies other than the Mass, he has allowed wider use of the vernacular at baptisms, weddings, and funerals.

A lifelong ambition for almost every Catholic is to visit Rome and see the Pope. In the 18 years of Pius XII's reign, a staggering number of them, and of non-Catholics as well, have done so. Three periods stand out: World War II, when the Pope received

hundreds of thousands of servicemen and women of every allied nation; the Holy Year of 1950 and the Marian Year of 1954–55, during each of which the total number of pilgrims ran into millions.

The wartime audiences were a revelation, both for the Pope and the military. After an audience with United States sailors, one of their number led the rest in a rousing "Hip, hip, hooray—His Holiness."

Pope Pius moves among the crowds easily and graciously, firmly raising each person from his knees and greeting him warmly. He asks (often in the visitors language) where he comes from and what he does for a living. If anyone has brought along religious articles to be blessed, the Pope obliges readily. A flustered United States Congressman once pulled out a package of cigarettes instead of a box of medals.

It is not only private citizens who ask to see the Pope. Among prominent Americans he has received are Dwight D. Eisenhower (when he was still in uniform), ex-Presidents Truman and Hoover and Secretary of State Dulles.

For Pius XII, these audiences seem to be central to his mission as Pope, for though he is advancing in years and is not in the best of health, he continues to receive more than 1 million people a year. He imparts to each the quite justified conviction that the successor of Peter cares deeply about every member of his flock.

Whenever the Pope appears in St. Peter's Square, carried above the heads of the crowd in his gilded chair, a shout of "Evviva il papa" precedes him across the broad plaza. Like surf pounding a beach it swells, crests, and finally breaks, engulfing the spectator with its roar, and then ebbs to a murmur as the swaying figure moves on. In part, this overwhelming enthusiasm stems from the volatile Italian temperment. In part it reflects the almost universal personal esteem for Pope Pius XII himself. Essentially it springs from something deeper: the belief that the Pope is more than a wise and saintly man in glittering vestments; that he is, in fact, the representative of Christ on earth. For the Catholic he acts with Christ's authority to teach, guide, and govern the entire church, and though only a man, there is upon him the mark of the hand of God.

The Heavens Are Not Too High: An Address to the Graduating Class of 1958, New York Military Academy, Cornwall, N. Y., by Byron C. MacNaab, Chief, Convair Operations, Cape Canaveral, Fla.

EXTENSION OF REMARKS

OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1958

Mr. SIEMINSKI. Mr. Speaker, on June 7 of this year, for the 69th time since 1889, the graduating class of the New York Military Academy gathered by the great elm in front of the barracks on the high ground overlooking the Hudson at beautiful Cornwall, N. Y.

The graduating class of 1958 heard the two messages that follow and partook of the program which under unanimous consent to extend my remarks, I include in the RECORD:

INVOCATION DELIVERED BY THE REVEREND ARNOLD A. FENTON, CHAPLAIN AT NEW YORK MILITARY ACADEMY, CORNWALL-ON-HUDSON, N. Y., AT GRADUATION EXERCISES, JUNE 7, 1958

Almighty God, we beseech Thee to behold this academy and to look down upon it with favor. Grant that there may be obedience to Thy holy will, and that good learning may flourish and abound. Bless those who teach and those who learn. Especially do we ask Thy blessing upon those who are graduating today. Give them grace to stand fast in the faith, to obey Thy word, to abide in Thy love that being made strong by Thy holy spirit, they may resist temptation and overcome evil, and finally inherit eternal life. All this we ask in Thy name. Amen.

THE HEAVENS ARE NOT TOO HIGH

(Graduation address by Byron G. MacNabb, class of 1928, at New York Military Academy, June 7, 1958)

I wish to extend by heartiest congratulations to you young men who are graduating here today.

Thirty years ago this week I sat in the chapel here at New York Military Academy and listened to a commencement speaker as you are doing today. After 30 years I cannot even remember the subject of that address. By the same token, I realize, to borrow a few words from Abe Lincoln, "You will little note nor long remember what I say here today." I know that this moment you are only hoping that I will finish what I have to say so you can get your diplomas and go your various ways. I assure you that I won't delay you more than 10 minutes. Right now you are feeling complacent and self-satisfied with your accomplishment in graduating from New York Military Academy. Let me warn you that you have many a rough day ahead of you on the way up the ladder of success, and if what I say here today helps even one of you to reach the top I will feel I have not talked in vain.

You young men who are graduating today are on the threshhold of the space age. We look to the younger generation to solve the many problems which we will encounter in our efforts to conquer outer space. It makes no difference whether you plan to be an engineer, a doctor, a lawyer, or a businessman, the space age will challenge your imagination and tax your ingenuity to the utmost. Exactly 54 years to the day were required in the air age to progress from the first successful flight of an airplane by the Wright brothers to the first successful flight of Convair's Atlas intercontinental ballistic missile. I predict that the developments of the next 10 years will make the developments of the last 54 years appear to have been made at a snail's pace.

You are the men who must meet the challenge of the space age. Men of my generation are only the Wright brothers of the space age. You men will be the Lindberghs, Rickenbachers, the Vultees, the Martins, the Northrops, and the Donald Douglases of the space age.

It took almost 500 years from the time Leonardo da Vinci first set forth the principles of photography until the first successful process was developed. It took 40 years from the time Faraday and John Harvey developed the electric motor until electromotive power was put to a practical use. It took from 1873 to 1920 for radio to progress from the idea stage to practical application.

In my era this time scale has been compressed to where the A-bomb was developed in 5 years and transistors were developed from discovery to widespread use in only 5 years.

In the space age developments will move at an even faster pace, for we cannot afford a leisurely pace, and if you hope to succeed in this age you must continue to build on the solid academic foundation you have obtained here at New York Military Academy.

Regardless of what profession you choose to follow I warn you that there is no such thing as a short cut to success. Success comes only as a result of hard work. Here at New York Military Academy you have been given a solid foundation in your academic studies. More important, however, is the fact that you have received excellent training in the principles and importance of teamwork, the ability to take orders, to carry them out, and to be leaders of men. You will note that I have said that you have received here a solid foundation, but a foundation is not enough. You must continue to build on this foundation and it has been my experience that you can never stop building if you wish to continue on the road to success.

There is a great deal of talk today about the weakness of the American educational system—I do not subscribe to this school of thought. The weakness in our educational system is not in the schools but in the students and their parents. Our colleges are equipped to provide the finest possible type of higher education but too many of our college students today take the path of least resistance in obtaining a college degree. Briefly, too few students today are willing to work hard and their parents are unwilling to insist that they do so. Too often even among the parents the word "college" is associated with football rather than education.

If you are to keep pace with the space age you need no magic formula—you need only a solid background in the fundamentals of education. Mathematics, physics, chemistry, and a good command of the English language are the basic tools you will need. No scientific problem can be solved without mathematics, and chemistry, and physics provide an understanding of the world around us and are the keys to the problems of the world of outer space. Stop for a moment and think of the challenges of the engineering problem of weightlessness, the psychological problems of survival in a confined space for long periods of time, the medical problems of maintaining human life in space, or the legal problems which will face the "space" lawyer of the future.

Not since the days of Columbus and the discovery of the New World have young men faced such a wonderful opportunity for adventure and new discovery. Use your brains—work hard—let your imaginations work overtime—develop an infinite curiosity—learn to express yourself so others can understand you—be loyal to the man you work for and to the men who work for you—learn to be the kind of a leader you would want to have as a leader but above all learn to understand and be tolerant of your fellow men.

If you have a solid educational foundation and you follow these simple rules you will find as it says in the motto of Convair Astronautics that "The Heavens are not too high".

NEW YORK MILITARY ACADEMY 69TH GRADUATION, SATURDAY, JUNE 7, 1958

GRADUATION

The Star-Spangled Banner.

Invocation, Rev. Arnold A. Fenton.

Address to the graduating class, Byron Gordon MacNabb, New York Military Academy, 1928.

Presentation of diplomas, Bartlett E. S. Chappell, dean.

Awarding of medals and honors, Brig. Gen. Nelson Dingley III.

Presentation of achievement alumni award, George L. Strang, 1930, president of board of governors, New York Military Academy Alumni Association.

Benediction, Rev. Almos F. Gaudette.

The Alma Mater.

HONORS AWARDED FOR THE SCHOLASTIC YEAR 1957–58

Head boy gold medal, Daniel Irwin Konover.

Achievement alumni award, Joseph Solomon Dornbush.

The H. M. Scarborough award for distinguished scholastic achievement, Daniel Irwin Konover.

Hardy gold medal for school leadership, Donald David Bonanno.

The Laidlaw athletic award, Rafael A. Pizzo.

The Allan Rabinowitz trophy, Chris Constantine Parkas. To that graduate in the college preparatory course who has been in attendance for at least 4 consecutive years, and who has made the greatest overall improvement in scholastic work.

The Joseph C. Younes memorial trophy, Carlos Alberto Corredor-Ortiz. Awarded in recognition of superior achievement in senior mathematics.

The following gold medals are awarded for proficiency in academic subjects: Chemistry medal, open to seniors and juniors, Robert A. Vogel; physics medal, open to seniors and juniors, Carlos Alberto Corredor-Ortiz; biology medal, open to all classes, Stephen Lewis Weisel; English medal, open to seniors, Carlos Alberto Corredor-Ortiz; Latin medal, open to seniors, juniors, and sophomores, William John Gallicano; French medal, open to seniors, juniors, and sophomores, Robert A. Vogel; Spanish medal, open to seniors, juniors, and sophomores, Brian J. Duffy; German medal, open to seniors, juniors, and sophomores, Thomas George Knapp; mechanical drawing medal, open to all classes, Ernest Hulsizer; freshman medal, open to freshmen only, Gregory A. Hill; social studies medal, William John Gallicano.

Rensselaer Alumni Association medal, Joseph Solomon Dornbush. Offered at this academy to the member of the graduating class who has done the best work in mathematics and science during his course.

The Sovatkin memorial scholarship awards given by Mr. Edward J. Sovatkin in memory of his son, Stanley B. Sovatkin, class of 1932:

The Sovatkin memorial award of $25 for excellence in the two courses, United States history and world history, Michael R. Halperin.

The Sovatkin memorial award of $25 for excellence in science, Stephen B. Barasch.

The Sovatkin memorial award of $25 for excellence in English, Peyton Boswell III.

The Sovatkin memorial award of $25 for excellence in mathematics, Carlos Alberto Corredor-Ortiz.

The Daughters of the American Revolution award, Michael R. Halperin. To the senior cadet making the highest average in American history, a gold watch to be presented by Mrs. Thurman C. Warren, Jr., State regent, New York State organization, National Society, Daughters of the American Revolution.

Wright Hall parents' scholastic improvement award, Otis W. Stephens. To that cadet in Wright Hall who by industry and zeal has shown the greatest improvement in his academic work.

Medal, best scholastic work in Bard Hall, Morley Shelman.

Dr. Leon Hermann award, Richard Wallace. Awarded to that cadet in Bard Hall who by his conscientious effort has improved in scholastic endeavor. The trophy will be permanently possessed by Bard Hall with the recipient's name inscribed thereon.

The Rae Grossman memorial trophy sponsored by Mr. and Mrs. Arnold J. Canton, Peter Metralexis. In annual recognition of that cadet in Bard Hall whose academic achievement throughout the year has been significantly marked by hard, consistent, and diligent effort, this trophy, remaining at the academy and inscribed each year with the name of the winning cadet, is commemorated in a silver medal to be awarded to the recipient.

Best drilled infantry cup.

Best drilled special unit cup.

DIPLOMA LIST, 1957–58

Robert Jay Abend, Robert Joseph Agnoli, Jose Guillermo Alberni Boudet, Leonard Howard Ashbach, Stephen B. Barasch, Donald David Bonanno, Peyton Boswell III, Elroy H. Botwick, Enrico Joseph Bovera, Edward M. Brewer, Jr., Arthur James Burlington, Jr., Carl C. Buschmann, John David Castellitto, Luis Antonio Cavalieri B., Carlos Alberto Corredor-Ortiz, Frank Anthony Corigliano, Alfred Beveridge Dedel, John Anthony Louis DeSalvio, Dirk Ross DeWitt, Joseph Richard Donovan, Joseph Solomon Dornbush, Temistocles Fernandez Colmenares, Cosimo J. Filiberto, Anthony M. Frisina, Manuel Jose Garcia-Tamayio, Edward Joseph Gray, Jr., Gordon H. Groland, Michael R. Halperin, Sylvested J. Hamilton, Floyd Edwin Harris, Stephen D. Harrison, Robert W. Hertz, Michael Herwig, John Leonard Hines III, Jorge Bernardo Hung, Juan Marcos Imery, Ronald Morris Jackson, Nicholas F. Jaenichen, Robert C. Johnson, Thomas P. Kennedy, Thomas George Knapp, Daniel Irwin Konover, Arturo Leon, Jerold Kobrick Levien, Tubilo Lombao, Jr., Carlos Manuel Londono, Phillip Lovitt, Malcolm C. Lunn, Kevin John McHugh, Carmine Joseph Mancuso, William J. Masilotti, Jr., Guitze Rafael Messina, Michael Morchower, Thomas M. Murphy, Marcus Whitman Muth, Robert A. Neild, Chris Constantine Parkas, Philip Warren Perry, Raphael A. Pizzo, Gerald Alfred Pucillo, Alfonso Riveroll Estrada, Andres Jeronimo Rolando, Michael P. Romain, Herbert Charles Ross, Jr., Sanford Scott Rothman, Charles Malcolm Sage, Jr., Michael Henry Savod, Victor C. Scallo, Thomas F. Schaffran, Frederick H. Schroeder, Richard A. Schwartz, Richard D. Schwartz, Ronald Seppi, Robert W. Smyth, Robert Rubin Stroh, Jack Tenbekjian, Juan Antonio Tinoco, Pablo Uribasterra, Manuel L. Weinberg, Richard Weiner, Fairfield Whiting, Jon Enoch Yellin, Ernest I. Zima, Jr.

Postgraduates: Lawrence S. Hoyns, Richard Bryant Nelson, Gene August Perla.

Winning Essay and Book Selections in Milwaukee Library Contest

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1958

Mr. REUSS. Mr. Speaker, this spring the Milwaukee Committee for National Library Week conducted a contest among the young people of the community. Each contestant selected 25 books that he would want to own—for knowledge, for understanding, for entertainment. The first prize was won by John Woodmansee, of 2927 East Newberry Boulevard. His prizewinning essay and list of books follow:

[From the Milwaukee Public Library Milwaukee Reader]

TWENTY-FIVE BOOKS

My reasons for wanting to own the particular books I have chosen are almost as varied as the selections themselves.

Some of the books—many, in fact—will help me better to understand the world in which I live, and the people who have made it what it is.

Our vast culture is important in this respect, as the marvelous world that our authors, poets, and composers have created has become a part of our own world.

The old masters, Shakespeare, Cervantes, Bronte, Twain, Dumas, and, appearing in the Oxford Book of American Verse, Poe, Whitman, and Longfellow, their works, as well as the works of the new masters, O'Neill, Sandburg, O. Henry, Hemingway, Steinbeck, have not been omitted from the list.

The composers, too, are important and even though their works have to be heard to be appreciated, I will learn something about them in the books A Journey to Greatness, A History of Music, and Bach.

To understand the world in which I live I must also understand another world, too, the world of science. To discover the sea in Rachel Carson's The Sea Around Us, to learn of the stars and planets, the rocks and trees in Palmer's Natural History are things which I want to do very much now, especially since I have started to work on this contest.

Equally important to greater knowledge of the world is a knowledge of history. By understanding the world of yesterday through history, it is possible to understand the world of today. In this subject, I have chosen Epic of America as a good general American history; I have pinpointed various moments of the story of man in this country and others with A Tale of Two Cities, The Red Badge of Courage, and All Quiet on the Western Front; finally, I have chosen a book about a man who I think has done more for this country than any other man, Abraham Lincoln.

And then, too, I have selected books of quite a different nature, the ones you can just sit back and enjoy for their humor. The Private Dining Room and The Thurber Album are two of these, and, although a much older work, Don Quixote, promises to be just as enjoyable.

I am also looking forward to some interesting science fiction which I have enjoyed in the past but not added to my library.

All and all, should I receive the books I have mentioned, ahead of me there would be a wonderful summer of reading, as well as increased pleasure in books throughout the years to come. To me, there is something specially thrilling about each title I have chosen.

To enrich a mind, to bring on a laugh, to sway a heart—these are some of the things that a book—and sometimes only a book—can do. I have selected mine with these ideas—and many more—in mind.

Abraham Lincoln, by Carl Sandburg (the one-volume edition containing The Prairie Years and The War Years); Nine Plays by Eugene O'Neill; The Complete Short Stories of Mark Twain; Bach, by Albert Schweitzer; The Sea Around Us, by Rachel Carson; Jane Eyre, by Charlotte Bronte; The Notebooks of Leonardo da Vinci (in the Modern Library Edition); The Private Dining Room, by Ogden Nash; The Complete Works of William Shakespeare; The Red Badge of Courage, by Stephen Crane; The Complete Works of O. Henry; Famous Science Fiction Stories (A Modern Library Giant, edited by Raymond J. Healy); Don Quixote, by Cervantes; A Journey to Greatness, by David Ewen; The Thurber Album, by James Thurber; Epic of America, by Adams; All Quiet on the Western Front, by Erich Remarque; The Oxford Book of American Verse; Vanguard, by Caidin; A Field Guide to Natural History, by Palmer; A Tale of Two Cities, by Charles Dickens; A History of Music, by Paul Lang; The Old Man and the Sea, by Ernest Hemingway; The Grapes of Wrath, by John Steinbeck; the Count of Monte Cristo, by Alexander Dumas.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Bridges, Saltonstall, Young, Knowland, Thye, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, Potter, and Ives.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Bush, and Barrett.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Monroney, Clark, Proxmire, Capehart, Bricker, Bennett, Bush, Beall, Payne, and Case of New Jersey.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Clark, Proxmire, Beall, Morton, Javits, and Hoblitzell.

Committee on Finance

Messrs. Byrd (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, Bennett, and Jenner.

Committee on Foreign Relations

Messrs. Green (chairman), Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Symington, Ervin, Humphrey, Thurmond, Lausche, Mundt, Mrs. Smith of Maine, Messrs. Martin of Iowa, Curtis, Revercomb, and Capehart.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Malone, Watkins, Dworshak, Kuchel, Barrett, Goldwater, and Allott.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Bible, Thurmond, Lausche, Yarborough, Bricker, Schoeppel, Butler, Potter, Purtell, Payne, and Cotton.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Wiley, Langer, Jenner, Watkins, Dirksen, Butler, and Hruska.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Thurmond, Yarborough, Smith of New Jersey, Ives, Purtell, Goldwater, Allott, and Cooper.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Neuberger, Church, Yarborough, Clark, Jordan, Carlson, Jenner, Langer, Martin of Iowa, Morton and Hoblitzell.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Church, Jordan, Martin of Pennsylvania, Case of South Dakota, Kuchel, Cotton, Hruska, and Revercomb.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Talmadge, Curtis, Cooper, Javits, and Case of New Jersey.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4853 Hutchins Place.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.

OFFICERS OF THE SUPREME COURT

Clerk—John T. Fey, 2931 Cathedral Ave.
Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Road.
Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Drive, Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Road.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED

TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

Sixth judicial circuit: Mr. Justice Burton. Kentucky, Michigan, Ohio, Tennessee.

Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.

Eighth judicial circuit: Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Ninth judicial circuit: Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

The Mutual Security Program

EXTENSION OF REMARKS
OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, July 24, 1958

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by the International Cooperation Administration with respect to certain allegations made before Senate and House committees and on other occasions by witnesses who have appeared before the committees. It is a statement from the ICA, and is in the nature of an answer to the various charges which have been made in one field of activity or another.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

COMMENTS ON STATEMENT OF SPRUILLE BRADEN BEFORE SENATE APPROPRIATIONS COMMITTEE, JULY 18, 1958

Mr. Braden's statement contains a number of statements of or assumptions as to alleged fact concerning the mutual security program. The following comments are restricted primarily to an analysis of the factual representations.

Perhaps the most frequent and basic condemnation of the mutual security program in this statement is that ICA and its programs are wasteful, inefficient, extravagant and dishonest. However, no specific cases are cited in this statement. ICA and its operations are under constant, careful scrutiny by many agencies and individuals both public and private. Congress and the General Accounting Office conduct regular, careful examinations of the program. A compendium of specific criticisms arising from a variety of sources was carefully examined this year and the record of this examination (ICA Answers to Criticisms of the Foreign Aid Program, House Foreign Affairs Committee print, March 14, 1958) would indicate that the program has been conducted remarkably well, that only a very small proportion of those criticisms were entirely valid, and that in these rare instances, corrective action has been completed or is underway. There is no doubt, however, that the program by its very nature is faced with severe difficulties in working effectively with a wide variety of governments and peoples with differing objectives and standards. Continued objective examination of the operations of the program performs a valuable service.

More specifically, Mr. Braden has raised the following items on which comment seems indicated.

Item: ICA is a horrible example of dishonesty.

Presumably this would relate to the integrity of ICA personnel. Throughout the history of the agency, there have been only a very few cases in which employees have been found guilty of malfeasance (see answer to question No. 1, House Foreign Affairs Committee print, March 14, 1958). The small number of cases which have been discovered is strong evidence of the effectiveness of the agency's effort to insure that its personnel maintain a high degree of responsibility and integrity.

In testifying before the House Foreign Affairs Subcommittee on the Far East regarding charges made about the program in Laos (hearings, May 7 and 8, 1958, p. 10) program a General Accounting Office witness stated:

"From all the evidence we have had, we can say, Mr. Chairman, we have no evidence at all that there was any fraud, malpractice, or wrongdoing on the part of the United States officials."

There are of course many problems in working with officials in underdeveloped countries with widely differing concepts and standards. To meet these problems rather than avoid them, to help our friends to improve and develop is a major element of the mutual security program.

Item: Accounting and control of foreign aid funds are deficient.

The problem of controlling and auditing foreign aid funds has been intensively examined not only by the executive branch but by several congressional committees and the General Accounting Office. ICA maintains careful controls, audits and end-use checks throughout its program. This cannot be expected to be fully and immediately effective, however, where it extends into the operations of the governments of many undeveloped countries. In fact one of the major objectives of the technical assistance program is to assist these governments to improve their public administration.

Item: The foreign aid program is conducted by an inflated bureaucracy.

Personnel figures for the mutual security program are given in detail during the course of the presentation of the program to Congress. A table summarizing personnel figures for 1953, 1957 and 1958 is included in question No. 2 of the House Foreign Affairs Committee print of March 14, 1958. It should be particularly noted that 86 percent of ICA's total personnel is in the technical cooperation program and an additional substantial percentage is directly involved in conducting assistance projects under other categories of aid. Thus, ICA personnel to an overwhelming percent is not administrative but rather a major component of our assistance to other countries, composed of technicians either directly hired by ICA, employed by other government agencies such as the CAA or employed by contractors performing program activities required in assisting friendly countries. Another important fact ignored in the broad charge of inflated bureaucracy is that the 86 percent of ICA personnel referred to above is attributable to $132 million of the total of about $1.3 billion programed for economic assistance for fiscal year 1958. This $132 million is the technical assistance program which is acknowledged as one of the most successful programs and the one that most effectively provide people-to-people contact so important to the objectives of mutual security.

Item: ICA has not rebutted Mr. Braden's earlier statement of January 30, 1958 and ignores documented criticisms.

ICA submitted to the House Foreign Affairs Committee a detailed analysis of Mr. Braden's address of March 16, 1958 as published in the Wall Street Journal of March 17, 1958. Furthermore ICA has taken particular care to solicit and respond promptly to criticisms. This has been commended frequently by Members and committees of Congress.

Item: ICA has classified many of its operations and documents which makes adequate congressional investigation impossible.

ICA's records are fully available to the General Accounting Office. The General Accounting Office maintains in ICA a staff of accountants and auditors who have access to the agency files without formality. Classification of documents has been conscientiously kept to a minimum and any information in documents which must remain classified has been made available to the committees of Congress and by these committees to the Members of Congress. (See statment of Dr. Morgan, CONGRESSIONAL RECORD, p. 7539, where he called attention to the Members of the House that they were welcome to examine all the information and data prepared and presented by the executive branch as part of the presentation regardless of classification. This invitation was extended at the beginning of the hearings. During the debate moreover the basic presentation documents consisting of six large volumes of facts and figures were available for inspection at the tables of the managers of the bill.)

Item: The billions already in the foreign aid "pipeline" do not require further appropriations until all questions about ICA operations are answered; $12,129,307,500 would be in the "pipeline" if the requested funds for fiscal year 1959 were appropriated. This vast amount is evidence that Congress has abdicated its responsibilities.

The House Foreign Affairs Committee report on the Mutual Security Act of 1958 (pp. 12–14) summarized the committee's careful analysis of the unexpended balances in the foreign aid program. The report states that "the fiscal side of the mutual security program compares favorably with that of other Government agencies. In most cases it is considerably better." The $12 billion figure is erroneous. The estimated unexpended balance at the end of fiscal year 1958 for the entire mutual security program is $5.1 billion which is a sharp reduction from previous years:

[In billions]

1953	$10.0
1954	9.5
1955	7.9
1956	6.3
1957	6.1
1958	5.1

The program cannot for long spend more than is appropriated to it or it would be bankrupt.

Item: The administration's intensive propaganda campaign and pressures have prevented the full truth about mutual security being known by the American electorate.

Facts about the mutual-security program—both favorable and unfavorable—and arguments pro and con have been made available to the American people through reports from Congress, information supplied by the executive branch, reports in the daily press, radio, television, and in many public

meetings. Every request for information from the Congress or from the American public has been responded to.

Item: Congressman BYRD's and Senator JENNER's criticisms of ICA operations and all other opposition and criticism is snowed under by the administration.

Criticisms of the foreign-aid program have received extraordinarily broad circulation. For example, an article signed by Congressman GEORGE MEADER was published in the Readers' Digest, a magazine with the largest circulation in the world, estimated at about 17 million copies per month. ICA has repeatedly welcomed constructive criticism. Much of the most widely circulated criticism, however, has been based on misinformation. ICA considers it essential to keep the record straight.

Item: Congress has very little basic knowledge to go on in voting appropriations. The Hoover Commission recommendation has been forgotten. Except for the General Accounting Office spot checks, no one has carried out an impartial and comprehensive field survey to trace past appropriations to final use.

The Hoover Commission recommended that there be a full analysis of commitments against unexpended balances with a view to possible substantial reductions in future appropriations. Congress concentrates particularly on just this element of the mutual-security operations in determining future appropriations requirements. There is full, continuous disclosure of the status of funds. General Accounting Office studies are extensive. Special congressional studies are frequently conducted by both the House and the Senate. Several elements of the executive branch, too, keep careful watch on this. It would not be an exaggeration to state that the mutual-security program is subject to more study, investigation, and scrutiny than any other Government program. Annually four committees review the program. In addition, at least one subcommittee of the House Government Operations Committee investigates special phases of mutual-security-program activities.

Item: Though the foreign-aid program is damaging to the United States economy and a serious drain on United States resources, the administration this year justifies it as a cure for the recession.

The administration has done no such thing. The National Planning Association has estimated that 715,000 jobs in the United States are derived from the foreign-aid program and concludes that reduction in the foreign-aid program would add to unemployment.

Item: "On January 5, 1958, the Iranian Ambassador criticized our aid as far from adequate and said that the Middle East and Asia, unless we did better, would have to throw in their lot with the Communist world."

This remark of Mr. Braden's is a gross distortion and misrepresentation of the position of Ambassador Amini. The Ambassador's remarks are available from the Iranian Embassy. The Ambassador was full of praise for the United States aid program. He was bitterly critical of Soviet actions and policies and at no time did he suggest that Iran would go over to the Communists.

What he did say in his speech was:

"International communism is now fully exploiting the poverty-stricken conditions of the people of the underdeveloped world. Unless the free world offers an effective and decisive remedy to raise the standard of living of these people, accommodating the minimum requirements of their living conditions, these underprivileged people will have no alternative but to throw in their lot with the Communist world. It would be much wiser to treat the patient before the disease has reached a fatal stage."

Item: ICA has supported a Communist regime in Bolivia and has fostered expropriation of private mining interests by providing an investment guaranty to an American firm enabling that firm to take over the interests as a receiver of stolen goods.

There have been certain strong Communist-oriented elements in the Bolivian Government. This constituted a serious threat to United States interests. As a part of our policy of countering this trend, the United States concentrated particularly in shoring up the anti-Communists in the government party. This was accomplished particularly by providing substantial assistance mostly in the form of surplus agricultural products until the economy of the country could be stabilized. The results have been encouraging. The Bolivian Government is now popularly supported and the Communist threat has been effectively met.

The investment guaranty referred to is not a form of direct financial assistance to the country. It is insurance against expropriation or convertibility of a new investment and does not involve using mutual security funds unless a valid claim develops. There was no reason to deny to the South American Gold & Platinum Co., a United States corporation which had met the requirements fully, an investment guaranty available to private American investors without discrimination.

Support by Reserve Officers Association of the United States of the President's Action in the Middle East

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, July 24, 1958

Mr. JACKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Rear Adm. Leon J. Jacobi, national president, Reserve Officers Association of the United States, at the White House, July 24, 1958, for himself, and Col. Louis O. Gravely, USAR, Ocala, Fla., national vice president, Army; Col. John W. Richardson, Jr., AFRES, Detroit, national vice president, Air Force; Comdr. John Enis, USCGR, Omaha, national vice president, Navy; Col. John T. Carlton, USAR, Washington, D. C., national executive director.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF REAR ADM. LEON J. JACOBI, NATIONAL PRESIDENT, RESERVE OFFICERS ASSOCIATION OF THE UNITED STATES, JULY 24, 1958

In behalf of the thousands of citizen-reservists of the United States, I have just called upon the President of the United States to convey to him our deep commitment to his purposeful stand for peace in the Middle East. The President asked me in turn to thank the Nation's reservists for their stated accord with his action.

Many of the members of our association have participated as combatants in 3 conflicts within the past 40 years. We know first hand of the perils of warfare and the accompanying heartaches, and indescribable hardships. The Nation's reservists are those who under the American system must furnish much of the leadership and the major manpower for any struggle.

We also are citizens who face major obligations in the political, social, and economic facets of American life. We know from history the folly of appeasement, or quailing in the face of clearcut challenges.

If a free civilization is to survive in this swiftly changing world, the United States must be firm, resolute, and positive in opposing aggression, or any subtler force which would destroy for us or our free allies the right to our liberties. We must recognize also that there is being waged aggression of ideas and this aggression must be countered with the same decisiveness as we must counter a military threat. The United States has no honorable alternative to its present course, embracing risks though it does.

We believe the perseverance of our Government in the face of obvious challenges deserves the support of all citizens. All citizens must also prayerfully sustain our Nation's position.

Summit Meeting

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, July 24, 1958

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Next Week in New York," which appeared in this morning's Washington Post and Times Herald. I think the editorial is informative. It deals with a question of great importance to all of us.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post of July 24, 1958]

NEXT WEEK IN NEW YORK

The United States is in the position of being forced reluctantly to attend a party in its own back yard determined in advance not to like it. This is the worst possible attitude in which to cope with an overebullient and self-invited guest in the person of Mr. Khrushchev. If there is to be a meeting of the western leaders with the Soviet chieftain at the United Nations Security Council next week, along with Mr. Hammarskjold, Mr. Nehru and representatives of Arab nations, let us by all means make the best of it and not regard it as a defeat before it takes place.

Surely the first requirement is to end the negative stance. This means close consultations with the British, French and Canadians, particularly, and the burying of any miffed feelings over misunderstandings. Beyond that, there ought to be a cold assessment of western concerns in the Near East and a willingness to accommodate these concerns to current realities and possibilities while the West seeks effective checks against subversion and indirect aggression. And there ought to be, in respect of form, generosity in welcoming Mr. Nehru and the Arab representatives. There is no point, either, in forcing the issue of Nationalist China whatever the technical rights; let there be a separate Security Council subcommittee for the meeting if need be.

Mr. Khrushchev has had his way at the outset largely because western ineptitude has played into his hands. But this does not

mean that things will all go his way. With his transparent emphasis on the United Nations, there will be an opportunity to confront him with the Soviet sabotage of efforts to strengthen the U. N. in the Lebanon situation. There also may be some virtue in talking frankly face to face with Arab leaders. In short, this is a call for the United States to show that it is not afraid of discussion and that it has both flexibility and confidence in itself and its friends.

Representative Charles O. Porter and His Efforts in the Case of Gerald Murphy

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, July 24, 1958

Mr. NEUBERGER. Mr. President, one of the truly heroic and persistent congressional crusades in recent years has been that of Representative CHARLES O. PORTER, of the Fourth Oregon District, to determine the fate of his constituent, Gerald Murphy, who has disappeared in the Dominican Republic, and may be the victim of foul play.

The Grants Pass Courier, a prominent daily newspaper in Mr. PORTER'S district, has paid tribute to the Congressman's tirelessness in an editorial which declares that Mr. PORTER "is doing an excellent job of informing the American people."

This editorial from the Courier, which is published in the mining and lumbering center of Grants Pass, Oreg., was reprinted in the Eugene (Oreg.) Register-Guard of July 17, 1958, and I ask that the editorial be printed in the Appendix of the RECORD for the information of our colleagues of the Senate and the House. The Register-Guard has the largest circulation of any newspaper published in the district represented by CHARLES O. PORTER.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Eugene (Oreg.) Register-Guard of July 17, 1958]

PORTER'S FIGHT WITH TRUJILLO PUBLICIZES DOMINICAN MESS

(Editorial from the Grants Pass Courier)

People in this end of the Fourth Congressional District have refused to get very excited over Representative CHARLES O. PORTER'S feud with Gen. Rafael Trujillo, dictator of the Dominican Republic.

For one thing, Representative PORTER has been working on behalf of constituents in the Eugene area; the parents of Gerald Murphy, who apparently was assassinated in connection with Dominican intrigue. Murphy, to most people, was an American soldier of fortune who became involved in international intrigue and paid with his life. That has happened many times in the past to other adventurers. They know they are taking great risks when they get into this league.

We are in complete agreement with Representative PORTER'S condemnation of Generalissimo Trujillo, however. The Dominican dictator has retained Morris Ernst, known as a brilliant lawyer, in an attempt to whitewash the Murphy affair. Representative PORTER charges that Ernst will receive a total of $90,000 as a retainer and for expenses.

The Trujillo's, father and son, are unsavory characters. The generalissimo is a typical Latin American dictator, out to feather his own nest without heed for the people.

Son Rafael, Jr., is the international playboy who showers Hollywood movie stars with automobiles and other lavish gifts. Sent to the United States to attend the Army's Command and General Staff School, he failed to graduate. Instead, to the great indignation of Trujillo, Sr., he finished his classes only with a "certificate of attendance."

The Dominical Republic—it is a republic in name only—has been receiving foreign-aid funds from the United States Government. Trujillo, Jr., denies that the millions he squanders come from this foreign aid, but it certainly doesn't set well with the American people to see their tax money going to a dictator who has such low regard for public opinion.

The palatial yacht of Trujillo, Jr., for instance, is reported to be equipped with rugs and oil paintings valued in excess of $70,000. This yacht still is moored in the Los Angeles harbor while the dictator's son continues his romancing. He is the father of six children, by a wife he has discarded as incompatible.

Representative PORTER may not get very far in his fight with Trujillo, but he is doing an excellent job of informing the American people about the Dominican mess. Just why our State Department feels it necessary to extend foreign aid to such a government is beyond comprehension.

Archbishop Michael

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, July 24, 1958

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement on the death of Archbishop Michael, the head of the Greek Orthodox Diocese in North and South America.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR DIRKSEN

The religious world mourns the death of Archbishop Michael the head of the Greek Orthodox Diocese in North and South America. Archbishop Michael was one of six presidents of the World Council of Churches. He was elected to that post at its convention in my home State in Evanston, Ill, several years ago, and had rendered much prestige and service to that post prior to his death.

Those of us who were present at the second inauguration of President Eisenhower were greatly impressed with this great spiritual media of orthodox faith who rendered one of the four prayers at the President's second inauguration. He was the first of the Greek Orthodox faith to be invited to render a prayer at a Presidential inauguration. Archbishop Michael was elected archbishop of the Greek Orthodox Diocese of North and South America in October of 1949 and he has created a most impressive record during the period he has served in this hemisphere.

The Greek Orthodox Church has made tremendous strides during that period and it has gained in prestige to the point that it is now well recognized as one of the four major religious faiths in this country. Archbishop Michael was the spiritual leader of over 1 million Americans of Greek descent and a spokesman for over 5 million communicants of the Eastern Orthodox Churches in the Western Hemisphere.

In 1954, he enrolled President Eisenhower in the Grand Order of the Holy Sepulchre in recognition of the President's efforts toward world freedom, justice, and peace.

Archbishop Michael was regarded as one of the most learned clergymen in the Greek Orthodox Church. In addition to Greek, he was fluent in English, French, and Russian. He wrote several books on the administration and teachings of the Greek Church.

His passing deprives the world of a great churchman and a great humanitarian. I know that my colleagues on the Hill join me in expressing our deepest sympathies to the millions of Greek Orthodox communicants in this country.

Herbert Hoover: A Man of Good Deeds

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, July 24, 1958

Mr. MARTIN of Pennsylvania. Mr. President, all of us, regardless of party, are so proud of the activities of Herbert Hoover. He is, without question, the outstanding man of the world without portfolio. His recently published book, The Ordeal of Woodrow Wilson, is a masterpiece.

I was greatly pleased to read in the Pittsburgh Press last Sunday an article written by Mrs. Walter Ferguson, praising Mr. Hoover's distinguished service to our country and to the world and referring to him as perhaps the greatest humanitarian of our century.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A MAN OF GOOD DEEDS

(By Mrs. Walter Ferguson)

Every true American must have had a warm little glow 'round his heart at the news of Belgium's reception of Herbert Hoover. Not only because he represented our country abroad, but because life has brought him the honors he so richly deserves.

Herbert Hoover is perhaps the greatest humanitarian of our century. Yet for years he was berated up and down the land as an enemy of the poor, the oppressor of the downtrodden, and a man without a heart. He was blamed for the global depression in 1929 by his political enemies. Neither Republicans nor Democrats can plead innocent to the charge of twisting truth and exaggerating error to suit their purposes. And fate made Hoover an excellent target for the barbs.

Being a good Quaker he never answered his critics. He merely went on day after day, doing his best, helping his country, helping people, living according to the principles in which he believed. As President, he refused part of his salary. In an era during which men and women have used their high

offices to make private fortunes, he has never lowered his ethical standards.

He has recently written a highly praised book, The Ordeal of Woodrow Wilson, another of our great humanitarians. There he gives a sympathetic picture of a President whom he knew well and worked with, a man who fought a brave fight against fatal odds and died of a broken heart.

Hoover's task of distributing food from America to the many hungry in Europe after World War I was done under Woodrow Wilson, and made him a beloved figure in the Eastern Hemisphere.

But it is Herbert Hoover the man who engages our attention now. How well he exemplifies our concept of a true Christian. He has never ceased doing good. He has never hated his enemies. He forgave those who persecuted him. Now in his old age he remains head and shoulders above the petty souls who in years past echoed the smears against his character.

The Nature of Nationalism

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, July 24, 1958

Mr. KEFAUVER. Mr. President, I wish to commend to the attention of my colleagues a sound and lucid article by Charles L. Bartlett, which was published in the Chattanooga Times of July 20, 1958. At this time of crisis and revolution in the Middle East, it is vitally important that we be mindful of the true nature of these nationalist uprisings in the underdeveloped nations of the world. The true revolutions are not the mere military coups; rather, they are simply the reflections of the broader revolutions of rising expectations and demands of backward and underprivileged peoples whose interests are becoming increasingly more dominant. Mr. Bartlett pointedly notes, and I must agree, that we must recognize and deal with those interests, if in the long run our own interests are to be served.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN WASHINGTON
(Chales I. Bartlett)

WASHINGTON.—Amid the clamor of events which has followed the overthrow of the Iraq Government, the major point has largely been lost that the administration which went down in the dust of the Baghdad streets was a corrupt and unpopular government by any standard.

There may have been agents of the Nasser and even of the Communist underground in the movement which took control of Iraq on Monday but unofficial observers just back from Iraq believe firmly that all the elements of a revolt, untainted by Nasserism or communism, were present in the emerging middle class, army officers, and civilians, who hated the ruling faction with a passion.

It has been impossible to find in Washington this week any United States official, no matter how well informed, who could point to solid evidence of foreign intervention in the overturn.

This was a high-handed autocratic and corrupt government playing an international game that had no favor with the educated middle classes who loathed the heavy hand which Britain had maintained in their affairs for almost 40 years. The wily Prime Minister, Nuri Said, was viewed as the instrument of British policy and accordingly hated as a British stooge.

The young king, Feisal II, was a cipher in the regard of his countrymen, he lacked the oratorical gift which is the essence of leadership among the Arabs. When his grandfather was placed on the throne by the British in 1921, the Arab governor rode at the head of the procession saying, "for Allah's sake, cheer." After 37 years, the Iraquis, who had never cared much for independence on the artificial terms in which it was given to them, still found little to cheer about in their monarchy.

Some who have visited in Iraq very recently maintain that the government was only popular with its top officials and with those who had fat contracts. The corruption was widespread and minor officials who wanted a better job had to make payments up the ladder.

Against this background there was the problem of a painful inflation which made it a struggle for the middle classes to hold the status which they prize so dearly. The average salary of the Government worker is about $150 a month and out of this he must pay for the $57 suit and the fountain pen which are the proud symbols of the educated. Rents in Baghdad are fantastically high and some of this educated class hold as many as 3 or 4 different jobs just to make ends meet.

It is true that the Government had instituted an extensive public works program to bring roads, dams, and irrigation to the country but most of these are up in the mountains and away from the city where they could not be appreciated by the dissidents.

The Arab word for imperialism is "isti'mar" and it means using one's strength to take advantage of the weak. This was the catchword of the Iraq revolt and it was drummed home in every propaganda broadcast because it summarized all the grievances, foreign and domestic, and called to mind not only the suppliance to the West but the harsh treatment, including death and imprisonment, which had been the lot of those who dissented from Government policy.

Nasser is a hero to these people, the experts maintain, because he stood up to the West and because of a mistaken notion that he had rid Egypt of corruption. He has also become the symbol of the national Arab State but there is a surprising expectation that the new Government will move reluctantly to join the Arab republic. Having gained control of some $200 million in annual oil revenue, the new Government leaders are not likely to be eager for a broader association which will make these funds a part of the common Arab treasury. There are also tribal differences in religion which may keep Iraq out of the UAR.

The rule of King Feisal was certainly not government at its best and it is a sad reflection of the intricacies of world politics that United tSates prestige must be tied so firmly to decaying and inflexible governments which will inevitably yield to the ambitious pressures of the middle classes that are springing up in backward countries around the globe. This is a movement which the United States must harness and not oppose or it too will ultimately go down in the dust.

The Middle East Crisis

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, July 24, 1958

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Dead End Street," by Walter Lippmann, published in a recent issue of the New York Herald Tribune; also an article entitled "Preview of Foreign Policy Referendum," written by Arthur Krock and published in the New York Times of July 18, 1958, dealing with the Middle East crisis.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune]

DEAD END STREET
(By Walter Lippmann)

As things stand at this moment, the notion of a summit meeting in the heart of New York City has the characteristic of one of those nightmares in which one feels compelled to do what one desperately does not want to do. At this time, a public confrontation between Eisenhower and Khrushchev would be a ghastly spectacle, almost certain to poison the air still further with charges and countercharges. Moreover, there are great risks that the local police would not be able to maintain perfect law and order during the visit of a man who has in the cosmopolitan city of New York so many embittered enemies. Beyond that, there does not now exist as between Washington and Moscow a basis for negotiations. Both have talked themselves into extreme positions from which it is most awkward to make any concession.

Yet the fact is that the President has been pushed and pulled by the British Government, and by widespread public opinion in Germany, in Scandinavia, in Japan, and elsewhere, to a grudging acceptance of the idea of a summit meeting on the Middle East. Why, we must ask ourselves, do Mr. Eisenhower and Mr. Dulles find themselves between the devil and the deep blue sea, between having a conference which would now be dangerous and refusing to have one which is dangerous too?

They find themselves in this dilemma because they have no Middle East policy and have therefore lost the diplomatic initiative. The right and effective answer to Khrushchev's call for a summit conference was not to refuse it and leave it there, was not to accept it and to be entangled from there on. The right answer would have been to propose the terms of a settlement which included but extended beyond the withdrawal of the marines. Such a proposal would be something substantial to talk about in place of the talk about where and when to talk.

Unfortunately, we do not have negotiable terms of settlement to propose. The Anglo-American intervention in the Lebanon and Jordan was carried out to prevent their collapse. But this was a hurried reaction to the unexpected news from Iraq. It was not a deliberate act of policy.

We find ourselves, therefore, in a dead-end street. The presence of our troops not only does not promise a settlement of the revolutionary condition which caused us to send

them in—the longer the troops stay, the harder it will be to withdraw them without precipitating the disaster they are meant to prevent.

Thus, it is true that neither the Lebanon nor Jordan can be stabilized and made secure without a wide settlement beyond their frontiers.

There is a school of thought both here and in Britain which argues that the only settlement which is acceptable and which will really settle anything will be one which folowed a restoration in Iraq and the elimination of Nasser. They would do now what Eden and Mollet attempted to do at Suez some 2 years ago. They are prepared to defy the Soviet Union and they would by force of arms establish a British-American protectorate in the Middle East.

There is a kind of logic in this view. But those who hold it are living in the wrong century. Relatively speaking, particularly in the Middle East which borders on Russia, the Soviet Union is incomparably a stronger power than was Czarist Russia in the 19th century. The Arab revolution, of which Nasser is the most conspicuous but not the only champion, did not exist at all in the imperial days of the last century. Moreover, and this must not be overlooked, the democracies of the North Atlantic Treaty Organization must be considered. They cannot be counted upon to go all the way in case of a military showdown over an Arab country in the Middle East.

If, therefore, the day is past and gone forever when the Middle East can be stabilized by western military power, we must seek an accommodation with the new powers in the Middle East—namely, with the Soviet Union and with Nasser's confederation.

What other line of policy is conceivable? None, unless it can be called a policy to do nothing but dig in where we are in the Lebanon and in Jordan, and for the rest to trade insults with Nasser and Khrushchev. We shall get the worse of the exchange of insults, in that it is always easier to denounce intervention than to defend it. Let us have no illusions then that we can dig in and sit it out hoping that something better will turn up.

Unless there is a reasonably prompt settlement in the Lebanon with the marines withdrawing, their continuing presence will embarrass us everywhere in the world. They were sent in in order to prove to the Turks and the Pakistanis and others that our military promises will be honored. But if the marines stay on and become an army of occupation, there will be some serious second thought not only among the nations guaranteed but also here among ourselves who must provide the guarantees.

It is, therefore, a very great interest, one might without exaggeration call it a vital interest, of the United States to work out by negotiation an honorable exit for the marines. This may be impossible, given the revolutionary character of the Nasser movement. But it may not be impossible, if it is seriously and thoroughly attempted, given on the one hand the military weakness of the Arab States and on the other their great need of the West in the oil business and in their economic development.

[From the New York Times of July 18, 1958]

IN THE NATION—PREVIEW OF FOREIGN POLICY REFERENDUM

(By Arthur Krock)

WASHINGTON, July 17.—The comments on the Middle East situation made in the Senate this week by Democratic Members merit a listing in the new chapter of history now being written in that area. That is because these comments are a preliminary outline of foreign policy issues on which the Democrats now expect to go before the voters of the United States. But the immediate consequences of President Eisenhower's decision to land marines in Lebanon may postpone a comprehensive submission of this referendum until the polls of 1960. And successful final consequences would alter it fundamentally.

The principal Democratic commentators were Senators MANSFIELD, of Montana; HUMPHREY, of Minnesota; and FULBRIGHT, of Arkansas. There are several reasons for selecting FULBRIGHT's remarks for inspection. He is the ranking majority member of the Committee on Foreign Relations; and because he originated the successful program for the international exchanges of high school and college students his views perhaps attract a larger audience among young people and their teachers in other countries than any other American legislator can assemble.

What FULBRIGHT had to say was brief, and restrained by the current crisis. But, as he noted to his colleagues, if any comment on the mideast events were to be made at this time there had to be some mention of their causes. His enumeration of these did not reach some of the deeper roots of the problem that took hold during the Truman administration. Instead he offered this recent catalog:

The United States continues to have no long-range policy to serve as a guide to the required day-to-day decisions.

THE REASON FOR VACILLATION

It has never (for example) made the fundamental policy decision whether Arab nationalism—epitomized in Nasser—was a force with which we should try to work, or a force which we should oppose. As a consequence our day-to-day actions have vacillated between tempting Arab nationalism with offers of assistance and taunting it with refusals to sell wheat and other petty annoyances.

In the Mideast, as elsewhere, the United States has relied on military pacts and doctrines without relation to the question whether the dangers involved were of a military nature or their solution was possible by military means.

This has caused us to lose touch with the ordinary people. In few of the newly independent countries have we an understanding of the motivations of the common man. In most of these areas the United States has dealt with princes, potentates, big business men and the entrenched, frequently corrupt, representatives of the past.

THE SOURCE OF REVOLUTIONS

There is a question whether we have not been so obsessed with our fear of (International) communism that we are unable fairly to appraise the motivations of such violent revolutions as are occurring in the Middle East. The Kremlin's approval, for obvious self-interest, of these revolutions does not necessarily mean the Kremlin is their dominant force or factor. But, as in the Baghdad Pact and the Eisenhower doctrine, the United States recognizes only one brand of revolution—that which is directed by (international) communism.

Hence people everywhere who aspire to the good life are unable to identify their desires with our policies.

In the meeting of congressional leaders with the President Monday the Senator asked some questions which projected his thought that obsession with (international) communism may blind our authorities to other sources of revolution. But in reply the President and Secretary Dulles were positive that the violence in Lebanon and Iraq was inspired and supplied by a Nasser-Soviet combination of mutual interest. And Dulles referred to the documentation of this with respect to Lebanon by Government intelligence units that was published in this newspaper today.

In his speech FULBRIGHT saw proof of his charge that the United States has lost touch with ordinary people in the fact that our intelligence units were completely unaware of the plot that overthrew the pro-western Government of Iraq. But that was no job by ordinary people. Members of those very classes which FULBRIGHT criticized United States agents for dealing with exclusively conceived and executed it.

To Meet the Education Crisis

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, July 24, 1958

Mr. HUMPHREY. Mr. President, recently there appeared in the New York Times a letter to the editor entitled "To Meet the Education Crisis." This very fine letter calls for leadership in the field of education. It endorses Federal funds for school construction. In fact, it calls for a broad program of increased support for educational needs on a Federal, State, and local level.

I wish to congratulate those who have signed it. They are performing a truly public service.

I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the New York Times of July 11, 1958]

TO MEET EDUCATION CRISIS—FEDERAL LEADERSHIP TO AROUSE PUBLIC IS DEEMED ESSENTIAL

To the EDITOR OF THE NEW YORK TIMES:

We read with great interest the incisive letter of Hon. Charles H. Silver, president of the Board of Education of the City of New York, in your issue of June 27 with reference to the recent Rockefeller Fund Study Committee on educational needs in the United States. We wholeheartedly concur with his conclusion that we can have only as good an education for our children as we are willing to pay for.

The New York Times also published the equally excellent report by United States Commissioner of Education L. G. Derthick, on the competence and quality of the Russian school system. This report, too, in the words of Mr. Silver, should be required reading for every citizen.

Both the Rockefeller and Derthick reports point up the necessity of awakening the American people to the role of the school in our society. It is essential to the accomplishment of this that the administration and the Congress stop sweeping our need for schools under the rug.

The thought that the Federal Government would spend up to $2 billion a year for the next 5 years for school construction would not be a shocking one to the American public, but would be one which they would accept as readily as the fact that we spend over $40 billion a year for our national defense.

MATCHING OF FUNDS

The Nation needs dramatic leadership in the field of education. New school buildings erected with a real assist from Federal funds should spur local school district to do their part toward matching these funds to meet local needs. More than this, once the school buildings are built it would be an

incentive to the States and local districts to fill these buildings with skilled teachers at necessarily increased salaries.

A climate of opinion from the activity of the Federal Government would be created so that education would be given proper consideration by so-called opinion molders. Communities then would more readily vote for local taxes to support education, thus reversing the present trend. Only through Federal leadership with its ability to affect the entire Nation will we be able to meet the present crisis in education.

It must be met now. This too is national defense.

WILLIAM B. NICHOLS,
President,
BETHUEL WEBSTER,
Chairman, the Board of Trustees,
FRANK E. KARELSEN,
Chairman, Executive Committee of Public Education Association.
NEW YORK, *July 7, 1958.*

Scholarships for Higher Education

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. BERRY. Mr. Speaker, I have asked unanimous consent to insert in the CONGRESSIONAL RECORD a letter from the president of one of America's outstanding engineering schools, a man who has given his life to higher education, Dr. F. L. Partlo, of the South Dakota School of Mines and Technology, Rapid City, S. Dak.

His ideas on this proposal for the Federal Government to go into the program of scholarships for higher education are worth the time of every Member of Congress to read. His letter is in part as follows:

In the first place, this whole plan is being put forward as an emergency measure with a 4-year duration. Don't let anybody fool himself regarding this temporary scheme. There isn't anything temporary about it and the promoters of it know very well that it is only the first step in a growing and expanding permanent program. If the Congress enacts this bill it will have another Frankenstein monster on its hands.

Ours is a small college and yet we are able to operate a scholarship program amounting to over $20,000 per year entirely outside of our institutional budget. If the Federal Government goes into wholesale scholarships it seems quite likely that the sources of funds for the program now in operation will substantially dry up—and where, then, is the net gain. Applying the ratio of college age populations to the proposed up to 100,000 4-year scholarships would give South Dakota about 130 per year. Applying to this the ratio of enrollments at the School of Mines and Technology to total in the State would give the School of Mines and Technology approximately 10 such scholarships per year. At $500 each in a 4-year period the annual amount would approximate our present scholarship program. I would prefer that we continue with what we have.

Title III provides for student loans. We now have 3 loan funds which are taking care of our most pressing needs. I do not think there is a real possibility in financing education through borrowed money, but I firmly believe that it could be done through private enterprise and that it does not have to be done with Federal funds. As a matter of fact, the Teachers' Insurance and Annuity Association is making a careful study of this possibility at the present time. Title VI gets into the field of fellowships for graduate education wherein I can see the possibility of a legitimate Federal concern and responsibility.

Title VII has some real interesting and profound potentialities for the do-gooder, the social planner, and the socialistic schemer. In the field of guidance, counseling, and testing we have a fine device for the shaping of youthful minds by a federally centered body through the device of granting or withholding funds depending upon what the State would do with them.

It is my judgment that H. R. 13247 should go down to defeat.

It's a Good Place To Live

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, July 24, 1958

Mr. NEUBERGER. Mr. President, in the 1940 census, Oregon's population for the first time exceeded the 1 million figure, and by 1950 the population exceeded a million and a half. The migration to Oregon has been the subject of millions of words of prose, cast in the form of editorials, tourist news, business analyses, industrial surveys, and, not to be overlooked, letters to the folks back home. No extensive study has ever been made, that I know of, in which the thousands of new Oregonians revealed why they came to this particular Pacific Coast State. I would like to see such a study undertaken. One question that should be asked would find out how many had come to Oregon, left the State, and then returned. This, I am sure, would reveal a definite pattern—migrants who leave and in time return.

A few years ago an article on Oregon in Holiday magazine was bitterly criticized by many Oregonians. The author, H. L. Davis, a novelist and former Oregonian, postulated that newscomers to Oregon stay for a few months or years and then move on. I am persuaded that his postulation would have been more accurate had it also indicated a heavy return trek to Oregon. I offer this as a casual observation, based on the frequency with which I am told, "After we had once lived in Oregon we were not happy until we had returned."

I offer these comments, Mr. President, after reading an editorial entitled "It's a Good Place To Live." A simple, accurate statement, the title is, nonetheless, eloquent. So that it may be properly appreciated, I ask unanimous consent to have the editorial, from the July 15, 1958, issue of the Pendleton East Oregonian, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IT'S A GOOD PLACE TO LIVE

The state department of planning and development, created by the Oregon Legislature of 1957 at the request of Governor Holmes, is engaged in a highly competitive enterprise. Dozens of other States have agencies that are working at the same job, trying to lure industries and business enterprises.

The people who are engaged in this pursuit can talk to prospects on several points, including availability of raw materials, availability and cost of labor, availability and cost of power, gas, and water, markets for products, transportation, warehousing, and storage facilities, taxes, community attitudes, and climate.

These factors vary, of course, in their importance to businesses and industries that are looking for new locations. And it is obvious, too, that some factors are big cards in the hands of some States while others are better left unmentioned.

After touring Oregon last year and writing a series of articles on the economy of the State, we concluded that most of the industries that will come to Oregon will do so because of availability of raw materials. If low-cost hydroelectric energy is in ample supply it also can be a factor in attracting industry. Other factors on the positive side are, it seems to us, less important than those two.

Having arrived at these conclusions, we found extremely interesting a study made by the bureau of business research at the University of Oregon at the request of the State department of planning and development. The June issue of Oregon Business Review has a report on the study, Why Do New Business Enterprises Decide To Locate in Oregon? It is written by the director of the bureau, Wesley C. Ballaine.

According to the study, two factors have dominated in the decisions of owners of business and industries recently located in Oregon. One is availability of raw materials, and the other is a desire to live in Oregon.

The latter factor is an interesting one. After we had made that tour of the State we were asked on several occasions, "Why, if freight rates discriminate against businesses and industries in the Northwest, if big markets are many miles away, if Oregon's tax structure creates hardships for corporations—why, if those conditions exist, have so many large industries located here and not some other place?"

The persons who asked were thinking, we found, of Jantzen Knitting Mills, Hirsch-Weis, Iron Fireman, Pendleton Woolen Mills, and a few others—industries that did not locate in Oregon because of availability of raw materials. We are not sure the answer was correct, but we replied that those industries had been, in all cases, established by Oregonians who preferred to live in Oregon—that that could be the only reason they set up shop here instead of going to areas closer to major markets.

We think these cases bear out the findings of the survey made by the Bureau of Business Research. It found, "A highly significant aspect of this study is the importance given by respondents to a desire to live in Oregon. This was especially true of the nonlumber manufacturing group, that is, the type of industry that can be attracted to Oregon by State and local efforts." The survey learned that 49 businesses had been attracted to Oregon for that reason.

Oregon has some real handicaps when it goes on the prowl for new businesses and industries. But it has some good points, too. And don't overlook that old chamber of commerce line, "It's a good place to live."

Proposed Regulation of Sports

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, July 24, 1958

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Mr. Shirley Povich and published in today's Washington Post, dealing with sports, and particularly with a bill relating to baseball, football, and other sports.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIS MORNING, WITH SHIRLEY POVICH

In contrast to the docile, company-man attitudes of the major league baseball players who testified before the Senate's antitrust committee, the athletes who toil in pro football are saying they don't want to hold still for too much power in the hands of the club owners.

They're kicking up a fuss at the House-passed blank check given the owners of all sports teams and urging the Senate to take a hard look at the bill that would make absolute dictators of the owners in their relations with the athletes.

"Club owners have proven over the years that they abuse the players when they have been given a free hand," said Bill Howton, Green Bay's crack pass-receiving end. As president and spokesman of the National Football League Players Association, he doesn't want the owners freed from court scrutiny of their dealings with the athletes.

This was vastly different from the testimony of the big-shot baseball athletes who are willing to place their fate in the hands of the owners and rely on their bounty. Ted Williams, Stan Musial, Mickey Mantle, and Robin Roberts said, in effect, they were willing to trust the owners.

Theirs could have been slightly prejudiced testimony in view of their delightful experiences with the baseball owners. Williams is currently drawing $125,000 for six months work, Musial is a $100,000 wage earner. Mantle's pay is up to $70,000 and Roberts has been a $50,000 man. The Senate subcommittee didn't summon any of the Nats' $7,000 minimum men, of whom there are a few.

But the football players prefer the Celler bill that was beaten in the House, the one that put the owners under "reasonably necessary" restraints that permitted the athletes to take their grievances to court. They're wary of the House-passed bill granting complete antitrust immunity to their employers. Mainly, they fear they'll have no place to go with complaints except to an owner-paid commissioner.

In fact, the whole pro football industry would be willing to settle for the Celler bill. It would represent a great advance for pro football, putting it on an equal footing with baseball. The latest Supreme Court decision held that football is answerable to the antitrust laws, and the game is in an uneasy position, vulnerable to costly suits by unhappy players.

It is when the subcommittee gets around to questioning pro football on its so-called college draft that it could strike pay dirt. The truths of that situation when fully developed could be sufficient to jolt the Senators into wonderment how the pro football league has gotten away with their unconscionable draft of college boys all these years.

Organized baseball never has presumed that pro fotball's kind of draft is necessary for its game. The baseball people admit that they envy football's ability to get away with the maneuver which takes all choice of team selection away from the graduating collegian, and which eliminates costly competitive bidding by the clubs. But they havent' dared to install the same device.

The pro football people don't give the graduating collegian any freedom of choice. A pro team needing a halfback says, in effect, to the object of their choice, "You belong to us. You will play pro football for this team, at the salary we pay you, or you must find some other profession because no other club in our league will hire you."

It is the purest preemption, accompanied by a barefaced threat of boycott as the alternative of the graduating collegian, who must agree to forfeit his bargaining rights if he wants to play the game. And how did the club come into ownership of the player? That was simple. They drew his name out of a list that appeared on a blackboard at the owners' annual meeting. Simple as that.

The wonder is that Congress has held still for the pro football draft all of these years in the light of the wide notice given the goings-on at the draft meetings. And vastly mistaken is the impression that pro football needs such a draft to equalize the playing strength of the clubs.

The Nation would be outraged if business firms other than football were to use the same tactics with graduating collegians. If such as General Electric, Westinghouse, and Du Pont, in campus interviews were to inform graduating engineers that they had no choice but to join a particular firm, or get out of the engineering business, there would be a huge outcry, plus the demand for respect for birth rights, constitutional rights, and bargaining rights.

H. R. 3

SPEECH
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1958

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 3) to establish rules of interpretation governing questions of the effect of acts of Congress on State laws.

Mr. FASCELL. Mr. Chairman, I support the provisions of H. R. 3, one of the effects of which will give back to the States the right to enforce their State sedition statutes. Such is the purpose of the bill I introduced on this subject, H. R. 1129.

In Florida, our State treason and insurrection laws have been in the statutes since 1868. Since 1941, Florida statutes have made it a felony to advocate by word of mouth or writing the overthrow of our constitutional form of government by force or violence or by any other unlawful means. Additional statutes dealing with this general subject were passed in 1949 and 1951. I was privileged to be a member of the Florida Legislature when in 1953, the Subversive Activities Act was enacted which made it a felony to become or remain a member of a subversive organization.

I supported this legislation then because I felt it was a proper field for State legislation. Every State and all of the citizens within that State have the interest and right to combat subversive influences and activities within their communities.

I introduced H. R. 1129 because I felt the Supreme Court's decision in the Nelson case constituted an unwarranted and unnecessary invasion of the rights of the States in this field. Further, I believe that it was never the intent of Congress in enacting legislation dealing with subversive activities, to deprive the States of the opportunity to enforce their own sedition statutes, or to vest in the Federal Government exclusive jurisdiction in this field.

I am gratified by the overwhelming vote given H. R. 3 in the House.

Presidential Pensions

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. BOLLING. Mr. Speaker, the following editorial from the Kansas City Times-Kansas City Star of Monday, July 21, 1958, makes sense and deserves the particular attention of those who are opposing the Presidential retirement bill:

PRESIDENTIAL PENSIONS A NORMAL OBLIGATION

This should be the week of action on the presidential pension bill. It is hard to see how the recipients of congressional pensions could fail to provide for the highest office of the land.

Reasonable security for a former President or his widow is simply good public policy. It is outrageous to think that the former head of the great United States could be forced to sell the reputation of his office in the marketplace.

Against objections based on political animosities the Senate passed the bill last year. Now the same kind of opposition is encountered in the House. Chiefly it appears to come from some Republicans who don't want Harry S. Truman to have a pension.

This is no issue of personalities. It isn't a question of anyone's feelings for or against Mr. Truman, for or against Herbert Hoover, for or against Mrs. Franklin D. Roosevelt. The bill would be passed for the high office. It would apply to the holders of the office through the predictable future. It isn't a question of whether any individual needs the money. The United States cannot put its former Presidents on charity basis to receive financial help according to need.

A President's responsibilities to the public continue long after he leaves the office. He may or may not continue to be a party leader. The whole country looks to him for informed views on major issues. He must carry a heavy correspondence, the reason for the franking privilege and a clerical staff. He should be in a position to continue the associations with world leaders and American leaders made during his Presidency. He should be able to keep up his end of the entertainment involved in such associations.

It is doubtful that a President can save much, if any, money during his tenure of office. Unless he has money when he takes the office he will have little or nothing when he leaves. Presumably he will be able to get a good price for his memoirs which is a proper and standard method of accumulating something. But memoirs are not a reliable source of income for many years of retirement. Of course the prestige of the Presidency would command a good salary in

private employment. That's the point. The pension bill is intended to make unnecessary that kind of trading on the office.

Except for the involvement with personalities we can't see how this proposal would even stir an argument.

United States Struggles for U. N. Vote

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, July 24, 1958

Mr. PROXMIRE. Mr. President, Mr. Drew Pearson has an extremely disturbing analysis, published in this morning's newspapers, of the great loss of American influence throughout the world caused by our lack of leadership and imagination and our most unfortunate failure to buttress our military power with intelligent, thoughtful, effective, diplomatic know-how.

Mr. President, I ask unanimous consent to have this article printed in the Appendix to the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES STRUGGLES FOR U. N. VOTE
(By Drew Pearson)

The American public does not know it, but all last week and early this week there has been more diplomatic armtwisting, more table-pounding, and more due bills collected by American diplomats at the United Nations than at any other time in American history. The arm-twisting has been to drum up a two-thirds vote in the U. N. General Assembly to get a U. N. police force to take over for the marines and thus get the United States off the hook and off the beaches in Lebanon.

The U. N. vote-getting has not been easy. Here is how some of the onetime friends and allies of the United States have reacted:

In Latin America: Argentina, Brazil, Chile, Venezuela, Mexico have been cool. They argued privately that the good-neighbor policy has become a series of visits by American bigwigs and they are tired of smiling faces behind champagne glasses lifted to toast an empty policy. They point out that they are summoned by American-delegation office boys at the U. N. and told how to vote. They are telling American diplomats that they are tired of voting on instructions from the State Department.

In Europe: West Germany, an anchor member of NATO, has been grumbling against American intervention in Lebanon. Norway, Denmark and Belgium are irritated. The French, though for intervention, are most unhappy over the fact that some 1,800 of their troops have been anchored off Beirut for almost a week, anxious to go ashore, but unwanted.

In Asia and Africa: Japan, which we have depended upon as our chief Far Eastern ally, has been on the other side of the Lebanese fence. Saudi Arabia, which we have wooed and courted, sidestepped an O. K. for the use of the Air Force base in Dhahran, and refused to send oil to Jordan, even though King Saud, less than a year ago, had stationed his troops in Jordan to rescue King Hussein. Indonesia, India, and most African-Asiatic states are against United States.

Remarked one Latin-American ambassador: "How can I possibly explain to the people of my country why we should vote to take over for the United States marines in a little country few of them have heard about and which they think is being occupied solely to protect American oil?"

WHY WE SLIPPED?

In the last few days, some diplomats have been telling each other: "We've got to pitch in and save the United States. We can't allow her to lose face. It was bad enough to have Britain and France shown up as weak powers after Suez. We can't have the same thing happen to the United States."

All the above is not pleasant to contemplate. However, the American people would be guilty of keeping their heads in the sand if they did not wake up to the facts. And these unpleasant facts indicate how badly American prestige has slipped.

The question is—why? The answer, in brief, is that world leadership goes to:

1. The strong.
2. Him who leads.

On point 1, for the last 10 months, it has been obvious that our one-time scientific and military supremacy has been going to the nation which was able to put a ton-and-a-half sputnik in the skies, and was able to test a long-range intercontinental missile as early as May 1957. In contrast, our ICBM, the Atlas, went p-f-f-ft at Cape Canaveral on July 19, the same day Khrushchev was demanding a summit meeting in brutal, bulldozing language.

On point 2, a nation which leads must not be a nation which waits. It must solve problems before they become acute. It must use imagination and inspiration. It cannot rely on bluster and talk. We have been talking big and carrying a little stick. We have been bragging about outer space, but beeping with a tiny sputnik. We have been talking about massive retaliation and agonizing reappraisal when the world knew we weren't going to attack massively with the atomic bomb, and the world has now come to realize that we have to undergo an agonizing reappraisal of our own policy of brinksmanship.

One policy we may have to reappraise is that of policing the world on the other side of the globe—the equivalent of Russia landing troops near our border in Nicaragua, Guatemala, or Mexico.

Squaw Mountain and Fire Control

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. McINTIRE. Mr. Speaker, on July 26, commemoration exercises will be conducted at Greenville, Maine, for the Squaw Mountain Lookout, the first forest fire tower ever erected in the United States.

This will be a signal event, for it honors the institution of a planned defense against the all-consuming fires that once rampaged, unchecked, through our timberlands and threatened to destroy our forests.

Because of the important part forest fire control plays in our national complex, I insert in the RECORD the following report on Squaw Mountain Lookout and its relationship to the development of our Nation's forest fire fighting system:

At the turn of the century, America had no forest fire detection and suppression system as we know it today. Forest fires burned across the country, destroying huge acreages of timberland annually. Few and untrained hands were lifted against the insidious enemy and little, if any, thought was given to detecting fires while they were still small.

Stimulated into action by the severe fires of 1903, several Maine timberland owners, operators, and other interested people began to give their attention to the recurring problem. Names such as Elmer Crowley, William Shaw, W. J. Lannigan, and Payson Viles cross history at this point.

Crowley and Shaw, both associated with the M. G. Shaw Lumber Co., then operating in the vicinity of Greenville, conceived the idea of a permanent lookout on Squaw Mountain. The idea was encouraged by Lannigan and Viles and in 1905 the project was underwritten by the M. G. Shaw Lumber Co.

The lookout was placed in operation on June 10, 1905, with William Hilton of Greenville, now vice president of the Great Northern Paper Co., Bangor, as the first observer, or watchman as he was called at that time.

The first entry in the log kept by Mr. Hilton reads:

Commenced work Saturday, June 10, 1905; clear, south wind.

Hilton served as observer from 1905 through 1908. During the first year he lived at the M. G. Shaw logging camp, making the trip up and down the mountain each day.

The value of Squaw Mountain Lookout was demonstrated many times in 1905. Other lookouts followed in quick succession, and in 1909 all lookout stations in the unorganized towns and plantations were absorbed into the Maine Forestry District upon its creation by the legislature.

Yes, the whole concept of fire control started in Maine, right there at Squaw Mountain. And from the humble beginning, the combined State foresters of this country have built the largest forest fire protection force in the world. Three thousand three hundred fire towers now keep vigil over the non-Federal forest land of America. In 1911, 6 years after Squaw Mountain tower was erected, the Weeks law was enacted by Congress to provide Federal participation in forest fire control. At that time only 61 million acres of State and privately owned forest land out of a national total of 427 millions acres were under organized protection. By 1925 protection had expanded to include 178 million acres in 29 States. Last year more than 395 million acres were being protected.

The year 1925 saw 135,000 acres of our Nation's timberland burned, or 13 percent of every million protected, and the size of the average fire was 280 acres. Last year only twenty-eight-hundredths percent of the protected area was burned and the size of the average fire had diminished to a little over 17 acres.

Total United States expenditure for State and private forest fire control amounted to $3,604,000 for 1925. Last

year expenditures reached $45 million, of which $35 million were State and private funds and $10 million were Federal.

In the early years forest fires were controlled by the States mainly by manpower and hand tools; there was little so-called heavy equipment available. During the last 10 to 15 years tremendous strides have been made not only in efficiency of equipment but also in the number of such facilities used among the various States. Tanker trucks and power pumps, for example, increased in use nationally from 2,170 in 1945 to almost 3,800 in 1957. Only 4 airplanes were a part of State facilities in 1945 compared to 135 in 1957. Over the same period the number of fireline plows swelled from 326 to 1,694 and radios more than tripled in number from 3,356 to 12,452.

Throughout these fifty-odd years Maine has been a leader among other States, both in expanded protection program and increased efficiency. From that early beginning on Squaw Mountain, Maine, now has 113 lookout towers. In addition, there are 160 trucks, 238 power pumps, 2 airplanes, 301 radios, and 2,550 miles of telephone line. Much of this equipment was acquired after the catastrophic fire year of 1947. Today Maine protects 100 percent of its 17 million acres of forest land. Last year only eighteen-hundredths percent of these lands was burned compared to the national total of twenty-eight-hundredths percent, although 726 fires occurred, and the fire season was severe.

This is a record of which Maine citizens may justly be proud. There is also another reason for them to feel particularly proud, for history records that this country's first fire control tower was erected on Squaw Mountain, at Greenville, Maine.

H. R. 13478, a Predator Fish Control Bill Is Urgent Legislation

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. PELLY. Mr. Speaker, each Member of this House has enough problems effecting his own district and constituents, I am sure, without looking for more. Notwithstanding, I am going to discuss momentarily a serious situation in connection with coastal fisheries, in particular those in the Puget Sound and Pacific Northwest waters. However, I am hopeful of especially sympathetic understanding from those colleagues who come from agricultural areas.

Mr. Speaker, when a pest in the nature of a harmful weed or disease spreads through farming countryside, an individual farmer on his own is helpless. Infections like this are public problems and can only be controlled by group measures. Thus we have Federal programs under direction of the Department of Agriculture.

Federal participation is even more essential in the fishing industry since the sea and waters from which the fishery harvest is obtained is all publicly owned. Conservation and control of fishery resources must be a Government function.

In this connection, I recently introduced H. R. 13478 which offers the only practical means of controlling a predator which has been increasing in numbers during recent years in west coast waters and in New England waters, too, I am informed. This predator is a serious source of depletion of our fishery resources. I refer to the dogfish shark which causes great loss of valuable fish and damages the fishermen's gear as well, and like a weed or insect on the land must be controlled.

My bill provides for the payment of bounties on dogfish sharks to encourage the farmers of the sea themselves to reduce the depredations of this predator species of fish.

And, as I have indicated, I seek support for enactment of my bill into law and plead for understanding and support from not only the Members from coastal States familiar with fishing problems but also from those Members who appreciate similar blights in relation to crops and products of the soil.

Because the fishermen of Puget Sound and my State of Washington are suffering on account of the dogfish shark I have been in touch with the Bureau of Commercial Fisheries and the following excerpt from correspondence with this Bureau speaks for itself:

> Those advocating the control of the dogfish shark point not only to their predatory nature, but also to the nuisance aspects where they interfere with the commercial fishing operations. Frequently such large numbers of dogfish are present that the fishing gear is ineffective in capturing desirable species. Control of the dogfish shark would probably be feasible only through their capture by commercial fishing gear. It is hoped that additional technological study will develop new uses for dogfish shark as an animal food which will make it profitable to fish commercially for this species.
>
> During World War II, and the years immediately following, the dogfish was fished extensively for the vitamin A content of its liver. Total catches for Washington and Oregon reached a peak of about 23,000 tons in 1944, but dropped abruptly after 1949 when vitamin A was synthesized. The technological staff of the Bureau has proposed a research program to study the feasibility of utilizing dogfish in pet foods, fish meal, and as food for furred animals. This study would include as well a fundamental investigation of the chemical composition and properties of dogfish designed to yield data of maximum value in promoting the commercial utilization of this species. It is the Bureau's view that the Federal Government can contribute most to the solution of the dogfish problem through the initiation of a comprehensive technological study of this nature.

Owing to the seriousness of the dogfish problem and its effect on conservation of salmon and other fish resources—as that quotation reveals—the Bureau of Commercial Fisheries has instituted preliminary planning for a research study as to the feasibility of the use of these fish by processors in some way such as in animal food.

I have suggested for such a study the use of the staff and facilities of the College of Fisheries of the University of Washington, but implementation of any research of that kind must be delayed until at least fiscal 1960 because funds are not available. Meanwhile the situation is urgent and, therefore, legislation such as H. R. 13478 is needed. I would hope this would be a stopgap yet practical means of controlling the dogfish population.

Let me point out that several studies as to the diet of the dogfish from the stomach analyses show that about two-thirds of the food of this predator is fish of all types and one-sixth is shellfish. Thus the dogfish destroy a vast quantity of marketable fish—a truly fantastic quantity of protein food that should be conserved for orderly harvesting.

Also as I said earlier trawlers and salmon gillnetters suffer an economic loss to their gear in the amount of untold thousands of dollars yearly due to the involuntary capture of nets full of these dogfish.

The Director of the Bureau, Donald McKernan, recently wrote a letter in which he said:

> You are quite right in assuming that they—dogfish—can be best taken by the commercial fishermen. In fact, I doubt that there is any other way in which they could be taken successfully.

This legislation is needed now and I hope Members will support it at the appropriate time. Meanwhile in the Senate a similar measure introduced by the senior Senator from my State of Washington [Mr. MAGNUSON] is being considered. The time for adjournment is short but I hope there is still time to bring relief to the fishing industry.

Still the U. N.'s Business

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very timely editorial which appeared in the Boston Daily Globe on July 21, 1958:

STILL THE U. N.'S BUSINESS

That Nikita S. Khrushchev's demand for a five-power summit conference tomorrow to deal with the Middle Eastern crisis will prove acceptable to the West appears extremely unlikely. The time element has already proved an insuperable obstacle.

There are other major hurdles in the way. Among these is the obvious fact that Khrushchev has so patently utilized this opportunity to distort the record, and as an occasion for laying down the official line of Moscow for the party faithful abroad. These dodges do nothing toward easing matters in the Middle East or solving problems there.

The Russian party boss is also repeating on this occasion the tactics he invoked immediately after the launching of Sputnik I last autumn. Then, as now, his aim was to hustle the West, inadequately prepared, into a summit meeting through threat and beguilement, so as to cash in swiftly on the worldwide concern generated by that demonstration of military prowess.

From the tone and temper of this newest demarche it is clear, finally, that Khrushchev's aims include exploiting to the full the opening presented by the Middle Eastern muddle at the assizes of world opinion in Asia, Africa, and Europe. Candor compels admission that he has already achieved substantial success on this point. Witness the world reaction to his message.

Were these the sum and substance of this latest development, they would mean that diplomatic sparring on the Middle Eastern problem is continuing, and is as dangerous as ever. But there is more to the message than familiar distortions and adroit diplomacy.

Two striking facts stand out. In listing conferees for a possible summit meeting, the Russian has been content to stipulate that but one Communist government—his own—would be represented there. In addition to urging a conference of the U. S. S. R., the United States, Britain, France, and India, he also proposes that Dag Hammarskjold, Secretary General of the United Nations, be a participant.

Thus, despite the thunder reverberating through this highly tendentious document, Russia is recognizing the role of the United Nations as a restraining factor in the crisis. That is certainly reassuring. It adds to evidence, hitherto more or less piecemeal, that the Soviet Union has no present intention of embarking upon military adventures, however determined Khrushchev may be to exploit the West's dilemmas.

Khrushchev's plan further details Moscow's intention of utilizing the U. N. by proposing that any solutions a big power conference might frame should be sent directly to the Security Council for implementing decisions and action. In the Council Russia, of course, holds a veto power. Moscow's approach accordingly foreshadows recourse to the favorite Communist diplomatic tactics—endless wrangling.

In view of the fact that the Soviet delegate only last week vetoed the United States proposal, backed by 8 of the 11 Council members, that a U. N. police force be dispatched to Lebanon and Jordan to safeguard the existence of their governments; and in view of the pledges of the United States and Britain to withdraw forces when such a U. N. police agency is created, it would seem clear that the proper answer to Khrushchev's message should be to press the call of the U. N. General Assembly and seek a new verdict there, where no veto exists. That, rather than meeting at haste at any summit anywhere, would make sense.

Boating Safety

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1958

Mr. BYRNE of Illinois. Mr. Speaker, I support the House's action in passing H. R. 11078, to promote boating safety on the navigable waters of the United States, its Territories and possessions and providing for cooperation with the States in this matter. Our Nation is possessed of an abundance of streams and larger bodies of water. Certainly Chicago, my home city, has a great deal at stake in this bill. When the St. Lawrence seaway is completed, and all Chicagoans are awaiting this important event, the giant ships from all major cities of the world will sail down the St. Lawrence seaway into Chicago's beautiful harbors.

As a member of the House Public Works Committee, and serving on the Subcommittees of Rivers and Harbors and Flood Control, I am vitally interested in navigation projects, flood control problems, and safety measures pertinent to these subjects.

The Third District of Chicago is located on Chicago's southwest side. As such, residents are a bit removed from lake front, and have no true body of water that can be used for recreational purposes. Persons living in areas further south and west in Cook County are still further removed from water recreational facilities. With the advent of water skiing, the ever increasing popularity of the sport of small boat craft, there is a need for safety regulations. I understand that there are now about 30 million people who indulge in the small boat craft. When hearings on H. R. 11078 were held in Chicago, my good friend, Congressman KLUCZYNSKI, presided at them. As he has told us, the committee heard over 70 witnesses, not all of whom were from Illinois but many were from States contiguous to Illinois. The witnesses favored this proposal.

Looking ahead I think is necessary. I hope that residents of my district as well as those in other districts located in southwest Cook County will have water recreational facilities. I introduced legislation recently providing for the conversion of a swamp and marsh area known as the Stoney Creek Watershed into a chain of lakes suitable for swimming, boating and other recreation connected with water. I have introduced legislation to continue the Cal-Sag navigation project. Both of these areas while not actually in the Third District are directly adjacent to it. The residents of these areas would be the beneficiaries of my proposals. New and expanded industries or businesses will develop in this part of Chicago. The number of small craft owners will increase. With this, there will be a great need for adequate safety precautions.

Another consideration is that this proposal which I voted for does not infringe on States rights nor does it permit encroachment into State affairs and private affairs by the Federal Government.

Peace Won't Be Vetoed

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting editorial which appeared in the Christian Science Monitor on July 23, 1958:

PEACE WON'T BE VETOED

The Soviet veto of the Japanese resolution on Lebanon shows clearly the nature of the Russian Communist interest in the Middle East. Moscow's desire is not to promote peace but to exploit discord. Nevertheless, peace has resources yet to be explored in the Security Council and possibly the General Assembly of the United Nations.

First, Secretary General Hammarskjold can do a great deal under the original Swedish-sponsored resolution, which authorized the present U. N. observer group in Lebanon. This does not give all the authority that could be wished, but it does make possible a corps which can serve as eyes and ears to the U. N. and its members.

Second, the Security Council itself, as Britain and the United States are pointing out, can provide all the essentials of a summit conference such as Soviet Premier Khrushchev advocates, and can make it even more meaningful than his plan.

Third, if an appeal eventually is taken to the General Assembly, the West is putting itself in a position to gain rather than lose at the bench of world opinion.

The Council debate has shown how empty are the Soviet pretensions of wishing a real settlement in the Middle East. It has fulminated for withdrawal of American troops from Lebanah, yet has twice resisted the only practical measures which could bring about such a withdrawal and still protect this small nation from externally aided subversion.

Under such conditions it is impossible even to credit the Moscow regime with good faith. Its position is essentially dishonest.

The Soviet Government has tried to bypass the U. N. by its summit conference proposal. Stuck with its challenge of asking an Assembly session, it revived the summit talk as a substitute. It could use a small chiefs-of-state meeting as its propaganda sounding board without the presence of small nations whose security might be jeopardized as Lebanon's has been.

If a direct meeting between heads of state is desired, that can be obtained by the simple expedient of Premier Khrushchev, President Eisenhower, Prime Minister Macmillan, and others acting as their own chief delegates at a convening of the Security Council. This would have the great merit of keeping negotiations in the direct line of U. N. procedure rather than as a substitute for it.

One or two further touches might be recommended, since Soviet diplomacy has been ready to broaden Big Four conferences. The Council should invite President Nasser, of the United Arab Republic, and King Hussein, of Jordan, to attend as representatives of the peoples whose destines are being discussed. And if personnel for an expanded observer group could be drawn chiefly from Asian and African countries, that unit would probably be the more acceptable.

The resources of world diplomacy for peace and security are only beginning to be developed. International communism will find they cannot be stifled by vetoes or propaganda.

More Reasons for Making Hawaii a State

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1958

Mr. BURNS of Hawaii. Mr. Speaker, at frequent intervals during the 85th Congress, I have been privileged to call

to the attention of the Members of Congress the exceptional qualifications of the Americans of Hawaii whom I have the great honor of representing in the Congress. I have continued to point out that while the American citizens of Hawaii are of many racial ancestries, they are nonetheless red-blooded Americans, fully participating in all phases of American life.

I am indeed honored to be able to call the attention of the Members of Congress to the fact that the 121st Signal Detachment, Hawaii National Guard, has been honored by being announced the winners of the National Guard Association Trophy, the Pershing Trophy, and the National Guard (State) Trophy in competition with all other National Guard units. The Hawaii National Guard achieved this outstanding recognition by surpassing equally outstanding units from every State in the Union.

All three trophies are for the highest figure of merit attained by a team in its record practice conducted during the calendar year with .30-caliber service rifles or carbines. Any squadron, group, headquarters, company, battery troop, group headquarters detachment, or similarly sized unit that is federally recognized and which is authorized to fire a .30-caliber qualification course is considered.

Teams consist of all individuals who are carried on the rolls as members of the unit during the period in which firing is conducted.

The National Guard Association Trophy is an honorary award only. It remains permanently in the headquarters of the National Guard Association of the United States, Washington, D. C. It is inscribed with the name of the unit attaining the highest figure of merit of all competing units. The National Guard Association also presents a Certificate of Victory to the outstanding unit.

The Pershing troop award is made to the winning unit in each Army area. They receive a Pershing Trophy for permanent possession. It is also awarded by the National Guard Association.

The National Guard State Trophy is a revolving trophy awarded by the National Board for Promotion of Rifle Practice and is awarded to a unit in a State or Territory to hold for 1 year until called for by the State adjutant general. The National Board for the Promotion of Rifle Practice also awards a Certificate of Victory to each of the winning units.

The 121st Signal Detachment, under the command of W. O. Herbert Hiroshi Nakaya, has demonstrated a high standard of efficiency in training and maintenance, in addition to outstanding technical proficiency with individual weapons. This unit had a figure of merit of 97.50 percent, which not only placed them first in the Territory of Hawaii, but first in the Army area and finally first in the entire country.

Farm Surplus Reserve Great National Asset

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. McGOVERN. Mr. Speaker, for the past several years high administration officials and particularly the Secretary of Agriculture have bemoaned the existence of surplus farm commodities in the United States.

I have taken strong, strong exception to this attitude and have insisted that surplus food is a great national asset if properly used.

A food reserve is an essential national defense component. It can be a boon to our own needy citizens. It can be a tremendous instrument for peace and freedom if used wisely as a basic part of American foreign policy.

On July 20, 1958, I read a most interesting article by Associated Farm writer, Ovid Martin, pointing out that our so-called farm surplus is not really very large in terms of our present position as a leading world power. Mr. Martin says that our food reserves would be quickly exhausted should we become involved in war.

Mr. Martin's article from the Sioux Falls (S. Dak.) Argus-Leader of July 20, 1958, is included as follows:

FOOD SUPPLY SHORTAGE SEEN IF WAR COMES

(By Ovid A. Martin)

WASHINGTON.—The Nation's farm surpluses would melt away quickly should the country become involved in a big new war.

Without doubt, shortages would develop quickly for some items and rationing would be needed to assure equitable distribution and to prevent skyrocketing prices.

Recent developments in the Near East, involving the landing of United States armed forces in troubled areas, have set farm and food officials on a new appraisal of the food-supply situation.

There are some surpluses, but they are limited almost wholly to food raw materials, such as wheat for flour, corn and other grains for livestock and poultry feed.

True, the Government does own stocks of such items as butter, dried milk, cheese, rice, and dry beans. But measured against year-long needs, they are insignificant. Take butter for example. The Department owned nearly 100 million pounds June 1. This represented only about 5 weeks' supply for consumer markets.

The Government holds no stocks of meats. The only surplus available are those held in processing and distribution channels and those represented by livestock still on farms.

It would be possible to step up meat production somewhat, but not for long unless grain production were increased. Present surplus stocks of corn and other feed grains—while at record high levels—represent only about 6 months' requirements.

Only in the case of wheat are the stocks sufficient to maintain a high consumption rate for an indefinite period. Of course, there is a possibility the United States would be called upon to share these supplies with allies.

Now plentiful, sugar would become hard to get in the event of a conflict. That is because his country depends on offshore producing areas such as Cuba, Puerto Rico, Hawaii and the Philippine Islands for nearly two-thirds of its needs. Wars interfere with oceanic movement of sugar.

Much has been said about the milk surplus. About 5 percent of the production has been moving into government surplus stocks—in the form of manufactured products—under price supports.

But this 5 percent would be absorbed quickly through increased civilian and military demands. In wartime, civilians tend to buy more heavily of food. That is because supplies of other consumer goods usually are smaller than in peace time.

Undoubtedly, the meat situation would warrant speedy government action in event of a war. Supplies now are running below a year ago and consumers would like to have more. The per capita consumption is averaging about 151 pounds a year compared with a postwar peak of 167 in 1956.

Egg production is below a year ago and considerably below levels of World War II. Production of poultry meat is larger. But certainly there are no surplus stocks of these poultry items.

The government owns some surplus soybeans and peanuts, raw materials for vegetable oils used in making shortening, margarine and similar foods. These stocks are insignificant from the standpoint of annual requirements.

Of course, agriculture has a large unused productive capacity in the form of cropland idled under crop control and soil bank land retirement programs.

The extent to which this land could be put back to use would be governed to a considerable degree by the availability of additional manpower, farm machinery equipment and supplies.

Nixon Offers a Foreign Policy Plan

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minneapolis Tribune of July 21, 1958. The address of Vice President NIXON to which the editorial refers was an informal talk without manuscript. Because it was so comprehensive, well-reasoned, and convincing, it can be of great assistance to persons who are uncertain as to why it was both right and necessary to go to the assistance of a beleaguered friend, Lebanon. It was placed in the RECORD by my colleague from Minnesota, Senator THYE, and appears on pages 13272–13274 of the RECORD for July 22, 1958.

The immediate objectives were to protect American lives and to demonstrate that the United States can be depended on to support democratic governments, at their request, against aggression from within as well as from without. If independent countries were to have their confidence in the word and the will of the United States shaken, they would have no choice but to bow to Communist pressures and the United States would soon stand alone and in mortal danger. The emergency action in support of hard-pressed Lebanon presented admittedly grave risks; any other course presented greater risks.

But any such action, at best, only buys time and opportunity to devise and put into operation promptly positive programs that will meet the more basic needs and desires of affected peoples; freedom from alien control, economic betterment, and internal democracy—in that order.

The Vice President stated, with equal persuasiveness, the case for such long-range programs, using afresh the ideological weapon of the American Revolution which is more responsible than anything else for the unrest and aspirations that now demand American leadership in satisfying:

NIXON OFFERS A FOREIGN POLICY PLAN

Vice President NIXON made a magnificent defense of the administration's intervention in the Middle East in his speech Saturday at the Aquatennial luncheon for Minnesota's newspaper editors.

Yet even more significant, in our opinion, was his recognition that this action was only a stopgap and what is needed is a new, long-range foreign policy that will recognize and respect the deep desire for change that is being expressed by the people of the Near East, Far East, Africa, and even Latin America.

"Our major problem in the years ahead," the Vice President said, "is to develop more effectively than we have the kind of programs in the information field, in the economic assistance field and in other areas which will identify American policy with the aspirations of these peoples."

Those aspirations, the Vice President emphasized, are: first and above all, national independence, recognition of their dignity as nations and individuals and their equality; second, at a much lower level—but still important—economic progress, and third, at the lowest level at this point, individual freedom.

As NIXON said, this is what the people of the United States and our Government want for ourselves and what we believe our policy is designed to provide and encourage for others. The Vice President pointed out that this message has not been adequately portrayed to the world. We agree. But we would add that too often America's policies have not been designed with these goals and objectives clearly in mind, either.

The Vice President said—and we hope his words were heard throughout the world—that we should talk more about "the promise of the American revolution" than about the threat of Communist revolution. And then he added these significant words:

"The American Revolution caught the imagination of the world one-hundred-and-eighty-odd years ago because we stood then for independence for nations no matter how small, for economic progress and for freedom. We stand for the same things today.

"And our problem in the world is to convince the masses of the people (and) the intellectuals in all the world that the United States and those with whom we are associated * * * are the protagonists of the real, the true revolution, rather than the Soviet Union."

We hope the Voice of America and the other agencies of the United States Information Service are broadcasting the Vice President's speech throughout the world. For it contains the kind of an appeal that too often has been lacking in recent years because of our overriding concern with nuclear weapons, defense pacts, and military aid.

Such defense preparations are needed too—in greater or lesser degree—but there is even more need for the kind of an approach to the people that the Vice President outlined in his speech in Minneapolis Saturday. We hope our State Department can build on the foundation NIXON laid.

Fairfield Jaycees Set Record by Taking the Largest Number National Awards Ever Bestowed

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Winnsboro News and Herald, Winnsboro, S. C., of July 26, 1958:

FAIRFIELD JAYCEES SET RECORD BY TAKING THE LARGEST NUMBER NATIONAL AWARDS EVER BESTOWED

The Fairfield Jaycees walked away with top honors at the Jaycee National Convention in Los Angeles, Calif., last week. They were selected as the outstanding chapter in the United States, located in towns of 5,000 population or less. For this they were presented the Clarence H. Howard award, which is the most coveted award for Jaycee chapters. In addition to this they received six awards for various civic projects. This is the largest number of national awards ever received by a single Jaycee chapter in any one year. The projects were as follows:

First place: Community health.
First place: Public affairs.
First place: Sports activities.
Second place: Publications.
Second place: Interclub relations.
Second place: Youth welfare.

The Fairfield chapter received statewide recognition at the Jaycee State Convention in Myrtle Beach a few days earlier. They were selected as the oustanding chapter in the State, located in towns of 5,000 population or less. They were also selected as the outstanding chapter in the State regardless of population group. The local president, Fred Phillips, was selected as one of the six outstanding chapter presidents in South Carolina.

The Fairfield Jaycees conducted an impressive, well balanced group of civil projects throughout the year.

Last year's officers of the local chapter were F. C. Phillips, president; W. D. Bozard, first vice president; W. J. Arnette, second vice president; F. C. McMaster, secretary-treasurer; H. R. Jones, W. R. Traylor, Tom Weir, M. W. Chappell, E. P. Ferguson, Marion Frazier, directors.

New officers, recently installed, are H. R. Jones, president; F. C. McMaster, first vice president; J. R. Stevenson, second vice president; J. L. Shaw, secretary-treasurer; W. J. Arnette, W. D. Bozard, Alan D. Bogge, J. P. Harrison, W. T. Weir, and Ed Puryear, directors. F. C. Phillips is a national director.

Joint Effort

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include the following editorial, "Joint Effort," appearing in the Newark Evening News of Monday, July 21.

As the Representative of Orange and East Orange in the House of Representatives, I am proud of the fine spirit of intercity cooperation displayed by the two cities. As the editorial points out, our communities must join together to solve the complex problems confronting our urban areas.

As a member of the Housing Subcommittee of the Banking and Currency Committee, I have the pleasant duty of currently helping to draft Federal legislation providing for a long-range extension of the urban renewal program, with additional capital grant authorization.

The editorial reads:

JOINT EFFORT

In crowded Essex County the urban complex produces problems that do not stop at municipal boundaries. Orange and East Orange are taking steps to see that solution of these problems do not stop there either. Moving jointly on commercial, housing, and transit projects, they display a heartening new spirit of intercity cooperation.

Officials from both cities are coordinating urban renewal plans in what David Davies, regional representative of the Urban Renewal Administration termed an effort rather unique in the history of that Federal Agency. A blueprint for revitalizing Orange's fifth ward was doubled in size to 100 acres when East Orange applied for funds to redevelop the Doddtown section adjacent to it.

Noting that housing and business blight do not stop at a city line, Orange Mayor Riley hailed the prospect of working with East Orange on this project as a first step toward regional planning. His counterpart, Mayor McConnell, pledged complete cooperation of East Orange's planning agencies in developing this and other plans to improve living and working conditions in their cities.

With impetus from East Orange both cities last year coordinated rush-hour traffic bans and timing of signals to ease congestion on Main Street. This week planning boards of the two municipalities will discuss how to locate East-West Freeway access ramps so as to serve both East Orange's Brick Church and Central Avenue business districts and Orange's Main Street stores. Their recommendations will be forwarded to the State highway department.

Engineers and consultants are studying an intercity traffic loop that would make Oakwood Avenue and Hilliyer Street in Orange one-way south and Harrison Street, in East Orange one-way north, thereby easing traffic flow in both Oranges.

Isolation of metropolitan communities—often self-imposed—has intensified social and economic problems. They await solution through joint effort.

The Myth of Anti-Americanism

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. W. S. Woytinsky, distinguished economist, describing his observations during an 8-month tour of Latin America. This is the second of two articles by Mr. Woytinsky appearing in the New Leader. The first was introduced into the RECORD on July 18 and appears on pages A6488–A6490.

EIGHT MONTHS IN LATIN AMERICA: THE MYTH OF ANTI-AMERICANISM—2

(By W. S. Woytinsky)

In the course of the 8-month, 15-nation Latin American tour from which Mrs. Woytinsky and I have just returned, people asked us constantly about life in the United States. Elevator boys, waiters, taxi drivers, store clerks, everybody wanted to learn something about working conditions, wages and job opportunities in our country. To go to the United States appeared to be the dream of almost every person we met. High-school pupils dreamed of a United States college education, university students asked about the chance of getting a visa and a job here.

In Santos, Brazil, we asked two teen-agers for the road to Monte Serrat. Learning that we were North Americans, they volunteered to accompany us. They did not let us pay their fare at the funicular railway that leads to the summit and were happy when we accepted a local drink from them—juice pressed from sugarcane right before our eyes. One of them spoke English fairly well; the other understood but could not speak. During the walk they inquired about California, Texas, and various universities. The first planned to go to the United States for good after graduation from high school; the other doubted his ability to face competition in the United States.

More than once sentries at public monuments showed us around, then asked about a visa for this country. On the Copacabana Beach in Rio de Janeiro, two youngsters swimming next to me asked whether I came from the United States. When I said yes, they called another boy who could speak English, and in no time I was surrounded by a crowd of young people, swimmers and divers. They shot questions at me about universities and job opportunities; they were excited and happy to get firsthand information about the "promised land."

The tremendous interest of Latin American youth in the United States is evidenced by the success of the so-called binational institutes. We visited and lectured in many of them. Some counted their enrollment in thousands; occasionally one had more students than the local university. These included not only teen-agers but many professional and business people. Officially, the task of the institute is to teach English and English literature; actually, it introduces its students to North American civilization. We also heard that many Latin American young people are enrolled in our universities; I do not know the exact number, but it must be substantial and steadily increasing.

This interest marks a very important shift in the cultural orientation of Latin American countries. Only two decades ago, families that could afford to educate their youngsters abroad sent them to Europe, mainly to France. Now the United States is the beacon. The new generation of intellectuals returning from this country brings back new customs, ideas, and attitudes. Without prejudice to their traaditional Spanish magnificence and ornamentation, Latin American cities begin to acquire more and more similarity with the United States scene. We observed this, for example, during the pre-Christmas shopping season. The show windows of the department stores in Sao Paulo and Rio displayed our traditional Christmas decorations; even Santa Claus was there, driving his sleigh in the midst of tropical vegetation.

The traditional pattern of thinking inherited from colonial times is beginning to yield to new influences. What is this pattern? Extreme centralization of government; striking contrasts between rich and poor; a deeply rooted conviction that hereditary wealth is the key to politics, and politics the key to further accumulation of land and money; lavish expenditures on ornamentation of the capital city, public buildings, and private mansions; contempt for manual work and often for any economic activity except that based on land ownership and politics.

These characteristics were not equally evident in all countries that we visited, but they are somehow related to what some Latin American writers used to describe as Latin humanism, as opposed to the materialistic and pragmatic United States civilization. We observed vestiges of this heritage from the colonial era not only in such countries as Colombia, Ecuador, and Peru but also in Chile and to some extent in Argentina. There is much less, of course, in Brazil and Mexico.

Yet we also met people of another psychological bent—among the managers of the steel mill in Huachipato, Chile, and the directors of the Cauca Valley project in Cali, Colombia; in business circles in Mendoza, Argentina; among the economic leaders of Mexico and the directors of Volta Redonda and Petrobras in Brazil. The new-type intellectuals combine the refinement and artistic spirit of the old Spanish-American aristocracy with the dynamism, ambition, and vision of modern times. They speak our language even in Spanish.

The political transformation and economic revival of Latin America are manifestations of this major cultural revolution. Each step in this direction narrows the gap between the two parts of the Western Hemisphere, brings our Latin American friends closer to us.

Driving through a Latin American city, one sees signs including the word "Servicio" on some public buildings. It is a reminder that the respective agency has been established by the cooperative efforts of the national government and the Inter-American Institute or the point 4 mission. In any Latin American country one crosses Franklin Roosevelt or Lincoln Plaza, drives along a Roosevelt Boulevard or park, sees a Roosevelt hospital, a Roosevelt high school, or a Roosevelt youth or sport association. The Latin Americans have accepted Roosevelt and Lincoln in their pantheons along with such native liberators as Bolivar and San Martin. The name of F. D. R. is not associated with the Democratic Party, nor is that of Lincoln with the Republican Party. Both signify aspects of United States civilization which touch the heart of Latin America.

One aspect of our economy that has deeply impressed economic thinking and planning in Latin America is the Tennessee Valley Authority. We observed its influence in the magnificently daring Cauca Valley project, which the local inhabitants refer to as the Lilienthal plan because former TVA Chief David E. Lilienthal greatly contributed to its formulation. We also saw its influence on the far-reaching program of integrated regional development in Chillan, Chile, and found it in the regional development programs in Brazil. We visited the foundations of the Papaloapam project in Mexico, which has not yet reached its full extent but promises to become the Mexican TVA.

Unfortunately, not all visitors from this country realize the significance of such links between Latin America and the United States. * * *

The campaign built around the slogan of "people's capitalism" has been successful, in my opinion, but too often our economy has been pictured to Latin America as a General Motors or Ford catalog—an abundance of shiny cars, electrical appliances and gadgets, and no soul.

We also found that some of our businessmen are not successful goodwill envoys. Some express their bitterness about high taxation, about what they consider insufficient tariff protection of domestic industries and, most of all, the timidity of the United States Government in dealing with the monopolistic power of labor unions. Some representatives of American firms also show lack of respect for Latin Americans, describing them as lazy, unreliable and irresponsible. To be sure, we met American business people who were competent and had a deep understanding of local conditions. Yet the fact remains that the attitude of certain persons from the United States is bound to provoke resentment and plant suspicion of this country's friendship for Latin America.

In our lectures, we tried to portray the United States as we see it: hardworking people, deep respect for work in all its forms, opportunity for all as the key to social equality, little respect for hereditary wealth but a profound appreciation of individual success and of individual effort even when it has not been crowned with conspicuous success. We spoke of the United States as a community of free people who have mutual respect and have learned to work together, trusting one another. We stressed that, while the rich people in our country live in the same luxury as the rich in poorer countries, the difference is in conditions of life for the masses. We explained that our mass production is based on mass consumption, on the availability of a broad domestic market created within the framework of our democratic society. At the request of our audiences, we elaborated various aspects of our economic and social structure, always in terms of human relations and human attitudes rather than of dollar and technical achievements.

More than once, the USIA members who attended our lectures told us of their surprice that these features of our system are so seldom presented in United States literature. Perhaps they are so obvious as not to need elaboration in books designed for domestic readers. But here, I believe, is a gap in our cultural work in Latin America. Apparently Washington has made little effort to establish clearly in the minds of our Foreign Service people what aspects of the United States economic and social system can be expected to have appeal abroad.

This confusion has still another implication—namely, that our cultural representatives abroad are not given any reliable yardstick for judging to what extent the people, and particularly the intellectuals, in foreign countries are friendly or unfriendly to the United States. We met instances in which the desire of a country to have its own government exploit its petroleum resources was considered an unfriendly attitude toward the

United States. Even the operation of the railroads by the government was frowned upon. I do not wish to exaggerate the significance of such appraisals, but I fail to see how the vital interests of the United States are affected by a foreign government's policies concerning its petroleum or railroads.

Apart from such preconceptions and within the means at their disposal, I believe that our cultural agencies are doing a respectable job. Their libraries are well organized and attended, and their publications well selected. It would be unjust to hold them responsible for the fact that people abroad are not as well informed about the United States as we would like them to be.

The strongest point in the work of the United States in the countries we visited is, of course, the activities of the International Cooperation Administration (point 4). We met competent and devoted people among our extension agents, educators, engineers, medical men and other experts—men with missionary zeal, clear understanding of their program's purpose and real interest in the people. Every member of the point 4 mission feels himself surrounded by friends in Latin America. More than once when local people spoke warmly of point 4 personnel, we remarked: "They are typical of the United States, they are of the breed that has built the United States and continues to build it." Unfortunately, point 4 remains known only within the communities it directly affects. People on the east coast of Latin America, for example, know little or nothing about its work on the west coast.

The great majority of Latin Americans look to the United States as the beacon of their cultural, economic, and social evolution. The rising tide of anti-Americanism feeling in Latin America is a myth, whether it rests on misinterpretation of the mood of Latin American peoples or on the wishful thinking of our enemies. It is a dangerous myth—the sooner we get rid of it, the better it will be for our policy in Latin America.

Public opinion here has accepted the outrageous behavior of mobs in Caracas, Venezuela, and other places as evidence of a strong undercurrent of anti-American feelings in these countries. This view has been used as an argument for revision of our policy and for increased United States aid to Latin American countries. If this reasoning is correct, my wife's and my own highly favorable observations could be used as an argument against increasing United States aid to Latin America. To my mind, this kind of thinking is utterly absurd. It actually amounts to saying to a foreign country: "If you are not satisfied with the aid the United States gives you, let your hoodlums attack our dignitaries or burn our information offices. Then Uncle Sam will give you more." Thus our aid would become either blackmail or a means of buying friends.

Foreign policy cannot be based on such considerations. It must rest on a clear definition of our objectives in each particular area. What are our objectives in Latin America? To pave the way for the investment of our private capital? To insure our control over the natural resources of foreign lands? To build up outlets for our exports? To influence their economic policy in accordance with principles which we do not apply consistently at home?

For all considerations of this type I would substitute a simple statement: We are vitally interested in the progress of democracy and in economic and social progress in these countries, as the road to prosperity, unity and strength in the Western Hemisphere. This progress can be achieved only through the free individual efforts of the respective nations, but we can and should foster their efforts and contribute to their success.

More specific questions concerning our policy can be answered in the light of this general principle. This principle demands, first of all, revision of our foreign-trade policy in Latin America. When the interests of our domestic producers and consumers clash with those of that area, we must realize that the interests of the latter are not alien to us. Compromises must be sought and found.

Our cultural work in Latin America must be strengthened in scope and depth. We must expand our technical aid and be ready to help Latin American countries financially in their projects, encouraging those that are most promising. We cannot remain neutral in the fight between progressive and reactionary forces, and must not glorify dictators because of concessions they have given to our private companies. Each dictatorship is a setback in progress that we consider vital. We must do our best to dispel the vicious myth that the United States is sympathetic toward reactionary forces in Latin America. This myth is the strongest weapon of the Communists, and is as widespread in Latin America as the myth about the "anti-American" feelings of Latin America in the United States.

Newark in Her Debt

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following editorial entitled "Newark In Her Debt," that appeared in the Newark Evening News on July 21. As the editorial states, Doctor Fried has enriched her adopted land and Newark especially. She takes with her the profound gratitude and affection of her fellow citizens, and their best wishes for continued success and happiness. Doctor Fried translated into action our ideals of democracy and freedom, and her dedicated service toward building better citizens and a better community has enriched the lives of countless families.

The editorial reads:

NEWARK IN HER DEBT

Newark will lose a dedicated and resourceful community leader when Dr. Antoinette Fried leaves next month as executive director of Fuld Neighborhood House to work in East Harlem.

Dr. Fried has spent 13 years at the agency which serves the neighborhood surrounding the Rev. William P. Hayes and Felix Fuld Court housing projects in the central ward. But the fruit of her work stretches beyond these boundaries, even to West Germany, where, under a State Department program in 1954, she advised educators and social agencies on human relations techniques used in the United States.

Cooperation with a variety of groups and progressive—often unique—programs tailored realistically to meet local needs characterize Dr. Fried's work in Newark. Under her direction Fuld House has become the only agency in the city to employ a detached worker to help hard-to-reach youth who on their own initiative would not take advantage of traditionally organized programs. A combination work and recreation program for teen-age boys, operated by the agency in cooperation with the Essex County Park Commission, is another practical result among many of Dr. Fried's progressive leadership.

A cultured native of Vienna, she has enriched her adopted land and Newark especially. She will be missed.

Momentous Week

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Marys (Pa.) Daily Press of July 21, 1958:

MOMENTOUS WEEK

This may be a momentous week in the affairs of man as Uncle Sam strengthens his landing forces in the Middle East and Russia's top brass insists on a top level conference between the Soviet Union, United States, England, France and India on the knotty problem that has been created in Lebanon and Jordan.

The thought persists in United States that if Mr. Khrushchev wants to contribute something to world peace he should operate through the United Nations and muzzle the man who now represents his country in that organization.

You may have heard two able men comment on the troubled crisis on Meet the Press program on your TV last evening, Senators H. ALEXANDER SMITH, New Jersey Republican, JOHN SPARKMAN, Alabama Democrat.

Both agreed, President Eisenhower had no alternative left to him when President Chamaun of Lebanon asked for help. Both men were as one in thinking the United Nations should carry the ball from here on in so United States forces in that country could be withdrawn with speed.

A resolution to that effect was defeated in U. N. Security Council last week by use of the Russian veto, an instrument the Soviet Union has used many times in the past to defeat measures not to her liking.

Mr. SMITH and Mr. SPARKMAN were in agreement Russian propaganda efforts were far more efficient than those of America and may have had much to do with the Arab nationalist movement that has been gaining momentum of late. They thought it would be a fine gesture to invite NASSER to Washington and there show him actual proof we have no desire to expand our territorial holdings or force our way of government on any other race of people.

Since World War II this country has spent more than $900 million in the Middle East in an effort to win friends, but when the showdown comes we find ourselves out on the well-known flimsy limb.

America, the friendliest of all the major powers, has failed miserably in gaining friendships through giveaway programs. It is difficult for one on the sidelines to say just where Uncle Sam stubbed his toe.

For America it has been likened to chasing the pot of gold at the foot of the rainbow, and finding nothing but delusion at the end of the trail.

Every taxpayer in America has contributed of his or her earnings to the wealth that has been sent to the Middle East and other parts of the globe to help other lands,

other people regain their economic equilibrium after the war, and in many instances save them from starvation.

We have been paid back by insults and outright condemnation; part of the price all distributors of worldly goods have encountered since the world began.

Today, because of our generous benefactions we find ourselves up to our neck in Middle East turmoils, a respected representative of the Nation kicked and spat upon in South America, reviled in many European countries where we have been playing Santa Claus since the early days of World War I.

One wonders if it would not be better for United States to withdraw within its own shell, expand her defensive strength and let the rest of the world stew in its own juice.

Shooting War Unlikely Now

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the Editor's Report of William Randolph Hearst, Jr., editor in chief of the Hearst Newspapers, which concerns the present Lebanon situation:

EDITOR'S REPORT: SHOOTING WAR UNLIKELY NOW

(By William Randolph Hearst, Jr., editor in chief, the Hearst Newspapers)

Call it what you will—war of nerves, cold war, hot war—what it is, is a mess. Nevertheless, I don't think it is going to turn into world war III, and I'll tell you why.

I don't mean to imply that it is a mess because of what we have done or that we should have done it sooner or shouldn't have done it at all.

Conditions and circumstances in the so-called Middle East—brought about by the different races and religions and national interests and ambitions, and schemes and intrigue, great wealth beneath the ground in the hands of a few and extreme poverty on the surface suffered by the many—are made to order for Russia's global scheme to bring about the downfall of the capitalistic system and the countries of the free world.

There are two major principles involved. One is moral and involves our belief that countries and individuals should be free to determine their own forms of government by ballot and not by bullets.

The other is oil.

The economies of countries in Western Europe would come to a grinding halt without the oil and petroleum products of the Middle East, better than 60 percent of which they consume annually. It follows, therefore, that if this oil were denied Western Europe these countries would have to go to the Western Hemisphere for it at considerably greater cost, as was done during the few weeks when the Suez Canal was closed a couple of years ago.

I got it from a top government authority in England when Bulganin and Khruschev visited there a couple of years ago, that they had been told the Mideastern oil was so vital to England's very existence that she would have no alternative but fight for it, were there even any possibility of it being denied her.

I believe the way it was phrased was, "rather than be economically slowly strangled to death England would prefer to die fighting."

It is just as vital to the existence of the other western European countries. In other words, the stakes in this game are so high that nobody can afford to run a bluff. Sure as shottin' somebody is going to be called.

There is, too, the added dangerous complication that Nasser has become so committed to the principle of Arab confederation and convinced that he should head it that he, too, has gone beyond the bluffing stage. While he may not have actually committed or perhaps even contemplated the assassination of young King Faisal of Iraq and his Prime Minister, he certainly has condoned it and shown his approval by immediately recognizing the assassins as the de facto ruling government.

It is quite conceivable that the Arab States might some day form themselves voluntarily into a confederation and nationalize the oil fields, in which case the countries of Western Europe would be forced to make the best deal with the confederation that they could. After all, the Arab States would certainly want to sell their oil to somebody.

Normally this continent does not need it and Rusia, who exports oil, does not need it. Therefore, Western Europe would be the logical customer in whoever's hands the oilfields repose.

Russia could probably afford to contract for all of it and run the price up, to force the free countries of western Europe to deal on its terms. However, I don't think even Russia could afford to do that for long.

The West must be gambling that while Russia would like to bring about a situation which would cause such consternation in the West, the Communists will not precipitate the unthinkable destruction of world war III, just to temporarily embarrass the countries of western Europe.

In a nutshell, Europe needs the oil and has it now, Russia hasn't got it and doesn't need it and, therefore, it is doubtful that the Russians would bring about their own destruction (which world war III would do among other things) over the present issue.

Nikita Krushchev told the Hearst task forces on two different occasions that he believes that eventual dominance of communism was inevitable and that time was on the Communists' side. If he honestly believes that, I agree with the thinking of the major Western Powers that he will not risk self-destruction to bring about an end which he thinks he will attain by peaceful means in a relatively short time.

Nasser too believes in the eventual formation of an Arab confederation and he would indeed be a fool, which I don't think he is, to precipitate a global conflict—again with certain self-destruction—for his goal, which he, too, believes he will attain fairly shortly.

As I have said before I don't have a reliable crystal ball—I wish I did have—but my guess is that Bob Murphy, of our State Department, who is now in Lebanon as the ace troubleshooter of President Eisenhower and Mr. Dulles, has the best chance of any western diplomat of easing tension and getting the Arabs at least to listen to our side of the case.

Bob has courage, intelligence, and skill and from what I can gather from Washington he has been given a free hand to play it the way the ball bounces. He enjoys the trust of the Arabs, the respect of the British, and has had the confidence of the President since the time that Bob served as General Ike's diplomatic advisor in the North African World War II campaign.

Among his first duties, I would guess, is to see that President Chamoun, of Lebanon, keeps to his pledge not to seek an unconstitutional second term, and that the election July 24 for a new president takes place on schedule. But I wouldn't be at all surprised if Bob Murphy came up with far more important accomplishments. He's a good man to keep your eye on.

The crystal ball gets real foggy when I seek in it an answer as to whether we are going to oust or deal with the present government of assassins in Iraq. In this connection, I do not see that Nasser's secret meeting with Khrushchev necessarily means Russian intervention. You will notice that Nasser has been talking it up about protecting Iraq, but he hasn't said a word about moving against the American or British troops in Lebanon and Jordan.

The one most likely circumstance of Russian intervention is that Iraq will ask Krushchev to parachute reinforcements into that country, which is exactly what England did at the request of King Hussein, of Jordan. The danger there, though, would be that Russian paratroops might be fighting British paratroops and that could easily ignite the world.

Returning to my belief that the Russians do not want to start world war III, my guess is that they will not play with fire. Since the end of World War II Russia has avoided military contact in any situation other than those with foregone conclusions, such as picking up the Baltic states and maintaining the position of its troops at the end of World War II in Central Europe.

Reaching across Iran to get into an almost certain fight becaues some hot-headed Arab soldier shot his king, I suspect, would not be their idea of a good deal.

My guess—and I hope and pray to God that I am right—is that forceful action of the United States, Britain, and France in seeking to maintain peace and return to the status quo ante, which is diplomatic lingo for "as you were," will prevail.

Soviet Insincerity

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. BYRD. Mr. Speaker, the millions of people the world over who look to the United Nations as the instrument for collective security find the Soviet's constant resort to the veto in the Security Council a discouraging thing. It is most regrettable that the very world agency which was created for the purpose of furthering the cause of peace thus finds its basic purpose flouted by the chronic Soviet dissenter. And yet, even this device of negation utilized by the Russians may serve the useful purpose of exposing to the world the insincerity of the Soviets. Truly, it is by deeds, not words, that nations as well as individuals are judged.

A very able exposé of Soviet insincerity in its U. N. actions is contained in an editorial of the Charleston (W. Va.) Gazette, in its issue of July 22. Captioned "Red Insincerity Exposed by Soviet's U. N. Action," the Gazette's editorial aptly defines Russia's real objectives and then proceeds to destroy the Soviet case.

I commend the reading of the editorial and I include it for the attention of my colleagues. The editorial follows:

RED INSINCERITY EXPOSED BY SOVIET'S U. N. ACTION

If there had been any doubt about Russia's real objectives in the Middle East and

its insincerity in posing as a paragon of peace, that doubt was removed Monday by the Soviet's opposition to the Japanese compromise plan for easing explosive tensions in Lebanon.

The Japanese plan, designed to permit the withdrawal of American marines from Lebanon, simply gives Secretary General Dag Hammarskjold blanket authority to strengthen the U. N. observer organization in Lebanon in whatever way is necessary to protect the political independence of that country.

The United States gave its approval, saying the plan offered a way to get United States marines out of Lebanon. Great Britain followed with an offer to work out a plan with Hammarskjold to permit the withdrawal of British forces from Jordan.

France, Sweden, and other countries threw their support to the plan as a means of settling the danger-fraught situation in the Middle East.

But the Russian delegate, Arkady A. Sobolev, refused to go along. He said the Soviet Union could not support the Japanese plan because it would amount to a tacit approval of the United States landings in Lebanon and the British landings in Jordan. He said it would, in effect, make the U. N. a party to the intervention.

By his actions, Sobolev was overlooking, or ignoring, the very purpose of the U. N., which is to settle disputes and maintain world peace. And if the U. N. cannot intervene when the peace of the world is threatened, then certainly it cannot function in the purpose for which it was created.

While he did not say it in so many words, Sobolev strongly indicated that Russia would resort to its old standby, the veto, to block the Japanese plan. This would be the Soviet's 85th Security Council veto in what can be nothing less than a deliberate effort to keep the world in chaos.

What, we ask, could possibly be wrong with a plan that would accomplish the withdrawal of foreign troops and at the same time set up safeguards for maintaining a small nation's political independence?

The answer, of course, is that such a plan could have only the highest sincerity of purpose in protecting both justice and peace.

But we don't think Russia wants the United States marines withdrawn from Lebanon or the British from Jordan. This would interfere with the Soviet's propaganda machine in its efforts to stamp the West as warmongers and to keep the Middle East in a turmoil.

By its actions in the Security Council, Russia has shown the utter fraud of Khrushchev's five-power peace conference proposal.

And this gives us the big hope that Russia has been so diabolically clever in its scheming that its insincerity will be fully exposed, and fully realized, by all nations of the world, including those in Nasser's sphere of influence.

Residents of Luzerne County (Pa.) Endorse the President's Action in Lebanese Situation

---

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which was featured in the Wilkes-Barre Sunday Independent of July 20, 1958, setting forth the opinions of a cross-section of Luzerne County residents on the President's action in the Lebanon crisis:

COUNTY RESIDENTS SAY IKE WAS RIGHT SENDING UNITED STATES FORCES TO LEBANON

The vast majority of Luzerne County residents endorse President Eisenhower's decision to send United States military personnel into Lebanon to protect American interests there and to safeguard that country from aggression, a survey by the Sunday Independent showed yesterday.

While the opinions, voiced by county residents from Duryea to Hazelton, showed overwhelming support for President Eisenhower's action, there was some criticism that his decision came at a late date.

There also was a sprinkling of we should mind our own business attitudes.

But by far, most of those interviewed claimed that President Eisenhower acted correctly in sending American troops into Lebanon.

Here are the opinions of a cross section of Luzerne County residents:

Joseph Blaski, Hanover Township: "It certainly looks bad right now, but I don't think the President had any other choice but to send the Marines into that area to keep the Communists and their pals from taking over more territory."

William Kennedy, Wilkes-Barre: "The thing had to be called some time, so I guess this was as good a time as any to find out just how tough this guy Nasser is and how much help he can expect from the Russians."

Donald L. Honeywell, Wilkes-Barre: "My only fear is that those countries we thought were friends of ours will not support us now and the American forces will have to be pulled out with a great deal of loss to our prestige."

Abe Drubey, Jr., Wilkes-Barre: "The idea of an all-out war is not a pleasant thought, but the way things have been shaping up, a showdown had to come some time."

Al Ruck, Nanticoke: "No real point in me worrying about it right now. If there's a war they'll call us back soon enough. Of course, I'm not so sure the old uniform and I are still the same size."

Mrs. Betty Pleban, Lee Park: "The President had to have sound reasons for his actions and it's time we called a halt to some of the things that are happening to the free word."

Edward C. Curley, Wilkes-Barre: "I hope all this blows over and that the Russians and their friends get the idea that the United States is not going to put up with any more of their moves to control people."

William Smedley, Kingston: "The President is a former military man and undoubtedly felt that the situation called for the drastic military move that was made. I think most Americans will back him up 100 percent."

Carl B. Olsen, Trucksville: "We're not exactly weaklings from the military standpoint and it's time we stood up to the saber rattling that the Russians have been doing."

Joseph Gunning, 1714 Wyoming Avenue, Forty Fort: "President Eisenhower's decision to send United States Marines into Lebanon is good leadership. To have the Big Stick in a key spot will have a tendency to slow up the policies of Russia. Our action was necessary if any kind of freedom is to prevail in the Middle East."

Chief of Police John Adams, Luzerne: "President Eisenhower's decision to send troops to strife-torn Lebanon no doubt is necessary. I am certain the President consulted with leaders of Congress and Senate before he took action."

Beverly McHugh, 74 South Atherton Avenue, Kingston: "I hope President Eisenhower did the right thing when he sent troops into Lebanon."

Gordon James, Rural Delivery 2, Dallas: "The President did what was right. It was the only choice he could have made if we are to live up to international agreements and preserve the United Nations."

George H. Waters, 99 West Union Street, Kingston, retired Metropolitan agent: "What I would like to know is how President Eisenhower is going to get the marines out of Lebanon, without the Nation losing face. It could be worse if DICK NIXON was in the White House."

Edward Crossin, Mercer Avenue, Kingston, president of the Greater West Side Memorial Post, Disabled American Veterans: "What else could the President do?"

Burgess Jack Dempsey, Wyoming: "I hope that the decision of President Eisenhower to send troops in to Lebanon was not too late. I am inclined to be just a little on the pessimistic side right now."

George Hewitt, 175 Main Street, Luzerne: "The decision of President Eisenhower to send the Marines into Lebanon was for the best interest of the Nation. We cannot continue to put up with the ruthless actions of Russia who are trying to undermine our influence for justice and equality."

Fred P. Gibbons, 970 Wyoming Avenue, Forty Fort: "The President is right. It is about time the Nation told Russia where to get off. Sending the Marines into Lebanon is one way to do it. We have had too many sad experiences, such as dealing with Hitler to procrastinate when it comes to stopping Nasser and the Soviet Government. I am for a strong determined policy."

Jerry Iscovitz, 126 Main Street, Luzerne: "I believe the President acted for the best interest of the American people. Our relationship with dictators and aggressors have been costly, when they are permitted to become well entrenched. We cannot permit the free world to become imperiled."

Mrs. Cyrus Shearer, 31 East Walnut Street, Hazleton, mother of Pfc. James Shearer, one of the Hazleton marines who landed in Lebanon: "First, let me say I am deeply concerned about my son. Our whole family is worried. I don't know whether it was the right thing to do (sending troops in). President Eisenhower is a military man and I guess he knows what he is doing."

John Bove, 536 Wyoming Street, Hazleton, father of Cpl. Robert Bove, the other Hazleton marine landed in Lebanon: "What can I say? The whole thing is a little too deep for me. I can't commit myself one way or the other. I do feel definite U. N. action should be taken and, if needed, other troops from other countries should be sent in. It goes without saying that my wife and myself and all of us are worried for the safety of our son and the other marines."

Attorney Anthony C. Falvello, 35 West Diamond Avenue, Hazleton, a veteran: "There is no question about it. President Eisenhower should have strengthened our friends in the East much sooner. One must consider the valuable oil lands there and it is essential that those oil land areas remain under a government that is friendly to us."

Victor C. Diehm, 627 West Diamond Avenue, Hazleton: "I believe the move was in order. I discovered while traveling through Europe recently that the popularity of the United States was low in many quarters. Many people feel the United States is too vacillating—afraid to take a firm stand on many issues. I believe the recent move will help our prestige throughout the world and I think the U. N. should act promptly and make sure the situation doesn't get out of hand."

George Chisnell, 504 West Diamond Avenue, Hazleton: "I think the move by the President minimized the possibility of a general war. I have the utmost faith in him.

not only as President dealing in civilian matters, but with his military background I believe he is completely cognizant of the strategic timing of the move."

Mrs. John Cembrock, Heights: "There was nothing else that the President could do. I have a son in the Army and I pray that nothing serious will result from the landing of the troops."

Mrs. Walter Cunningham, Wilkes-Barre: "Things are happening so fast that I can't keep up with them. I suppose the President did the right thing. They know a lot more in Washington about those things than we do."

Mrs. John Gilboy, Dallas: "It is about time that some action was taken. We just can't let those Russians push us around without doing something about it."

Mrs. Mary Francis, Wilkes-Barre: "All I can say is that I hope the President's action doesn't mean another world war. I have lived through two of them and this time, everyone will feel the effects."

Mrs. Ann Herring, Wilkes-Barre: "I don't know anything about world problems. Let the politicians settle them."

Mrs. Della Grabowski, Lyndwood: "The President was absolutely right. We had no other choice."

Ernie Sfarnas, 8 North Main Street, Pittston, businessman: "I think it's about time. We made our mistake 15 months ago when the British and French had Nassar hiding in the cellar. We should have helped them, not stopped them."

Louis Schiffman, 104 William Street, Pittston, businessman: "I don't think President Eisenhower could have acted any differently. There was little choice in the matter and I feel he knows what he's doing."

Mary Finnan, 714 Hawthorne Street, Avoca: "I think the President did what was right, but I bet Truman is getting a kick of it since he was criticized for going into Korea. Don't you think the State will go Democratic this year?"

Stanley Turkos, 500 Stephenson St., Duryea, businessman: "I think we beat Russia to the draw. We've got to protect our own interests in all parts of the world."

Mary Norris, 34 North Main St., Pittston, saleslady: "I think the President was right. The Russians have to be stopped from undermining and stealing countries. No one wants war, but the Russians have to be stopped."

Ned Levey, 314 Race St., West Pittston, businessman: "I think it was a good move. President Eisenhower took the bull by the horns after we were pushed to the walls."

Steryl Serfoss, 101 Philadelphia Avenue, West Pittston: "The President carried out the Eisenhower Doctrine passed by Congress with an amendment by Senator MANSFIELD, from Montana, directing aid to any country as long as such aid is requested and is considered vital. In this case, it was both requested and vital."

John E. Romanowski, Nanticoke: "Time will tell whether the action was right or wrong. We are proud and honored to have our son serving with the Marines in Lebanon but definitely worried."

David Jones, Nanticoke merchant: "The United States made a smart decision by moving into Lebanon before trouble started. It should have been done years ago in the case of Hungary."

P. J. Guesto, Ashley pharmacist: "I think we were right but, at the same time, hope it doesn't lead to another war."

Benjamin F. Howells, Nanticoke publisher: "President Eisenhower is to be commended for this action. The United States should take a positive and definite stand and stop being bluffed by the Communists."

Rev. Herbert G. Nahas, pastor of St. Mary's Syrian Church, Wilkes-Barre: "Because of our close contact with the people of Lebanon through the American University of Beirut the American way of life is well understood and dear to the educated youth of Lebanon. They understand our free way of life and as a result of the principals of democracy they have learned at the American schools, both missionary and cultural that we have founded there in Lebanon. I feel that the intellectual core of the Near East in general will be in complete sympathy with the problems facing the free world."

Henry Mack, Laurel Street, Wilkes-Barre: "It's time something is done to bring peace to the world. One thing is sure, you can't underestimate this country of ours. We're well prepared and we can strike anywhere in the world on a few hours' notice. We should back our President in time of trouble."

Ray Ulisch, Wilkes-Barre: "I don't like wars but if they push us around it's time we put a stop to it. We have a military man as President and he proved his ability during the last war. I feel sure he knows his way around now."

Ralph Lorenzotti, South Washington Street, Wilkes-Barre: "We're all worried about fighting wars but if we have to fight Communists then it is time we put our shoulders together. God is on our side and we know we're right."

Frank Yuknavitch, Wilkes-Barre Township: "None of us likes wars but we can't stand being pushed. We have a great country and it's worth defending anytime. Ike must know his job. He has had a lot of experience."

Thomas C. Thomas, Pennsylvania Avenue at Union Street, Wilkes-Barre: "I am in full accord with President Eisenhower. The country of Lebanon is outstanding for its educational background, having the American University in Beirut. Our country as a whole should back our President."

Rev. John Koury, pastor of St. Anthony's Church, Wilkes-Barre: "The idea of Eisenhower is the life of Lebanon. Without the American idea Lebanon would be a mere mouthful for the Republic of Egypt. The people of Lebanese descent in this country are thankful to the United States Government and President Eisenhower for the support of the Lebanon Government."

Tom A. Evans, city treasurer: "The President's action has my full approval. He has proved himself in war and peace and in these troubled times every American should be glad that such a man is at the helm as Commander in Chief to guide our military decisions."

Samuel Thomas, produce merchant: "If it means keeping the Reds from getting a foothold I'm for it, you bet."

William D. Jones, public safety director: "An ounce of prevention is always worth a pound of cure in my book and I think Mr. Eisenhower prescribed the right dosage when he sent the Marines to this troubled spot to make it clear to the whole world that we never let down our friends and allies."

Benjamin Dalassandro, central city bartender: "I am glad to see the Marines move in fast. We have always waited to take the first punch. It's time we got in the early licks to show we mean business."

Attorney Reynold J. Kosek, veteran of 5 years' service in World War II: "I served under General Eisenhower and have great respect for his wisdom in military matters. His handling of the present situation proves, I think, that we have an aggressive Commander in Chief in the White House and that's good for the Nation in these times of international unrest."

Fire Chief Ambrose Saricks: "In our business we have a saying 'stop 'em (fires) when they're small.' The same is true, I believe, in the handling of world affairs. The President was right in stepping in at the kindling point in Lebanon and not waiting until he had a general alarm on his hands."

James Corbett, Navy veteran and ILGWU recreation director: "This time we didn't wait until it was too late. I think the President was right in sending the marines pronto. Looks to me as though the situation is well in hand."

John Bonk, Laurel Run: "It's about time we showed Russia we mean business."

Mrs. Blanche Jones, Laurel Run: "Eisenhower knows what he is doing. After all, he was the military leader for the Allies during World War II."

Walter (Blaze) Martin, Plymouth, captured in north Africa during World War II: "Eisenhower is acting properly to avoid the mistakes of the last war. If the Allies showed a firm hand when Hitler started to grab Austria and Czechoslovakia, we would have had more men to fight for freedom in the first war and maybe he would never have reached Africa."

Stanley Gryskiewicz, Plymouth: "By sending a formidable force to the Middle East at this time, Eisenhower might be doing the world a service. I don't think Russia wants war any more than we do but she understands force better than diplomacy."

Frank Nemshick, Edwardsville: "Our job is to build a strong civilian defense unit at home to prepare for emergency. Let's get out and volunteer for home-front service and leave the international problems to Washington."

Police Officer Gus Snyder, Larksville: "I agree with Eisenhower. That gang with Nasser has been bulling its way long enough and Russia is behind them. See how quick Russia recognized the new group in Iraq. If we leave them go they'll take over all the countries. Give it to them now in the language they understand and we will avert more serious trouble."

William Kelly, Plymouth: "We probably would have avoided a lot of this if we encouraged the British and French to hold the Suez Canal when their paratroopers took it. Eisenhower has the right idea in sending the marines. My old outfit knows how to do a thorough job."

Police Chief Larry Kendig, Plymouth: "There probably was nothing else to do except what Eisenhower did. If we left things go, they would grab up all the small countries and we would really be in trouble. Ike called their bluff and I think they will back down like Nasser did in the Suez Canal deal."

Edward Yob, Plymouth: "Look what happened in Europe, Korea and China where the Communists were allowed to move in before we acted. Eisenhower is profiting by mistakes of the past. He had to offer a hand to our friends or lose face as a military power and champion of the free world."

Joseph W. Urban, 30 New Sullivan Street, Swoyerville: "I believe in defending ourselves. I'm against Communists. If they need me I'll go, even if I was in World War I."

John Fabian, 79 Milbre Street, Swoyerville: "If you have to, you have to."

John Saxon, truck driver, 247 Slocum Street, Swoyerville: "I think President Eisenhower was right in sending troops to Lebanon."

Anthony Janowski, 22 Gillespie Street, Swoyerville: "My opinion is that the American troops should be there."

Sam Dia Maria, 278 Slocum Street, Swoyerville: "I believe our troops should have never been sent to Lebanon. It is none of our business."

Stephen R. Stefanides, 33 Gillespie Street, Swoyerville: "I don't like to see our troops go over there. We should mind our own business."

Sam Slomowitz, 326 Hughes Street, Swoyerville: "I definitely approve the Eisenhower decision."

Steve A. Farris, 274 Chapel Street, Swoyerville: "I am firmly convinced this is a long-range program on the part of the Russians

and against all free countries. The sooner we stop it, the better for all."

John Dorish, Sr., 410 Main Street, Swoyerville: "Personally I feel it is the right move to send troops there."

A Contrast Which States the United States Case

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. BYRD. Mr. Speaker, the sight of Khrushchev shedding crocodile tears is not very impressive. Perhaps, swayed by his own bloated importance, he is going in for broad comedy. In any event, Khrushchev is weeping copious tears over the fact that the United States Marines and soldiers are in Lebanon, at the specific request of the Lebanese Government, to protect that country from aggression by infiltration. Khrushchev finds this most outrageous. He is working overtime to get the last drop—tear drop—of propaganda out of it. He very conveniently forgets that he ordered Soviet military forces into Hungary to crush Hungarian patriots, under the cover of deceit, while pretending that the Kremlin would enter into discussions for the peaceful settlement of the Hungarian uprising. The Soviet doublecross in the Hungarian crisis was one of the most infamous acts in history.

All of this is ably recited in a timely editorial in the July 22 issue of the Charleston Daily Mail entitled "A Contrast Which States the United States Case." For the RECORD, I wish to include the editorial and I commend it to the attention of my colleagues. The editorial follows:

AMERICANS IN LEBANON, RUSSIA IN HUNGARY; A CONTRAST WHICH STATES THE UNITED STATES CASE

By way of clearing its throat and giving due notice, the Soviet Government notes that it will "not remain indifferent to acts of unprovoked aggression in a region adjacent to its borders."

For the Soviets this is fairly polite talk and fairly reasonable, too. The United States would say exactly the same if the Soviets, or anyone else, made an aggressive move in the direction of Mexico, Venezuela, or Paraguay.

Since the Monroe Doctrine, the United States has taken an unfavorable view of European interest in American affairs, and we may gain some insight into Soviet thinking simply by imagining what the United States would do if Soviet marines plied ashore on the beaches of Vera Cruz.

What remains to be decided, then, is a twofold question:

Is the Marine landing at Beirut an act of aggression—unprovoked or not?

The Soviets excluded, how will the rest of the world look at it?

As to the first the evidence seems to be on the American side. The invitation to land was legitimate enough. The act itself seems to have taken place in an atmosphere of peace and good will. No one, it is worth noting, is being shot at, and no one has been killed. If this is aggression, it is a fairly new and generally wholesome variety.

As to the second question—whether the rest of the world will lean to the American or the Soviet interpretation—the final answer is not available yet, but the voting in the United Nations suggests the trend. Save for Sweden and Secretary General Dag Hammarskjold, the rest of the members accept the American view: That this is not an act of "unprovoked aggression," as the Soviets have it, but the gesture of a great power toward one of its firm allies.

If further argument is required, it might be pointed out that American intervention in Lebanon is considerably less aggressive than Soviet intervention in Hungary. On that contrast, the United States might well rest its case.

Tenth Anniversary of Congregation Beth Hillel of Washington Heights

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. ZELENKO. Mr. Speaker, under leave to extend my remarks and with the unanimous consent of the House, I am pleased to set forth an historical summary of the Congregation Beth Hillel of Washington Heights in my congressional district.

Congregation Beth Hillel was founded in 1940 through the initiative and energetic efforts of Samson Schmidt, who, an American by birth, had returned to this country in 1932 after having lived in Munich for several decades. During the following years he kept in touch with the ever increasing number of his coreligionists from Munich who were seeking a haven from Nazi persecution in New York City. Being aware of these Jewish immigrants' need for a congregational bond, Samson Schmidt began to pursue the possibilities of establishing a replica of their former congregation. This plan took on concrete form when in 1940 their long-time rabbi, Dr. Leo Baerwald, arrived in New York and expressed his readiness to assume once again the responsibility of serving as spiritual leader to his reborn congregation. By that time the number of Jewish immigrants from Munich living in Washington Heights had increased to several hundred. Due to the tireless efforts on the part of Samson Schmidt and Rabbi Baerwald, in collaboration with other dedicated men and women, the new congregation Beth Hillel was founded in 1940. Its first president was Dr. Herman Schuelein, whose well-known name and highly esteemed personality added to the prestige of the young congregation.

During the high holy days of that year, inaugural services were held at the former Paramount Building in Washington Heights. From the outset the large attendance, even at the regular Sabbath services, augmented by numerous nonmembers living in the neighborhood, bespoke the great need for such a congregation in that area.

According to the classifications customary in the United States, Beth Hillel may be considered a conservative congregation. Services were conducted in the order of the old Munich prayerbook, retaining also the familiar cantorial melodies. Due to this familiarity the congregation, from the very beginning, felt at home in the services held in their new country. During the early years, in the interest of the older generation, sermons were delivered exclusively in German. This was not only a linguistic expedient, but it also strengthened the common ground of thinking and raising questions. However, in recent years, especially under the leadership of Rabbi Dr. Hugo Stransky, who took over in 1955 from Rabbi Dr. Baerwald, for the sake of the younger generation, and as their elders have become more familiar with the language of their new country, sermons have been given alternately in German and English. English has also been the language of teaching in the religious school from its inception as well as of all cultural and social activities sponsored by the youth group and by the younger members of the sisterhood.

In 1941, the newly founded Congregation Beth Hillel was greatly strengthened by its merger with a kindred group from Nuremberg. Under the leadership of their former rabbi, Dr. Isak Heilbronn, whose untimely death occurred in 1943, and the trustee, Richard Jung, a number of Jewish immigrants from Nuremberg had at first joined an existing American congregation in Washington Heights. Finding that this solution did not meet their need for spiritual and cultural cohesiveness amidst the many difficult adjustments necessitated in the new country the members of the former Nuremberg congregation then decided to join their brethren from Munich so as to be able to worship once again in their familiar tradition.

The expanded Beth Hillel flourished under the joint spiritual leadership of Rabbis Baerwald and Heilbronn and to Richard Jung's dedicated collaboration on its board of directors. By the end of the forties the family membership had increased to about 2,000 souls, for whom the old Paramount Hall now proved wholly inadequate, even including other rooms in the same building where subsidiary services were conducted during the holy days. The growing religious school also pointed up the need for larger, more appropriate quarters. In September 1948, on its 8th annversary, Beth Hillel was able to inaugurate its own building at 571 West 182d Street, originally built by the Government for post office purposes. Thanks to the generosity of the congregation it was possible to purchase this building and to commission the architect, Fritz Nathan, to rebuild it as a synagogue and Jewish center.

Since that time Beth Hillel of Washington Heights has been growing further; not only in membership, which now amounts to about 750 families, but also in its cultural, educational, and social programs. An active sisterhood, parents' association and youth group, a dedicated Chevra Kadisha, a substantial and informative bulletin; these are some

of the aspects of congregational life which strengthen the bond among its members, under the administrative guidance of a board of trustees of 24. The presidents of the synagogue were Dr. Hermann Schuelein, Richard Jung (who died in 1957), Louis Bauernfreund, and Dr. Leopold Landenberger, and at present Dr. Paul Simon.

When Rabbi Baerwald retired in 1955, he continued to take a lively interest in the affairs of Beth Hillel. Under the leadership of the succeeding Rabbi, Dr. Hugo Stransky, the congregation has continued to grow in vigor, incorporating in its program many features adopted from its American counterparts and involving the younger members for more active participation. Dr. Stransky has had a most distinguished record as a religious and civic leader. He is a native of Prague, Czechoslovakia, where he served for 9 years as rabbi. During World War II he was a rabbi and Army chaplain in England; from 1947 to 1951 chief minister of Melbourne Hebrew Congregation, Melbourne, Australia; and from 1952 to 1955, principal rabbi in New Zealand.

Right-To-Work Laws

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1958

Mr. ROOSEVELT. Mr. Speaker, the following statement on right-to-work laws by Bishop G. Bromley Oxnam is one that I believe contributes significantly to the case against such legislation. The broad point of view which Bishop Oxnam presents cuts across the lines of self-interest of either labor or management, and is therefore an important consideration of the merits of the case. Under leave to extend my remarks, I include the text of his message in the RECORD:

THE RIGHT-TO-WORK LAWS

(From an address by Bishop G. Bromley Oxnam, Baltimore Conference, Westminster, Md., June 7, 1958)

So-called right-to-work laws are fraudulent. They are neither intended nor designed to guarantee work or to establish the right to work. These laws are sponsored by the same reactionary forces that once sought to destroy labor organizations. When the churches in 1908 declared, "The churches stand for the right of labor to organize and to bargain collectively through representatives of their own choosing," men of similar mind declared the social creed of the churches to be radical and subversive. Yesterday, intelligent and two-fisted individualists sought, by the use of the labor spy and the black list, by intimidation and force, to destroy the labor movement. Greedy and undemocratic powers that maintained the 12-hour day and by every device from company housing to depressed wages sought to resist the introduction of democracy into the economic order are among those who today sponsor these right-to-work laws. The public is being deceived by the machinations of these stupid men who misrepresent the wise and far-seeing leaders of contemporary business who long since have seen the wisdom of dealing with organized labor, of meeting at the bargaining table, and of using the mind instead of the fist to reconcile differences.

Americans believe in the right to work. They resent the parasite, and see work as an obligation. But just as the Communist deliberately misuses such worthy terms as "peace," "democracy," and "justice," so, too, clever crafty and highly paid public relations experts have designated these endeavors to weaken labor as right-to-work laws. They would return to the jungle of industrial struggle, instead of marching forward to the bargaining table with its sensible and scientific cooperation.

Actually, a sanctimonious subterfuge is being foisted upon the public. The real purpose of these laws is to deny both management and labor the right through collective bargaining to establish a relationship wherein all of the workers belong to a union and, through representatives of their own choosing, bargain collectively with all of the employers in a particular industry, whether local or national, through representatives of their own choosing.

The executive board of the division of Christian life and work of the National Council of Churches has declared "that union membership as a basis for employment should neither be required nor forbidden by law: the decision should be left to agreement by management and labor through the process of collective bargaining."

The board of social and economic relations of the Methodist Church has stated, "Such laws are miscalled 'right-to-work laws,' since they do not oblige anyone to give an individual a job. * * * We hold that 'union membership as a basis for continued employment should be left to agreement by management and labor, through the process of collective bargaining.'"

The archbishops and bishops of the Roman Catholic Church in Ohio have said, "There are certain abuses which sometimes creep into the labor movement, but we are convinced that 'right-to-work' laws are not the proper means to correct them. * * * As to the present issue before the electorate in Ohio, we are convinced that a 'right-to-work' amendment would not solve our problems, but lead to a more intensified struggle for domination and thus postpone an era of peaceful cooperation."

The Reverend William J. Smith, S. J., director of the St. Peter's Institute of Industrial Relations in Jersey City, N. J., has said in a pamphlet entitled "What's Wrong With Right-To-Work Laws," a pamphlet that carries the imprimatur of Patrick A. O'Boyle, Archbishop of Washington, that "the one right that a misnamed 'right-to-work' law touches upon directly is the right of freedom of contrast between union and management. It denies to both these parties the right to agree voluntarily to a union-shop contract." He refers to the union shop as one where "a company and a union agree voluntarily that all employees represented by the union in the plant should become members of the union." This is based upon the principle "that the worker who is sharing the benefits of the collective bargaining contract should have sufficient sense of social justice to carry his share of the cost." Father Smith continues, saying, "A Taft-Hartley collective-bargaining contract covers all employees in the bargaining unit. The union becomes the exclusive legal agent of all the employees. The benefits accruing from that contract are bestowed upon all without discrimination. The full weight of supporting that contract and its legal agent, however, falls only upon the beneficiaries who volunteer to become union members. In our opinion, it is sheer inconsistency to state that all the burdens of that contract should fall only upon some of the individuals covered by it."

The Protestant churches in Ohio have spoken through the general assembly of the Ohio Council of Churches, saying, "We urge the citizens of Ohio to reject legal proposals which will make either the open or union shop compulsory. Such proposals are undesirable and incompatible with the development of such management-labor relations as are in accord with the public interest."

Current exposure of corruption in some unions has been seized upon by those who would destroy all unions to foster right-to-work laws. The high standards of integrity and the democratic practices of the great unions of this nation are not known to large numbers of people who think of all labor as led by corrupt tyrants. The achievements of American labor in raising the standards of living, carrying democracy to the democratic order, ridding the American labor movement of subversive elements, and of maintaining a stable economy are matters of proper pride and constitute a fundamental bulwark against the inroads of totalitarian and atheistic materialism. The right-to-work law means a return to the battlefield. The most significant progress has been made in industrial relations where the workers belong to the union and the union, through its representatives, meets management, through its representatives and together they think out the problems that should not be fought out.

The law requires an employer to bargain collectively with his employees when, after a properly supervised election, the bargaining union is decided upon. It is far wiser to have all of the employees belong to that union, sharing in their obligations as well as in their benefits. Even if there is disagreement upon this proposition, a law that forbids employers and employees from entering into agreements to establish a union shop is in no sense a right-to-work law.

For purposes of illustration, we Methodist ministers belong to an annual conference. Agreement has been reached in the democratic general conference of the church where our laws are passed concerning membership in an annual conference. All ministers who are to be appointed to our churches by a bishop must belong to the annual conference. The general conference determines the educational qualifications of our ministers. The annual conference votes upon the admission of members to the conference and insists that certain standards shall be maintained. The effect of a law similar to the right-to-work laws in methodism would mean simply that any individual who wanted to serve in one of our churches might do so, if the church wanted to employ him. Before very long, our standards would be gone and the whole responsible system based upon law would break down. The doctors have their medical societies and maintain their standards. A right-to-work law carried out in the medical profession would mean that subject to State law, any doctor, no matter what school he graduated from or whether ne graduated from any school, might go out and practice medicine. It would be solely up to the person who wished to employ him. Lawyers who have their bar associations may well ponder these right-to-work laws. The purpose is not right-to-work. The real purpose is to weaken and eveuntally to destroy the democratic labor movement.

Yesterday, the great insurance companies were under investigation in New York. The makers of munitions were investigated, so too the powerful financial agencies of the country. There was much that was discovered that needed proper control. No one is objecting to an investigation of corruption in the labor movement or anywhere else. There are practices that are not only immoral but ought to be criminal. The right-to-work laws have nothing to do with the question of corruption in business or in

labor. They are a dangerous proposal, conceived in hypocrisy, and proclaimed in Pharasaic deceit. The forward-looking businessmen of America who have long since recognized the wisdom of the organization of labor and the propriety of collective bargaining should speak with single voice to strike down this pretense.

The Responsibilities of the Negro Press

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. POWELL. Mr. Speaker, one of the most vital and important institutions for keeping alive the democratic traditions of this Nation is a free and unfettered press. Newspapers of America have, for the most part, sought to live up to their responsibilities as quasi-public agencies, in the belief that an informed public is an alert public, ever sensitive to possible encroachment both from within and without our borders.

Over 150 American newspapers are published primarily for Negro readers, and it is particularly true that these papers, weeklies, except for two dailies—Atlanta, Ga., and Chicago, Ill.—have rendered exceptionally distinguished service with sustained editorial support to the high principles of our Constitution. In so doing, they have served by helping to keep America strong.

A few weeks ago, the publishers of these papers, the National Newspapers Publishers' Association, were addressed by the President of the United States. The occasion was a summit conference called in the Nation's Capital, bringing together Negro leaders from every section of the United States.

Shortly thereafter, the group met in an annual session in Philadelphia, Pa., to consider, among other aspects of their publishing enterprises, the manner in which Negro newspapers might further live up to their responsibilities and obligations to the people of America.

One of the panels of this conference was addressed by Mr. M. A. Lockhart, director of advertising and promotions of the Amsterdam News, a great newspaper published weekly in the city of New York. The Amsterdam News, I am proud to state, is a potent factor in informing the Negro public of Metropolitan New York concerning contemporary social, economic, and political issues.

Excerpts from Mr. Lockhart's address before the distinguished National Newspaper Publisher's Association follow. They are particularly pertinent to the responsibilities of the American press in that Mr. Lockhart pulled no punches in urging his listeners to maintain only the highest standards of journalism; especially in relation to the Negro consumers, who annually pour some $17 billion into our American economy.

Quotes from Mr. Lockhart's address:

The United States Supreme Court's decision, in 1954, on public school integration, marked one of the most momentous milestones in American race relations. Although it concerned the educational world primarily, we can accurately state that it has already had far-reaching effects on the business community.

Newspapers and other forms of advertising media have paused to take a good long look at the Negro market. What they see is largely an image created, for the most part, by the Negro newspaper. For this, we can take a bow; since there can be no gainsaying the fact that Negro citizens, both individually and organized, have depended on their own papers to help muster public opinion, behind the quest for what we call first-class citizenship.

It follows in logical sequence, therefore, that if we helped create what amounts to social revolution, we must not permit ourselves to fall victim to the changes we have sired. Rather, we should, after making an accurate estimate of the current situation and finding ourselves in a deep hole, regard that hole as a foundation upon which to build for the future. * * *

Negro publishers have become step-children in the advertising family, largely because they have failed to live up to the responsibility inherent with the quasi-public status we seek to enjoy.

The fact that lineage in Negro papers has slumped to a danger point is due to the fact that we have not lived up to the rules of the game. The past decade has seen the newspapers of the Nation challenged by TV and radio to the point where we have ultra-selectivity, and no publication is going to receive anything better than token recognition unless through sheer merit.

The basic need is to build a bridge of understanding and information between the Negro papers and the advertising world; the agencies, the media directors, and plans boards. If we want to be a part of top policy, then our policies must match top policy, both in standards and requirements. Without attempting to sermonize, suppose we analyze some of the basic shortcomings we need to overcome.

Research: The science of finding out what people buy and want. How pitifully little research is conducted by Negro newspapers.

It was President Eisenhower, I believe, who said, "In a free economy, people do not always buy just because they have the money. Theirs is the sovereign right of choice."

Most certainly, we should make factual and documented information about the Negro consumer—his wants and aspirations—a genuine and not a conjured up part of our selling tools.

We have likewise failed to give any semblance of hard-hitting merchandising support to our advertisers. Even though we are aware of the hand-in-hand relationship between advertising and merchandising, we allow pinch-penny attitudes to color our thinking.

These are just some of the areas of operation where we might pause for reappraisal. Among others are proper editorial support for the product we advertise, technical deficiencies, and above all, the editorial content of the papers themselves. Certainly, far from being least in importance, the reading content of our papers is generally not up to standard as far as adequate coverage is concerned.

In setting our sights to the future, it might be well for us to make partnership our goal. Not partnership in the strictly legal interpretation, but rather as associates in the chosen task of making this American economy a fabric of such durable and unpiercable composition, with the free interchange of information and ideas leading us on to the ultimate democracy for which we strive.

Community Cooperation

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 4, 1958

Mr. SANTANGELO. Mr. Speaker, as a Congressman, I believe that a Representative should remain close to his people and should know the needs of his community. A legislative forum is one of the best means for a Representative and his constituents to exchange their ideas for mutual benefit. I have worked closely with parent-teacher associations, trade union groups, fraternal orders, athletic clubs, churches and synogogues, tenant organizations, civic groups, and have received the benefit of their views.

On May 22, 1958, I cosponsored a legislative forum. A summary of the discussion and results will prove interesting reading.

The first annual legislative forum sponsored by the East Harlem Council for Community Planning and the Yorkville Civic Council with Congressman ALFRED E. SANTANGELO was held on May 22, 1958, at the Ruppert Brewery at 1639 Third Avenue, New York, N. Y.

The purpose of the forum was to explore areas of particular concern to the Yorkville and East Harlem communities and areas where the various agencies and community groups might be able to make a contribution by working together. The nonpartisan forum was mainly directed toward suggesting legislation to assist these goals with the idea of making the various, city, State and Federal legislators aware of the proposals adopted by the forum.

After the opening address by Rev. George Todd, chairman of the East Harlem Council of Community Planning, indicating the purpose of the conference and welcoming the participants, the conference was divided into four separate panel discussion groups as follows:

Housing in East Harlem: The chairman of this panel was Hortense Gabel, deputy State rent administrator. The panel speaker was Herman Cohen, executive director of the legislative committee on housing and multiple dwellings.

Housing in Yorkville: Victor Remer, assistant director of the Lenox Hill Neighborhood Association, chaired this panel and Robert I. Randall, treasurer of the Citizens' Housing and Planning Council, was the speaker.

Youth and schools: Hugh K. Johnson, acting chief of street club work for the New York City Youth Board, was the chairman, and Jean Rubin, staff associate for public affairs at the Community Service Society, was the speaker.

Economics and the consumer: Commissioner Edward Corsi, executive director of LaGuardia House, chaired this panel. Murray Kempton, labor columnist at the New York Post, was the speaker.

PANEL SUMMATIONS

Housing in East Harlem

Mrs. Gabel eloquently described the East Harlem community—the dilapidated tenements, the overcrowded rooming houses, the thousands of families displaced to make room for the gigantic housing projects which will soon house 25 percent of the population. She made a plea for more intensive and imaginative planning, for the utilization of underoccupied, underused or badly

used land, and lastly, for the construction of scattered smaller housing projects better related to the community.

She was joined by Mr. Cohen in outlining the various legal tools which can help relieve and correct our inadequate housing conditions. The rent control laws still necessary in the face of the continuing housing shortage, the Sharkey-Brown-Isaacs bill which can be the key in promoting the racial and economic integration of our neighborhoods, the State neighborhood slum prevention plan which would make it possible to preserve the character of a neighborhood through rehabilitation or construction of various kinds, and the Mitchell Lama law which would fulfill what may now be our greatest need—middle income housing.

Public interest, participation and pressure were held, both by the speakers and the audience, to be the keys to the enforcement of existing laws, to the promotion of new ones as needed, to the proper functioning of the various city agencies, and even to securing vacant land for future building.

Housing in Yorkville

Both Mr. Remer and Mr. Randall described the serious and growing housing situation in Yorkville. It was noted that thousands of Yorkville families have already been evicted and many thousand others face eviction for the erection of high rent luxury apartment houses in New York's new garden spot. The problems facing elderly people and others on fixed incomes were explored as well as the difficulty in securing adequate new apartments at moderate and low rentals. Accordingly, the 7 proposals adopted by the panel follow:

1. The establishment of a central city relocation in which private real estate interests could participate. This group would set fair standards, list potential relocation sites, synchronize demolition and building schedules, etc.

2. Compel builders to relocate as part of the requirements of procuring certificates of eviction. (Lack of free housing market). This would mitigate tenant hardship and facilitate repossession of properties by reputable builders.

3. Persuade the comptroller to utilize more frequently the tax abatement powers he possesses to stimulate new low and middle income development and the rehabilitation of existing structures.

4. Persuade private, nonprofit agencies, to sponsor Mitchell Lama construction for the desperately needed low-middle income families.

5. Develop some small, scatter site, public housing units in Yorkville.

6. Develop a master plan like the one being developed in the West Side project area by the planning commission to insure upgrading and to sustain balance. (This might be done by a total regional zoning code plan which would be set up to ensure the building and/or rehabilitation of diverse kinds of housing.)

7. Start to build immediately on vacant areas all over New York, under existing Federal legislation, temporary, but good basic housing, to shelter families in transition because of either public or private construction or rehabilitation.

Youth and the schools

Mrs. Rubin presented to the panel a comprehensive view of existing services and the obvious gaps in service available to the youth in the community. Both the speaker and the chairman made reference to inadequate budgets for casework services, shelter care, out-patient mental health care, and welfare assistance. The unmet educational needs of the community were explored with suggestions that existing remedial reading classes be increased, that the bureau of child guidance secure additional financial contribution, and that preemployment continuation facilities be expanded. The recreational needs of the area have not been satisfied. A recent request for 10 new summer community centers was rejected without even 1 such center authorized. A communitywide program with various agencies lobbying most actively for increased expenditures for the youth was advocated. It was felt that legislation currently pending in the Congress could be of real assistance in providing tools for the youngsters in the area. Federal aid to education, federally endorsed scholarship grants, and Federal funds for child welfare services were cited as examples.

Economics and the consumer

Mr. Kempton discussed the lack of productivity involved in many industries today and compared the desire of the automobile industry to produce larger and more chrome-spangled cars with the need for more small and simple cars. He suggested a broad hospital-construction and roadbuilding program, stating that hospitals and roads were needed regardless of the salutory effect that such programs might have on the sagging economy. Mr. Corsi, drawing upon his vast experience in labor matters in New York, participated in the discussion of the problems of the present recession. Congressman SANTANGELO, who was present for this panel discussion, reported on the antirecession bill he had introduced and called for increased and extended unemployment-insurance benefits.

PLENARY SESSION

Following the panels, a report was made to the entire assembly of the progress in each of the areas. Reverend Todd then introduced the keynote speaker, Congressman SANTANGELO.

Congressman SANTANGELO emphasized the changing nature of the community of East Harlem and Yorkville and the related problems created by the economic and social transition there. He pointed out that the objective of our housing and social program is not only to eliminate slums, but also to develop a balanced community where families of different economic levels may live side by side and asserted that while public housing is popular in New York, its faulty administration has uprooted and dislocated families who have lived in the community for decades and brought about economic ghettos. In order to achieve the goal of balanced communities, he has introduced legislation which would prohibit local housing authorities from considering the income of minors for the purpose of admittance to public housing and continued occupancy there, but would include such income when fixing rentals. While Federal regulations do not restrict the permissible income of minors, local authorities have adopted restrictive eligibility requirements. In recognition of the paradoxical situation which exists in Yorkville where low-cost housing projects with rentals at $10 per room per month are being constructed within a few blocks of luxury apartments renting at $75 per room per month, he recommended that the Government or a citizens housing group should seek to build spot projects within the income limits of the community's residents. Stressing that the upheaval of present structures has also adversely affected senior citizens who are widowed or single, he recommended that the eligibility age for singe persons should be reduced to 60 years and that more apartments for single persons should be provided, with high priority given to such dislocated single persons.

On the problems of our youth and juvenile delinquency, Congressman SANTANGELO affirmed that responsibility for the welfare and morality of our young people must be restored to parents and schoolteachers. He also called for greater understanding and courage on the part of public officials in regard to children who have been in trouble and wish to rehabilitate themselves by obtaining gainful employment in governmental agencies. Civil-service positions, postal employment, licenses and responsible positions are denied to these delinquents who have transgressed instead of being made available to them in a spirit of constructive cooperation. Congressman SANTANGELO deplored the lack of Federal aid for school construction which is so desperately needed in our community.

In regard to the problems of economics and the consumer, Congressman SANTANGELO commended the chairman of the panel, Edward Corsi, who, as industrial commissioner, has been a vocal spokesman for higher minimum wages and broader coverage for unemployment insurance. He also noted with approval that Congress, to combat the recession, has adopted many work programs. He suggested further that the Federal Government establish a fund to make Federal grants available to localities in need of schools and hospitals.

Congressman SANTANGELO pointed out that while the housewife is complaining of the high levels to which consumer prices have risen for food supplies, farmers have received less of the consumer dollar. At present the farmer receives only 40 percent of the consumer dollar and the remainder is going to the food chains and distributors.

Congressman SANTANGELO promised to continue his advisory council meetings and expressed his hope that other legislators would follow his lead in establishing community forums in order that greater cooperation take place between representatives and their constituents.

Dr. Ernest Gruening, the Real Pioneer of Alaskan Statehood

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, July 24, 1958

Mr. NEUBERGER. Mr. President, every great cause has its foremost crusader, its Richard the Lionhearted, its peerless leader.

In the case of Alaskan statehood, this individual has been Dr. Ernest Gruening, who served as Alaska's Governor from 1939 until 1953, and whose book The State of Alaska has been the real handbook of the statehood movement.

As one who has visited Alaska many times as a civilian—and also as one who served in the Alaskan theater of war in our Army during World War II, from 1942 until 1944—I can testify that Ernest Gruening was carrying on a lonely battle for statehood, when some of the present summer patriots of statehood were actually in opposition.

I ask unanimous consent, Mr. President, that an eloquent editorial from the St. Louis Post-Dispatch of July 21, 1958, paying tribute to Ernest Gruening's pioneering role in the movement for Alaskan statehood, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HE FOUGHT FOR 25 YEARS

Countless people, many of them no longer living, share in the victory that now at-

tends the 40-year struggle to bring Alaska into the Union. In the current Congress, the constructive efforts of Majority Leader JOHNSON and Minority Leader KNOWLAND and Senators JACKSON, NEUBERGER, CHURCH, MORSE, and KUCHEL, among others, stands out. In the House, passage was due in large part to the strategy of Representative O'BRIEN of New York, who found a legal but seldom used way to get the bill before the House even though it had been smothering for 10 months in HOWARD SMITH's Rules Committee.

On the executive side, Secretary of Interior Seaton gave infinitely more help than his predecessor, Douglas McKay. But there is little doubt that no one else did as much as Ernest Gruening, Governor of Alaska for 14 years by appointment of the late President Roosevelt and since 1956 a "Senator" from Alaska in the anticipatory congressional delegation elected by the people of Alaska 2 years ago. It is safe to say that no one else has seen as much of Alaska as Ernest Gruening. As governor he visited not only remote points on the mainland, but the many islands of the Aleutian chain. The leading book on the subject, The State of Alaska, is his, and he gave it that name 4 years ago as evidence of his faith that statehood was coming.

It takes nothing from the contributions of many others in Alaska and Washington to say that the blue ribbon in the statehood fight goes to Ernest Gruening for his unrelenting battle over a full quarter century.

Representatives Walter and Hillings Commended

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. SCHERER. Mr. Speaker, by far the vast majority of those who come to our shores from foreign countries to make this their future home become fine, upstanding, and patriotic citizens of the United States and contribute much to its progress and welfare.

An increasing and alarming number, however, are or become members of the Communist conspiratorial apparatus, subversives, racketeers, or just common criminals. The law properly provides, in order to protect our internal security, that such persons forfeit their right to residence in this country. After due trial, they are deported, usually to the place from whence they came. In case after case through legal maneuverings and outright abuse of our judicial processes, these deportees have flaunted the law and remained in this country for many, many years, some indefinitely.

Congressman FRANCIS WALTER has introduced legislation which, if enacted, will prevent these abuses of our hospitality and judicial processes. He has been vigorously and conscientiously supported in his move by Congressman PAT HILLINGS, of California. Both of these dedicated Members of the Congress are to be commended for their efforts and foresight.

The Los Angeles Examiner, in a lead editorial on July 21, 1958, clearly and succinctly points up the issues involved. The editorial follows:

URGENT REMEDY

The Judiciary Subcommittee of the House of Representatives has reported favorably on a bill intended to make major reductions in the periods of litigation that are serious and often dangerous obstacles to final disposition of deportation cases.

Introduced by Representative WALTER, Democrat, of Pennsylvania, this measure has been given immediate urgency by the flagrant case of William Heikkila, of San Francisco, native of Finland and an admitted one-time Communist, who has been either the beneficiary or the victim—according to whose viewpoint is consulted—of 10 years of protracted deportation proceedings.

But the necessity for the legislation sponsored by Mr. WALTER is the bitter fruit of long and tragic experience. Throughout all the years of our neglect in this matter, as he emphasizes, many subversives and conspirators against the peace and security of the United States, and many hoodlums, gangsters and criminals menacing the property and lives of decent people, have been able to remain in this country with immunity from our laws and with contempt for our society.

Mr. WALTER makes a special and proper point of the fact that the program he proposes for the remedy of judicial abuses in deportation cases will provide full protection for aliens and citizens alike in all the vital areas of their constitutional rights.

But this phase of the problem is put in its proper perspective by Representative PAT HILLINGS, Republican, of California, and a member of the subcommittee, who is vigorously supporting the WALTER proposal. As Mr. HILLINGS says, the safeguarding of constitutional rights is a basic duty of the Congress, but it is an equally challenging obligation to correct the great weakness of a judicial system that is inoperable for long periods of time against the most dangerous of our enemies.

It is one of the essentials of protective law in this field, as he insists, that these enemies "will not be allowed to make a mockery of our courts after once receiving their protection."

The Walter bill is presently before the full Judiciary Committee of the House, and its consideration by that group and eventually by the whole Congress should be free of all delay. The basic principle here involved is that those who would destroy us are left free to do so, as long as this reckless gap in our security system remains.

Popular Jim Farley

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Mirror of July 9, 1958:

POPULAR JIM FARLEY

Big Jim Farley, 1 of the 2 or 3 favorite citizens of New York, has announced that he will be a candidate for the Democratic nomination for United States Senator. Usually the Mirror does not concern itself with primaries. The parties set up candidates; the people make the choice.

But James Aloysius Farley is something different. He is not only a man, he is an institution among us. He is not only a politician but a respected and even beloved citizen. Go to any public dinner, whether it is a charitable, a religious or a political gathering, and watch the universal good cheer that greeets the mention of Farley's name. Always the applause for him is the greatest.

This is not because he was Franklin D. Roosevelt's campaign manager. Republicans applaud Farley as vehemently as Democrats do. It is not because he was once a member of a Presidential Cabinet; in New York, there are lots of those around. It is because he is Jim Farley.

It is said that some of the Democratic leaders are opposed to Farley because he broke with Roosevelt over the third term issue. That he did and more honor to him for putting country above personal interest. At any rate, Jim Farley holds the respect and affection and can get the votes of Democrats and Republicans and it seems to us that it would be a short-sighted politician who would decline to give Jim the honor that he merits.

Well, we said our piece in defiance of all our rules and we hope that Jim gets the nomination no matter who is against him. If it is left to the people, Farley cannot lose.

Nutrition and Medical Problems—Distinguished Service of Dr. Tom D. Spies

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, July 24, 1958

Mr. HILL. Mr. President, at the recent convention of the American Medical Association in San Francisco, Dr. Tom D. Spies, director of the nutrition clinic at Hillman Hospital, in Birmingham, Ala., was presented the association's distinguished service award. The clinic's outstanding contributions to medical knowledge in the field of nutrition and nutritional disorders are widely known and appreciated. I am proud and delighted that the American Medical Association has presented its highest award, which has been given only 10 times in the 108 years of its existence, to this outstanding Alabama doctor and research director, Dr. Spies.

Earlier this year the legislature of Puerto Rico enacted a resolution expressing official recognition to Dr. Spies for his discoveries which have been so beneficial to humanity and for his interest in Puerto Rican hospital institutions.

I ask unanimous consent to have printed in the Appendix of the RECORD the editorial from the June 7 issue of the Journal of the American Medical Association about Dr. Spies' work. The editorial is entitled "Nutrition and Medical Problems."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NUTRITION AND MEDICAL PROBLEMS

The chemical composition of any food, drug, or poison taken into the body can have a profound effect on one's body, mind, and spirit. Heretofore nutritionists have

been chiefly concerned with determining the chemical composition of the foods most commonly used, with little thought for their relation to medical problems. No one has been more active in bringing this relationship to both nutritionist and physician than has Dr. Spies, whose latest contribution to this field appears in this issue. As in almost any field, what at first appeared simple is found with each new discovery to be anything but simple. Although research rarely does and is not expected to give us definitive answers to all questions, every advance in our knowledge of nutrition should when properly applied aid in building health and preventing disease. Many diseases formerly of unknown origin are now recognized as due wholly or in part to chemical imbalances within the body.

In any effort to prevent disease early recognition is an important factor. Diagnostic criteria originally based on descriptions of far-advanced cases of such diseases as pellagra and sprue are of little or no value in early recognition, and when recognition of the cause of a direase leads to prevention the advanced cases become a rarity. This necessitates setting up new criteria for finding the early and the chronic but mild cases—always a more difficult problem. Meanwhile many such cases go unrecognized, misdiagnosed, and improperly treated. It is difficult to think of a more frustrating experience for such a patient than to go on for years labeled a hopeless neurotic. These patients can never get well on placebos or bromides, but when the deficient element in the diet is supplied they promptly regain their health.

Another important point to remember is that apparently no one develops a deficiency of only one of the water-soluble vitamins. It seems to be necessary when such a deficiency is discovered to search for others and correct them. Unlike smallpox, one attack of a nutritional deficiency does not confer immunity. The only prevention is a daily supply of all the necessary elements in the diet. Of course no one should get the impression that all dieases are caused by a nutritional deficiency or can be prevented by an adequate diet. The important thing to remember is that chemical imbalances in the body may play a part in any disease and do play a large part in many a condition in which the possibility of nutritional deficiency is not even considered.

Lest We Forget—That Khrushchev Is a Ruthless Murderer and Enslaver, Not a Peacemaker

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following eloquent editorial from the New York Herald Tribune of July 24, 1958:

JUST 20 YARDS FROM FREEDOM

The item took only one paragraph to tell on the Associated Press ticker. But it spoke volumes.

This is what it said:

"An unidentified man in civilian clothes ducked out of some bushes in Communist East Berlin today and began running toward the border of West Berlin. An East German guard fired one pistol shot. The man died—20 yards away from the border."

Only 20 yards away from freedom. And willing to risk death to obtain it.

No matter what soothing notes may come from the Kremlin, about the easing of tensions in a fear-haggard world, the central fact remains that a Communist state is a prison, and that its inmates would flee it, if they could. That is what the Hungarians tried to do, and the Poles are still trying to do. President Nasser of Egypt would do well to ponder these facts before he lurches any further, of his own volition, into the all-too-eager arms of the bear that walks like a man.

Hon. James A. Farley

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley delivered at the opening ceremony of the 84th grand lodge session of the Benevolent and Protective Order of Elks of the United States of America held at the Hotel Astor, New York City, on Sunday evening, July 6, 1958:

Dear brother Elks, as many of you know, I have seldom missed an Elks national convention since my first convention in Atlantic City over 40 years ago. From time to time I have been honored by the privilege of addressing these gatherings of my brothers and fellow Americans from every site of land under our flag. I am doubly honored tonight for it is my great privilege and pleasure to extend to this 94th grand lodge session of the Benevolent and Protective Order of Elks the official greetings of the city of New York on behalf of our distinguished mayor, the Honorable Robert F. Wagner.

Other duties that took him out of the city tonight made it impossible for Brother Wagner to be here and personally bid you welcome to our great and wonderful city. His regret is the greater because, as a past exalted ruler of New York Lodge No. 1, the founding lodge of Elkdom, Mayor Wagner is himself a member of this grand lodge and shares with all of our 1,200,000 brothers throughout America the love and affection that we hold for the Benevolent and Protective Order of Elks.

It is always a very special occasion when the Elks return to New York for the national convention. New York is hometown to all Elks, wherever we live, for it was here 90 years ago that our order was founded. It was from New York City that the actors and entertainers who conceived the Benevolent and Protective Order of Elks and who in their travels introduced it to distant parts of the land and passed on to other men the high ideal of a brotherhood united by the principles of charity, justice, brotherly love, and fidelity.

It is with rightful and justifiable pride that New York looks upon the Benevolent and Protective Order of Elks as one of its finest contributions to the people of America.

Today, there are more than 1,840 Elks lodges, and every week the number grows. They are in the great cities, in small cities, and in the villages throughout our land. Wherever they are the Elks Lodge is, always has been and, thank God, always will be the home of stouthearted Americanism. The history of our order covers half the history of our country. And in that time, in war or in peace, the Elks have been determined and aggressive defenders of liberty, and unyielding foes of all who have sought to destroy or weaken it.

We preach Americanism. We teach Americanism. We practice Americanism. We do these things not from a blind acceptance of the past but because we know that we are the inheritors of political, social, and economic ideas and ideals that have answered the prayers in men's hearts, and are the source of our strength and greatness as a nation.

Because of our firm faith in the American dream, we have never lost confidence in our way of life. Sputniks may rise into the heavens, sent there by slaves who serve the desperate ambitious of dangerous men. They may strike fear in the faint-hearted, and cause those of little faith to speak admiringly of Communist triumphs. But we Elks know better. We know that, as long as we Americans remain true to ourselves, so long as we stand faithful to the concepts embodied in the Constitution of the United States, and symbolized by the magnificent statue that stands in the harbor of this city, then America will stand always as a rock against which communism and every tyranny will break and perish.

As conservative as Elks are, with respect to any attempts to tamper with our liberties, we are just as liberal when it comes to lending a helping hand to those who have suffered the hurts of life, to guide our youth toward the greatest fulfillment of their hopes and talents. As a measure of this liberality, this generous spirit that animates the men of Elkdom, our order last year spent more than $7 million for benevolent programs so many in number and so varied in character that they cannot be listed in detail. And the dollars invested in them are indeed a poor measure of their worth. A far better measure is the many thousands of crippled children whose bodies have been restored at our hospitals—the thousands of cerebral palsied youngsters who have been taught to talk, to dress and feed themselves, and who have known the immeasurable thrill of joining other youngsters at school and at play, because the Elks provided the treatment that set them free.

When our colleges open their doors next September, several hundred young Americans will be able to enter those doors only because the Elks dug into their pockets and gave them scholarships. Some of these young people are superior students, enormously gifted, others are average. But they all have talents that our country needs, and they will be able to make their greatest contribution to society because of the generosity of Elks.

And always, do we remember the men who defended our liberties and who today lie wounded or ill in hospitals. In gratitude for their sacrifices, the Elks—throughout the year and in every veterans' hospital in the land—bring to these men entertainment and recreation. We remember them at Christmas and other special occasions. In these and other ways we try to bring cheer and pleasure, to share a little the load they bear and, above all, to make them know that we do not and shall not forget.

These, my friends, are some of the true measures of Elkdom. They are in fact a reflection of the true greatness of America. They are the real spirit of America, the spirit that gives meaning to the words of our Constitution. This is the spirit that flames from the torch high over New York Harbor, high over America, across the world—and sends its message of serene defiance to sputniks everywhere.

Proudly, indeed, the city of New York welcomes the Benevolent and Protective Order of Elks to the city of its birth. We rejoice in Elkdom's achievements. We know that this grand lodge session, at the business meetings that will get underway tomorrow, will chart a course for future achievements for the betterment of all America. Our city offers you all its resources for your comfort and convenience while you attend to the business that brings you here. And, as the most hospitable city in the world, New York bids you, when the time comes to play, to enjoy to the fullest the pleasures of the good life that we offer in such abundance. For that is traditional with Elks, we know the joyousness of life when enriched with good fellowship, and who want to share it with others.

Language and Our Schools

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1958

Mr. WAINWRIGHT. Mr. Speaker, one of my special interests has been America's deficiency in the language field. It is so shocking and appalling that it need not be whipped to death. Frankly, if there were no other excuses for the Elliott bill, the language provision alone would be worth the entire program. This should not be misconstrued—I am in favor of the entire program.

Anyway, an excellent editorial in last night's Washington Evening Star should be brought to the membership's attention, and I herewith submit it.

LANGUAGE AND OUR SCHOOLS

In declaring that the study of a modern foreign language should be included in every American child's upbringing—from the third through the sixth grade, and preferably for a consecutive 10 years—the United States Office of Education has put a timely warning finger on another great weakness of our school system, public and private alike.

A few statistics are enough to point up the seriousness of the situation. Half of the Nation's 23,000 high schools, for example, do not have a single class in any of the modern foreign languages. Similarly, in those that do have such courses, less than 15 percent of the student body enrolls in them. As for the college level, only about the same percentage studies French or Spanish or a comparable tongue, and fewer than 8,000 Americans are engaged in trying to learn Russian. By way of contrast, an estimated 10 million Soviet students are now studying English.

These are facts that have led some of our highest educational authorities to warn that the United States is the most backward of all major nations in the vital field of language competence. Moreover, it is likely to remain that way as long as our elementary schools—unlike those in Europe, on both sides of the Iron Curtain—fail to do something about the problem. That is why the Office of Education has put special emphasis on the idea—an idea which our District educators are wisely trying to put into effect—of starting courses in French, Spanish, etc., as early as the third grade.

If such a program were adopted throughout the country, beginning at this elementary level, our high schools and colleges in due course would almost certainly show a vastly enlarged enrollment in language courses. As matters stand now, however, the enrollment is woefully deficient, and this is a fact that can be dangerous to us vis-a-vis Russia in a competitive world where we can ill afford to be relatively illiterate or tongue tied.

Paving the 1,500-Mile Highway to Alaska

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, July 24, 1958

Mr. NEUBERGER. Mr. President, the recent action of the Congress in adopting legislation to make Alaska our 49th State has resulted in a great deal of public interest in the characteristics and the economic future of this most northern territory under the American flag. This interest has naturally been particularly intense in the Pacific Northwest. Many excellent articles, editorials, and columns about Alaska have appeared recently in the press in Oregon. Similar interest has also been shown in the bill S. 4097, which I have introduced with 9 cosponsors to provide for the paving of the only overland link between Alaska and the other 48 States—the Alaska Highway.

As a sampling of these expressions of interest, I ask unanimous consent to have printed in the Appendix of the RECORD able editorials from the Eugene Register-Guard of July 13, 1958, and from the San Francisco Examiner of July 8, endorsing the Alaska Highway project; two articles by Mr. A. Robert Smith from the Medford Mail Tribune of July 6 and the Portland Oregonian of July 13; and the first installment of an article on the economic development of Alaska by Mr. Ivan Bloch, industrial-relations consultant of Portland, in the same issue of the Oregonian.

There being no objection, the editorials and articles were ordered to be printed in the RECORD, as follows:

[From the Eugene (Oreg.) Register-Guard of July 13, 1958]

A BETTER ROUTE TO THE NORTH COUNTRY

A proposal that stirs the imagination is that which Senator RICHARD L. NEUBERGER, with an assist from Vice President RICHARD NIXON, is advocating for a cooperative agreement between this country and Canada for improvement of the fabulous Alcan Highway. Under this proposal, in which 3 other Democratic Senators and 2 Republicans join Mr. NEUBERGER, the United States would put up $66 million and the Canadian Government a like amount of money, plus grants of right-of-way. Over a 6-year period the money would straighten, widen, and pave the British Columbia and Yukon sections of the highway which runs from Edmonton, Alberta, to Fairbanks, Alaska.

The 50-50 split of the cost seems fair. This country needs the highway more than Canada does, especially now when we find ourselves (or soon will find ourselves) with a State that is beyond our natural borders. But much of the benefit would be Canada's. Not only would the improved roadway open up much of the northern British Columbia and Yukon country to the outside world for industrial purposes and provide new markets for raw materials produced there, it would also prove an incentive for tourists who are intrigued by the chance to see some of the last real frontier on the North American Continent. And as tourists appear, so do accommodations for them. The Canadians, we think, would be dollar-foolish if they turned down this country's offer.

The industrial and commercial possibilities are enormous. But, this sunny afternoon, we are more intrigued with the highway as a tourist attraction, as a pipe through which we may float while seeing an exciting part of the world. These days, with longer vacations and more powerful automobiles, a trip of this length, nearly 6,000 miles round-trip from Eugene could be attempted. And if time did not permit the full trip, it would at least permit penetrating deep into the Canadian "bush" for a week or two or three.

Such a trip would differ from a trip of similar length in this country in one important respect—the element of adventure. The traveler on United States highways is rarely far from a gas station, a hot-dog stand, a curio shop. He is secure in the knowledge that help is never far away. Not so up there. The motorist who undertook the trip to Alaska would have to be prepared to change his own tires (not just the wheels, but the tires), install a new fan belt and make other emergency repairs on his car. He'd need to carry extra gas and extra water, to prepare his own meals and generally to shift for himself. And, at least until the tour grew too popular, he'd really be "away from it all" for a few weeks.

How the editorial imagination does wander this sunny afternoon. After the Alaska trip, all armed with new knowledge about changing tires and fan belts, about combating bears and mosquities, the tourist would come home for a year or two of the old grind. And then what? Then, of course, it would be nice to go the other direction, south through Mexico to the Panama Canal, when the Pan-American highway is a reality.

[From the San Francisco Examiner of July 8, 1958]

ALASKAN HIGHWAY

The cooperative project proposed by Senator NEUBERGER, Democrat, of Oregon, for an all-weather paved highway linking the new State of Alaska to the rest of the Union, is one of the necessities created by the new relationship.

It requires the hard surfacing of 1,200 miles of highway, all within Canada, which makes the sharing of the costs of the program between the United States and Canadian Governments one of the conditions of the program.

But the reaching of an equitable basis for agreement in this matter is so important, and eventually so beneficial and profitable, to all the vast areas affected that a minimum of delay is reasonably anticipated.

As Senator NEUBERGER sensibly sums up the matter: "The development not only of Alaska, but of the intervening areas of western Canada will be hastened by an all-weather paved highway and benefit both countries and all people concerned."

Adequate highway facilities are an absolute must for the proper implementation of the status of statehood which Alaska now enjoys, and as Senator NEUBERGER wisely suggests, the American Secretary of State should be promptly given the necessary authority to negotiate the needed agreement with Canada. It is part and parcel of the good-neighbor tradition, of which the St.

Lawrence seaway program is a magnificent example.

There is abundant precedent for the expenditure of American tax dollars on highway projects in another country, where our own vital interests are so richly served. In the case of the still uncompleted Pan-American Highway, the United States is bearing almost the whole burden of cost, and it will eventually justify itself in not only better trade but infinitely improved hemispheric relations.

[From the Medford Mail Tribune of July 6, 1958]

PAVING ALASKA HIGHWAY MAY BE DISCUSSED AT CANADA MEETING

(By A. Robert Smith)

WASHINGTON.—Vice President NIXON plans to try persuading President Eisenhower to take up with Canadian Prime Minister Diefenbaker this week the proposal of Senator RICHARD L. NEUBERGER, Democrat, of Oregon, for paving the highway which links the new State of Alaska with the Northwest.

Eisenhower is going to Ottawa for talks with Diefenbaker July 8 through 11. It will be their first meeting since the Canadian Conservative leader won a smashing national election this spring.

NEUBERGER introduced a bill last Tuesday to authorize a cost-sharing plan with Canada for paving the 1,200 miles of gravel-topped road to Alaska running through Canada. The 300-mile portion of the Alaska highway in Alaska has been paved.

SERVED IN ALASKA

The Oregon Senator, who served in Alaska in the Army during World War II and helped build the long overland road to Alaska, told the Senate:

"We have just completed action on the historic legislation that will take into the Union a great new State—a State larger in area than Texas, a State whose mountains include a higher peak than any in the present 48 States, a State with vast natural resources and with a growing population of splendid, patriotic Americans. Now, let us make it possible for more Americans to get there."

After his speech, Vice President NIXON called him to the rostrum to express his support for the idea. NEUBERGER noted that he had a bipartisan group of Senators sponsoring the bill with him—Senators WAYNE MORSE, Democrat, of Oregon, JAMES E. MURRAY, Democrat, of Montana, FRANK CHURCH, Democrat, of Idaho, NORRIS COTTON, Republican, of New Hampshire, and FRANCIS CASE, Republican, of South Dakota.

THINKS IDEA GOOD

Next day NIXON informed NEUBERGER that he'd rounded up two more Republicans—Senators GORDON ALLOTT, Republican, of Colorado, and ARTHUR WATKINS, Republican, of Utah. He said he thought the idea was so good he planned to urge the President to discuss it with the Canadians this week.

"We've got to do this," NEUBERGER said NIXON told him. "We might as well do it now. It will put people to work, and it will help solidify our relations with Canada."

The bill authorizes $11 million for each of 6 years starting next year, on condition that Canada share costs and agree to maintain the road after it's finished. Canada would also agree to make it accessible on free and nondiscriminatory terms to American traffic with reciprocity on licensing vehicles and operators.

ESTIMATED TOTAL COST

The Bureau of Public Roads estimates the total cost at $125 million. This includes $15 million for making the 110-mile connection with Haines also paved.

A study is now being made by the Alaska International Rail and Highway Commission, set up early this year, of the feasibility of building a more direct road between the Pacific Northwest and Alaska. The existing highway goes far inland. It is also to examine the prospects of a railroad linking the 49th State to the rest of the Union. One was declared feasible during the war, but the highway was built instead.

More and better overland transportation between the Northwest and Alaska will be demanded by the expected rise in tourist trade alone. The American Automobile Association last week predicted that statehood would stimulate tourist interest in Alaska.

"With the Pacific Northwest as the gateway to Alaska, existing facilities for automobile, plane and ship travel to the new State probably will be expanded as tourist demands develop," the AAA reported.

The motor trip to Alaska, AAA added, covers approximately 2,350 miles from the United States-Canadian border to Fairbanks and requires under normal road conditions a minimum of 8 days from Seattle. AAA said the best time to make the trip is from June through September when temperatures range from 35° to 75°.

[From the Portland Oregonian of July 13, 1958]

CITIZENS OF ALASKA LOOK FORWARD TO TOSSING OFF SHACLES OF COLONIAL GOVERNMENT

(By A. Robert Smith)

WASHINGTON.—When word was flashed to Alaska that the statehood bill had passed the Senate, the citizens of Anchorage touched off a huge bonfire containing 49 tons of wood. Into the fires of celebration, officials tossed two documents, the Organic Act and the Jones Act.

This was a symbolic act, like burning the family mortgage or an oppressive financial obligation which had at long last been satisfied. For Alaska it was symbolic of throwing off political and economic shackles that have long been a part of Territorial status.

It was preparation for a new era of economic development in the new State of Alaska, finally freed of the discrimination that retarded development of the Territory for many years.

The Organic Act of 1912 was what made Alaska a Territory with limited powers of self-government, mainly the power to elect a legislature. Prior to that, Alaska constituted a civil and judicial district subject to the laws of Oregon. The Statehood Act will bring Alaska up to full-fledged political equality with the other States, allowing full powers of self-government, including such rights never before enjoyed in Alaska, as voting for President, Governor, and United States Senators.

The Jones Act symbolizes what many Alaskans have called her colonial status of the past, economically—a general condition in which the Territory was exploited by absentee-owned companies more concerned with shipping raw materials out than finished goods in. The Jones Act helped keep it that way.

Passed by Congress in 1920, the Jones Act requires all cargo between the United States and its Territories or possessions to be hauled on American ships, although recently an exception has been made to permit Canadian ships to serve just southeastern Alaska.

Until Coastwise Line and, later, the Alaska Freight Line started service from Portland and other west coast ports, Alaska Steamship Co. had a monopoly on all Alaska shipping, through the port of Seattle. Seattle terminals imposed a special charge which Alaskans had to pay. In his authoritative book The State of Alaska, ex-Gov. Ernest Gruening explained it this way:

"On shipments made from the east of the United States through Seattle, consigned to the Hawaiian Islands or to Oriental ports, the total handling charges were 30 cents a ton wharfage, and all other costs were absorbed by railroad and steamship lines. But for the same type of shipments consigned to Alaska, there was an unloading charge of 65 cents a ton, a wharfage charge of 50 cents a ton, and handling charge from wharf to ship of 60 cents a ton.

"These charges, which in the aggregate were over five times the cost of Hawaiian or Oriental consignees or shippers, had to be paid by the Alaska consignee or shipper.

The Jones Act was named for a Seattle Senator of that era, Wesley Jones, a Republican. The statehood bill repeals the section of the Jones bill affecting Alaska.

How much of a factor this will be in fostering competition and cheaper freight handling for Alaskan shipments remains to be seen. It is counted by some Alaskans as a major breakthrough against discrimination, but to date, neither the Maritime Board nor the ICC looks for any dislocation of trade or commerce.

Gruening, who is expected to run for one of Alaska's Senate seats, recalls that the Jones Act put one Alaskan businessman out of business after he had developed a midwest market for Sitka spruce. Business was possible when he shipped his product via Vancouver, British Columbia, at a cost of $5 per thousand board-feet, but became impossible when he was compelled to ship via Seattle, where he was charged over twice as much, $11.

After statehood is a legal fact, all Alaskan shippers will be able to use United States or Canadian shipping lines, also use Canadian ports if they prefer. This will further break the monopoly long enjoyed by shipping interests operating out of Seattle. It is expected to reduce tariffs and increase service due to competition.

Shortly after Alaska gets settled into the saddle of State government, it is expected to receive jurisdiction from the Interior Department of its salmon fisheries—for many years its most lucrative resource. When this happens, fish traps, long ago outlawed in the Pacific Northwest, are expected to be outlawed in Alaska. Alaskans hope this and other conservation practices will help revive the depleted salmon runs. The fish traps are mostly owned by Washington State interests, who have had more power in Washington, D. C., than have Alaskans in setting fish regulations over the years.

Repeal of the Alaska section of the Jones Act and transfer of the fisheries to State control are expected to break much of the stranglehold Seattle has held on the Alaskan economy. Fortune magazine, in a major article on Alaska's economy, reported that Seattle banks, labor unions and wholesalers, along with the canned salmon industry, were intent on opposing statehood or any form of local development that might loosen its own lucrative grip on the Alaskan economy. It added:

"Alaska's absentee owners, like most people geographically separated from their capital, are preoccupied with profits, protection and the bearing of as few burdens as possible."

These interests have long maintained that Alaska can't afford to pay the costs of State government, that the economy will suffer from excessive taxes.

Near the climax of the Senate debate on statehood, Interior Secretary Fred A. Seaton sent to the Capitol an analysis to refute

this argument. Seaton calculated that State government will cost Alaska about $6,350,000 a year, but that new revenues coming into the State treasury will amount to about $5 million a year. The net cost of statehood, then, should be only $1,350,000 beyond the $15 million which Territorial government cost Alaskans last year.

Chief among the new revenues will be 90 percent of the revenue from oil and gas leases ($3 million a year) and 70 percent of revenues from sale of Pribilof Island sealskins ($1 million).

Another big advantage to the new State will be control of 102,500,000 acres of public lands now held by the Federal Government. This is about 26 percent of the entire State. The original lands—which would have given Alaska about half its public lands—which would have given her about the same State-Federal ratio that Oregon has—but this was scaled down by the House.

Seaton figures the State will collect about $500,000 annually from fines, fees, forfeitures, and 5 percent of proceeds from sale of public lands.

But possibly more important to Alaska in the long run is that State lands may be opened to new settlers on lenient terms. Some of these settlers, of course, may be industrial pioneers looking for inexpensive mill sites.

Gov. Mike Stepovich, who may run for the office to which President Eisenhower appointed him or for the Senate, is confident Alaska's population will be counted in millions, not thousands, in a few decades. He favors using the land the State will get to attract newcomers.

Vice President RICHARD M. NIXON said the other day he wouldn't be surprised if Californians didn't migrate to Alaska in generous numbers, now that the Golden State is fast filling up. Seaton said, lightheartedly, that Alaska could then bid for a major league baseball franchise and play night games under the midnight sun without the high cost of artificial lights.

Stepovich and his predecessor, Gruening, agree that Alaska's growth is as promising as that of Scandinavia, which supports a population of 15 million, in an area similar in climate, topography, and resources.

One aid to increasing the population would be improved transportation to Alaska. The presidentially appointed Alaska International Rail and Highway Commission is now studying feasibility of a shorter route than the present Alcan Highway, preferably one closer to the coast which would link southeastern Alaskan cities, especially Juneau, the capital, to the Pacific Northwest by road.

Within Alaska, road building has been an unsteady business, fluctuating mostly with defense requirements. Last year a new era of road building opened under the Federal-aid highway act, which for the first time included Alaska, thanks to an amendment sponsored by Senator RICHARD L. NEUBERGER, Democrat, of Oregon. NEUBERGER now wants to see the United States and Canada join in paving the 1,200-mile stretch of the Alcan Highway which is still gravel so the 49th State will be joined to the other states by at least one hardtop highway.

The Rail and Highway Commission is to look into the possibility of building a railroad all the way to Alaska. The only railroad service Alaska now knows is the Government-owned Alaska Railroad from the port of Seward to Fairbanks. It will remain federally owned and operated under statehood.

Inasmuch as Alaska has a short growing season, its variety of agricultural products is limited, although truck crops grow to astronomical size because of the longer dose of sunshine during those midsummer days of 21 hours of daylight. But as her population expands, she will be a growing market for Northwest farm produce, as well as other consumer goods manufactured in Northwest factories.

"It's not going to happen overnight," cautioned an Alaskan businessman who has worked hard for statehood, "But now we're on the way."

[From the Portland Oregonian of July 13, 1958]

STATEHOOD STATUS TO EASE STIFLED DEVELOPMENT OF ALASKAN RESOURCES

(By Ivan Bloch)

The granting of statehood for Alaska will have profound influence on that vast area's industrial potential. To date, development of Alaska's resources has been substantially stifled by a morass of absentee-applied rules, regulations, and statutes of the Federal Government. The local ability of the Territory to finance public and private developments has been highly limited by restrictions of laws, some ancient and no longer applicable.

The enormity of Alaska's land area, the incredible roughness of some of its terrain, the inaccessability of many of its parts, and the past uncertainties of its political status have made rational examination of its resources both expensive and difficult. And, yet, certainty does exist with regard to a number of specific items of development. The existence of the new State will do much to lessen the past hesitancy of private capital to explore, probe, and develop many more in the next few immediate years. This summary will deal only with these major items about which actual facts are available, and which are likely to become reality well within the next decade.

1. The forest resources of Alaska are already being utilized for industry, and major establishment of large processing-plant units is current. A dissolving woodpulp plant has been in operation for the last 2 years or so near Ketchikan. Another such plant is rapidly approaching full operating stages at Sitka. This plant has been built by Japanese interest with its output for Japanese consumption. Two more pulp and paper units are in advanced-planning stages for location in the Juneau and Wrangell areas. These southeastern forest-products operations are all geared to sustained-yield units, guaranteeing perpetuity of timber supply.

The interior forests of central Alaska are being studied, particularly in the Anchorage area. Large stands of hardwoods, predominantly birch, may sustain a specialty pulp product, valuable as an admixture for softwood pulps at Pacific coast points.

2. With regard to mineral resources, a few may be singled out for likely major development during the next few years. It is known, of course, that Alaska possesses nearly all of the metallic ores regarded as strategic and critical; but with some exceptions, to date, actual development has been very meager.

Southeast Alaska possesses an outstanding massive deposit of titaniferous iron ore. Programs of vigorous exploration and metallurgical research are now being pursued by at least one major steel company on the Klukwan deposits near Haines. This may become a major source of iron materials (and some others) for west coast and Far Eastern use. Also in southeast Alaska, there exist very large deposits of relatively low grade nickel ores on which exploration is also moving apace. There are many other possibilities regarding copper, cobalt, pyrites, and many important nonmetallics in this panhandle of Alaska.

The Kenai Peninsula has been a supplier of metallurgical chrome ore for some years. Interest is substantial in the possibilities of an electric furnace ferrochrome installation near the deposits. Occurrences of other ferroalloy material are known to exist in that area of central Alaska.

In the Copper River area, intense exploration is underway regarding copper and other metals.

The Kuskokwim and Yukon Basins are also of mineral interest. Platinum and mercury have been produced for years. The vastness of that area still obscures potential.

In the Alaska and Brooks Ranges of western Alaska, basic geologic information is sparse, and outside of traditional gold in the upper Yukon and Tanana Valleys, there is evidence of copper, antimony, nickel, and a number of other important industrial minerals. The possibilities of utilizing local limestones, shales, and coal in the Ralibelt midway between Anchorage and Fairbanks for the production of cement have been under study for some time.

The foregoing are indeed feeble tokens of what exploration by modern, airborne, geophysical methods may eventually reveal. Alaska's new status as a State is quite likely to provide an incentive for the expenditure of large sums of private moneys for mineral development heretofore inhibited under territorial conditions.

3. Perhaps the most exciting field of development involves petroleum resources. During the past 2 years, every major oil company and many others have been systematically engaged in geophysical exploration and actual drilling. A major exploratory well in the Kenai Peninsula brought in by Richfield 2 years ago triggered a real oil rush in all of Alaska. The major commercial interest centers in a large bandsweeping, crescent-like, from the Anchorage area through the Kenai Peninsula, Cook Inlet, across the base of the Alaska Peninsula into the upward of Bristol Bay. Also the very recent release by the Secretary of the Interior of some 20 million acres in the famous naval petroleum reserve, north of the Arctic Circle and to the Arctic Ocean, now engages additional major attention. Other Alaska areas are also under consideration by petroleum interests.

The tremendous importance of these oil developments is readily apparent. To begin with, these oil reserves are under the American flag. Geographically, they are closer to United States points of consumption than those from Borneo, Venezuela, and the Near East. On the basis of what appears to be reliable economics of production and tanker shipment, the potential cost of delivery to existing Puget Sound and potential Columbia River refineries would be highly competitive over present sources. The near-future requirements for Pacific coast petroleum products cannot fail to justify full utilization of these petroleum resources even though those north of the Arctic Circle may require somewhat more time to reach optimum production.

Also to be noted are what appear to be very large natural gas potentials north of the Arctic Circle, some 400 to 500 miles north of Fairbanks. Plans for the exploration of these valuable chemical raw materials and fuels are under consideration by at least one major company.

It is also quite possible that moderate-sized refineries to meet local, civil, and military demands will be established in the Cook Inlet-Anchorage and Fairbanks area.

The Price of Freedom

EXTENSION OF REMARKS
OF
HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. JOHANSEN. Mr. Speaker, under permission to extend and revise my remarks I include the address by the very able Secretary of the Army, Hon. Wilber M. Brucker, delivered at the Kiwanis International Convention in Chicago, June 30, 1958. Secretary Brucker's remarks are a significant commentary on the contributions being made by the Army to the national defense:

THE PRICE OF FREEDOM

It is a high compliment to be welcomed with such cordiality to the platform of this great convention of Kiwanis International. I feel privileged to have been a member of Kiwanis since 1922, and to have served a decade ago as president of the mother club—Detroit No. 1. I have cherished the opportunity to play even a small part in the inspiring programs of community action which Kiwanis has carried forward through the years to strengthen the foundations of freedom and responsible self-government.

As we look out upon the world today, how could we fail to realize that America stands at a momentous crossroads of destiny? Instance is piled upon instance to impress upon us that the diabolic Communist conspiracy has by no means slackened its attack upon the free world, nor abandoned in any particular its ambition to shackle all mankind with the grim chains of a Red despotism.

The most recent Communist atrocity in Hungary, the shocking execution, the brutal murder, of Imre Nagy and other Hungarian patriot leaders involved in the ill-starred revolution of October 1956, again underscores in blood the elemental barbarism of the Soviet Communist character, and brings into new and sharper focus our clear and present danger.

The brazen announcement just 2 weeks ago that these men who had vainly striven for liberty against the cruel and unbearable Soviet tyranny had been put to death by Soviet Russia's Hungarian puppets, after their safety had been solemnly guaranteed, was another explicit warning that the Communist conspiracy intends to stamp out all opposition, and inflict its evil will upon all mankind at any cost.

We have every reason to know what we can expect of the Soviet Union.

Its hand can be seen in the troubles of the Middle East, where the threat of open warfare looms like an ugly specter.

The Kremlin meddles incessantly in Asia and Africa, fomenting unrest in an effort to exploit natural ambitions for the political independence, and pervert them to the advantage of the Communist cause.

The established pattern of Communist attack was apparent in recent disturbances in South America.

The Soviets have placed every obstacle in the way of finding solutions to vital issues which will affect the people of the whole world for generations to come. It is damning evidence of the true purpose of their military power that they have stubbornly resisted every effort to work out any international agreement embodying reasonable inspection safeguards which might lead to the limitation of armaments—particularly nuclear armaments—and the permanent reduction of the nuclear peril which hangs over the world.

Behind the Communist purpose to destroy us stands the might of the largest mobilized military forces on earth. We must recognize that in a time of nominal peace, the Communist world is on a war footing. The military might of 8 million men under arms, over 400 ground divisions, 500 far-ranging submarines, and more than 25,000 modern aircraft, constitute the "clenched fist" with which Soviet leaders have promised to destroy us. The Soviet Union is concentrating virtually all of its best scientific and engineering talent on the frenzied development and production of ultramodern weapons, including intercontinental nuclear ballistic missiles, and other technological devices in order to place in the hands of the plotters of the Kremlin the power to dominate the land, the sea, the air, and even outer space. We must not forget for a moment that they are ready and waiting to move in swiftly for the kill if they should ever manage to catch us with our guard down.

How can we expect the Soviets to use their military might?

How can we best defend ourselves against it?

It is imperative that we be prepared for every eventuality, for a war or a limited war, for an atomic war, or one in which atomic weapons are not used, for a war fought by Soviet troops against the main bastions of freedom, or a war fought by puppet volunteers in an effort to nibble away the fringes of the free world. It does us little good in the long run to be able to deter an enemy from one kind of aggressive action, if we leave him free to pursue with comparative impunity another course by which he might attain the same result. We must not forget that if we were unprepared for limited war, we would be helpless to deal with any attempt at piecemeal conquest except by precipitating the suicidal nuclear holocaust we are striving by every means to prevent.

It is the combined strength and versatility of our Armed Forces, our Army, Navy, Marine Corps, and Air Force, integrated in a great defense team forming the keystone of a worldwide system of collective defense linking the United States and 45 other nations, which deters the Soviets from unleashing their military might in an effort to achieve their goal of world domination.

No amount of talk about the vast power of strategic nuclear weapons can obscure the pressing necessity for balanced forces such as are required to support our defensive commitments against the power of the Soviet troops ranged opposite our own troops and those of our allies in the front lines all along the Iron and Bamboo Curtains, and ready to attack at a moment's notice.

Nearly half of the United States Army is deployed overseas at this moment, standing shoulder to shoulder with the troops of our partners in the defense of freedom. The presence of our soldiers in fighting array, armed with the most modern weapons, including tactical nuclear missiles and rockets, stimulates the morale and stiffens the resistance of our allies. It constantly reminds them, not in mere words but in the solid substance of American men and American armaments right there with them, that we are in this crusade for peace together, and that we intend to see it through together. It also has a very discouraging effect upon any plans the Communists might have to extend by force the bounds of their "empire of fear." It is noteworthy that they have so far atempted armed encroachment only where resistance was feeble or nonexistent. Defensive strength, coupled with determination, has effectively dampened Soviet enthusiasm for military excursions. No Soviet aggression has yet been launched within range of American guns.

The United States Army of today is characterized by balance and versatility. It is built to fit the pattern of the space-atomic age. It is prepared to meet the requirements of the entire spectrum of war from an all-out nuclear conflict throughout the whole wide range of lesser enemy operations which are possible, and which would pose a grave and direct threat, not only to the security of the United States but to the very existence of civilization as we know it today. Our Army has a one-two punch—the ability to fight effectively with either atomic or nonatomic weapons—which is the key factor of our national power to apply military pressure with precise discrimination in order to deter aggression on the spot, anywhere in the world. Moreover, in any kind of war which might be thrust upon us—large or small—that one-two punch would be indispensable to ultimate victory.

The ability to make prompt and decisive response to any situation is esential to the prevention of war or the winning of a victory in this modern age. The United States Army's Strategic Army Corps, consisting of 2 airborne and 2 infantry divisions, armed with atomic weapons as may be appropriate to any situation which might arise, is ready to move out by intercontinental airlife at a moment's notice to cope with Communist armed aggression anywhere in the world. "STRAC" it is called, S-T-R-A-C—and its slogan is based on those letters: "Skilled, Tough, Ready Around the Clock." Any aggressor who challenged it would soon discover that it lives up to that slogan. The capability of STRAC as a ready force was dramatically demonstrated a few weeks ago, when two companies of the 101st Airborne Division stationed at Fort Campbell, Ky., one of its component organizations, with no prior warning were alerted for transoceanic air movement at 3:55 one afternoon. At 8:35 a. m. the following morning—only 16 hours and 40 minutes later—the two companies, comprising about 500 men, together with all their necessary vehicles, weapons, ammunition, and rations, had been set down, ready to go, 1,740 miles distant from Fort Campbell. That is our modern Army in action.

Less than 2 months after Explorer I went up, the Army orbited another satellite, Explorer III. Because of its eccentric orbit, and its extensive instrumentation, Explorer III was able to provide immensely valuable information on air density, temperatures, micrometerorites, cosmic radiation and other flight conditions from 1,740 miles in space down to the outer reaches of our atmosphere. It transmitted this information by means of two radios and a miniature tape recorder no larger than a king-size cigarette package which broadcast on command what is stored up during each circuit of the earth. From every standpoint, Explorer III has been an extremely important instrument for the advancement of our scientific knowledge.

The United States Army's participation in space programs is based upon the fact that its experience and existing capabilities and facilities enable it to aid materially in the advancement of national space programs, in full cooperation with the Navy, the Air Force, and civilian agencies, leading to our national goal, which is the dedication of space to the benefit and not the destruction of mankind. A satellite is an ideal instrument to provide comprehensive meteorological information leading to more accurate weather predictions. A satellite containing radio-relay equipment would be an important supplement to our present worldwide communications system. Messages originating in the Pentagon, for example, could be transmitted to such a sat-

ellite, recorded, and rebroadcast on command to addressees in distant parts of the world. One satellite of this type could handle the entire radio traffic to and from Washington.

On May 22 of this year, a letter addressed to me by the director of the missile firing laboratory at Cape Canaveral, Fla., was delivered to me in the Pentagon. It was a very unusual and significant letter because it had been carried in the tactical warhead of an Army Jupiter missile over 1,000 miles through space, and dramatically demonstrated the Army's completely successful solution of the problem of protecting a missile nose cone and its contents against the intense heat generated when it reenters the earth's atmosphere at supersonic speed. The solution of that problem was basic to the development of a successful intermediate range ballistic missile. That letter is evidence of a first for America which we have every reason to believe has not yet been matched by any other nation.

The Army's arsenal contains more than 10 types of missiles and rockets precisely adapted to the accomplishment of its varied tasks. Tactical surface-to-surface missiles range in size from the mighty Redstone, which can deliver a nuclear warhead more than 200 miles, to the relatively tiny Dart, which is capable of destroying the heaviest tank. To carry out its major responsibility for the ground defense of the United States against air attack, the Army has surface-to-air missiles—Nike Ajax, Nike Hercules, and Hawk—which effectively cover the whole span of aircraft altitudes from the treetops to the highest flown by planes, and are capable of dealing with any type of aircraft now in operational use.

All in all, counting our experience with the Jupiter-A, the modified Redstone which preceded Jupiter-C as a test vehicle; the Jupiter-C, and the Jupiter itself, the Army has attempted 38 launchings of the big missiles in its Jupiter program. Twenty-nine were successful, completely successful, shots. They accomplished everything planned. Seven were partially successful, they all had successful launchings, but then, for various reasons, did not entirely meet the scientific requirements which had been set up. Only two did not score at all. Americans have every right to be tremendously proud of this splendid record. It stands up against even the most wildly optimistic Soviet claims.

To be strong among nations, and capable of deterring aggression and defending our liberty, we must first be strong within our own Nation. No other land has ever enjoyed as great an abundance of material things as does America today. But material things will not preserve our freedom. It is not what we have but what we are, which is the true substance of our strength. In the final analysis it is not what is done in our State capitals, or in Washington, which has the most far-reaching significance for America, but what is done in the local units of government throughout our Nation. That is why the community programs of Kiwanis are of such transcendent value.

The idealism of so many millions of brave and true people in all walks of life who have lived, worked, sacrificed, and died for America through the years—the idealism which "gives primacy to spiritual rather than material values"—ought to be the moving force in all our lives, for in a very real sense every American holds in his hand the destiny of the Nation.

It is the duty of each one of us to pay the price of freedom in the golden coin of courage, self-discipline, devotion, and steadfast adherence to the great tenets of our American faith.

Euratom—Statement by Gen. Julius Klein, Retired

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1958

Mr. CELLER. Mr. Speaker, I am very much interested in Euratom, as I am in Euromarket and I am pleased to submit a statement on Euratom by a very distinguished Army officer and friend of mine, for whom I have an affectionate regard, Gen. Julius Klein. The statement follows:

STATEMENT BY MAJ. GEN. JULIUS KLEIN, RETIRED, BEFORE THE JOINT COMMITTEE ON ATOMIC ENERGY, THURSDAY, JULY 24, 1958

Gentlemen, I thank you for the invitation to appear before your committee today. The subject before you is a vital one. It assumes even more importance in the light of the present crisis.

My name is Julius Klein. I am a resident of Chicago. I am a retired Army officer, with the rank of major general.

It has been my privilege to serve as consultant to the late Sentor Taft, of Ohio, and to the Senate Armed Forces Committee in the 80th Congress. And later, in 1954, as you may recall, I performed a special mission in Western Europe for the Senate Appropriations Committee. It is a matter of great pride to me that gentlemen on both sides of the aisle in the Senate and the House described this as a mission well done.

Now I have just returned from a 2-month visit to five European countries, including some of the major member nations of the European Atomic Energy Community, such as West Germany, France, and Belgium.

Although I was not an official representative of the United States Government during my journey, I had the privilege of renewing my friendship with a number of high officials of these governments, as well as with several prominent officials of Euratom itself.

I wish to make it plain that I represent my own views solely in this testimony—as a retired Army officer who has tried to serve my country in a number of civilian capacities. My interest in this question is based solely on my concern for what is in the best interests of the United States and its foreign and economic policy.

Gentlemen, I found almost unanimous opinion that the program proposed by President Eisenhower, and which is now pending before this committee, would be of great significance in the advancement of worldwide peaceful uses of atomic energy.

We need only to look at the headlines from the Middle East to understand the urgency of this legislation.

There is no doubt in my mind that, technically and commercially, the joint program will be of benefit to the United States as well as to Euratom.

My journey abroad enabled me to obtain conclusive evidence of the determination of the Soviet Union to impress the people of Europe with their industrial progress, particularly in the field of nuclear power development. This is an area that is receiving maximum Soviet attention.

As the President has said—and I quote—In the face of challenges to the West this (Euratom) program offers heartening evidence of the fundamental unity of purpose for the common good which exists among the free nations of the world today and illustrates our basic desire to concentrate on harnessing the atom for peaceful purposes—unquote.

I should like to give you an example of the way in which the Soviet propaganda works.

While overseas, I attended the first World Public Relations Congress, which was held in Brussels last month. I was a delegate of the American Public Relations Association.

A delegation of three members representing the Soviet Union was seated at the opening of the congress. This delegation promptly proceeded to use the congress as a forum for the distribution of sinister propaganda against the United States and the rest of the free world.

Although the congress had barred political and controversial issues from its agenda, the Soviet delegates hammered away at their favorite theme—that the United States was seeking war, whereas the Soviet was seeking only peace.

I recall that one of the Soviet delegates obtained recognition and addressed the congress in this fashion:

"In the Soviet Union we have 2 million workers utilizing atomic energy for peace, and, not like the United States, for war."

After a few more utterances of this type, I obtained recognition. Among other things, I pointed out that the Soviet brand of public relations was best evidenced by the events in Hungary and Poland, and in the executions of Nagy and Maleter. And I made it quite plain that the Communist propagandists were ignoring the fact that the Eisenhower doctrine of atoms for peace was of worldwide importance, and that they would do well to subscribe to it.

At that point, the chairman of the congress ruled the Soviet delegates out of order. And we were able to get on with the business at hand.

I cite this incident, gentlemen, only to highlight the fact that the Soviet Union is pursuing a course of attempting to undermine all that the western nations are seeking to accomplish in the way of world peace.

May I remind you that the Congress already has enacted legislation to share the military secrets of the atom with our friends in Great Britain and, to a lesser extent, with France.

Now we are presented with the opportunity to share the peaceful, as well as the military, knowledge with our allies of the Western World.

Should we fail to grasp this opportunity now, the result would be to add weight to the Soviet contention that we are interested only in atoms for war, and not atoms for peace.

The Soviets aim at using their scientific and economic resources to strike at the basic institutions of the Western World's free enterprise system.

The President's atoms-for-peace program was a vital step in checkmating this Red design. An equally important step was the formation of the European Atomic Energy Community.

And now comes the pending international agreement between the United States and Euratom. This proposal clearly constitutes recognition that multilateral action by the Western community is required to safeguard the free economic system of the West in the key area of peaceful use of nuclear development.

It is unfortunate that the proposal comes late in this session of Congress. But I voice

the hope of all with whom I talked that it is not too late.

It is never too late, gentlemen, to adopt measures for peace.

You will recall that when President Truman made the fateful and correct decision, as Commander in Chief, to unleash the atom bomb against Japan, and thus hasten the end of World War II, he made a fervent prayer that someday this great source of energy might be used as a blessing to the world—and not for the destruction of mankind.

The Eisenhower atoms-for-peace doctrine, which the Soviet propagandists have tried to ridicule from one end of the earth to the other, seeks to divert the awesome power of the atom into peaceful channels so that men, women and children everywhere need no longer live in fear.

And now comes Euratom—an agency operated by men dedicated to peace, by men free from the taint of socialism, communism, or other "isms," under the chairmanship of the distinguished Monsieur Armand. I have had the privilege of meeting these men. And I am impressed by their determination to make Euratom work for the benefit of you, and me, and our fellowmen.

The member countries have assigned their most distinguished and ablest statesmen to the task of promoting peaceful uses of atomic energy.

Euratom represents a prime opportunity for United States participation in a concerted effort by the free world to preserve the basic institutions of western free enterprise.

It affords the opportunity to demonstrate to the underdeveloped countries that western science and technology have immense contributions to make to the peaceful development of new sovereignties.

It can help to further respect for institutions of private enterprise by demonstrating that western aid is not trailed by the political strings that bind Soviet offers.

In my conversations abroad, I fould considerable interest in the fact that the British Government has offered to conclude an agreement with Euratom. As you know, negotiations are well underway.

Prime Minister Macmillan recently was asked about these negotiations by a member of Parliament. I would like to quote his reply.

He said, "The American agreement provides the framework for the joint construction of prototype reactors of American design, which still are in the development stage and which will be partly American financed. The United Kingdom offers a fully developed power reactor system which is already available for use in this country and for export on ordinary commercial terms. Her Majesty's Government hopes to conclude agreements with the (Euratom) community, and with appropriate member governments, which will provide the framework within which exports can take place."

In the course of my discussions, I found that there is no question but that British type power reactors are at the moment further developed than the American type. And, furthermore, I was informed that they can produce electricity at a lower rate than reactors developed in the United States.

But, at the same time, I was given to understand that Euratom holds to the view that the Community should explore the possibilities of American as well as of British type reactors. Euratom proposes to construct big powerplants in order to find out which type—in the long run—will prove to be the more economical.

The feeling is strong that this construction program, when linked to the joint research and development plan put forward by President Eisenhower, will provide a major incentive for European industry—for free private enterprise, which the Free World needs.

And this is the nub of the program.

We must prove that the American type reactor is geared above all other types to the peaceful uses of this tremendous energy.

Obviously, Euratom will only buy reactors of this type if the nations of the Community are convinced that these reactors are economically sound. The program now before you endeavors to carry this conviction abroad.

There are other compelling reasons—call them selfish, if you wish—why we must be closely identified with Euratom.

European nations have long been the source of many scientific developments, many of which have been of material benefit to the American people.

We, too, have contributed much in this field. But one can never be too old, or too learned, to ignore the progressive ideas of others.

As you gentlemen will remember, the whole field of atomic development was opened to us through the genius of Americans of foreign extraction—men who were refugees from their hard-pressed native lands—men of the stature of Einstein, Teller, Fermi, Szilard, and von Neumann, and others of like talents.

The President is now asking us to contribute to Euratom. But we can also learn from Euratom.

We have only to gain by this association.

Earlier, I stated that there is desire—intense desire—on the part of those with whom I conferred for action on this program before the adjournment of Congress.

Let me explain the reasons behind this desire.

Recent events in Europe have upset the time schedule for implementation of the European Common Market. These, in turn, could have a noticeable effect upon the progress of Euratom.

Premier De Gaulle has informed the president of the European Parliamentary Assembly that it is his intention to respect the European treaties now in force. But he has not denied his skepticism of these agreements.

The French economic situation is such that the entire Common Market faces delay in getting under way—at least, in getting under way to the extent originally planned, and hoped for, by the member nations.

It remains now for Euratom to give proof of the vitality of European integration through the program now before the Congress.

My consultations abroad have convinced me of one vital fact:

If this program should be rejected by the Congress, the result could only be to increase skepticism of United States policy and the sincerity of the Eisenhower atoms-for-peace plan within the European community.

Rejection also would be considered generally as a sign of distrust—rightly or wrongly—and as a retreat from United States policy for the unification of a free Europe bound to America in the peaceful pursuit of life.

I don't believe that it is an overstatement to say that Europe might undertake to try its hand alone, collectively or individually, politically and technically, in the event that this program should fail.

I do not pose as an expert in the field of atomic energy. U–235 is a mystery to me, as it must be to many people. I can report only the results of my conferences.

If Europe must travel alone, I am told, industry there will have no choice but to engage in the construction of natural uranium-type reactors. Reactor technology offers limited possibilities—due to the huge costs involved. Should European industry be committed to natural uranium-type reactors, the fewer would be the possibilities for development of American type reactors in Europe. My friends in Euratom have told me that they would deplore such a situation.

Also, in my discussions abroad, I found apprehension in the original proposal to grant inspection rights to the atomic energy agency now located in Vienna. This, as you are well aware, would have amounted to letting the Soviets take part unilaterally in atomic control in Western Europe. Our allies, naturally, could not accept such a plan.

It is gratifying to know that Euratom intends to keep its skirts clear of any Communist plan for mutual inspection, and that such a proposal does not appear in the program submitted to you.

Euratom has taken steps to set up its own control system under which nationals from six different nations shall have the right to investigate in other countries than their own. That, gentlemen, is the free world's way of doing business. By insisting upon an unrestricted control system, Euratom has done a great service to the objectives of freedom-loving peoples everywhere.

As a layman, I have tried to bring you only the thoughts I assembled during my tour of Western Europe. They came to me from many sources. They came to me from men and women sincerely interested in putting the atom to work for peace.

Euratom is a step sorely needed in this period of crisis abroad. As the President has said: It will bolster the strength and solidarity among the free nations of the world.

I earnestly urge its approval.

Thank you.

American Federation of Musicians Honor Oregon

EXTENSION OF REMARKS
OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 12, 1958

Mr. PORTER. Mr. Speaker, July 23, 1958, was an eventful day for the State of Oregon and Oregonians in Washington, D. C., and elsewhere.

Last evening the American Federation of Musicians saluted the State, its society and friends in the Capital, distinguished Oregonians in government and Mr. Herman D. Kenin, newly elected president of the International Musicians Union. Herman Kenin, a man of warmth, humor, and vigor, is outstanding in the musical field. He comes from Portland, Oreg., and only last month was elected to head the 264,000-member AFM.

In a splendid evening of live music under the stars, the 55-member Watergate Summer Symphony Orchestra treated audience members to lively renditions of hit melodies from Broadway musicals, after the crowd of several thousand was welcomed by Senator WAYNE MORSE, distinguished dean of Oregon's congressional delegation.

The multistarred concert featured a stirring initial symphonic performance of the official Oregon State song, Oregon, My Oregon. The version was arranged and conducted by Mr. Toby Tyler. The lyrics were sung by personable Gene Archer.

It was a proud night for Oregonians and AFM members, climaxed by a na-

tional introduction of President Kenin and the State song over the Mutual Broadcasting System's vast network. The symphonic version of Oregon, My Oregon will be heard often in my State during the centennial celebration next year.

Under leave to extend my remarks, I include the radio script from the Watergate broadcast, the program for the evening, and articles and editorial comment relative to the Oregon State song:

ANNOUNCER. Good evening, ladies and gentlemen, this is Ken French speaking for the Mutual Broadcasting System from the famous Watergate on the historic Potomac River in the Nation's Capital where tonight we are about to bring you a portion of the concert by the Watergate Summer Symphony Orchestra being presented by the American Federation of Musicians. The orchestra conducted by Dr. Henry Goldstein comprises members of the Washington, D. C., Local, No. 161, of the American Federation of Musicians and tonight's concert salutes the State of Oregon, the Oregon congressional delegation and Mr. Herman D. Kenin.

Dr. Goldstein is now making his entrance to the conductor's podium and we start this portion of the concert with the Watergate Summer Symphony Orchestra playing selections from the Broadway musical success, My Fair Lady.

Orchestra: My Fair Lady.

ANNOUNCER. As a feature of this Oregon celebration tonight on the banks of Washington's broad Potomac, it is my pleasure now to present a distinguished adopted son of Oregon. Himself an accomplished musician, a former practicing attorney, and for the past 14 years an international officer of the Musicians Union, he is enthusiastically welcomed here tonight by one of the largest and most distinguished gatherings of Oregonians ever assembled in the Nation's Capital. Ladies and gentlemen, I am pleased to introduce the newly elected president of the American Federation of Musicians, Mr. Herman D. Kenin.

Mr. KENIN. Thank you Mr. French. This is indeed the happiest homecoming a man could ever hope to enjoy away from home. Incidentally, yours is my first public introduction since I assumed the leadership of the American Federation of Musicians early last month. I can only hope that succeeding introductions of me in my sometimes controversial official capacity will be half so kindly. Circumstances have decreed that I must reside far from my beloved Oregon, but the memories of this cordial and gracious reception will soften any pangs of homesickness. It is a privilege to participate in any history-making first occasion, and especially in a coming-out party for our Oregon State song. My chief satisfaction, however, is that tonight history will be made by live musicians playing lively music from an orchestration arranged by Mr. Toby Tyler a long time member of our local musicians union. Ours tonight is the rare opportunity to remind tens of thousands of listeners that the music which is our American heritage can be created and kept alive only by live musicians. What the music machine gives us is but the parroting of the live musicians artistry. Yet, sadly, those machine-made sounds are threatening to mute forever the creative voice of a basic American art. But I won't intrude further a sad note upon so happy an occasion. Rather, I would remind my listeners, and particularly my fellow Oregonians, that we are indebted for this history-making event to the fact that the State of Oregon numbers among its distinguished congressional delegates a private investigator of the persevering school of the late Sherlock Holmes. I refer, of course, to Representative CHARLES O. PORTER, who does not confine his investigative prowess wholly to the domestic scene, but sometimes practices his talents abroad, to the discomfiture of dictatorships, and to his everlasting credit. Yet, I predict history will record that one of his finest hours as a private eye was achieved in ferreting out of dusty archives the all-but-forgotten State song of Oregon. When Congressman PORTER told me of his recent achievement in perpetuating American music through the rediscovery of this age-yellowed sheet music, originally written for piano in 1920 by Henry Murtagh, I promised him we would prepare an arrangement of it for symphonic production and rededicate it to a great State that soon will celebrate its centennial. The song, Oregon, My Oregon may not find a place on the Hit Parade because Mr. Tyler's arrangement is not at all reminiscent of Rock 'n Roll or even Dixieland music, but I am confident its rediscoverer will add to his renown as a Member of Congress who can produce the music as well as the words. Thus, it gives me much pleasure to introduce to you the Honorable CHARLES O. PORTER, Member of Congress from Oregon. Mr. PORTER.

Mr. PORTER. Thank you my friend, Herman Kenin. It is a tribute to your untiring work on behalf of the American Federation of Musicians that you have been elected to succeed Mr. Petrillo. I believe that as the leader and spokesman for a great labor union, you will do much to sustain the cause of "live" music. Tonight we have heard fine examples of the talent of American Federation of Musicians members. And, we will soon hear a symphonic version of the Oregon State song which that leading newspaper columnist George Dixon commented on. George called the words sheer horror. Humor is humor, but this is going too far: Here are the words of Oregon, My Oregon.

"Land of the Empire Builders,
Land of the Golden West;
Conquered and held by freemen,
Fairest and the best.
Onward and upward ever,
Forward and on, and on;
Hail to thee, Land of Heroes, My Oregon."

Sheer horror, ladies and gentlemen? I think not. What do these words tell us? Land of the empire builders—builders of an empire based on hard work, courage, and tolerance of the other fellow's views; land of the golden west—golden refers to sunsets and how we feel, not to material wealth; conquered and held by freemen—we shall ever be in debt to the free men and women who bravely pioneered our land; fairest and the best—no question about this; onward and upward ever, forward and on, and on—there is still pioneering to be done in our great State—hard but satisfying work for all of us; hail to thee, land of heroes, my Oregon—heroes indeed—all those who seek to be worthy of this many blessed portion of our great Nation. Sheer horror, these words? No, indeed, but fitting words for stirring music. It is now my privilege and pleasure to present to you the Watergate Summer Symphony Orchestra conducted by Mr. Toby Tyler, featuring Mr. Gene Archer and their rendition of Mr. Tyler's arrangement of Oregon, My Oregon.

(Orchestra: Oregon, My Oregon.)

ANNOUNCER. The Mutual Broadcasting System has brought you a portion of the concert by the Watergate Summer Symphony Orchestra presented by the American Federation of Musicians. This program came to you from the famous Watergate on the historic Potomac River in the Nation's Capital, and saluted the State of Oregon, and the Oregon congressional delegation. Heard on tonight's program were Congressman CHARLES O. POTTER, of Oregon, and Herman D. Kenin, newly elected president of the American Federation of Musicians. The orchestra was conducted by Dr. Henry Goldstein and Mr. Toby Tyler. The vocalist was Gene Archer. This broadcast was produced and directed by Phil Lampkin, director of music for the Mutual Broadcasting System. This is Ken French speaking.

THE AMERICAN FEDERATION OF MUSICIANS IN COOPERATION WITH THE NATIONAL CAPITAL PARKS, PRESENTS THE WATERGATE SUMMER SYMPHONY IN HIT MELODIES FROM BROADWAY MUSICALS AND FEATURING THE FIRST SYMPHONIC PERFORMANCE OF OREGON, MY OREGON, OFFICIAL OREGON STATE SONG

(This added concert of Washington's Summer Jubilee Festival Salutes the Oregon State Society, Distinguished Oregonians in Government, and Mr. Herman D. Kenin, newly-elected president of the American Federation of Musicians, also of Oregon)

PROGRAM NOTES

Tonight's concert is the first of six Watergate concerts to be offered each Wednesday evening through August, featuring members of the D. C. Federation of Musicians in symphonic, jazz, and country and western music.

The succeeding five concerts are made possible by the Music Performance Trust Funds through a grant by the recording industries, and in cooperation with the D. C. Federation of Musicians.

A 25-minute segment of tonight's concert will be broadcast live coast-to-coast over the Mutual Broadcasting System, commencing at 9:35 o'clock. Ten minutes before broadcast time the program director will instruct you in the audience participation for this broadcast.

Reserved seats for Oregon State Society members have been provided tonight because they are present especially to hear played for the first time anywhere a symphonic arrangement of their official State song, Oregon, My Oregon. The song was rediscovered recently by Oregon Representative CHARLES O. PORTER. President Kenin of the American Federation of Musicians, himself an Oregonian, promptly asked the D. C. musicians union to prepare a symphonic arrangement of the State song.

Thus, Oregon Night at the Watergate salutes the hundreds of members of the Oregon State Society in the Nation's Capital, many distinguished Oregonians in governmental service here and an adopted son of Oregon, Mr. Kenin, who only last month was elected president of the 264,000-member American Federation of Musicians.

PROGRAM, WEDNESDAY, JULY 22, 1958, 8:30 P.M.,
DR. HENRY GOLDSTEIN, CONDUCTOR, WATERGATE SUMMER SYMPHONY ORCHESTRA

The National Anthem.

I Love Washington (Edward R. Carr), conducted by Eddie Pierce, sung by Gene Archer.

Selections, The King and I (Richard Rodgers).

Piano duo, medley (Vincent Youmans), Mel Clement and Helen Myers, pianists.

Seleections, Show Boat (Jerome Kern).

Intermission.

Coast-to-coast broadcast (Mutual Broadcasting System).

Selections, My Fair Lady (Frederick Loewe).

State song, Oregon, My Oregon. Music by Henry B. Murtagh, words by J. A. Buchanan, sung by Gene Archer, arranged and conducted by Toby Tyler.

Piano duo, Medley (Cole Porter).

Symphonic scenario, South Pacific (Richard Rodgers).

[From the Eugene (Oreg.) Register-Guard of February 18, 1958]

MUSICAL CRISIS SOLVED FOR CENTENNIAL

(By A. Robert Smith)

WASHINGTON.—For many years, an indignity has been imposed upon those displaced Oregonians who, by the chance of politics

or the lure of money and fame, have made their home in the Nation's Capital.

When they attended those familiar social functions—say a big political banquet—along with natives of the other States, one point of discomfort to loyal Oregonians inevitably arrived.

It would come when the orchestra began honoring the various States. When the band struck up The Eyes of Texas Are Upon You, the Texans in the house would act like loyal Texans always act. The Californians would go wild over California, Here I Come.

As the musicians delighted one State group after another with their official State songs, the Oregonians finally had to face the music—the band never knew Oregon, My Oregon.

Fresh from the grassroots of Oregon, Congressman CHARLES O. PORTER noticed this soon after he arrived here early last year while attending a Democratic dinner. Much to his chagrin, he reported:

DUM, DUM, DUM

"When Oregon was saluted, the orchestra played one of those nameless somewhat tuneless, mixtures of notes.

"Always, at the functions I've attended, the orchestra or pianist or chorus fills in with 'dum, dum, dum'. The dums signify nothing other than an awkward musical bridge."

Because he liked the song, which the State went to much trouble to select, and to correct this slight against Oregon, PORTER dug into the matter.

The Society of Oregon Composers held a contest in 1920 to pick a State song. From 50 entries, it selected Oregon, My Oregon. The lyrics were written by a municipal judge who liked to write poetry, J. A. Buchanan, who died at Astoria in 1936. Composer was Harry Murtaugh, who played the piano during silent movies, but left Portland years ago and has not been heard from since World War II when he passed through town with a war bond selling group. The State legislature in 1927 made it official under the title, "Land of the Empire Builders."

NEVER COPYRIGHTED

PORTER learned from the Copyright Office, Library of Congress, that no copyright had ever been issued for the song under any title. The Portland music publisher, Irving E. Sklare, obligingly sent him 50 copies of the song, which the Congressman distributed to the Washington, D. C., Federation of Musicians, with this comment:

"Frankly, I flinch when a musical bridge fills the spot where a few health strains of Oregon, My Oregon would warm the loyal hearts of Oregonians attending the function."

The local musicians are especially anxious to prevent congressional flinching in the music field these days, what with a bill now pending to reduce the tax on all places that feature live music—a tax which the musicians claim has thrown many of them out of business because many cabarets avoid the tax by replacing the band with a jukebox.

STARTED REHEARSALS

All the local band leaders were promptly supplied with Oregon, My Oregon, and the union promised PORTER they would soon be able to swing right into it on request.

Moreover, the United States Navy Band agreed to make an arrangement of the song and be ready to perform for Oregonians by June 1. The Navy may even record it, though this can't be sold commercially.

And Dean Theodore Kratt of the University of Oregon School of Music has indicated to PORTER he could have a choral arrangement made as a student project. A. Verne Wilson, supervisor of music, Portland Public Schools, said he would take it from there and have a high-school choir record the song.

Oregon, My Oregon is in for a needed revival, just in time for the big centennial that is coming up next year.

[From the Milwaukie (Oreg.) Review of February 20, 1958]

SINGING FOR OREGON

Thirty-one years ago the legislature made it official, Oregon's State song was to be Land of the Empire Builders, or more simply, Oregon, my Oregon.

It is a lilting tune, easy to sing and understand—but now in 1958, only a few Oregonians know the words and sing out when it is played for group singing. We'd better brush up on it this year to get ready for next year's centennial.

We are grateful to CHARLES PORTER, the zestful young Congressman from the southwest Oregon district, for his initiative in popularizing the song with bands and orchestras in the National Capital. Now let's do as well, or better, here at home by singing it in our schools, grange, clubs, and community meetings until we know it.

To refresh your recollection, here are the words of our song. It's a good song, as good as the famous State songs of Texas, California, or Indiana and almost as taking as Oklahoma's or Maine's:

"Land of the Empire Builders,
Land of the Golden West;
Conquered and held by freemen,
Fairest and the best.
Onward and upward ever,
Forward and on, and on;
Hail to thee, Land of Heroes, My Oregon.

Land of the rose and sunshine,
Land of the summer's breeze;
Laden with health and vigor,
Fresh from Western seas.
Blest by the blood of martyrs,
Land of the setting sun;
Hail to thee, Land of Promise, My Oregon."

[From the Eugene (Oreg.) Register-Guard of February 21, 1958]

STATE SONG

A. Robert Smith, our Washington correspondent, reports that Congressman CHARLES O. PORTER has decided to do something about the ignorance, in Washington, D. C., of Oregon's official song, known variously as Oregon, My Oregon and Land of the Empire Builders.

That's fine. We hope the song becomes known across the land, but we also suggest it is not exactly a familiar song right here in Oregon. When we read Bob Smith's piece, we tried out a few bars on our monotone and found that, to save us, we couldn't get beyond "Land of the golden west." (That shows how long it's been since were were in the seventh grade.)

Since this is Oregon's 100th year of statehood, it behooves us to learn as much about Oregon as we can. Earlier we suggested boning up on Oregon history and literature and spending the summer on "See Oregon first" vacations. Now we suggest that Oregon residents brush up on their State song. It can be found, words and music, on page 123 of the current Oregon Blue Book.

Oregon, My Oregon is no Maryland, My Maryland, or California Here I Come, but as State songs go it's far from bad.

[From the Medford (Oreg.) Mail Tribune of June 8, 1958]

STATE SONG PROGRESSING

Oregon, My Oregon, also known as Land of the Empire Builders, the Oregon State song, is making heartening progress.

We lamented here a few months ago that no one seems to know it very well—if at all—and that it was being neglected. And it's a good tune.

Since then, we understand that at least one young men's service club in town has started singing it at the beginning of its meetings. And, according to evidence from some school-age youngsters we know, it is a part of their music repertory.

Now we are informed that it's beginning to get through in official circles in Washington.

Congressman CHARLES O. PORTER earlier this year got in touch with the District of Columbia Federation of Musicians, and suggested that Oregon's song be played at functions where the various States are saluted by their official songs. In the past, Oregon's tribute has been sort of undistinguished musical bridge which meant nothing.

As a result, the District's orchestra leaders were tipped off to this unsatisfactory situation, and at one recent function, the State's song was given a lively and well-rendered version, PORTER reports.

Which is all to the good.

Hon. George H. Christopher, of Missouri

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1958

Mr. CANNON. Mr. Speaker, Missouri has sent many able Representatives to the Congress of the United States; however, to my knowledge no other Member has more quickly joined in the conflict for the common good of all people than the gentleman from the Fourth Congressional District GEORGE H. CHRISTOPHER.

The CONGRESSIONAL RECORD abundantly proves that GEORGE CHRISTOPHER has always spoken, fought, and voted for legislation which would be of benefit to veterans, laboring people, students, educational leaders, farmers, and the business and professional men and women who serve and supply them. Such a record has seldom been equaled and never exceeded. No vote cast by my friend, GEORGE H. CHRISTOPHER, in 6 years of congressional service can be pointed out as wrong for the people of his district, State, or Nation.

Here is a man who firmly believes that democratic institutions are never done, that they may be compared to living tissues, always a-making, and although it may be strenuous, this thing of living the life of a free people, as we do in our Nation, we cannot escape the burden of our inheritance.

It is good to come upon such a man on occasions—to rewarm our hands at his fire of enthusiasm, to stand face to face with his ideals, to reckon again with our duties, to take fresh view of our aims and to gain strength from his courage.

Such talent, enthusiasm, and courage could not long go unrecognized, and it gives me much pleasure to extend at this point in the CONGRESSIONAL RECORD five letters written by farm veterans, and rural electrification leaders in which they recognize in appropriate form the fulfillment of my colleague's responsibilities to the American people.

The Congress of the United States, the people of the Fourth District, and the Nation as a whole still need the service of this man in the Congress.

NATIONAL FARMERS UNION,
Washington, D. C., July 21, 1958.

Hon. GEORGE H. CHRISTOPHER,
United States Congressman,
House Office Building,
Washington, D. C.

MY DEAR GEORGE: As I read your recent letter my thoughts turned to the many outstanding Members of Congress that the voters of Missouri have sent to Washington and to President Harry Truman under whose administration and leadership you served the farmers of the United States.

Events on the Washington farm front today have been greatly altered with the pressure from the White House and the Department of Agriculture always on the side of lowering farm prices. In spite of glowing reports, farmers' bargaining power is becoming weaker with vertical integration an increasing threat to their economic interests.

About the only solace that we in agriculture have today is the knowledge that men such as yourself are still in the Congress and the prospect of increasing their number.

I am grateful for the opportunity this reply to your letter has given me to express appreciation for your many services to the farmers of the United States.

Sincerely,

JAMES G. PATTON,
President.

MISSOURI FARMERS ASSOCIATION, INC.,
Columbia, Mo., June 24, 1958.

Hon. GEORGE H. CHRISTOPHER,
United States Congressman, House Office Building, Washington, D. C.

DEAR CONGRESSMAN CHRISTOPHER: Recently I have had occasion to review your voting record over the years on matters of import, and particularly on questions of farm legislation and also those related to REA. I have been impressed with your performance in this regard, and feel that you have always kept foremost the best interests of farmers and agriculture in general.

If you have occasion to come by Columbia when you are next in Missouri, I would be most happy to have an opportunity to visit with you.

With best personal regards, I am

Sincerely yours,

FRED V. HEINKEL,
President.

NATIONAL FARMERS ORGANIZATION,
Corning, Iowa, July 9, 1958.

Hon. GEORGE H. CHRISTOPHER,
Adrian, Mo.

DEAR SIR: As president of the National Farmers Organization and as a farmer in northwest Missouri, I wish to express my thanks to you for your constant efforts in the House of Representatives to improve the agricultural economy for the family type farmer.

In reviewing your past efforts I know of no Senator, or Congressman, that has a better record for the American farmer in the Halls of Congress.

In my opinion your services to agriculture in the Congress of the United States is equal to any that can be found.

Very truly yours,

OREN LEE STALEY, *President.*

NATIONAL RURAL
ELECTRIC COOPERATIVE ASSOCIATION,
Washington, D. C., July 23, 1958.

Hon. GEORGE H. CHRISTOPHER,
House of Representatives,
Washington, D. C.

DEAR GEORGE: This is in reply to your letter of July 15 asking whether this organization has a record of your support of the rural electrification program during your terms in the Congress, and, if so, what it shows. Yes, we compile a running voting record of all Members of Congress with regard to matters vitally affecting the rural electrification program.

I am pleased to enclose herewith a copy of your voting record on such matters. You will note that on pages 24 and 25, it shows your voting 100 percent in favor of the program on every vote that you cast, and it shows only two absences when rural electrification matters were being voted upon.

This confirms my personal knowledge that you have been one of the hardest and most dedicated workers on behalf of the rural electrification program in the Congress during the years that you have been there, and I might add that you have been one of the most effective because of your keen debating ability. The rural electrification program nationwide is greatly indebted to you for such a fine record of support.

With highest personal regards, I am

Sincerely,

CLYDE T. ELLIS,
General Manager.

THE AMERICAN LEGION,
Washington, D. C., July 16, 1958.

Hon. GEORGE H. CHRISTOPHER,
House of Representatives,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN CHRISTOPHER: Before Congress adjourns I would like to take this occasion to express to you my sincere thanks and appreciation for the wholehearted support and splendid cooperation which you have always extended on behalf of veterans' legislation.

As you know, since you have been a Member of Congress and especially during your service on the House Veterans' Affairs Committee, I have requested you, on numerous occasions, to introduce bills covering veterans' legislation in which the American Legion was interested, and you have always complied with my requests.

I am also grateful to you for the fight you have waged and the arguments you have advanced on many occasions when matters of interest to veterans and their dependents came before the House Veterans' Affairs Committee for consideration.

In addition, I would like you to know that I personally appreciate the numerous interviews which you have been good enough to grant to me in connection with our legislative program and for the excellent advice you gave me on occasions too numerous to mention.

With warm personal regards, I am

Sincerely yours,

MILES D. KENNEDY,
Director.

Depressed Areas Need Help of Congress Now

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1958

Mr. SCOTT of Pennsylvania. Mr. Speaker, under leave to extend my remarks I am inserting an editorial which appeared in the Harrisburg Patriot on July 22, 1958. The passage of the area redevelopment bill is of vital importance to Pennsylvania and should be acted upon without further delay.

DEPRESSED AREAS NEED HELP OF CONGRESS NOW

The fate of the area redevelopment bill at this session of Congress will be on the line when the House Rules Committee finally gets around to holding a hearing on whether or not to allow the legislation out on the floor for a vote. And riding along with it will be the hopes of people living in the Nation's chronic pockets of unemployment for a new economic lift.

Pennsylvanians have a vital interest in this legislation. It would provide aid for these depressed areas, and the Commonwealth has more than its share. It's only fitting, therefore, that this State's congressional delegation is trying to push the bill out for action through the logjam of apparent indifference that exists toward it in the House.

This is no recession year legislation. Pennsylvania's hard coal regions have been feeling the pinch for years. These areas will need some Federal aid if they are to experience an economic revival through new industries and new jobs.

Neither is this a Federal handout. A Senate-passed bill, which the proposed House measure closely follows, would establish an Area Redevelopment Administration to handle revolving loan funds of $100 million each for industrial redevelopment areas, rural redevelopment areas and for public facilities to improve commercial opportunities.

For Pennsylvania at least, this is not a case of States and local communities asking Uncle Sam to do something they won't do for themselves.

The Commonwealth has an admirable record of achievement in this field through the Pennsylvania Industrial Development Authority, which in the first 20 months of its existence has loaned out or committed $5,866,062 for factories in 30 communities. It has helped establish 47 new plants providing 8,800 new jobs. And 2 weeks ago, Governor Leader cited the self-help record of northeastern Pennsylvania communities which, in the 12 years before PIDA, financed 67 projects and created 17,730 factory jobs.

But this is not enough. Before this biennium is over, the $8 million appropriated by two consecutive legislatures is expected to run out. Congressional action is needed to supplement the effort on the State and local levels.

As Governor Leader said recently, "People are not interested in which party gets the credit for this legislation—what they want is action now and they have every right to expect it."

Pennsylvania's Representative HUGH SCOTT thinks the Rules Committee vote will be a close one. Close or not, this bill should be given its chance before the full House. There are no good reasons for killing this legislation again. The national blight of the depressed areas will not disappear by itself. It will take the sort of enlightened aid envisioned by this bill.

Minnesota Offers Many Attractions for Visitors and Homeseekers

SPEECH
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. McCARTHY. Mr. Speaker, I am pleased to join my colleagues in extending to all Members of the House an in-

vitation to visit Minnesota's Theater of the Seasons during this our centennial year. Vice President NIXON blazed the trail last Saturday when he journeyed to the land of 11,007 lakes to open Minneapolis' annual celebration of its world-famed aquatennial. Members who may find themselves a little too busy just now to follow the Vice President's example and take part in that summer festival may perhaps be able to make amends for this inadvertent slight to our great State by visiting Minneapolis' sister city, St. Paul, during Minnesota's invigorating winter season and joining in its exuberant tribute to King Boreas Rex during the week of its winter carnival. Members who may be afflicted with ochlophobia and may wish to avoid the vast crowds which frequent both of these celebrations can find many a green and secluded spot within the State where they may rest from the heavy burdens of statesmanship and devote themselves to swimming, boating, hunting, fishing, or merely passively contemplating the natural beauty of the North Star State. Wherever they may go they will be sure to encounter that characteristic hospitality of her citizens to which Mr. Fernós-Isern, the Commissioner of Puerto Rico, has so graciously paid tribute. The warm friendliness of which Mr. Fernós-Isern spoke arises not merely from compassion on the part of Minnesota's citizens for the inhabitants of lands less delightful to behold, but betokens in many cases a feeling of identification with the visitor, for Minnesota, as I have remarked before on the floor of the House, is a miniature United Nations. Members of many races, who have come from many other parts of the United States and from many foreign lands have played a part in her hundred-year saga, and their descendants today have at least a latent racial memory of what life was like before they or their forbears moved to what we in Minnesota regard as a land only "This Side of Paradise" to borrow the title of a novel by one of Minnesota's most famous sons, F. Scott Fitzgerald.

Many a casual visitor to our State has later returned to become a permanent inhabitant. Those who, while grateful for the solace afforded to mind and heart by Minnesota's natural beauty, may be unwilling or unable to devote full time to the contemplation of that beauty can find ample opportunity within our progressive State for the exercise of their commercial or professional talents. Minnesota has long been considered one of our Nation's great agricultural States. It has been such in the past and is so today, with some 180,000 farms, 4 out of 5 of which are owner-operated. Yet industry is by no means a minor factor in the economy of the State. In 1948, for the first time in the history of the State, the dollar value of manufactured products exceeded cash farm receipts. Sauk Centre, Minn., was the setting of Sinclair Lewis' famous novel, Main Street, and there are many Main Streets throughout the State whose small-business men did nearly $4 billion of retail sales in the calendar year 1957.

Physicians know Minnesota as the home of the Mayo Medical Center and of the University of Minnesota hospitals. The famous Sister Kenney, it will be remembered, when she came to this country to advance her great crusade against crippling polio, established herself in the city of Minneapolis. Intellectuals need not fear that they must abandon their books and scholarly interests and immerse themselves wholly in nature when they settle in our green and rustic land. They can turn for intellectual stimulus to the University of Minnesota with its many extension and community-service programs to 1 of our 5 State colleges, or to 1 of 14 excellent private colleges. The musically inclined can look to the performances of Minneapolis' world-famous symphony orchestra, and to many college and civic music groups throughout the State. The art lover will find a number of first-rate art galleries and abundant evidence of creative activity in painting, sculpture, and architecture. St. Johns University, one of our fine private colleges, has recently embarked upon a 100-year building program, employing the services of the eminent architect, Marcel Breur, which has won international recognition.

In short, Mr. Speaker, Minnesota is not only one of our country's finest vacation lands but offers many advantages—economic, social, cultural, climatic—to him who would make his home among us. He will find even in our largest cities much of that unassuming friendliness and concern for the welfare of one's neighbor which is habitually associated with the small midwestern town. In 1858, when Minnesota was admitted to the Union, it had a scant 150,000 inhabitants. Today it has over 3 million, but its dynamic and expanding economy, based upon a rich endowment of natural resources, can accommodate many more. Minnesota's territorial seal bore the motto, "Quo sursum volo videre"—I wish to see what lies beyond." This is a fine emblem, I think, of the habits of thought which have characterized Minnesota's ambitious and forward-looking citizenry during the first 100 years of the State's existence, and which will continue to mark its unflinching acceptance of the role it is called to play in the century to come.

Why This Difference?

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 9, 1958

Mr. JOHNSON. Mr. Speaker, as we all know, the vast majority of American citizens are prompt in taking care of their income tax obligations to their Government. And the Internal Revenue Service is properly vigilant, in the majority of cases, in seeing that each person bears his fair share. Therefore I was surprised to read recently that a large industrial firm, the Lebanon Woolen Mills Corp., has not filed its income tax returns since 1952. To date there has been no explanation for this slipup. But there must be an explanation and I hope it is forthcoming soon if for no other reason than to renew the assurances we have been receiving of late that certain gift givers are not the recipients of any special considerations in the Nation's Capital.

Some of the questions which have arisen in my mind in recent months are aptly expressed in an editorial in the July 26 issue of Labor, the weekly newspaper for railroad brotherhoods. I recommend it to my colleagues.

WHY THIS DIFFERENCE IN COLLECTING TAXES?

The House committee investigating the Adams-Goldfine case, headed by Congressman OREN HARRIS, Democrat of Arkansas, has performed a public service by spotlighting this question: Why are businessmen allowed to get away with all sorts of tax dodges, and sometimes practically thumb their noses at Uncle Sam's tax collectors, when wage and salary workers are required to obey the letter of the law and pay every tax penny they owe?

If that seems pretty strong language, just consider the following reasons for asking the question:

As an article in the Scripps-Howard papers reports: "One of Bernard Goldfine's companies—Lebanon Woolen Mills Corp.—has not filed its income tax returns since 1952. Another Goldfine company, Northfield Mills, Inc., has not filed its fiscal 1956 tax return, due a year ago.

"Goldfine also has failed to file his personal Federal tax returns for 1956, and has received an extension for filing his 1957 returns, which were due last April 15.

"Internal Revenue officials," the article points out, "said they could not explain the Service's failure to compel Goldfine's mills to file tax returns."

The United States income tax collectors do not go so easy on a worker. In the first place, his taxes are deducted from his pay, so he has no chance to dodge. In the second place, if he failed to file a return tax men would promptly crack down on him and make him pay penalties.

Not only that, but an editorial in the Machinist, weekly newspaper of the machinists' union, points out graphically what happens to a worker if he is unemployed and can't pay taxes on his past income. As the editorial says:

"Last week the Internal Revenue Service admitted that its collectors have been seizing unemployment-compensation checks due jobless workers who are behind in their taxes. Now the same Internal Revenue Service reveals that Textile Millionaire Goldfine has not even filed his (personal) income tax returns for either 1956 or 1957."

Commenting on this situation, Congressman LEROY ANDERSON (Democrat of Montana) said: "I can't see why Uncle Sam should reach into the meager assistance to a parent with children, for a bare bread-and-butter living, and take part of it away." This would be stopped by a bill which Anderson and some other Members of Congress are pushing.

Because of Goldfine's gifts to "Assistant President" Sherman Adams and other high officials, an article in U. S. News & World Report magazine says: "People are raising questions about the deduction of gifts in figuring income taxes." The article's answers to those questions boil down to this:

The ordinary individual cannot cut his income taxes by deducting the cost of gifts, "because the ordinary individual's wage or

salary is not dependent on giving gifts. To be deductible, gifts other than charitable donations are required to be business expenses."

In other words, the giver has to expect something in return, something that would help his business.

Thus, as Labor pointed out last week, Goldfine either expected something in return from President Eisenhower's right-hand man, or Goldfine was doing some tax dodging, and Uncle Sam's tax collectors—at least, so far—have let him get away with it. They would have said "No" in a hurry if some ordinary individual, instead of a wealthy businessman, had tried to deduct the cost of a gift from the income on which he pays taxes.

United Board, Carton Official Favors Extension of United States Trade Program

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. HOLTZMAN. Mr. Speaker, I would like to include, herewith, a clipping from the Springfield (Ohio) Daily News, of July 11, concerning the remarks recently made by Mr. William S. Stuhr, president and board chairman of the United Board & Carton Corp., at the 19th annual State convention of the Ohio Department of the Marine Corps League.

The newspaper article follows:

UNITED BOARD, CARTON OFFICIAL FAVORS EXTENSION OF UNITED STATES TRADE PROGRAM

(By Bill Norman)

"Extension of the trade agreements program for at least 5 years is important because it would lend needed stability to the program, not only to trade itself but also to United States overseas investments, which a liberal trade policy encourages."

This was the comment made Friday by William S. Stuhr, of Weehawken, N. J., president and board chairman of the United Board & Carton Corp., which has plants in Springfield and Urbana.

He is in Springfield to make an address before the 19th annual State convention of the Ohio Department of the Marine Corps League.

The convention is being hosted by the Springfield detachment of the Marine Corps League and Auxiliary. It got under way Thursday and will conclude Saturday night following the talk by Mr. Stuhr, installation of newly elected officers, and a military ball in the ballroom of Hotel Shawnee.

In discussing the trade agreements program which is now before Congress, Mr. Stuhr stated that he has been a proponent of liberal trade policy for many years and is greatly interested in the legislation now before Congress covering the program.

"Our program by now has become an integral part of our foreign policy. It is difficult to see how we can cultivate friendship in other areas of international relations if we refuse to play ball, or play it reluctantly, with stipulations that are too stringent when it comes to foreign trade," he said.

"And that becomes a vital consideration now that Russia has openly launched a broad, powerful economic offensive and will shoot out another trade mission at the drop of an invitation anywhere," he continued.

"We suffered a psychological setback before the eyes of friendly nations when Russia became the first to launch a satellite. And we'll suffer another setback if we tighten rather than loosen our trade terms with those countries that want and need to sell to us," Mr. Stuhr said. "We have launched a satellite, too, and we are certainly capable of sustaining a powerful economic offensive to keep free countries out of the Russian bear hug."

He continued by saying that many of the free countries the Soviet Union is wooing must trade to live and if they can't do business with the United States they will do it with Moscow.

"Moreover, many of those countries are sources of materials we must import that are vital to our economy and military strength. If and when those countries fall into the Communists' economic orbit we will find those sources cut off and that is obviously a part of the Kremlin design," he concluded.

Top Woman Protestant Is a Negro

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. DINGELL. Mr. Speaker, I was happy to see a recent article which appeared in the Detroit, Mich., News of May 16, 1958. That article sets forth how one of my constituents, Mrs. Jesse Jai McNeil, was chosen president of the United Church Women, an organization composed of women of all Protestant and Orthodox religious groups. Mrs. McNeil is a much respected member of the Detroit community and has been active in civic, church, and charitable affairs in Detroit and the State of Michigan. Her husband is Rev. Jesse Jai McNeil, pastor of Tabernacle Baptist Church, vice chairman of the Michigan Corrections Commission, and vice president of the Michigan Council of Churches.

Election of Mrs. McNeil is indeed, proof that we in Michigan recognize her ability and integrity.

Under unanimous consent I insert the article in the appendix of the RECORD:

TOP WOMAN PROTESTANT IS A NEGRO

Michigan's Protestant and Orthodox churchwomen today elected a Negro woman as their president for the first time.

She is the cultured, personable Mrs. Jesse Jai McNeil, wife of the senior minister of Detroit's Tabernacle Baptist Church. Her husband also is vice chairman of the Michigan Corrections Commission and vice president of the Michigan Council of Churches.

Mrs. McNeil said she was "both happy and humbled" when delegates chose her for their 1958 leader at the annual meeting of the United Church Women of Michigan, women's department of the Michigan Council of Churches.

The women's session was held in Grand Rapids' South Congregational Church.

Election of Mrs. McNeil was hailed by Mrs. T. D. Stilwell, of the United Church Women of Detroit, as a stride toward "unity of churchwomen in the task of establishing a Christian social order, in which all areas of life shall be brought into harmony with the life and teachings of Jesus Christ."

"I realize," said Mrs. McNeil, "that our policy of integrated leadership will be watched and serve as an example in the other State organizations in the United States."

SETS EXAMPLE

"That we have adopted such a policy demonstrates also to those abroad that we in America are bringing our practices into conformity with our ideals.

"In our churchwork, such as sponsoring the World Day of Prayer, we come in contact with churches of all nations, and to them this election will seem a vindication of our American way of life."

Mother of four children, Mrs. McNeil has traveled abroad extensively with her husband. She was an official observer at Britain's Triennial Congress of the Women's International League for Peace and Freedom.

HOLDS DEGREES

She holds degrees from Howard and Fisk Universities, studied neuropsychiatry at Duke University and was a National Public Service fellow in sociology at Columbia University.

She is a member of the human relations workshop team of the United Church Women (UCW) of the United States, Alaska, and Hawaii; the commission on cooperation of the World Council of Churches and the national board of managers of the churchwomen's department of the National Council of Churches of Christ.

She has been vice president of the Michigan UCW for 4 years, and she has served as president of the Doty School PTA, as a board member of Lucy Thurman Branch, YWCA, and a member of the National Association for Advancement of Colored People.

While gratified at the new honor given her today, Mrs. McNeil did not forget to speak of the encouragement given her by her husband and their children, Jesse Jr., 12; Genna Rae, 11; Kenneth Ross, 9, and Brenna Jean, 7.

The Role of the Supreme Court

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, July 24, 1958

Mr. ERVIN. Mr. President, everyone who is interested in understanding the rightful role of the Supreme Court in our Government ought to read Judge Learned Hand's recent book entitled "The Bill of Rights." In its issue of July 23, 1958, the Asheville Citizen, of Asheville, N. C., carried an excellent review of this book written by Edwin M. Gill, State treasurer of North Carolina, who is a profound scholar in governmental and legal fields. I ask unanimous consent that this review be printed in the Appendix of the RECORD.

There being no objection, the review was ordered printed in the RECORD as follows:

FAMED JUDGE LEARNED HAND SAYS COURTS SHOULD INTERPRET, NOT CHANGE LAW

(By Edwin Gill)

At a time when the Justices of the Supreme Court of the United States are noted for injecting into their opinions their social and economic predilections, it is refreshing to read the words of Judge Learned Hand who is known chiefly for his objective approach, his impartial spirit, his sense of history, and, above all, his profound knowledge of the law.

Others who sit upon the bench may strive to be crusaders, reformers, advocates, prosecutors and lawgivers, but Learned Hand is content to be a judge, wielding the authority of such office with the humility of one who considers himself a servant of the law, fully conscious of the fact that he is not infallible.

In this slender volume, which is based upon Judge Hand's Oliver Wendell Holmes lectures, a number of searching and fundamental questions are asked, all of which have to do with the function of the Federal courts in declaring invalid statutes of Congress or of the States or acts of the President, because they are in conflict with the 1st, 8th, and the 14th amendments to the Federal Constitution, which Hand calls The Bill of Rights.

Although the Constitution does not expressly give to the Supreme Court of the United States the authority to pass on the constitutionality of acts of Congress, the Executive and State legislatures, Hand agrees with John Marshall that such authority is necessary to the orderly conduct of our Government. Judge Hand would, however, greatly limit the area in which the Court should intervene.

From long experience, Hand has learned that justice is more apt to be relative than absolute. He feels that the advocacy of ideas under some circumstances may properly be restrained; that in a constitutional democracy such as ours, neither speech, nor religion, nor the press is absolutely free. He contends that the rights of life, liberty, and property are equally guaranteed and can find no justification for the theory that by the expansion of the "due process clause" of the 14th amendment, one of these rights is entitled to more protection than another. In passing upon the constitutionality of acts of Congress or of the States, Judge Hand holds with those who feel that the Court should not concern itself with the wisdom of such legislation but with the power of the legislative branch to enact such laws. He respectfully demurs to the idea that the Court should constitute itself a guardian of the faith and morals of the public, quaintly observing: "For myself, it would be most irksome to be ruled by a bevy of platonic guardians, even if I knew how to choose them, which I assuredly do not."

Judge Hand adheres firmly to the time-honored doctrine of the separation of powers—that laws should be made by the legislative, administered by the Executive and that the Court should limit its activity to a sincere effort at interpretation, guarding the Constitution from invasion by either of the other branches. He believes that a judge can properly advocate changes in the law, but that when he sits upon the bench his motive should be to interpret the law as it is, rather than yield to the temptation to change it by judicial fiat. He believes in the rule of law, and sees it weakened and betrayed when judges decide to depart from their judicial function and become lawmakers.

It is interesting to note that in his discussion of the segregation cases, Hand expresses wonder that the Court felt it necessary to intervene; he confesses that he does not know the implications of these decisions, saying: "I cannot frame any definition that will explain when the Court will assume the role of a third legislative chamber and when it will limit its authority to keeping Congress and the States within their accredited authority."

As I interpret his philosophy, Judge Hand believes that the survival of democracy and free institutions depends not so much upon the restraints written into the Constitution—as great and as necessary as they are, but upon the restraints voluntarily imposed by judges, presidents, governors, legislators, and the people, upon themselves—that self-discipline is the hallmark of freedom.

It is significant that toward the close of this volume, Judge Hand quotes at length from the address written by Benjamin Franklin and read by James Wilson to the Constitutional Convention of 1787, which was characterized by great tolerance of the views of others and modesty as to his own wisdom. In quoting Franklin, he seems to say that we got the Constitution in the beginning because of the temper of men like Franklin, and that we will preserve it only by continuing to practice their wise and tolerant spirit.

Do judges make law, or do they only discover it? On this controversial subject, there is a whole library of legal literature. Ordinarily in construing a statute the court's path is clear; it simply explains the language of the statute, resolving conflicts and clearing up ambiguities. But when the problem involves great constitutional questions that arise when statutes collide with the organic law, the dividing line between interpretation and change by judicial decree is sometimes shadowy. There are those who contend that by the very nature of the judicial process, it is inescapable that judges do make law; their position is that to contend otherwise is to support a legal fiction; that in rendering a decision, a judge necessarily adds something of his own to the total legal structure. However, this may be, there are judges who strive to uphold the concept of interpretation and there are judges who seem to embrace willingly the idea of change through judicial review. It goes without saying that Judge Hand is a judge who strives to avoid the very appearance of "legislation" through judicial action and sets as his goal the interpretation of existing law. This does not mean that Judge Hand is a slave to the past, nor is he in bondage to the letter of the law. In The Spirit of Liberty (Papers and Addresses of Learned Hand: Knopf 1952), Hand describes his approach to the interpretation of law as follows: "The duty of ascertaining its meaning is difficult enough at best, and one certain way of missing it is by reading it literally, for words are such temperamental beings that the surest way to lose their essence is to take them at their face. Courts must reconstruct the past solution imaginatively in its setting and project the purposes which inspired it upon the concrete occasions which arise for their decision."

When faced with mounting demands for changes in the Constitution, there are always those who look for short cuts, who feel that the end justifies the means, that the great Gordian knots of constitutional problems should be dramatically cut by judicial review rather than unraveled by the more prosaic, time-honored method of amendment. As I interpret his position, Judge Hand dissents from this viewpoint. In an age in which highly-placed officials are often tempted to extend their authority unreasonably in order to satisfy the emotionally charged demands of the hour, Hand counsels patience, tolerance and self-restraint. In a power-hungry world, he stands for moderation.

This book will live. It will take its place with such classics as The Common Law, by Holmes, and The Nature of the Judicial Process, by Cardozo; down through the years, it will constitute a forceful and eloquent protest against any and all usurpation of public authority.

Important Work Being Carried On by World Health Organization

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. FOGARTY. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I am honored to say that I had the privilege of participating in a testimonial luncheon for our Surgeon General of the United States Public Health Service on July 1, 1958. It was one of the most inspiring affairs that I have ever attended, with some of the leading doctors and laymen who are interested in medical research in attendance. Dr. Burney gave a very vivid account of the important work that is being carried on by the World Health Organization and I am pleased to include his address at this point:

ADDRESS BY L. E. BURNEY, M. D., SURGEON GENERAL, PUBLIC HEALTH SERVICE, UNITED STATES DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

It is difficult to express one's feelings on an occasion like this. As all of you know, public testimony of civic and professional esteem is deeply gratifying to the average recipient—and I am no exception to the average.

Let me begin then by expressing my heartfelt thanks to my friends and colleagues in the National Capital area for their thoughtfulness in arranging this very pleasant affair.

A public health administrator perhaps finds it easier to reconcile such evidence of esteem with his own limitations. This is because, of all careers, a public health career depends upon the stature of the organizations one serves and upon the stature and dedication of one's fellow workers.

The honor you are according me, then, is one that I am privileged to accept on behalf of the entire staff of the Public Health Service; and on behalf of the delegates to the 11th World Health Assembly, whose work in Minneapolis laid the groundwork for new victories in the struggle for better health.

From my personal observation and the comments of delegates from all parts of the world and of the WHO staff, it appears that the 11th World Health Assembly will stand as a milestone in the history of WHO.

I should like to give you my personal impressions of the meeting and a very brief highlight of its achievements.

What made the Assembly so memorable to me was the wonderful spirit of harmony, friendship, and understanding that pervaded all the deliberations. It was attended by delegates of all 85 active member states—the largest participation in WHO's history—by observers representing the United Nations, its specialized agencies, and 32 international nongovernmental organizations interested in health. The delegates are health experts, outstanding health leaders of their respective countries.

It was a genuine honor to preside over such a group, particularly in view of the spirit of unity that prevailed. Issues that might have aroused controversy were resolved in the friendly atmosphere of cooperation and compromise. Even in such a sensitive field as the health aspects of atomic energy, the

approach was calm and the outcome was harmonious.

The delegates to the Assembly gave serious consideration to the world's pressing health needs and how they can be met. The decisions they reached will affect the health and well-being of millions of human beings, from the remote villages of Asia to our own great cities. Nearly 800 health projects in almost every country and territory of the world were adopted by the Assembly as part of the 1959 public-health program of WHO. These ranged from global malaria-eradication projects to the strengthening of training programs.

As significant as these actions are, they are matched in importance by the opportunity the Assembly afforded to exchange views and cement friendly relations with the health leaders of other nations. This is the essence both of communication and of international understanding. Communication permits us to put science and technology into practice, as rapidly as possible, in the interests of human health. International understanding is basically an extension of understanding between individuals and is the road to international stability and peace.

I have participated now in three World Health Assemblies and I can testify to the tremendous benefits of such face-to-face communication. The opportunity to renew old friendships and to develop new ones among the world health leadership is of incalculable value to the cause not only of human health but of international good will.

Moreover, such relationships are important because of the pattern of cooperation which has been established between WHO and its member nations. This pattern has a familiar ring to us in the United States; it is comparable in many ways to our relationship in technical matters between Federal and State agencies, and between these agencies and voluntary organizations.

WHO provides expert consultation and assistance to member countries. It develops and demonstrates public health methods which are new, or new to the nations concerned. It helps train health personnel. It stimulates cooperative action among nations on problems requiring such action. And in regional and worldwide meetings, such as the one which has just been completed, it determines the future shape of health programs throughout the world.

Thus, although the member nations of WHO are independent countries, they are succeeding, through WHO, in building on a world scale the techniques of cooperation which have proved so effective in our own country. They are, in short, building a true world community of health effort in a democratic fashion.

That the goal of the highest attainable standard of health for all peoples is being vigorously pursued was brought forth dramatically in the 10th anniversary commemorative session which preceded the Assembly. I wish each of you here could have heard the eloquent statements of delegates from nation after nation, describing what has been accomplished within the past decade with and through WHO. I was deeply impressed, as were my colleagues and the other delegates, to hear this catalog of progress in human health made possible by a decade of international health cooperation. What was even more important was the promise of continued strength and greater accomplishments in the future.

This session heard many distinguished speakers, including our own Secretary, Mr. Folsom, the Director General of WHO, Dr. Candau, and Dr. Milton Eisenhower, who greeted the delegates on behalf of the President of the United States.

At the Assembly itself, the delegates adopted the largest budget ever provided for WHO, a sum of about $14.3 million. And for the first time, the budget was adopted by acclamation.

Considerable attention was given to the world-wide malaria eradication campaign. The delegates expressed satisfaction with the results of this program to date and at the same time urged an intensification of efforts. It was noted that there are still an estimated 150 million cases of malaria, with about 1.5 million deaths each year.

I was particularly gratified that the United States has made a special grant of $5 million to WHO for the malaria eradication campaign. In voting this grant last year, the United States Congress once again demonstrated its continuing interest in world health work.

Other Assembly actions called for increased emphasis on environmental sanitation; charting of a global campaign to eradicate smallpox; and renewed efforts in tuberculosis and other infectious diseases. New fields will be opened as WHO expands its work on such problems as the health implications of the peaceful uses of atomic energy.

Perhaps the event of greatest long-range importance was the Assembly's action with respect to international medical research and training. Endorsing a proposal submitted by our United States delegation, the Assembly requested the Director General to organize a special study of ways in which WHO can stimulate and coordinate international research and the development of research personnel. Secretary Folsom and Dr. Milton Eisenhower offered a research grant of $300,000 to the World Health Organization to help finance such a study. The Assembly authorized the WHO to accept this grant and proceed with the study, reporting a plan for international research and training, with cost estimates, to the Twelfth World Health Assembly in 1959.

I am sure that you will be gratified by our country's leadership in this significant move toward greater international cooperation in the research effort which underlies all health progress. President Eisenhower in his state of the Union message to Congress last January emphasized the great potentialities for human betterment through science and research. With this declaration he captured the imagination and enthusiasm of his own Nation, and of people throughout the world.

The action of the World Health Assembly, in the opinion of your delegation, demonstrates that the peoples of the world stand ready to contribute to and support research for better health through international action.

It will seem natural to you, I am sure, that your government has taken strong leadership in this field of international cooperation. The medical and biological research effort in the United States is recognized as outstanding throughout the world. It has already produced dramatic results. It has been made possible, of course, only through the understanding and the generous support of the Congress. It has been greatly expanded during the past decade through the action of many voluntary organizations, and private foundations. The Public Health Service is privileged to administer the programs representing the largest share of the Government's participation in medical and biological research and, in so doing, to work in close cooperation with research leaders and voluntary agencies throughout the country. In our judgment and that of our colleagues, increased international effort in the health sciences offers tremendous promise, not only for the health of mankind but also for world peace.

This opinion is reflected in a recent statement of both Houses of Congress, "declaring it to be the policy of the United States to continue and to strengthen mutual efforts among nations for research against diseases, such as heart disease and cancer, and, inviting the World Health Organization to initiate studies for the strengthening of research and related programs against such diseases."

I have left for last the one other point that made the assembly particularly noteworthy of me. As you know, this was the first time that the governing body of the World Health Organization has met in the United States.

There is no question that this single event has had more immediate benefits than many larger undertakings of our country to cement friendly relations with the nations of the world. Health representatives of these nations, many of them for the first time, had an opportunity to meet our people and observe our way of life first hand. At the same time, a great many of our citizens, particularly those in the Midwest, became acquainted not only with the World Health Organization but also with leading men and women from other nations.

I cannot tell you how much this has meant in goodwill and understanding. One delegate told me that "the people of Minnesota have not only opened their homes to us but also their hearts and their minds." Another said that his ideas about the United States had always been somewhat critical; but in his 3 weeks here he was so impressed with the genuine sincerity, friendliness, and warmth of our people that his ideas had changed completely.

As proud as I was to be president of that great world health assembly, I was even more proud of the way in which my fellow Americans responded to the meeting and welcomed the delegates to their homes and hearts.

Thank you again for this honor and your gracious words. In honoring me, you are paying tribute to all the men and women who work on behalf of world health. We look to the future with great anticipation and determination. We are here again demonstrating that men of good will, working together, can contribute mightily to the greater wellbeing of people throughout the world and to man's dream of peace with freedom.

I am reminded of an inscription that appears on the Union Station here in Washington—a translation from the Spanish. It reads: "He would bring home the wealth of the Indies must carry the wealth of the Indies with him." We in the United States have a great deal to give. We have much, as well, to receive. Through this interchange of knowledge and of friendship our Nation is enriched. So, too, are the nations of the world.

Is Rehousing for People?

EXTENSION OF REMARKS
OF
HON. FRANK M. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, July 24, 1958

Mr. CLARK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an extremely able address entitled "Is Rehousing for People?" which was delivered by Nathan Straus, of New York, one of the leading experts in the entire housing field during the last 25 years. In his stimulating and interesting address, he pointed out the enormous difficulties with which we are faced in connection with the relocation of families by reason of the urban rede-

velopment and the highway programs and the complete inability to deal with those programs in the absence of adequate housing for families of low incomes.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

IS REHOUSING FOR PEOPLE?

(By Nathan Straus)

Is the objective of an urban redevelopment and rehousing program to help people or to beautify the city? The question is not intended facetiously. It comes to mind almost inevitably, if any serious study is made of the effect of the New York City redevelopment program.

We are informed that about 5,000 families will be relocated over the next 3 years in connection with the building of the Lincoln Square project. The word "relocated" is a convenient evasion of the fact that these unfortunate families are being thrown out of their homes—many of them, with nowhere else to go.

Here are a few typical examples, as reported in the daily newspapers.

A 70-year-old widow occupying an apartment for which she pays $36.80 per month is one of those evicted. She has been unable to find an apartment execpt at a monthly rental of $50. That is, she will be forced to pay one-third more rent than she has in the past. It is true that she will receive a one-time relocation bonus amounting to $312.92. But that money will be swallowed up in moving expense and the increase in rent, in less than a year. Her case is typical rather than unique.

Another family consisting of a man, his wife, their baby son and his wife's mother—four in all—occupy a flat for which they pay $22.70 a month. It consists of 4 rooms, so the rent is less than $6 a room. The apartments to be built on the Lincoln Square site are going to rent for upward of $47 a room. As one of the evicted tenants says: "We couldn't even rent a closet in them."

The real-estate concern in charge of relocation frankly admits that it has only 400 apartments available in all parts of the city and that these apartments rent for from $50 to $85 a month.

It is a fact that 1 family out of 4, now living in the Lincoln Square area, is theoretically eligible for an apartment in a subsidized public housing project. However, the eligibility is largely a theoretical benefit, an empty gesture, since, in fact, there is a long waiting list for apartments in public subsidized housing in this city.

Even though many of the tenements in the Lincoln Square area are firetraps and even though many of them may be vermin infested, nevertheless, on a cold night, any roof over the family's head is better than a park bench.

The plight of low-income families, to be evicted in connection with the Lincoln Square project, is characteristic of urban redevelopment throughout the United States.

Things are no worse in New York than in any other American city—except that redevelopment of slum areas has proceeded at a more rapid pace here than elsewhere. While our newspaper headlines read "High Rent Apartments Still the Trend in Manhattan" and "Lincoln Square DP's Ask the Planners: Where Do We Go?" as far out as the west coast, the pattern is duplicated.

One of the worst examples of mismanagement in the United States is that of the city of Los Angeles. There, a fine program of subsidized public housing, approved by the Federal Government, was rejected by the voters, just as it was all ready to go into actual construction. This negative result was the product of a campaign of vilification and misrepresentation by the National Association of Real Estate Boards and the United States Savings and Loan League, unfortunately abetted by the two leading newspapers of that city.

The outstanding success achieved by this campaign of misrepresentation by the real-estate lobby is well indicated by the fact that even as generally reliable and distinguished a representative of the Nation's press as the Wall Street Journal on July 17, 1951, printed the following headlines: "Los Angeles Folk Fume Over Huge Project." "Roar of Protest Against Public Housing."

The truth was that the city council had approved the public-housing program by a vote of 10 to 5. The truth was that the public-housing program had been endorsed by every local veterans' organization, all local-labor organizations and more than 70 other civic groups.

The low-income families of Los Angeles are today paying the penalty for the success of this vicious propaganda. Thus the New York Times, writing of the Los Angeles project on last June 8, reported, under the headline "Vast Building Plan Is Set in Slum" that "the 9,000 present residents of the hill will be resettled, virtually all the buildings in the 22-block area razed, and the tract relandscaped and rebuilt to accommodate 6,000 to 8,000 residents in style. What will become of the people who live in the firetraps and rabbit warrens atop the hill is an unsettled question. The redevelopment will be on somewhat a luxury basis, with apartments renting upward from $50 a room a month.

It must be unpleasant indeed to be the head of a family, worrying about where to find a roof to shelter wife and children, only to be informed that his fate is an unsettled question. Tearing down slum buildings may be esthetically satisfying and emotionally soothing but does not, of itself, improve the living conditions of low-income families. On the contrary, it may aggravate their plight.

The basic fact is, that even with Government aid under the FHA program and other forms of assistance, very little of the new housing provided by private speculative builders is within the means of even a family of average income. Obviously none of it is within the means of families in the lowest income groups, those who, of necessity, are compelled to live in slum areas.

About one-quarter of the families in the United States can afford to buy the cheapest new three-bedroom houses available at the end of 1957. Three-bedroom apartments are even scarcer and even more expensive than three-bedroom houses. A three-bedroom apartment rents for a minimum of about $110. This condition is true across the Nation. To afford such apartments, a family should have an annual income of not less than $7,000.

The problem of rehousing is essentially a national one that can be solved only on a basis of national financial assistance. WMCA calls again for the establishment of a Department of Housing and Urban Development in the Federal Government.

Moreover, WMCA would like to suggest that, just as a would-be automobile manufacturer in another country comes over here to study what has been done so successfully in Detroit, or physicians and surgeons come to New York City study the best in medical science, so officials in charge of our urban redevelopment and rehousing program might well study what has been done successfully abroad—especially in England and in Sweden.

According to Mr. Eric L. Bird, editor of the Journal of the Royal Institute of British Architects, "In Britain new construction generally precedes slum elimination." This, let it be noted, is said of a housing program that has been continued under Conservative and Labor governments, with only minor modifications since 1922. The 2 top years of public housing construction in England were under Conservative governments—in 1928 and 1939.

In Sweden, which hac carried out, in the opinion of qualified observers, the most successful rehousing program anywhere in the world, the philosophy of housing and the pattern followed is similar.

The best of Sweden is represented by Velingby, a new satellite town a few miles outside of Stockholm. It was completed last year. Velingby is not a group of tall apartment houses, huddled together in a few acres. It consists of hundreds of acres, laid out as apartments, individual homes, groups of two-story housing for elderly people, playgrounds, recreational parks, decorative fountains as well as wading pools. There are restaurants, there are bandstands. There are office buildings, where employment will be provided for those who live in the new city. There are sites available for leasing to private concerns, on which factories will be erected, to provide more employment. This is real redevelopment, having as its key a better life for the people of Sweden.

Let it be understood that WMCA has nothing but admiration for the ideals of urban redevelopment and specifically for the Lincoln Square project, which will replace a rundown area of antiquated tenements and superannuated buildings with a cultural center of the greatest city in the world. This is a project in the finest tradition of civic planning.

But slum clearance is not the cause of better housing. It is the result, the end product of a soundly planned rehousing program.

WMCA believes that, before a single building is torn down, subsidized public housing, equal in quantity to the number of families to be evicted and the rentals paid in those buildings must be built to house the tenants. You can put a side of beef in cold storage for a year. You cannot do the same to an American family.

Nearly twenty thousand human beings are being evicted or will be evicted in connection with the Lincoln Square project. WMCA believes that our immediate and pressing problem is to address ourselves to helping them. Let us not neglect their plight. Let us not forget that rehousing is for people.

Brussels World Fair Opened by Good Will Tour of New York Post 209

EXTENSION OF REMARKS

OF

HON. LESTER HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1958

Mr. HOLTZMAN. Mr. Speaker, I am including herewith an article that appeared in the July issue of the American Legion magazine, entitled "Brussels World Fair Opened by Goodwill Tour of New York Post 209."

Members of Advertising Men's Post, No. 209, of the American Legion, in New York City, and members of their families, made a goodwill tour of Europe and were the first group of Americans to visit the Brussels Fair.

The story follows:

BRUSSELS WORLD FAIR OPENED BY GOODWILL TOUR OF NEW YORK POST 209

Forty members of Advertising Men's Post 209, American Legion, New York City, and 34 members of their families, returned to

New York May 4 after a 21-day goodwill tour of Europe, on which they were hailed as the first party of Americans to visit the Brussels Universal and International Exhibit, 1958.

In addition, the 74-member touring Legion group contacted leading citizens, businessmen and government officials in France, Belgium, England, and Italy on unofficial goodwill errands at the request of People-to-People, Inc.

Traveling entirely at their own expense, the New York Legionnaires, carried scrolls and gifts from several United States organizations which they bestowed upon European dignitaries.

The Legion party participated as the only American citizen group on hand at the official opening of the Brussels Fair grounds by King Baudouin of Belgium.

Then, as American dignitaries opened the United States pavilion, they presented to it the official New York State flag on behalf of Governor Harriman.

The party presented gifts of portable typewriters to Pope Pius XII; to Msgr. John P. Abbing, head of Italy's nine boys' towns for homeless Italian youth; and to Commander Richard Colville, press secretary to Queen Elizabeth of England.

Heading the party were Post Commander Thaine Engle, manager of broadcast promotion, National Broadcasting Co.; Post Vice Commander and Tour Committee Chairman Gould Kardashian, assistant vice president Chase Manhattan Bank of New York; and Tour Committee Vice Chairman Louis Weintraub, head of the New York public relations firm of Louis Weintraub Associates.

In Brussels, where the party was greeted on its arrival by the color guard of Antwerp Post 1, Post Member Lyman G. Bloomingdale presented a scroll to the Brussels Crippled Children's Institute in the name of Just One Break, Inc., New York organization to aid the handicapped whose program is strongly backed by post 209.

The Ford Motor Co. tendered a reception for the group at the Royal Automobile Club in Brussels, to which it invited leading Belgians with the same occupations as members of the Legion party. The members spent a pleasant evening of shoptalk comparing notes with their Belgian professional counterparts.

Post Commander Engle reported that European radio and TV men were exceptionally curious about American broadcasting and envied America's nongovernment broadcasters their great freedom.

Earlier, in Paris, post members had been entertained by Paris Post 1 while their wives visited the Christian Dior fashion salon.

The French Government arranged a tour of Sorbonne University, and an official reception was given the group by the president of the City Council of Paris.

En route to London, the boat train was crowded with 1,300 British schoolchildren returning from a holiday in Germany. The Legion group contacted the teachers and had several hundred of the children in their compartments for the trip, with whom they swapped notes all the way to London.

In London, insurance men in the group paid a people-to-people visit to Lloyds of London, while Kardashian and Weintraub went to Buckingham Palace to give Commander Colville his typewriter, a gift of the American Public Relations Association.

The first Friday in Rome was a full holiday—Liberation Day—in observance of the initial landing of United States troops in Italy in World War II.

The Post members laid a wreath on the tomb of the Italian Unknown Soldier and were received by the mayor of Rome.

The leaders of the group dined with Commander Borré of the American Legion Department of Italy and Department Adjutant Carmine Casolini.

The entire group had an audience with Pope Pius XII at the Vatican, following which His Holiness personally accepted the gift of a portable typewriter, especially made by employees of the Remington Rand plant in Milan, Italy.

From the Vatican, the Legionnaires went directly to an audience with Italy's President Gronchi, to whom Karadashian presented a 1922 United States Peace silver dollar as a token of the Legion's hopes for peace.

The Italian President extended the interview, shook hands with all 74 of the party, inquired into the occupation of all of them and told them that striped pants diplomacy is all right, but the people-to-people idea, as epitomized by the traveling Legionnaires, was even more important.

Fifty Years of Progress

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1958

Mr. SIKES. Mr. Speaker, here is the dramatic and absorbing story of the pulp and paper industry's rise to maturity in the South—the story of men, places, and events historians on some day in the future will forge into milestones. Fifty Years of Progress is taken from the Forest Farmer of July 1958:

FIFTY YEARS OF PROGRESS

(By Frank Heyward, Jr., director of public relations, Gaylord Container Corp. division, Crown Zellerbach Corp.)

The expansion of the southern pulp and paper industry the past 20 years has been one of the highlights of the industrial development of the Nation. Only a comparatively few years ago, the manufacture of pulp and paper was of minor importance to the South's economy. Today, this region manufactures more wood pulp than all other regions in the Nation combined.

Prior to 1925, the southern pulp and paper industry consisted of 18 to 20 small mills widely scattered from Virginia to Louisiana. About one-third of these mills was located in the hills and mountains of Virginia, North Carolina, and Tennessee where they manufactured board from blight-killed chestnut. Only nine mills operated on pine wood. The combined output of the pine consuming mills was far less than that of any of the larger type present day kraft mills.

In 1936 the South's daily pulp production was only slightly more than 5,000 tons; by 1946 it was 16,000 tons; and by 1958 it had become 39,600 tons. Four mills now under construction will increase the daily capacity to well over 41,000 tons.

Probably the first successful effort to manufacture paper from southern pine took place in 1878 at the Marietta Paper Manufacturing Co., near Atlanta, Ga. This paper was made from shortleaf and loblolly pine groundwood with a mixture of rags.

The first continuous production of pulp from southern pine was begun in 1891 by the Carolina Fibre Co., now Sonoco Products Co., of Hartsville, S. C. The mill began on groundwood and soon changed to sulfite. The Covington, Va., mill of West Virginia Pulp & Paper Co. began its operation in 1900 on spruce and soft hardwoods. By the mid-1920's, pine sulfate pulp had practically replaced spruce sulfite.

The Champion Paper & Fibre Co.'s, Camden, N. C., mill was built in 1907. The first pulp was made from chestnut and other hardwoods. Later sulfite pulp was manufactured from spruce and hemlock. Champion, realizing the limited supply of readily available spruce and hemlock, was one of the pioneers in research on the manufacture of sulfate pulp from pine wood. As a result, when this company's bleached sulfate mill began production at Pasadena, Tex., in 1938, the result was white papers of highest quality from pine.

The sulfate process had its inception in the South on a commercial basis when the Halifax Paper Co., of Roanoke Rapids, N. C., blew its first digester on February 26, 1909. This operation was followed by one of the Yellow Pine Paper Mill Co., of Orange, Tex., in 1911, where E. H. Mayo changed an unsuccessful soda process to successful kraft production. Mayo is generally credited as being the man most responsible for the successful development of the pulping of southern pine by the kraft process.

In 1913, the Southern Paper Co., of Moss Point, Miss., began operations. At the time the company was organized, there was still much skepticism as regards successful pulping of southern pine. Efforts to finance the company in this country proved futile. Successful financing was completed with British capital only after both bleached and unbleached kraft paper was made from southern pine pulp manufactured in Sweden.

After early difficulties, the company employed Mayo as general manager and immediately began making a satisfactory kraft sheet. In 1928, this mill was bought by International Paper Co. Mayo's technical knowledge was fully utilized by International in the operation of its early mills. In the mid-1930's, he became a consultant and supervised pulp operations when Union Bag came into production at Savannah—and later when the Florida Pulp & Paper Co. began operations at Cantonment.

Other early southern mills, all of which made kraft pulp from pine, and the dates of their first operations are: Chesapeake Corp., West Point, Va.; Bogalusa Paper Co., now Gaylord Division of Crown Zellerbach Corp., Bogalusa, La., 1918; Kansas City Fiber Box Co., now International Paper Co., Bastrop, La., 1921; Hummel-Ross Fibre Corp., now Continental Can Co., Hopewell, Va., 1922; and Brown Paper Mill, now Olin Mathieson Chemical Corp., Monroe, La., 1924.

An individual whose name is closely connected with the early southern paper industry is the late R. J. Cullen, of International. Cullen made his start with the Louisiana Fiberboard Co. at Bogalusa. This venture proved unsuccessful and the mill closed. In 1919 he became general superintendent of the Bogalusa Paper Co. Shortly afterward, he built the Kansas City Fiber Box Co. mill at Bastrop, La. Cullen soon enlarged the original mill and then promoted and built a second, the Louisiana Pulp & Paper Co., also in Bastrop. After selling the two Bastrop mills to International, Cullen joined the company and became president of Southern International Pulp & Paper Co. International's Camden, Ark., mill was built in 1928 under Cullen's leadership, the Mobile mill in 1929, and Panama City mill in 1931.

Another rugged individual who contributed greatly to the development of the South's pulp and paper industry was the late J. H. Allen. A successful lumberman from Arkansas, Allen entered the paper industry as a lieutenant of his close friend, R. J. Cullen. He played an important part in establishing International's mills at Camden, Mobile, and Panama City, and later Union Bag at Savannah. He finally organized and built his own mill, the Florida Pulp & Paper Co., now St. Regis, at Cantonment, Fla.

Allen's enthusiasm for the potential production of the South's forests knew no

bounds. His favorite thesis was, if a profitable market for timber is established, people will grow trees. The high level of tree farming in the South today attests the truth of this belief. It was indeed fitting that Jim Allen was chosen as the first president of the Southern Pulpwood Conservation Association when it was organized in 1939.

The spectacular expansion of the South's paper industry may be attributed to the nationwide increase in per capita consumption of paper and also to the success of southern pipe pulpwood as a raw material for kraft products. Per capita consumption of paper in the United States was 58 pounds in 1899, 282 pounds in 1945, and 435 pounds in 1957. Although paper manufacturing increased tremendously on a nationwide basis, the rate of increase for the South was even more rapid. Chief reason was the fine grades of bleached and unbleached sulphate pulp used largely for container board.

It was inevitable that the paper industry would ultimately make its greatest development in the South with its tremendous timber resources. However, two events hastened the day. The first of these was the forest survey made by the United States Forest Service. This project, begun in the early 1930's, was the first truly authoritative report on the South's forests. The survey reported not only the quantity of timber by species but also the industrial use, mortality, growth, and most important of all, occurrence. From the survey reports, therefore, paper companies interested in possible expansion were able to pinpoint the timber supply by survey unit, of which there were about five per State.

The second important event to influence the paper industry was a slight, elderly man with the fire of genius and the ardor of a crusader. This was Dr. Charles H. Herty, already well known to the naval stores industry because of his work on gum production soon after the turn of the 20th century, and in the field of industrial chemistry because of his work with the dye industry in Germany after World War I as a Government representative.

In 1927, Herty visited the 86,000-acre naval stores operation of Alex Sessoms in southeast Georgia. Where forest fires had been excluded, slash pine had reproduced in incredible numbers. Herty was greatly impressed and wrote of his visit to the Sessoms property as follows, "A problem remains to be solved, and that is the utilization of the thinnings, which are of a size for the production of wood pulp. This is a question of transportation and of research, whose successful outcome may have tremendous economic importance, not only to the South, but to the constantly increasing number of industries throughout the country dependent upon wood pulp as raw material."

It was generally supposed at that time that the pines used as a source of naval stores would be too resinous to be used for pulp. To throw light on this point, Herty sought the cooperation of the Hercules Powder Co. of Brunswick, Ga. There sawdust made from slash pines was analyzed for resin content. The sawdust was specially prepared by Alex Sessoms for Dr. Herty. To Herty's amazement and delight, a resin content of only 1.38 percent was found. This indicated that the sapwood of slash pine was much lower in resin than the heartwood. And, as the young pines did not show heartwood formation until 10 to 12 inches in diameter or larger, Herty concluded that resin would not be a great problem in pulping young pines thinned when of small size.

Further cooperation, this time with the Castanea Paper Co. of Johnsonburg, Pa., revealed that young slash pine was readily reduced to a light colored pulp by the sulphite process. Furthermore, this pulp was easily bleached.

Still further preliminary work was conducted by Herty through the help of the Carolina Fiber Co., of Hartsville, S. C. This company prepared ground wood pulp of good color from young slash pine.

This was enough for Herty. He began at once to seek means of establishing a research laboratory. He met success at Savannah, Ga., where the city made available to him an old warehouse with power, steam, and water provided free.

From the beginning of his first research, Herty stated that his purpose was to adopt standard pulping methods to southern woods. Many times he pointed out that there was no so-called Herty process, and many times more he pointed out that his laboratory had never engaged in work on the pulping of southern woods by the sulphate process.

When Dr. Herty produced good groundwood pulp from southern pines and hardwoods, the press sensed the possibility of something sensational. Shortly afterward, the announcement of the production of newsprint from 7-year-old planted pines made headlines in some of the largest papers in the Nation. In its enthusiasm the press credited Herty with work he neither performed nor claimed, especially research pertaining to the sulphate process. He tried to point this out but the confusion persisted. The press recognized no distinction between mechanical, sulphite, and sulphate processes. Pulp was simply pulp.

In one attempt to clarify the situation Dr. Herter stated: "In the early part of the century soda pulp was prepared from these pines. In 1911, though it was held by the industry in the North that it would be impossible to make sulphate from southern pine, Mr. Ed Mayo successfully did so at Orange, Tex."

The occasion of this statement was the 73d convention of the Electrochemical Society, Inc., at Savannah in 1938.

With respect to research accomplishments on the sulphate process credited to him by the press, Dr. Herty wrote as follows to the editor of Science magazine, "This is an error which has frequently been made in recent weeks, particularly by correspondents of the daily newspapers not familiar with the history of the manufacture of pulp and paper. * * * For instance, in its account of the Fernandina celebration about a month ago, the New York Times correspondent stated that I was the discoverer of the process for making kraft pulp and paper. * * *

"Let me say that the kraft pulp and paper industry has been in existence in the South for the last 27 years.

"The man who was responsible for that development is a man living and working here in Savannah, namely Ed Mayo, who was a pioneer in the field and who struggled with those same difficulties, prejudices, and skepticism which we have been going through in trying to start the newsprint industry from pine in the Southern States."

Herty made countless speeches pointing out that only forest fires could prevent the development of a newsprint industry in the South. He stated that if the fire scourge were eliminated, the region could and would grow enormous quantities of fiber which would be irresistible to a greatly expanded pulp and paper industry.

Although Dr. Herty's researches were confined to the mechanical and sulphite processes, there is no doubt that his crusade in behalf of the making of newsprint from Southern woods made a great impression on kraft pulp manufacturers. They, too, were equally interested in the benefits and advantages of Southern forests which he publicized so effectively.

When Dr. Herty died in 1939, it was with the realization that his work had borne fruit. Because at that time Southland Paper Mills, at a mill site in Texas named Herty in his honor, was under construction. This was the first mill to produce newsprint commercially from Southern pine.

Rounding out the Southern pulp industry are wallboard mills of Flintkote, United States Gypsum, Celotex, National Gypsum, Johns-Mansville, and Masonite, dissolving pulp mills of Rayonier and International, and the cigarette paper mill of Ecusta Paper Corp. at Pisgah, N. C.

Lastly, the most recent unit of the South's pulp industry is the bagasse mill of the Valentine Pulp & Paper Co., of Lockport, La. This mill manufactures newsprint and high grade white papers from sugar cane fiber. This source of fiber was used in 1898 at Braithwaite, La., by a mill which operated at intervals until purchased in 1915 by E–Z Opener Co. In 1931 most of the equipment was moved to Tuscaloosa by Gulf States Paper Corp.

Although the pulp and paper industry has made spectacular development the past 25 years, its future appears equally bright. Recognizing that a permanent supply of fiber is basic to its operation, the industry is engaged in the most comprehensive forestry program ever undertaken in this country. Not only does it employ the most modern forestry practices in administering its 18½ million acres of fee land, but it supports a conservation association whose objective is to show the other fellow how to grow a tree crop. As a result, the industry faces the future with confidence, secure in the belief that through up-to-date tree farming practices its raw material supply will present a firm base for an even greater future expansion.

Bricks Without Straw

SPEECH

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1958

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 13450) making supplemental appropriations for the fiscal year ending June 30, 1959, and for other purposes.

Mr. CANNON. Mr. Chairman, some years ago I had occasion to read the transcripts of the proceedings of the House of Representatives, beginning with the 1st session of the 60th Congress down to date. I read, or at least turned, every page in the CONGRESSIONAL RECORD from 1907 down through the current session. It was interesting to note, incidentally, that the quotation most frequently cited by the Members of the House in their speeches here on the floor during those years was a stanza from Goldsmith's Deserted Village:

Ill fares the land, to hastening ills a prey,
Where wealth accumulates, and men decay;
Princes and lords may flourish, or may fade;
A breath can make them, as a breath has made;
But a bold peasantry, their country's pride,
When once destroyed, can never be supplied.

The last time I was in Europe, in every country we visited I insisted on going out into the country and seeing "the bold

peasantry, their country's pride" and of observing their farming methods. And I was inexpressively shocked by what I saw.

I was astonished to find in Germany, a country which has produced the greatest physicians, the greatest painters, the greatest musicians the greatest scientists, the greatest poets, as we traveled down Hitler's great autobon, a people so different, so unprivileged that they seemed to be of a different nationality. They were farming with hoes and plows pulled by oxen. Only three tractors were seen in that entire trip through the empire.

We found likewise, in rural France, in Turkey, in Greece, even in democratic England, an entirely different people from those found in the cities, a peasantry, of such lower social, economic and cultural status as to seem to belong to a different era.

When I came back home—and I never appreciated our country, our Government, our way of life, so much as when I stepped off the ship at New York—when I got back home, and Ida and I, returning from a meeting, would drive at night along the paved highways that led even to the remotest countryside, we could see the REA electric lights gleaming from every farmstead, the antennas of television sets, the comfortable homes with running water and central heat, the evidences of limed soils and terraced fields and tractors and landscaped lawns. And what was so much more important, an intelligent, progressive, cultured farm people.

We do not have the counterpart of European peasants in America. We are a homogeneous people. Unlike any other country in the world, there is no line of demarcation between our urban and rural populations. Wherever you meet them in the city or the village or the country they are identical in dress and speech and culture. We are all Americans.

But two nationwide influences have been in effect the last few years here in America, one, the organization of the workers of America, and the other, the concentration of wealth and financial power in industry and commerce. Both are profoundly affecting our national economy and both are in effect driving a line of cleavage which sets the farmer apart and which if continued will eventually and inevitably reduce him to a position of economic inferiority. Both have attained their advantageous positions through legislation enacted by Congress and signed by the President. Labor laws, immigration laws, wage and hour laws, collective bargaining and similar legislation enacted by the Congress have placed organized labor in a commanding position where he dictates wages, hours, and conditions of labor.

Tariff laws, tax, banking, commerce, trade, rate, marketing, and other legislation establish corresponding advantages and controls on the other side. But the farmer has been denied legislation which would give him a voice, either in fixing the amount of his own wages or prices, or in the market in which he must buy his own necessities. He is not allowed to have anything to say about the price of what he sells or what he buys. That road leads eventually to peasantry and peonage.

Great men, leading great movements—Gompers, Green, Lewis, Murray, Tobin, Reuther, Meany, and their associates and successors—organized the workers of America.

Under that movement we have divided and distributed the wealth of America. Formerly the prosperity of the country was monopolized by a few men at the top. Great fortunes were built up. But the man at the bottom, the worker whose labor created that prosperity had little part in the enjoyment of the wealth he created. Unionization has equalized incomes and has brought the worker a fair share of the national income and national prosperity.

All except the farmer.

While the wage of every worker in the Nation has gone up continuously since the close of the World War, the farmer's income has been almost as consistently down.

When I first came to the House, there was not a labor union in the district from which I came. It was an agricultural district and not a community was to be influenced by a vote for labor in the House. But it seemed to me that agriculture and labor had a common cause. Both were preyed upon by the same predatory interests and obviously they should work together. For that reason I have consistently supported labor legislation, beginning with the first Wagner bill and have never cast a vote that was not friendly to labor in the years in which labor was slowly building support in the House and in the country.

But the favor has not always been returned. And while labor has forged ahead agriculture has lagged behind and on a rollcall vote last week the labor vote in the House refused even to consider a farm bill.

Commentators in the newspapers referred to it as a smashing victory for Secretary Benson, but of course Secretary Benson had nothing whatever to do with it. A farm reporting agency briefly and accurately sums up the situation as follows:

> The balance of power that decided the outcome was the group of 90 city Democrats who voted against the bill. They voted their resentment against southerners who had opposed labor law liberalization, and racial integration.

None of the 90 cared anything about Benson or were influenced by him in the slightest. None of them had any affiliation with any farm organization. It was merely pique on a matter wholly unrelated to the farm bill. But they overlooked obligations that should have been regarded. And because I have voted for labor on more rollcalls than any one of the 90 Members who defeated the farm bill, I feel free to remind them of that obligation.

The Secretary of the Department of Agriculture, Mr. Ezra Taft Benson, announces this morning that the farmer's income has increased 22 percent in the last year. Of course such a statement is entirely misleading. The 7 years drought which depleted all herds in the Southwest, and the successive freezes in the fruit and vegetable areas, bring about purely temporary advances in prices—all of which the Department of Agriculture itself takes care to tell you will decline next year when normal conditions are resumed. The truth about the matter is that slowly but surely the farmer is being starved out. The proof is—and even the Department of Agriculture will not deny it—that the farmers are leaving the farm by the millions. That is a complete answer to all the hypocritical statements based on juggled bookkeeping they can make.

The first half of 1958 realized farm net income was $12,300,000,000; the total farm net income $13,100,000,000. Whichever way you measure it there has been a drop of from $1 billion to $2 billion on an annual basis in farm families' net incomes from farming during Secretary Benson's tenure in office. The cumulative loss of income on American farms since he took office has totaled almost $18 billion. The remarkable thing is that while the farmers' income has decreased $18 billion, the cost of running Mr. Benson's Department of Agriculture has increased from $1 billion to more than $5 billion a year.

Over the same period of time since Secretary Benson has been in office, the prices received by the farmers dropped from a 1952 average index of 288 to an index of 255 in June 1958.

The parity ratio dropped from 100 percent in 1952 to 84 percent in June 1958. That is bringing it down to date.

The prices paid by the farmer went up from an index figure of 287 in 1952 to an index of 305 in June 1958. It was less than one-third of 1 percent below the historic high in April 1958. There is no wonder that farm income is lower now than when Secretary Benson took office, no wonder that we have 600,000 fewer farmers now than when he took over and put the sliding scale into operation.

Then, now, upon what basis does the Secretary make his statement? Of course there has been an increase in the price of livestock. There has been an increase in the price of fruits and vegetables. Not to the extent that he would have you believe, because he counts in not only the farm income but also the money the farmer makes off the farm. Life on the farm has become so precarious and so unremunerative that the farmer and his wife have to go off the farm and get a job outside to keep the farm going.

Why has the cost of cattle and hogs gone up? Has it been on account of anything Mr. Benson did or the Department of Agriculture did? Four or five unseasonal frosts in the South have reduced the supply of fruits and vegetables and of course raised the price of what they did produce.

We have had 7 years of drought in the Southwest—Texas, Oklahoma, and neighboring States—which have forced the farmer to liquidate his herds.

This year, for the first time, we have had abundant rains and all over the country men are seeking to rehabilitate their breeding herds, and cattle are at

a premium. That, and that alone, has increased the price of cattle and hogs, because the two go together. And, mark you, Mr. Chairman, it will not continue. The Department of Agriculture itself predicts that next year prices will drop. When we get our herds filled, when we start marketing again in the livestock sections, when the abnormal demand ceases, the farmer will still be receiving less and paying more.

So the Secretary of Agriculture has done nothing for the farmer, and we are doing nothing for the farmer except to live at his expense. What sort of moral code is it, to live at the expense of another man through a process that will take away from him the products of his toil, his sweat, and his investment, and not give him a fair price for it, especially at a time when we are getting the biggest price for our labor ever known in this country or any time in history.

Let us also remember that a very large part of the increase from 1957 to the first half of 1958 is a result of a $700 million a year rate of acreage reserve payments this year under the Soil Bank program. There is another thing that is temporary. Let us remember that Secretary Benson will not be paying out any acreage reserve money next year.

But even with this in mind look at 1958 as against the year before the Benson program was inaugurated. These statistics, remember, are taken from the Department of Agriculture report:

1. Parity ratio is down 16 percent.

2. Prices received by the farmers are down 7 percent.

3. Prices paid by the farmer are up 6 percent.

4. Retail prices of food are up 6 percent.

5. Prices received by farmers for food commodities are down 7 percent.

6. Purchasing power of farm net income is down 14 percent.

7. The number of farms in the United States is down 600,000; 600,000 farm families have been starved off of the farms.

That in itself is the final and decisive criterion by which this Department should be judged. Something is radically and drastically wrong when 600,000 farm families are driven from the farm because a farm family never deserts the farm as long as they can exist there. They love the land and they never leave the land except as a last resort.

8. Mr. Chairman, Government expenditures for the Department of Agriculture are up 500 percent. I do not know what the extra 400 percent is for, but, certainly, whatever they are paying them for is not for anything they are doing for the American farmer.

9. Government expenditures for farm income stabilization is up more than 1,000 percent, but they have not stabilized anything.

Mr. Chairman, I want to appeal to the House, and I would especially like to plead with the 90 Members of the House who voted down the farm bill, who denied us even the chance to debate it, to amend it or to change it or discuss it, the opportunity to meet your views on this vital matter. You who voted to deny the farmer even the chance to be heard, to present his cause when starvation stared him in the face.

You who would not give him his day in court. Is that American?

Why did you deny the farmer the right to be heard, to take his case to the jury? Because you were afraid it would increase the price of food in the cities, increase the price of food to your constituents? Your constituents get more and better food for an hour's labor than ever before.

But let us take it categorically:

First. Your constituents work 5 days a week, but the farmer works 7 days a week.

Second. Your constituents, for whom you denied the farmer the right to be heard, works 8 hours a day, but the farmer gets up while it is still so dark he has to light a lantern, and he comes in to supper long after sundown. And, he is out in the night at lambing time and farrowing time and when predatory beasts threaten his flocks. Your constituents, for whom you deny the farmer a fair price, do not have to make sacrifices like that.

Third. And, your constituent is the worker for the family.

Nobody else in the family works. But, out there on the farm every child works from the time it can walk. You have child labor laws in the cities, but you do not have them on the farm. You have anti-sweat-shop legislation which protects the women against sweatshops in the cities, but they work constantly on the farm. And, if it were not for the work of these women and children you would not have the food you get. You not only deny the worker his wage but you deny his wife and children the pitiful price of child and sweatshop labor.

In the city the wife of your constituent has time for the social life in the community. She can attend pink teas, go to the afternoon theater, or she may get a job and double the family income.

And in that connection I include without comment a letter to the Washington Post printed on the editorial page:

WORKING WIVES

There are many husband-and-wife teams working throughout the Nation, due to the fact that these wives are so eager to forsake their family and home responsibilities in favor of the business world. I suggest that the Government solve the unemployment problem by making it compulsory for the husband to resign his job, thereby letting the little woman bring home the money.

It is these avaricious married women who crave the extra luxuries of life that are responsible for the huge unemployment figure. If married women, and I would like to make this clear, who have husbands earning sufficient incomes to support them in comfortable circumstances, stayed home where they rightfully belong and tended their children, the way they should be cared for, we would have less juvenile delinquency and plenty of jobs for heads of families and others who are in dire circumstances due to the recession.

RICHARD A. VEEVERS,
Houston, Tex.

Fourth. Your constituent works largely in steam-heated rooms in the winter and often in air-conditioned shops in the summer. But, the farmer works out under the sun in the blistering days of summer and in the frost and cold of winter, in the rain and in the snow and in the storm when the stock and the poultry must be cared for and the smudge pots must be put out when the temperature drops. Have you considered that when you would not let them bring the farmer's wage here to the floor?

Fifth. And, your constituent can get an insurance policy to protect him and his family, but the farmer's occupation is so hazardous that he cannot get standard accident insurance. I applied for an accident policy some years ago, and when they asked me what my occupation was I said I was a farmer, and they regretfully returned my application and said they were not insuring farmers against accidents; that the business was too hazardous. Then I sent it back and I wrote that I was a Congressman. Right away they sent me a policy. You know, we get shot at once in a while, but even at that our occupation is not as hazardous as that of the farmer. Of course, I subscribe to many country papers, and there is hardly a week some paper does not carry an account of a farmer getting his arm torn off by a farm machine, or of an instance in which a tractor rolled over on him and he died there slowly after long hours of waiting.

The insurance companies will not insure him. They will insure your constituent in his steam-heated room and air-conditioned shop where he is earning many times what the farmer gets. But you will not let the farmer, with 1 arm off, or 1 leg off, even talk about what wage he ought to receive for his toil and sacrifice.

Sixth. Your constituent lives in the city with every convenience about him. You have gas, water, electricity, heat, schools, churches, theaters, service stations for his car, shops and streets and transportation, all within a few steps. The farmer and his family must live an isolated life, frequently in remote sections where, according to statistics, a disproportionate number of farm women are sent to the insane asylum every year. Would you be surprised at that? But you will not give us a chance to pay her a living wage for the food she helps put on your table.

Seventh. You have the privilege of collective bargaining.

If an employer in any shop here in Washington called a member of the union and tried to bargain with him on the amount of his wages, he would be laughed at. You do not dicker about the amount of your wages. That is all fixed under a law passed by Congress. But the farmer does not have any voice whatever in fixing the amount of his wages, in fixing the price of his products, in fixing the rate of return on his investment. He is not allowed to have anything to say about it. He drives up to the market with his cornucopia of plenty for your table and he asks, "What are you paying today?" And no matter what they are paying, and although it

may be below cost of production, he takes it, and there is no shop steward or walking delegate to appeal to.

Then when he gets his pitiful little check, he goes across the street to buy the necessities of life. And he asks, "What is the price?" And no matter what the price is, he pays it or he does not get the goods. He pays the other man's price. I ask you, what business could survive under conditions like that, where the consumer fixes the price of the farmer's labor and also fixes the price of the necessities which he must buy? It cannot be done. And yet you would not even let us talk about his wage on the floor of the House.

Eighth. Even such inadequate wages as he receives are uncertain and subject to change without notice. The price of hogs, eggs and butter, for example, vary from day to day over a wide range. He never knows when he plants a crop what he is going to get for it. He never knows when he farrows his pigs what they will bring him. It is all a gamble. Some other fellow has the say-so. And still he serves you better, and more faithfully than anybody serves you in either your business, your industrial operations or your home life.

He must buy machinery and seed and fertilizer and insecticide. He must make commitments and sign notes at the bank. But before harvest, farm prices may drop so drastically that he will be left holding the bag. He has to take a risk your constituent is never called on to take. But you kick out his bill before the Clerk can even read the title to the House.

Ninth. And remember that the farmer must have ample capital. It costs money to be a farmer. Farming is a big investment. Any farm anywhere of any kind would cost from $15,000 to $35,000. Of course a good farm would cost $150,000. But he has to have from $15,000 to $35,000 even to get the farm. Then on top of that he has to have a minimum of $5,000 for machinery. The day has gone by when you could hire labor. You cannot get anybody to work for wages on the farm, you have to do it by machinery.

But still you do not let the farmer have anything to say about the income on that investment. Every man who owns stocks and bonds has to have his dividends. On his notes he has to have his interest; but not the farmer. He must have a farm. He must have machinery. Then he must have livestock. And you will not even talk here on the floor about letting him have anything at all on his investment, on all that amount required to start farming.

What does your constituent have to have? He has to have a pair of overalls and a wristwatch to be sure he does not work overtime. Still you legislate for him and let him fix his wage. But the farmer, who has to have all this investment does not get a chance to be heard.

Tenth. Here is another very interesting thing. When payday comes around, your constituent walks up to the window and gets his check, or he gets cash in hand. He would be surprised indeed if he went to the window and they said, "There is no check here for you."

But the farmer can work all summer long, in the heat and in the rain, and make every sacrifice, and when the time comes for him to get his paycheck and he goes up to the window they say, "Why, there is no paycheck here for you. Don't you remember we had a drought, we had a flood, we had the boll weevil. No check here for you."

Americans love fair play. We do not like to see a fellow kick the underdog, but we do not object to kicking the underfarmer who feeds us.

Ezra Taft Benson flaunts an honored name. But, he is unworthy of that name. He has brought reproach upon the name of a family honored for the great service it has rendered the Nation and all mankind. Ezra Taft Benson is evil personified. He has brought more tears to the sunburned cheeks of American farm women than any man in American history. He has denied proper food and adequate clothing and equal school advantages to more farm children than any man who ever sat in Washington. He has implemented the greed of corporations which have grown fat on the unrewarded toil of countless men, women, and children. He has brought heartbreak to young couples working from morning starlight until evening darkness 7 days a week in a hopeless effort to start life on the farm. He has denied medicine and hospitalization to the men who toil and sweat in the blistering summer sun and freeze in the frost and chill of the winter day desperately trying to make enough to pay interest and taxes. He has denied them the pitiful proceeds of beneficial crops and well-tended herds. No man in the annals of the American Republic has deliberately brought such undeserved suffering and unjust wages for backbreaking labor and has inflicted greater deprivation on children doing men's work, and enduring privation at a period of life when it stunts both mental and physical growth as that pliant tool of predatory wealth and oppression, Ezra Taft Benson. He has destroyed the small farm family, the wellspring from which through generations has flowed the wholesome stream of men and women reared far from the slums and teeming hotbeds of social vices and isms in the city. He has driven uncounted thousands of families from the farm tilled by their fathers for generations.

No such migration has cursed any people since Israel, condemned to make bricks without straw, fled from a kindred spirit and oppressor in ancient Egypt. He has done more than that. He has done worse than that. He has deliberately set class against class. He has engendered a prejudice on the part of the city consumer against the farmer.

Wallace's Farmer and Iowa Homestead, in its last issue, quotes a retired Iowa farmer as saying he is disturbed by the public's bitter attitude toward the farmer. He says the farmer is being blamed for everything from the recession to the high cost of living.

Ezra Taft Benson has deliberately fostered that idea. His strategy is to divide and conquer. He not only prejudices class against class, and consumer against producer, but he cleverly sets commodity against commodity.

And in that connection, the day has gone by when a bill for 1 crop or 2 or 3 crops can be brought to the floor and the growers of other commodities left to bring in a separate bill, or as usually results, left without legislation.

Cotton, for example, has had more legislation and more administrative consideration over the years than all other agricultural products combined. Missouri produces more cotton per acre than any State in the Union. I have supported and voted for every cotton bill passed by the House in the last quarter of a century. I recall vividly the opening days of the First World War. I sat on the platform beside Speaker Clark when a bill was brought in to put a ceiling on the price of wheat. In some surprise, I said: "Why, Mr. Speaker, why don't they include cotton? Cotton is just as essential to winning the war as wheat." Looking straight ahead the Speaker answered: "The cotton boys are too strong for us."

Mr. Chairman, I am through voting for any bill providing relief for any one or two commodities. Any fair bill must include all agricultural commodities. All for one and one for all. And for the first time in my life I must vote against any cotton bill that comes out on the floor without provision for all other farm products. We are through with divide and conquer. It is a device by which farmers are being driven off the farm, region by region.

In the first 6 months of this year farm employment averaged 5,580,000 compared with 5,729,000 a year ago. The last census report said that all of the 300,000 decline in 1957 was accounted for by self-employed farmers and their underpaid farm helpers.

We are giving no heed to the destruction of the small farm. But all great men of every city—lawyers, doctors, engineers, artisans, merchants and others—have come from the farm. The last two Presidents came from mortgaged farms out in the Central West. The city does not support itself in population. Left alone the city would die. It would perish physically and spiritually, were it not consistently fed by this constant influx of fine men and women who have been reared out on the farm under the sky and with their feet on the ground by devout mothers and fathers. You never saw a red flag above a farmhouse.

There is another significant trend. Many of those left on the farm are either too old for employment or too young to be employed. The recent explosive increase in our population has so increased the ranks of the consumer, and the years of hard tillage have so depleted our arable land, through attrition and erosion, that in the near future we will approach the line of subsistence.

Some time in 1970 we are going to pass the mark where there will not be enough land to support the people. You will call on the farmer and he will not be there. You cannot educate a farmer out of a book or in a college of agriculture.

There is only one way and one place to train a farmer and that is on the farm. A bold peasantry when once destroyed can never be supplied.

Guidance, Counseling, and Testing in the Proposed National Defense Education Act of 1958

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. THOMPSON of New Jersey. Mr. Speaker, I am concerned with those parts of the National Defense Education Act of 1958 that deal with guidance, counseling, and testing, as well as the identification and encouragement of able students.

Under the relevant title Federal assistance would be provided to encourage the States to develop and expand programs for the early discovery of student aptitudes, and for the maximum development of these aptitudes through improved counseling and guidance services in the high schools.

I have ample, adequate, and irrefutable evidence to back me up when I say that proper guidance is one of the greatest needs of our educational system. In a sense this type of help is more urgently needed than direct financial assistance to the school and the student. The will to want an education is the most important factor in the achievement of that objective. Moreover, the loss of valuable human resources through lack of full educational development of each student is a subject of serious national concern.

In 1956 the Joint Committee on Atomic Energy urged that remedial action be taken to provide—and I quote from the Joint Committee's report—"a stronger program for identifying the ablest students in our high schools at an early age and presenting them with challenging courses to stimulate their minds."

The Joint Committee included guidance and counseling among its major recommendations and suggested the following approach which might assist in meeting this requirement:

Early identification of potentially ablest students: At present only 4 out of 5 students in the top quarter of their class finish high school. Only 2 out of 5 in the top quarter go on to college. Many with high potential simply do not enroll in college preparatory programs. In order to recoup this loss of potential talent it is proposed that statewide testing start at the 8th or 9th grade level rather than the 12th. This would help insure that the ablest students don't drop out of school and that they take the kind of courses necessary for college entrance.

The importance of guidance and counseling in our increasingly complex society also was emphasized in the second report of the President's Committee on Education Beyond the High School which pointed out:

There is no doubt that talented young people are our most valuable national resource. The loss both in human and in social terms that results from failure to identify, inspire and assist able young people for further education and training is incalculable.

Proper identification of talent requires the skilled use of all the resources that a sound guidance and counseling program in the secondary schools can muster. To be most effective, this process of identification must start early. While each individual as he matures is expected to develop the ability to direct himself toward meaningful life goals, many need much assistance and all need information. Sound guidance and counseling services provide the student with facts about himself and his environment as a basic framework for thinking logically about his goals and relating this thinking to his abilities.

There are many more careers to choose from today than there were 20 years ago, and the number will rise. Yet today's student has no added time to decide, and no prior experience to guide him. He requires continuous, capable assistance as he proceeds through and beyond high school.

The Rockefeller Brothers Fund Report on Education, published last month, also underscored the Nation's need for adequate, effective guidance, counseling, and testing programs to identify and motivate potentially capable students. This need was summarized as follows:

One of the most important goals of any education system is to identify and guide able students and to challenge each student to develop his capacities to the utmost. Tests are most effective in measuring academic aptitude and achievement.

Used with a sound understanding of their strengths and limitations, present testing procedures can contribute significantly to a program of talent identification.

But testing procedures unwisely used can do harm. A few basic considerations must be understood: First, tests are effective on a limited front. Second, no single test should become a basis for important decisions. Third, test scores are one kind of data to be placed alongside other kinds of data.

The identification of talent is no more than the first step. It should be only part of a strong guidance program. As many teachers as possible should be trained to take part in it. As many high schools as possible should have special guidance officers.

The objective of all educational guidance should be to stimulate the individual to make the most of his potentialities. The fact that a substantial fraction of the top quarter of high school students fail to go on to college is a startling indictment of our guidance system.

The general academic capacity of students should be at least tentatively identified by the eighth grade as the result of repeated testings and classroom performance in the elementary grades. An adequate guidance system would insure that each student would then be exposed to the sort of program that will develop to the full the gifts which he possesses.

Our schools have made far more progress in identifying different levels of talent than in the development of programs for these different levels. Adequate attention to individual differences means rejecting a rigid policy of promotion by age; and it means sensible experimentation with various kinds of flexibility in the curriculum to meet the varying needs of young people.

The significance of guidance in a modern education program has been described by many experts in the field. Space permits me to quote only a few of the witnesses who appeared before our committee to urge improved guidance, counseling, and testing throughout the Nation. Mr. Arthur A. Hitchcock, executive secretary of the American Personnel and Guidance Association, outlined the significance of good guidance programs in our schools and pointed out that—

During the past several decades, and more particularly in recent months, many authoritative persons in education, in other professions, in business, and in industry have spoken vigorously of the need for good guidance programs in the schools of this Nation. * * * The last White House Conference on Education pointed up the need for guidance most clearly, and, in nearly half of the State conferences preceding the meeting in Washington, persons not in education stated the necessity for guidance most strongly.

May I cite only one authority, Dr. James E. Allen, Jr., commissioner of education for the State of New York. He stated recently, "Guidance is looked upon by laymen, as well as by those in education, as an integral and vital part of the educational process. The education profession and the public have come to expect substantial contributions from guidance in assisting boys and girls toward optimum development, for their own fulfillment and for their economic and social contributions."

Guidance is important in the schools, but its significance goes into the roots of this Nation.

In its recent statement of policy concerning the Nation's human resources problems, the American Personnel and Guidance Association endeavored to point out the significance of good guidance services to the basic values of this Nation in the statement that freedom of choice can "be enriched through the educational process, for persons can grow to the height of their potentialities when (1) they know their potentialities, interest, and values; (2) they have the opportunity to develop them through education; (3) they know about the complex rapidly changing career picture; (4) they are motivated to develop their potentialities and to relate them to the opportunities in our society."

In placing the development of individuals in a democratic society in its setting of freedom to choose one's career, the statement reads:

"This generation has been called upon to make a decision that will shape the destinies of many future generations. At the heart of this decision lies one of this Nation's basic freedoms—freedom of choice."

Dr. Dael Wolfle, executive officer of the American Association for the Advancement of Science, declared that—

The proper function of these programs is to accomplish something that cannot be done by a scholarship program alone, namely, to identify able students fairly early in their educational years, and to help them to take the courses and develop the plans that will enable them to continue in educational channels to the point where they can make full use of their abilities.

It is literally true that a considerable number of bright children do not know that they are bright, do not think of themselves as profiting from going to college, and do not recognize the opportunities that would be open to them with further education.

Dr. Lawrence G. Derthick, United States Commissioner of Education, pointed out the value of guidance service when he described the results of several well-designed studies as follows:

In an experimental study extending over a period of several years * * * [one researcher] compared the progress and adjustment of a group of students receiving guidance services in a high school with a matched group in the same school receiving no organized guidance. On some points there were distinct differences favoring the experimental group receiving the benefit of guidance services. Only 10 percent of the control group became honor students in high school, while 27 percent of the experimental group made honor grades. There were considerably fewer curriculum changes made by the guided group and after graduation from high school 53 percent of the guided group gained college admission as compared with 35.6 percent of the unguided group.

It is clearly indicated from the testimony that good guidance and counseling programs are a valuable and useful weapon which can be employed effectively to prevent dropouts from school, and to guide students into school programs for which they are best suited.

We must, if we are to reach our maximum strength in the development of our human resources, provide meaningful assistance to improve and expand guidance and counseling programs in our schools. The urgency of the situation is well illustrated by facts recently brought to light by authoritative studies.

The President's Committee on Education Beyond the High School reported that—

There is wide variation from school to school and from State to State in the distribution of counselors, the number of students per counselor, and counselor competence. In 1952 only 4 States had counselors serving at least half-time in 50 percent of more of their high schools, and only 13 had counselors on this basis in more than 25 percent of their schools. The best current estimates indicate the equivalent of 11,000 full-time counselors in the schools against an estimated need for 16,000 to provide minimum service, or 26,000 for recommended services (1 counselor for every 300 pupils). High-school enrollments will be increasing so rapidly during the next several years that the present counselor shortage will increase unless the numbers now enrolled in preparatory programs are greatly increased. The Committee believes that efforts to recruit and train more counselors should be stepped up substantially.

Dr. Derthick in testifying on the need for more and better-trained guidance personnel observed that—

Test results and other cumulative students' data can result in good educational planning by students and their families, only if the facts are properly interpreted and utilized by the students and their parents. Yet it is estimated that not more than one-half of the high-school students in the Nation are provided with the services of a well-rounded counseling program. Contributing to this situation is a severe shortage of qualified guidance personnel.

As might be expected, there is wide variation from school to school and from State to State in the distribution of counseling personnel employed, in the extent of counselor preparation, and in the number of students which each counselor must serve. Altogether the Nation's schools now employ approximately 26,000 counselors, including both full-time and part-time personnel. In terms of full-time equivalents, there are approximately 11,000. The best current estimates put the need at 15,000 additional counselors in the public high schools alone, if these services are to be provided adequately. Yet, in 1956, only about 2,500 graduate degrees were granted by institutions of higher education to serve all levels of education in guidance and personnel work. Also, it is known that not all of these entered education and that there is considerable turnover among counselors in secondary schools.

I think we know that industry, among one of these agencies, is draining off the counselors, having realized their great aid and advantage.

The present yearly supply of adequately prepared counselors is little more than enough to meet current replacement needs.

A total of 41 States employ some personnel charged with counseling and guidance responsibilities. However, the State departments at this time generally are not staffed sufficiently to provide the professional leadership, consultative services, research, and publications which are required to promote the necessary expansion and improvement of guidance services in the local schools. The 41 State programs employ a total of only 63 persons, counting both full-time and part-time personnel, who are responsible for giving professional leadership for these services. A recent survey of the State departments indicated that the difficulty in providing adequate guidance services, at both the State and local levels, is attributed to inadequate financial support for these services.

On the basis of these facts and information it is my opinion the provision for guidance, couseling, and testing in the proposed National Defense Education Act is fully justified.

Under the provision in the bill, $15 million would be authorized for each of 4 years beginning in fiscal 1959 for the purpose of making grants to State educational agencies to assist them in establishing and maintaining programs of testing guidance and counseling in public secondary schools. The funds under this program would be allotted among the States on the basis of their relative school-age populations. The States would be required to match their allotment dollar for dollar beginning in fiscal 1960.

In addition to this program the bill also provides for an authorization of $6 million for each 4 years beginning in fiscal 1959. The purpose of this is to provide assistance to institutes in guidance and counseling established by colleges and universities, which will conduct summer or regular sessions for the training of persons employed in a public school system who are in a guidance and counseling capacity. This assistance would be in the form of stipends to the guidance personnel in attendance and direct payments to institutions for the cost of such institutes. This program is similar to that of the National Science Foundation institutes for science teachers and is designed especially to encourage professional study in the field of guidance. These provisions, I believe, are urgently necessary to the overall improvement and expansion of guidance services in the Nation's educational system.

Phony Labor Bill

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Thursday, July 24, 1958

Mr. GOLDWATER. Mr. President, some of us, after spending too long a time in the rarefied atmosphere of the city by the Potomac, become disillusioned and fearful that our efforts to inform the public at large about legislation pending before the Senate or the House are doomed to failure.

For 5 days, on the floor of the Senate, I argued against the cries of appeasement and moderation that were characteristic of the arguments advanced in behalf of the Kennedy-Ives bill which has been termed—only by its supporters—as a labor reform bill.

I have never felt that it was a labor reform measure and so stated many times on the floor of the Senate, as well as in the Labor Committee.

It was, at the time of its passage, nothing but a patent attempt to satisfy the need for good labor legislation by a piece of legislative sleight of hand.

I was heartened, therefore, to read an editorial published in the Rockford, Ill., Morning Star of Wednesday, July 23, 1958. This editorial, entitled "Labor Bill Is Phony," expresses my sentiments about the bill much better than I can do so myself, and I am particularly happy to note that editors throughout the country have lifted the mask of the Kennedy-Ives bill and disclosed it for what it is—a sheep in wolf's clothing.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LABOR BILL IS PHONY

The Kennedy-Ives labor reform bill, passed by the Senate 88 to 1 last month, has been termed "a fraud," "a phony," and "a sweetheart" bill by those who have taken the trouble to study its provisions.

Its drafting was pretty much dominated by union politicians and lobbies. When Republican Senators like KNOWLAND, MUNDT, and GOLDWATER tried to insert into the Senate bill provisions that would have struck at root evils being turned up by the McCLELLAN rackets committee, they were shoved aside. Several provisions of the Taft-Hartley Act were actually weakened. And by clever juggling of provisions intended to hit at union racketeering, the bill actually provided legal means of further harassing employers and threatening them with prison when they carried out decent and forward-looking programs of employee relations.

During the writing of this Senate bill, a labor lobbist, former Congressman Biemiller, actually established himself in the Senate Labor Committee's room and gave advice on the altering of authentic reform amendments offered on the floor of the Senate. The bill has been termed in some

circles a "union organizational assistance bill."

This bill is now before the House, where it is proposed to ramrod it through with amendments barred. House Democratic leaders are gambling that election-bent Representatives will be glad to get a labor bill behind them without having to antagonize labor politicians. Because the bill is labeled a labor reform bill, Congressmen can face voters angered by the revelations of labor hoodlumism with this phony bill and say, "We made good." The Democratic leadership is also gambling on the effect of that 88 to 1 vote for the bill in the Senate. But can Republicans forget that the Senate voted the Kennedy-Ives bill on assurance by the Democrats to Senator KNOWLAND that his demands for real reform statute would be encompassed in another labor bill to be put through at this session? Having got the Kennedy-Ives bill through the Senate there was prompt default on that promise.

If Republican Congressmen think they can make any hay with the voters by support of the Kennedy-Ives bill, they are badly mistaken. An effort has been made to give the bill the appearance of an administration measure. But it is glaringly clear that the bill has been evolved by the Democratic majority in Congress to derail an honest effort to come to grips with the racketeering and hoodlumism brought to light by the rackets committee.

The Kennedy-Ives bill, as it is presented to the House, should be defeated, and alert Republicans can defeat it. It is a tricky bill, a hurtful bill. Far better to let this session be in complete default on a labor-reform bill than to accept the phony reforms put into the Kennedy-Ives bill. A fresh start can be made at the next session; and the McClellan hearings as well as the Hoffa threat of setting up a transport-union empire indicate that the country needs something more than a piece of sweetheart legislation whose writing was coached by the labor lobbies and politicians.

The rackets committee had voiced belief that three steps should be taken: put union funds into the class of legal trusts and fiduciaries; permit States to act against racket or recognition picketing in cases where the National Labor Relations Board failed to assert jurisdiction; insure secret ballots by union members of vital union decisions. The provisions were skidded out of the bill by skillful labor manipulations.

The Taft-Hartley Act was meanwhile weakened in several particulars, aimed largely at harassment of employers. The least of these was the compulsion put on employers to sign an anti-Communist oath. The bill changed the Taft-Hartley definition of supervisors to expand the number of workers who could be unionized; it concentrated even more authority in the NLRB; it shortened to 7 days from 30 the required time in which a construction worker must join a union; and it granted to former workers the right to vote in a representation election—a voter, in short, need not be an employee.

But the major blow at management was the requirement that money spent in fostering and improving employee relations in an industry has to be reported to the United States Labor Department if the sum is over $5,000. Failure may be penalized by a $10,000 fine and a year in jail. The bill mouths a phrase about "activities intended to influence or affect employees in the exercise of their right" to organize and bargain. But the wording is intentionally so vague that any employer trying to establish good industrial relations—even installing a pension system—and communicating with workers would have to file details with the Secretary of Labor or go to jail.

Under another section, the same penalty would apply to the employer if it was determined that his pension system, bonuses, hospital benefits, recreation program were designed to influence workers in their right to organize.

The racket hearings have strongly indicated that the country needs a labor-reform bill. But what was produced under lobbyist influence in the Senate, and is now offered on a this-or-nothing basis to the House, is at the opposite pole of what the country demanded. At this late hour in the session there is but one possible course—to vote it down.

Let's have a fair, honest piece of legislation, or none at all.

Plush Office for Lincoln Commission

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks, I include an Associated Press dispatch by Robert Novak which appeared in the Illinois State Register, July 16, 1958, concerning the extravagant expenditures of the Lincoln Sesquicentennial Commission in equipping their headquarters in the National Archives Building.

I also include an editorial from the Chicago Tribune entitled "What Would Mr. Lincoln Say?"

Although I was honored to be appointed by the Speaker as a member of this Commission, I want to make it perfectly clear that I deplore the extravagant amount of money that has been spent on the Commission's office. As this Chicago Tribune editorial says, one of Lincoln's most admirable traits was his simplicity. I wish this characteristic of Lincoln could have been kept in mind by those responsible for this extravagance.

[From the Illinois State Register of July 16, 1958]

LINCOLN COMMISSION EQUIPS PLUSH OFFICE

(By Robert D. Novak)

WASHINGTON.—A short term Government Commission has spent more on furnishing and equipping its office than it originally was expected to spend throughout its existence.

The Lincoln Sesquicentennial Commission, expected last year to use only $10,000 all told in tax money, has spent $15,713 to get its office in shape.

The group, charged with celebrating the 150th anniversary of Abraham Lincoln's birth next year, has used almost all of its initial $37,500 appropriation without starting on its proposed special projects budgets of over $150,000.

The Commission's current spending was disclosed in minutes of a recent meeting by its executive committee.

Those minutes showed the Commission purchased $7,250 worth of furniture from a Washington store without going through the usual Government procedure of competitive bidding.

Congress authorized only $10,000 last year when it created the Commission. But $37,500 have been appropriated to date, and the Commission is asking another $140,000 for the current fiscal year.

The Commission spending of $36,420 so far includes:

Renovating and carpeting the Commission office in the National Archives Building, $4,048.

Furniture for the office, $7,250.

Office equipment $4,415.

Publication of 75,000 copies of a Lincoln Commission handbook, $8,000.

The Commission moved into its offices Tuesday and will leave early in 1960 when the life of the group ends.

The minutes, prepared by assistant executive director John E. Allen, justified purchase of the furniture without competitive bids on grounds it would take 90 to 120 days to obtain Government issue furniture.

As for the expense of placing carpeting over linoleum, Allen wrote:

"Carpeting the office was considered necessary in view of the required dignity of the office."

Allen today told a reporter the Commission doesn't consider the expenses at all out of line.

The minutes of the Commission meeting also indicate the eight-member commission staff may soon begin to experience the Washington phenomenon of perpetual growth.

Bertha Adkins, women's director of the Republican National Committee and the Commission's executive committee chairman, suggested the Commission now should hire an administrative assistant and a press agent.

[From the Illinois State Register of July 22, 1958]

WHAT WOULD MR. LINCOLN SAY?

(Editorial from Chicago Tribune)

Congress last year established the Lincoln Sesquicentennial Commission in the expectation that with $10,000 it could figure out a suitable way of observing the 150th anniversary of Abraham Lincoln's birth—which will be next February 12. For the celebration itself, more money would be made available.

Since then, it now appears, the Commission has been busy establishing itself in a most un-Lincolnlike manner. It has run up bills of $36,420 without even mentioning any celebration, and is asking another $140,000 for the current year. Among its expenses have been $4,048 for redecorating and carpeting its Washington office; $7,250 for furniture, and $4,415 for office equipment. We have not been told whether an electronic calculator has been bought to make sure that 1959 is the correct year.

One of Lincoln's most admirable traits was his simplicity. His life shows us that a man can achieve greatness without squandering money on luxuries. He was amazed when his new stepmother, the former Sarah Johnston, moved into the humble Indiana log cabin with such unheard-of riches as a bureau for her clothes and a chair or so. He wrote the Gettysburg Address on the back of an envelope.

Perhaps the most effective way the Commission can put across its message is to disband, leaving only its office, just as it stands, with a sign saying "Abraham Lincoln was a great man. This is the sort of office he never had."

National Retarded Children's Week

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. FOGARTY. Mr. Speaker, I have today introduced, with the gentleman

from Connecticut, Congressman MAY, a joint resolution requesting the President to proclaim the period from November 16 to November 28, 1958, inclusive, as National Retarded Children's Week. Its purpose is to urge the people of the entire Nation to give their heartfelt support to the appeal for understanding of the National Association for Retarded Children, and its more than 600 member units in every State of the Union, including, of course, my own State of Rhode Island.

We are living in an age of medical miracles. Many devastating diseases have been, to a great degree, eliminated or controlled by the medical discoveries of the last three decades. Many people are now living who—had it not been for the antibiotics, for the sulfa drugs, for insulin, for new vaccines, for a variety of new operative techniques—would have been dead of heart disease, diabetes, malaria, polio, pneumonia, and a host of other diseases.

This age of medical miracles, however, is just beginning. The strides which have been taken are great ones; those which are yet to be taken are greater still. On every hand, mysteries confront us, the mysteries of cancer, for example, the mysteries of the many cardiovascular diseases, of the arthritic diseases, of mental illness, of a variety of neurological diseases, and many, many more. The list of medical problems awaiting solution is a long one. Prominent on this list is mental retardation.

Mental retardation is not a single disease entity. Its origins are many and diverse, its manifestations are varied, its implications manifold. It does not matter, however, from what point of view we regard mental retardation. From any point of view, it is a pressing and serious national health problem.

It is serious because of its size. About 1½ million children of school age are retarded, and about 3 million of the remainder of our population.

It is serious because of the kinds of disability suffered by its victims, and the problems and heartaches faced by their families.

It is serious in its economic implications for our Federal, State, and local education, health, and welfare services.

Like many of the other health problems we face today, mental retardation is beginning to show that it, too, is vulnerable to the probing attacks of medical research. Scientists are discovering how the various kinds of retardation differ from one another, and they are learning something about causes, prevention, and therapy. Investigators have discovered, for example, that errors of body metabolism are responsible for at least two types of mental retardation, and they are working on preventive and therapeutic diets to remedy the fault. Some kinds of retardation are now known to be caused by certain infectious diseases in the pregnant mother; preventive public-health measures can be and are being taken here. Birth injuries are responsible for still other kinds of retardation; ever-improving prenatal and perinatal care and obstetrical techniques can help cut down the number of these injuries. And there are still other kinds of mental retardation whose causes are beginning to be understood and against which preventive action is being taken.

There are, of course, many forms of mental retardation whose causes are still a mystery, and for which there are as yet no corrective therapies. Prospects for progress, however, are excellent. For one thing, it has been discovered that, regardless of cause of retardation, a great proportion of retarded children can derive substantial benefits from educational experiences directed specifically toward developing the aptitudes and skills they possess. Just a few years ago, most of those who were mildly to moderately retarded faced the prospect of an empty, unproductive, and unsatisfying life in a society which wrote them off as hopelessly limited and beyond help. Today, because of the efforts of dedicated and patient teachers, many of those who are only moderately retarded have high hope for socially useful and personally rewarding lives.

All over the Nation we can see the results of the combined efforts of private citizens and volunteer groups and the Federal, State, and local levels of government. Private groups stimulate action; they press for better educational opportunities for retarded children and for improved training and rehabilitation facilities; they urge the passage of legislation designed to aid in the fight against retardation; they serve to inform and educate the general public. Government does its part by conducting and supporting research, by aiding in the creation of educational and medical facilities for the retarded, by helping train personnel to work with the retarded, and by assisting in the development of new and improved teaching and rehabilitation methods. At the Federal level, for example, the National Institute of Mental Health is both conducting and supporting a variety of research projects on many aspects of mental retardation and is supporting the training of professionals to work with the retarded. The National Institute of Neurological Diseases and Blindness is conducting a broadly based study of the perinatal conditions so clearly related to mental retardation, cerebral palsy, and other disorders. The Children's Bureau, the Office of Education, and the Office of Vocational Rehabilitation are also contributing mightily to the fight against mental retardation by supporting medical, educational, and rehabilitation facilities for the retarded all over the country.

Much is being done to reduce the problem of mental retardation. But much more remains to be done. And while the research and teaching contributions of the professionals in the field are vital, they must be built on a firm base of public awareness and support. Without it, future achievements will be limited indeed. It is to broaden and strengthen the base of public support, therefore, that I offer a joint resolution for a National Retarded Children's Week.

We have all seen many times what splendid contributions an enlightened citizenry can make to the battles being fought against disease, ignorance, poverty, and other kinds of human distress. The contribution can be especially great for mental retardation, because the way in which a community handles the problem is a direct reflection of the views and attitudes of its citizens. In an informed community, we are likely to see adequate educational facilities for the retarded, good coordination of medical and rehabilitation services, and a progressive and supportive public attitude. In an uninformed community, we are likely to see the old ignorance and hopelessness.

To awaken the American people to the problem of mental retardation, then, and to inform them of our progress in solving it, on behalf of the National Association for Retarded Children and its many State and local chapters all over the Nation, on behalf of the parents and families of our Nation's 1½ million retarded children, and on behalf of the children themselves, who cannot speak for themselves, I offer this resolution for the establishment of National Retarded Children's Week.

For Secretary Dulles and Advisers

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. MADDEN. Mr. Speaker, the following editorial by H. B. Snyder, publisher of Gary (Ind.) Post-Tribune sets out facts which might give our State Department leaders constructive suggestions on future Mideastern policy:

[From the Gary (Ind.) Post-Tribune of July 16, 1958]

BECAUSE WE LACKED A POLICY

Events in the Middle East are developing with extreme speed, and almost entirely adversely for us. The situation is much as though a house of cards has started collapsing. The news may get much worse before we can make it any better—indeed, if we are able to improve it at all.

What is being demonstrated is our basic lack of understanding of the Middle Eastern situation and our lack of a firm, continuing policy for dealing with it.

In the past America had the friendly regard of the Arab world. When other nations were exploiting the area through their colonial policies, we were sending in teachers and helping the Arab peoples.

But since World War II we have been consistent in the Middle East only with our blunders. We have not done everything wrong, but we have more debits than credits to our score. And when we have made a favorable opportunity for ourselves, we usually have thrown it away the next moment.

We endorsed the formation of Israel, and we helped greatly in nudging the British and French out of the Arabian peninsula. But we then failed to undertake a continuing responsibility for that area; we failed to move into the political vacuum that was created.

With respect to Israel, for example, we have shied away from giving the positive

guarantees, that the new state would not be shoved into the sea and also that it would not be permitted to march against its neighbors. * * * And when Israel, in company with Britain and France, moved against Egypt, we stepped in to halt the fighting—but we only restored the status quo; we did nothing to clear away the basic causes for the Israeli attack. We have nobly tried to feed the Arab refugees, but have not adequately recognized what a festering sore they were in the Middle East. We have kept the sore open, instead of curing it.

As for the Baghdad Pact, which seems to have gone down the drain as a quick consequence of the Iraq revolt, we helped to draft it but we never joined it. We had a foot inside the door, but always one left outside.

Mostly we have failed to understand the upsurge of pan-Arabism. We underestimated Gamal Abdel Nasser, and not so much the man as the sentiment behind him. We have talked anticolonialism and yet have gone along with the French in their endeavor to subdue Algeria. In the Arab world itself, we have appeared as trying to buy support rather than help old friends. And we have lost the friends.

It is simple to blame Russia, but it is no adequate explanation. The Russians have largely been profiting only by our mistakes, moving into the opportunities we presented to them. Our policy hasn't failed; we have just never had a sound and consistent policy for working with the Middle East. And now that a first rate crisis has come, we are in an extremely difficult situation. The 5,000 marines in Lebanon may be only a token of our eventual involvement.

What To Do About Ex-Presidents

EXTENSION OF REMARKS
OF
HON. THOMAS P. O'NEILL, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. O'NEILL. Mr. Speaker, under leave to extend my remarks, I wish to include an article which appeared in the Boston Globe on Sunday, February 24, 1957, with reference to legislation now pending before the Congress. It was authored by my very good friend, John Harris, who is the political editor of that newspaper. I believe that the fruits of his research will be most interesting reading for my colleagues in the House of Representatives.

WHAT TO DO ABOUT EX-PRESIDENTS—WHILE PRESIDENT PROPOSITIONS TRUMAN ABOUT TRIP TO GREECE, CONGRESS DEBATES RETIREMENT PAY FOR CHIEF EXECUTIVES—MOST NEVER NEED IT, SOME NEED IT BADLY

(By John Harris)

President Eisenhower's effort to enlist ex-President Harry S. Truman as a goodwill envoy to the Middle East invites attention to a century-long debate Congress has resumed—what the Nation should do about our former Presidents.

Many ideas have been advanced. They have ranged the gamut from making ex-Presidents nonvoting Members of the Senate to chopping off their heads when they finally leave the White House, a grisly suggestion once made by a former Chief Executive.

Congress is presently on the verge of solving part of this long-neglected problem. The Senate, with few dissents, has voted to grant pensions to these elder citizens of the Republic and to their widows. An identical bill is now pending in the House, which last session permitted similar legislation to die in committee.

Gratitude, it is said, is not a marketable commodity. All too many of our former Presidents have sadly found this to be true.

Our two living ex-Presidents, Herbert Hoover and Harry S. Truman, are fortunately not in want. This session's brighter prospects for the Presidential pension bill, however, must be gratifying to all thoughtful citizens. Even more than insurance for the future, it is, after a fashion, a redress for our past negligence.

DEATH SAVED JEFFERSON

Witty Dolly Madison, who was to suffer, put it vividly as she looked out one day upon the trees at the side entrance to the President's house. "The President of the United States," she murmured, "usually comes in at the iron gate and goes out at the weeping willows."

A visitor today to the grandeur of Monticello would find it difficult to appreciate the anguish of its master, the author of our Declaration of Independence. Jefferson's dedication to public service caused him to neglect his private affairs. Only the generosity of a wealthy widow furnished him the ready cash to meet the demands of the Capital's butcher, baker, and candlestickmaker so he could avoid the risk of debtor's prison when he left the White House.

"Nobody," said Jefferson, "was ever more determined than I was to leave this place clear of debt." Even worse debt was ahead. It has been blamed on Jefferson's incurable hospitality, though the cause was more the decline of Virginia plantations, a farm problem of its day.

He sold land, mortgaged Monticello, to the hilt. To obtain funds, this man who said, "I cannot live without books," sold his library he had been collecting for a half century. It became the foundation of our present Library of Congress. Finally, to satisfy creditors and to keep his family from penury, he resolved to sell his remaining holdings through a lottery and sent his grandson on a melancholy mission to obtain a lottery license from the State of Virginia. Death alone spared Jefferson from being evicted.

FIGHTING POVERTY

The fate of Jefferson's two disciples, James Madison and James Monroe, was similar.

Grants given Monroe by Congress did not adequately cover his claim and fell far short of meeting his debts. He lost his Virginia estate to creditors. He spent his final days living on the charity of relatives in lower New York City and we have a pathetic picture of the author of the Monroe Doctrine walking Broadway—"a stooped old man, clothed in a shiny suit and battered beaver hat, giving every evidence in his facial expression of deep-seated unhappiness."

Madison, shocked by Jefferson's bankruptcy, tried retrenchments on his own Virginia plantation which his widow would one day lose. To provide her with some estate, Madison, despite failing eyesight and rheumatic hands, copied the precious notes he had made during the secret debates of the convention which drafted our Constitution.

Dolly Madison eventually sold them to Congress for a fraction of their worth.

She lived for years in the Capital in honored but genteel poverty, her food often supplied from the market basket of her neighbor, Daniel Webster.

Financial woes beset Andrew Jackson in his declining years. "Poverty stares us in the face," he wrote on one occasion. Though gravely ill, he traveled to New Orleans for the 25th anniversary of the battle, a trip made not to gather further honors but to raise money to meet the debts of his beloved stepson.

General Grant, second youngest of our Presidents with presumably many years ahead, was a man without an occupation when he left the White House. The collapse of his venture in Wall Street left him penniless. To satisfy creditors he even pawned the mementoes of a lifetime, his swords, souvenirs and gifts.

The general's greatest battle was his final one. Despite the ravages of cancer, he struggled to dictate and write two volumes of memoirs to provide his family with funds.

"Every day, every hour, is a week of agony," he said; finishing his task 4 days before he expired.

Congress has been more kindly with presidential widows. Some, whose husbands died in office or were assassinated, were given grants of the remaining year's salary.

To some, beginning with Mary Todd Lincoln, Congress voted a $5,000 pension and the franking privilege—one first extended to Martha Washington. Mrs. Lincoln, after Lincoln was shot, went to Germany to recover her health. Finding herself in need, she wrote a most moving letter to the Speaker of the House to request a pension.

NATIONAL OBLIGATIONS

Teddy Roosevelt considered the disposition of ex-Presidents one of America's biggest problems. The pros and cons on it are threadbare from argument. Andrew Carnegie's offer—in 1912—to furnish $25,000 pensions through private benefactions did not meet with public approval. Great Britain has long provided pensions for its Prime Ministers. We have provided pensions for generals and admirals—but none for the Commanders in Chief.

Now Congress, about to act, has repeated all the favorable contentions in a report on the pending bill. They are commended reading for those who may still dissent.

Assurance of financial independence for our former Chief Executives, says the report, is more than a matter of equity. It is good business for the American people. Our interest in Presidents does not cease when they leave office. They have obligations which continue. So have the American people.

We should see to it ex-Presidents can be asked to render further public service without hardship to themselves or their families.

Poles, Czechs, Hungarians Still Look to the West

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. BOLAND. Mr. Speaker, the editor in chief of Scripps-Howard newspapers, Mr. Walker Stone, gives his impression of where this country stands with the peoples of Poland, Czechoslovakia, and Hungary, in his fourth article which appears in the Washington Daily News today. Mr. Stone has been traveling in Russia and the European satellite countries during the last several weeks. With permission to extend my remarks, I include Mr. Stone's article to be printed in the RECORD:

POLES, CZECHS, HUNGARIANS STILL LOOK TO THE WEST

(By Walker Stone)

The Polish guide had proudly shown me through the old town of Warsaw. Every house and shop and cathedral had been rebuilt around the old square and along the

narrow, winding streets, just as they had been for centuries before the Nazis came. We stood on the cliffs overlooking the Vistula River.

"There," he spat, "is where the Russians camped while the Nazis destroyed our city. When the battle ended, there were only 20,000 of us left in Warsaw."

Later the guide, reluctantly, took me atop the skyscraper Palace of Culture, a towering edifice of wedding-cake architecture, a gift of the Russians to the Poles, to celebrate victory over the Nazis. From the tower you could look over a Warsaw which had been 85 percent destroyed by war, and is about 50 percent rebuilt.

DIDN'T WANT TO

The guide was reluctant because he did not feel comfortable in the structure.

"It gives me the creeps," he said. "It is a very expensive building the Russians gave us. All this marble and all these ornaments could have provided housing for 30,000. Very expensive. Very expensive, for us Poles."

CZECHOSLOVAKIA

In Prague, one Czech stopped another, asking, "What time is it?"

The other Czech looked at his wristwatch, mumbled: "It's 10 after 2, thanks to the Soviet Union."

In its brief history as a free republic, between the First and Second World Wars, Czechoslovakia was one of the most prosperous of European countries. Living standards then were much higher than they are now, although now they are higher than in Poland or Hungary, and far higher than in the Soviet Union.

The Communist press in Czechoslovakia daily extols the benefits that flow from the Soviet Union and the evils brewed by the western "imperialists." Hence the time of day becomes, in grim jest, a Soviet blesssing.

RIDDLE

"Do you know why," goes a Czech riddle, "Khrushchev got off the plane at our border and rode into Prague on a train?

"He was afrad he would crash on our high living standard."

Things have not gone as they should under Communist bureaucracy, so there was a big shakeup—and much scrambling for the good jobs. Each applicant had to be examined according to his proletarian background—

First came the potato, who made this claim:

"I provide food for the workers, and am entitled to preference."

The selection commmittee, however, ruled:

"Yes, but you have the wrong background. You originated in America."

Next came the stork, who proudly said:

"See, my beak is all red."

"But," ruled the committee, "on those long legs you live on a too-high level."

Came next the pimento.

"See," said the pimento, "I am solid red."

"Ah, yes," said the committee, "but you were once green." (The color of the farm party, which the Communists overthrew to gain power.)

Then came the bear. "I am," he said, "a worker in the forest. My father was a worker in the forest. My grandfather was a worker in the forest."

Ruled the committee: "You have a fur coat. Your father had a fur coat. Your grandfather had a fur coat. You cannot qualify."

HUNGARY

When the Moscow radio announced the execution of Imre Nagy and General Maleter, the news touched off demonstrations in many places in the free world. But it caused no reaction on the streets of Budapest.

In this beautiful spot, where the Blue Danube flows cold and gray and bosomy of commerce, between the spectacular cliffs of Buda and the smoky flats of Pest, the people were in no mood to demonstrate. They had had their fill of revolt, unaided, a year and a half ago.

After all, who were Nagy and Maleter, except a couple of Communists who at last had fallen victim to Communist tyranny? In that year and a half since the great Budapest uprising, when thousands had been slaughtered by Soviet guns, hundreds of other Hungarian patriots, not stained by communism, had been executed, with no notice taken by the outside world.

The Poles, the Hungarians, the Czechs, feel their true ties are with the Western World. Their values are western values. But so long as Russians troops are so close, they cannot choose sides.

A Historical Week

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. UDALL. Mr. Speaker, Arizona editor William R. Mathews, the publisher of Tucson's Arizona Daily Star, is not only a knowledgeable man on international affairs, but is one of the country's most outspoken editors as well. Last Sunday in his newspaper he published a hard-hitting editorial which, in harsh terms, criticized our actions in the Middle East crisis.

As one who believes that we need the cleansing influence of self criticism now as never before, I present, in that spirit, this sobering commentary:

[From the Arizona Daily Star of July 20, 1958]

A HISTORICAL WEEK

This week of July 14–20 has been a week of shame in American history. It has been a week of shame, because the Washington Government has deceived the American people in its action in landing marines in distant Lebanon. It has deceived the people by stating excuses that are either not true, or that, in telling only part of the truth, leave a false impression. It has conducted itself in a manner that for many years previously it denounced when others similarly conducted themselves. Until this week it has scorned and ridiculed the use of indirect aggression as an excuse for such a lawless act.

It has invaded with its Armed Forces a little country in which a rebellion was going on. It has done so on the mere oral request of its weak President, who is due to leave office in a few months, and who deliberately refused to consult his own parliamentary leaders.

Let it be noted that in giving the excuse of indirect aggression the President and the Secretary of State deliberately left out the word "Communist." They had to do that, because there was no immediate danger of Communist aggression in that country. American newsmen on the spot, of known repute, and the Secretary General of the United Nations, who was sent there to investigate, agree that there was no danger of Communist aggression. The fight was one between Moslem Arabs favoring Nasser, and Christian Arabs, favoring the West. Thus we land troops to put down a rebellion in Lebanon, but at the same moment allow our citizens, many of them, to be kidnaped and held prisoner by a rebel regime in Cuba.

The truth should be told. Two important facts are involved that for some reason have not been revealed. The first of these is that the rebellion in Lebanon and the one in Iraq have behind them the deep-seated, widespread hatred among all Arab people of the State of Israel. Just as the entry of the Christians of the Crusades of 10 centuries ago united the Arabs of those days, so has the entry of Israel in our own time.

The indirect aggression that Washington uses as an alibi represents an attempt of the Arabs to unite, first to make their united country independent of all other political powers. What is wrong with that? The humiliation they have suffered from centuries of subjection, they wish to bring to and end. What is wrong with that?

Why are not the people of the United States informed about these aspects? Why are they so carefully concealed that only those who have been on the spot know these truths?

Secondly, the United States, through its delegate to the United Nations, former Senator Henry Cabot Lodge, upon the instructions of President Eisenhower and Secretary Dulles engaged in one of the most brazen campaigns of diplomatic blackmail that the world has seen in many a year. The news dispatch reads, he warned that "the U. N. may collapse if it fails to cope with a master plot to take over the Middle East by indirect aggression." In other words, he warned that unless the other nations of the world, at least two-thirds of them, went along and approved of America's and now England's lawless acts, our country would no longer support or work with the U. N.

It was America that took the lead in creating the U. N. For an American representative of the U. N. to talk to it in that kind of language dishonors his own country. That is shameful, too.

Fifty years ago this joint Anglo-American action would have been considered normal. But look at what has happened in the past 50 years. No one has done more to break up such a use of armed might than America itself. We have denounced it as colonialism. Behind the break-up were the growing aspirations of people in the backward areas like the Middle East. We drove Britain out of Egypt. Britain drove France out of the Middle East in 1941. We drove Britain out of the Middle East in 1948. And now at this belated time in history we are emulating a practice that we used to condemn.

We have gone into the Middle East with armed forces, but in so doing we should realize that, while we may for a time intimidate these Arab peoples, it will not be long until they unite in spite of our military intimidation. We wil lose just what we have sought to gain.

We should hang our heads in shame; shame, if not for the indefensible immorality of our act, for our stupidity.

Priest To Celebrate 50 Years of Service

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 11, 1958

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I include in the RECORD an article from the Phoenix Gazette of July 12 commenting upon the approaching golden jubilee in the Franciscan Order of the Reverend Albert Braun, O. F. M. Father Albert is one of

Arizona's most distinguished citizens, having served as a chaplain in both world wars and spending the greater part of the Second World War as a prisoner of the Japanese. At present Father Albert is pastor of the Sacred Heart Church in Phoenix. This parish has four mission churches, all of which were built with Father Albert doing a great deal of the physical work himself. On July 26 a public ceremonial to his long public service will be held:

PRIEST TO CELEBRATE 50 YEARS OF SERVICE

The Reverend Albert Braun is preparing to observe his golden jubilee in the Franciscan Order of the Catholic church at a solemn Mass at which he will renew his vows.

The Mass will be celebrated at 9 a. m. July 26 at Sacred Heart Church, 920 South 17th Street, of which he is pastor.

At 69, Father Albert's 50 years have included serving the Indians, helping the poor, building churches, and seeing active duty as an army chaplain.

During his service in two world wars he was injured once, decorated, and survived the death march on Bataan. He spent several years as a prisoner of war.

Born in Los Angeles, he entered St. Anthony's Seminary in Santa Barbara, took his novitiate training at St. Elizabeth's in Oakland and then went to the Old Mission in Santa Barbara, where he was invested.

His first assignment was to work with the Indians on the Apache reservation at Mescalero, N. Mex. In 1918 he entered the army as a chaplain for the Sixth Infantry.

The same year he was wounded near Romaine, France, and received a citation. From there he went to Trier, Germany, and after his discharge in 1919, he became a member of the Reserves.

Father Albert went back to the Indian reservation and started to build a church of native rock as a monument to war veterans. The construction, with the help of the Indians, was done by hand, and the work work was so tedious it took many years to finish.

Meanwhile, he was called into active duty with the Civilian Conservation Corps in New Mexico. After the CCC move ended, Father Albert's army career was not over. In 1940 he was called back into the army as a captain instructor of chaplains at Fort Sam Houston, Tex.

The next year he left for duty in the Philippines. He was one of the survivors of the death march with General Wainwright and spent the rest of the war as a prisoner of the Japanese.

He won the respect of men of all races and creeds during his prison stay. A token of their affection is graphically told in a Christmas gift they gave him in prison.

They made a booklet of scrap paper. An artist drew a religious picture for a cover and then the men all gave testimony to his understanding and kindness. There were men who wrote their thanks to him for taking beatings for them, men who showed their gratitude for his covering up for them to keep them out of trouble, and appreciation from those in the infirmary for whom he had swiped extra food.

Until a message came over the radio Christmas of 1944, his associates stateside thought Father Albert was dead.

At the end of the war he retired to Mescalero to finish his church. At its dedication General Wainwright brought his Army band to play. The Army was not through with its chaplain, though. In 1947 he was recalled and sent back to Fort Sam Houston, where he remained until age caught up with him.

It was then he came to Phoenix and St. Mary's Church. For a period he taught at St. Mary's High School. Four years ago he was sent to Sacred Heart as pastor.

A student of history, he attended Arizona State for a while to get his doctorate, but seeing the need of the people in South Phoenix for additional churches, he started building with a zeal.

He has built four churches, doing a great deal of the work himself, from digging ditches to shingling roofs. They include Sacred Heart, Santa Isabell, Magnolia and 18th Street; St. Mary Magdalene, 11th Street and Hilton; Santa Rita, 904 South Starr, and a center at 910 South 16th Street, for instruction and recreation.

With no less energy, he is building a school, which will be ready to serve the first two grades by next fall.

Father Albert's alert eyes mirror his sense of humor and bounce with his energy. An avid card player, he hasn't much use for television because he believes it wastes conversational time.

Following his Jubilee Mass of thanksgiving, he will be honored at a brunch at the Hiway House. That evening the people of his parish will have a fiesta in his honor at Sacred Heart church ground.

Science Aid in Prospect

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. MADDEN. Mr. Speaker, the vast majority of Americans are hoping this Congress will enact constructive legislation to expand scientific education before adjournment. The Gary (Ind.) Post-Tribune outlines the thoughts of most people on this important problem:

[From the Gary (Ind.) Post-Tribune of July 19, 1958]

SCIENCE AID IN PROSPECT

Congress appears to be coming to life on the matter of aid to science education. There are prospects for enactment before the session ends of a measure even more generous to college students than was proposed by President Eisenhower.

The report from Washington that passage is a good possibility comes just as a report is received from another group of American educators on the status of science education in the Soviet Union. The group, including President Herman B. Wells, of Indiana University, has just returned from a tour of Russian universities.

As other such reports have done, the one from the college presidents stresses the intensity of Russian efforts in the field of higher education. The United States group found fault with some of the Russian aims but they did not question the "deadly seriousness" with which the Russians have dedicated themselves to the school program.

It may be true, as Edward Crankshaw reported early this week from London, that the extreme Soviet emphasis on engineering training is producing an oversupply of engineers. The Russians for the present seem to have more young graduates than their industrial setup can absorb. But that situation certainly is less to be criticized than our own, where we have been lagging in the education of young people in the scientific and technical fields.

The bill now being advanced in Congress would attempt to correct our deficiencies by extending scholarship aid to qualified young people in these fields. The President's proposal, made early in the year, calls for 10,000 scholarships a year. The House bill proposes 18,000 to 23,000. And the House bill is more liberal than the President's in several other regards.

For one thing, it would extend the first $500 of a scholarship grant without regard as to the student's need. Eisenhower had proposed a needs test for any amount. Perhaps a token grant should be made to any student qualifying for a scholarship, as is done in the National Merit Scholarship program, but it is hard to understand why substantial aid should be extended to students who don't need the money.

The number of scholarships is debatable. But if an error is to be made, we would rather it be on the side of authorizing too many, rather than not enough grants. A compromise between the White House and Capitol proposals should be easily reached.

The important thing is that there be action, and hopefully that it be speedy enough to permit the program to be of help next fall. The bill has been tagged as the National Defense Education Act, to ease its way through Congress, and certainly it will be of defense benefit. But the fact that it basically is Federal aid to education is turning out not to be the handicap some thought it was.

Polls made by several Congressmen show strong public support for Federal aid in science, mathematics and foreign language fields. The public apparently is much more understanding of the need than some Members of Congress have been.

Our Middle East Dilemma

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. UDALL. Mr. Speaker, Mr. William H. Stringer, in a piece he wrote this week for the Christian Science Monitor, tersely outlined the dilemma that confronts us today in the Middle East. I believe his piece, which follows, deserves the close scrutiny of our colleagues:

(By William H. Stringer)

WASHINGTON.—If anyone has a sure-fire antidote for indirect aggression in the Middle East, he should contact Secretary of State John Foster Dulles. Mr. Dulles has tried all sorts of formulas—and now this direct intervention in Lebanon and Jordan—but that man Nasser keeps right on scheming along.

Ask a high administration official why the United States, with Britain, moved into the Middle East thus formidably, with marines and aircraft carriers, and paratroops. The answer you will get is that the main reason was not oil, was not geography, was not anything but a determination to protect the small nations against indirect aggression.

In short, the way the Eisenhower administration reasons it, if the United States had not sent the marines into Lebanon following the Iraqi coup, no small country in the entire stretch of territory from Morocco to southeast Asia would have felt safe from indirect aggression.

Indirect aggression may be described as the seizure of somebody else's country by infiltration, massive propaganda onslaught, plotting against established authority, smuggling in of arms and commandos, assassination, and coups d'état. This is what hap-

pened, Secretary Dulles would affirm, in Iraq. It is what was barely prevented from happening in Jordan. It is believed behind the civil war in Lebanon, where, it is averred, as late as last weekend the rebels were receiving instructions from Syria's capital, Damascus, over an open telephone line.

If the United States had stood by idly or merely asked the United Nations to pass pious resolutions while not only Iraq but Jordan and Lebanon were seized by plotters friendly to Colonel Nasser, then—so Washington vigorously reasons—no small, beleaguered government anywhere would dare to resist.

No small nation would believe that it was healthy to be a friend of the United States. No small ally would believe that alliance with Washington was anything but the slenderest, unreliable reed.

So Washington landed the Marines. Previously it had sought to stem indirect aggression by canceling the Aswan Dam, in Egypt, and by inviting King Saud to Washington, in Saudi Arabia, and by relying on the shrewdness of wily old Premier Nuri, in Iraq. None of these devices has been successful.

Now Washington readily admits that landing the Marines does not, in itself, solve any Middle Eastern problem. The regimes in Lebanon and Jordan are bolstered while the Marines and paratroopers are camped beside the government buildings. But what happens when they are withdrawn?

The United States, of course, has turned to the United Nations for solution. It is seeking to find some way to establish what might be termed a stronger United Nations presence in Lebanon, strong enough to assure national independence, strong enough to allow the marines to go home.

Ideally, this would mean U. N. troops or a strong observer corps patrolling the Syrian frontier, and token U. N. forces on call in Lebanon's capital. Whether the United Nations can be persuaded to order such patrols into being, in either Lebanon or Jordan, is of course problematical.

For the moment, the United States has countered indirect aggression. The small governments around the periphery of Africa and Asia are, it hopes, bolstered and strengthened. They have seen how quickly American military power could come to their rescue. They have discovered that the Soviet threats have not put everyone into a paralysis of inaction.

But a truly great question remains: What is to be Washington's policy when the marines have gone home? Even if United Nations forces remain on guard, they cannot stay forever.

The United States has many friends in North Africa and in Asia. There are more peoples in the Middle East who would be friendly if they were treated as neutrals. Washington now should be readying its post-Lebanon diplomacy, based on a thorough understanding of the many forces at work all the way from Morocco to southeast Asia.

Supplemental Appropriation Bill, 1959—Emergency Funds for Schools of Public Health Training Programs

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1958

Mr. RHODES of Pennsylvania. Mr. Speaker, a few minutes before House passage of the 1959 supplemental appropriation bill last Tuesday, I received word that the President had signed H. R. 11414, an act amending the Public Health Service Act, authorizing the Surgeon General to make certain grants-in-aid for provision in public or nonprofit accredited schools of public health of training and services in the fields of public health and in the administration of State and local public health programs.

Members will recall that this emergency legislation was unanimously passed by the House on May 5, 1958. It authorizes the Surgeon General to allocate $1 million in grants to enable the 11 schools of public health to train badly-needed specialists for Federal, State, and local public health agencies. These schools are located at the universities of Michigan, Minnesota, California, North Carolina, Puerto Rico, Johns Hopkins, Tulane, Harvard, Yale, Pittsburgh, and Columbia.

As was pointed out in the committee report and in the House debate, these private and State-supported institutions are now incurring an annual deficit of over $3 million in subsidizing the training of public health personnel for the public service throughout the Nation. This bill had wide bipartisan support in both the House and Senate. It is a 2-year emergency program, effective with the fiscal year which began on July 1, 1958.

Mr. Speaker, the timing of the action on this bill unfortunately prevented the inclusion of necessary funds in H. R. 11645, the Labor-Health, Education, and Welfare appropriation measure. H. R. 11414 was unanimously passed by the other body in the identical form of the House version on July 10, 1958, but by then the appropriation bill was in conference.

Presidential approval of the bill came too late for either committee or floor consideration of a request for the inclusion of the necessary funds in the supplemental appropriation bill acted on by the House on Tuesday. It will therefore be necessary to request the Appropriations Committee of the other body to add an additional $1 million to H. R. 13450 and take it to conference, so that the emergency public health training program provided for in H. R. 11414 may be initiated during the present fiscal year. Unless funds are included in this bill, 1 year's operation of the 2-year emergency program will be lost.

Mr. Speaker, I would like the RECORD to show that this action is necessary because there was no opportunity for the House Appropriations Committee to consider this item. If funds are subsequently added to H. R. 13450 by the other body, Members and the House conferees may therefore be fully informed as to the reasons for such action.

I have discussed this matter with the gentleman from Rhode Island [Mr. FOGARTY], the distinguished chairman of the Labor-Health, Education, Welfare Appropriations Subcommittee. He has written me as follows:

I am glad that you have brought this matter to my attention. I strongly support the objectives of H. R. 11414 and agree that the necessary funds for this important emergency public health training program must be included in H. R. 13450. It is unfortunate that the timing has made it impossible for the request for the funds to be considered by our committee and trust that they will be added by the Senate and taken to conference.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Appendix

Is Rehousing for People?

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, July 24, 1958

Mr. CLARK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an extremely able address entitled "Is Rehousing for People?" which was delivered by Nathan Straus, of New York, one of the leading experts in the entire housing field during the last 25 years. In his stimulating and interesting address, he pointed out the enormous difficulties with which we are faced in connection with the relocation of families by reason of the urban redevelopment and the highway programs and the complete inability to deal with those programs in the absence of adequate housing for families of low incomes.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

IS REHOUSING FOR PEOPLE?

(By Nathan Straus)

Is the objective of an urban redevelopment and rehousing program to help people or to beautify the city? The question is not intended facetiously. It comes to mind almost inevitably, if any serious study is made of the effect of the New York City redevelopment program.

We are informed that about 5,000 families will be relocated over the next 3 years in connection with the building of the Lincoln Square project. The word "relocated" is a convenient evasion of the fact that these unfortunate families are being thrown out of their homes—many of them, with nowhere else to go.

Here are a few typical examples, as reported in the daily newspapers.

A 70-year-old widow occupying an apartment for which she pays $36.80 per month is one of those evicted. She has been unable to find an apartment execpt at a monthly rental of $50. That is, she will be forced to pay one-third more rent than she has in the past. It is true that she will receive a one-time relocation bonus amounting to $312.92. But that money will be swallowed up in moving expense and the increase in rent, in less than a year. Her case is typical rather than unique.

Another family consisting of a man, his wife, their baby son and his wife's mother—four in all—occupy a flat for which they pay $22.70 a month. It consists of 4 rooms, so the rent is less than $6 a room. The apartments to be built on the Lincoln Square site are going to rent for upward of $47 a room. As one of the evicted tenants says: "We couldn't even rent a closet in them."

The real-estate concern in charge of relocation frankly admits that it has only 400 apartments available in all parts of the city and that these apartments rent for from $50 to $65 a month.

It is a fact that 1 family out of 4, now living in the Lincoln Square area, is theoretically eligible for an apartment in a subsidized public housing project. However, the eligibility is largely a theoretical benefit, an empty gesture, since, in fact, there is a long waiting list for apartments in public subsidized housing in this city.

Even though many of the tenements in the Lincoln Square area are firetraps and even though many of them may be vermin infested, nevertheless, on a cold night, any roof over the family's head is better than a park bench.

The plight of low-income families, to be evicted in connection with the Lincoln Square project, is characteristic of urban redevelopment throughout the United States.

Things are no worse in New York than in any other American city—except that redevelopment of slum areas has proceeded at a more rapid pace here than elsewhere. While our newspaper headlines read "High Rent Apartments Still the Trend in Manhattan" and "Lincoln Square DP's Ask the Planners: Where Do We Go?" as far out as the west coast, the pattern is duplicated.

One of the worst examples of mismanagement in the United States is that of the city of Los Angeles. There, a fine program of subsidized public housing, approved by the Federal Government, was rejected by the voters, just as it was all ready to go into actual construction. This negative result was the product of a campaign of vilification and misrepresentation by the National Association of Real Estate Boards and the United States Savings and Loan League, unfortunately abetted by the two leading newspapers of that city.

The outstanding success achieved by this campaign of misrepresentation by the real-estate lobby is well indicated by the fact that even as generally reliable and distinguished a representative of the Nation's press as the Wall Street Journal on July 17, 1951, printed the following headlines: "Los Angeles Folk Fume Over Huge Project." "Roar of Protest Against Public Housing."

The truth was that the city council had approved the public-housing program by a vote of 10 to 5. The truth was that the public-housing program had been endorsed by every local veterans' organization, all local-labor organizations and more than 70 other civic groups.

The low-income families of Los Angeles are today paying the penalty for the success of this vicious propaganda. Thus the New York Times, writing of the Los Angeles project on last June 8, reported, under the headline "Vast Building Plan Is Set in Slum" that "the 9,000 present residents of the hill will be resettled, virtually all the buildings in the 22-block area razed, and the tract relandscaped and rebuilt to accommodate 6,000 to 8,000 residents in style. What will become of the people who live in the firetraps and rabbit warrens atop the hill is an unsettled question. The redevelopment will be on somewhat a luxury basis, with apartments renting upward from $50 a room a month.

It must be unpleasant indeed to be the head of a family, worrying about where to find a roof to shelter wife and children, only to be informed that his fate is an unsettled question. Tearing down slum buildings may be esthetically satisfying and emotionally soothing but does not, of itself, improve the living conditions of low-income families. On the contrary, it may aggravate their plight.

The basic fact is, that even with Government aid under the FHA program and other forms of assistance, very little of the new housing provided by private speculative builders is within the means of even a family of average income. Obviously none of it is within the means of families in the lowest income groups, those who, of necessity, are compelled to live in slum areas.

About one-quarter of the families in the United States can afford to buy the cheapest new three-bedroom houses available at the end of 1957. Three-bedroom apartments are even scarcer and even more expensive than three-bedroom houses. A three-bedroom apartment rents for a minimum of about $110. This condition is true across the Nation. To afford such apartments, a family should have an annual income of not less than $7,000.

The problem of rehousing is essentially a national one that can be solved only on a basis of national financial assistance. WMCA calls again for the establishment of a Department of Housing and Urban Development in the Federal Government.

Moreover, WMCA would like to suggest that, just as a would-be automobile manufacturer in another country comes over here to study what has been done so successfully in Detroit, or physicians and surgeons come to New York City study the best in medical science, so officials in charge of our urban redevelopment and rehousing program might well study what has been done successfully abroad—especially in England and in Sweden.

According to Mr. Eric L. Bird, editor of the Journal of the Royal Institute of British Architects, "In Britain new construction generally precedes slum elimination." This, let it be noted, is said of a housing program that has been continued under Conservative and Labor governments, with only minor modifications since 1922. The 2 top years of public housing construction in England were under Conservative governments—in 1928 and 1939.

In Sweden, which has carried out, in the opinion of qualified observers, the most successful rehousing program anywhere in the world, the philosophy of housing and the pattern followed is similar.

The best of Sweden is represented by Velingby, a new satellite town a few miles outside of Stockholm. It was completed last year. Velingby is not a group of tall apartment houses, huddled together in a few acres. It consists of hundreds of acres, laid out as apartments, individual homes, groups of two-story housing for elderly people, playgrounds, recreational parks, decorative fountains as well as wading pools. There are restaurants, there are bandstands. There are office buildings, where employment will be provided for those who live in the new city. There are sites available for leasing to private concerns, on which factories will be erected, to provide more employment. This is real redevelopment, having as its key a better life for the people of Sweden.

Let it be understood that WMCA has nothing but admiration for the ideals of urban redevelopment and specifically for the Lincoln Square project, which will replace a rundown area of antiquated tenements and superannuated buildings with a cultural

center of the greatest city in the world. This is a project in the finest tradition of civic planning.

But slum clearance is not the cause of better housing. It is the result, the end product of a soundly planned rehousing program.

WMCA believes that, before a single building is torn down, subsidized public housing, equal in quantity to the number of families to be evicted and the rentals paid in those buildings must be built to house the tenants. You can put a side of beef in cold storage for a year. You cannot do the same to an American family.

Nearly twenty thousand human beings are being evicted or will be evicted in connection with the Lincoln Square project. WMCA believes that our immediate and pressing problem is to address ourselves to helping them. Let us not neglect their plight. Let us not forget that rehousing is for people.

Neglected Areas of Education and the National Defense Education Act of 1958

EXTENSION OF REMARKS
OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1958

Mr. UDALL. Mr. Speaker, the time has come for us to fully realize what it means to live during times of explosive scientific development. Now we know that man's entry into space is limited only by the boundaries of time needed for research. This scientific research is man's last barrier to new adventure and discovery in the universe. Only an educational system alerted and equipped for the times can trigger a projection capable of surmounting science research barriers.

In the interest of the national survival we must provide stimulus to the States for the improvement and the further development of their public school programs of education and training in the sciences and foreign languages. We have more than sufficient evidence of the immediate dire need for this type of assistance to our public schools. In fact, as the committee reports on H. R. 13247 stated:

There is no question as to the need for strengthening and expanding the teaching of mathematics, science and modern foreign languages in our elementary and secondary schools. The vital importance of these subjects to our natural defense and to the conduct of our foreign economic, cultural, and diplomatic relations is inescapable. Instruction in these subjects—utilizing modern techniques and equipment—must be adequate at the elementary and secondary school level if we are to produce the educated people our Nation needs in the years ahead. The plain cold fact is that these subjects are neglected ones in all too many of our schools today.

Dr. Lawrence Derthick, United States Commissioner of Education, described the background of the situation when he testified before our committee that—

It scarcely needs to be said that we have entered a new era, an era unfolding as a result of new knowledge of the universe and the continued development of new sources of energy. In many respects what recently was in the future, as conceived in the minds of men, is already here. We have been startled by recent developments and the accelerated pace with which the doors to nature's secrets are being opened.

The relative recency of the entrance of the laboratory sciences into the curriculum undoubtedly is one factor limiting the character and degree of science offerings in the schools. Many of our schools never have had suitable laboratory facilities, and in school after school the few science courses that are taught are often of a very inadequate nature, with instruction by teachers with less than desirable qualifications for the task. In recent years even the more favored schools have suffered sharp limitations on their science programs, as we shall show. These and other conditions have contributed to a critical imbalance in the curriculum, instruction, and student enrollment. * * *

Today most of the States do not have the leadership needed to promote the necessary modernization and upgrading of instruction in mathematics and science.

Resulting in part from lack of personnel, most of the States have not developed modern mathematics and science courses of study and teachers' guides.

The need to improve the science curriculum in our public schools is described in an article by Mr. Elbert P. Little in the Science Teacher Magazine, as follows:

The teaching of science has changed, and changed substantially, in the half century, both in content and in technique. But on the whole, the changes have consisted in addition to the structure that existed 50 years ago, or in alterations to the existing structure. Lately there have been repeated intimations that this piecemeal reconstruction has long since failed in its purposes; that a new structure is now necessary; and that it must be designed from the ground up.

The expense of equipment for science laboratories has forced many schools to resort to nonlaboratory methods of teaching. In many instances, it was reported during our subcommittee hearings, it is not uncommon to find a complete absence of laboratory facilities in the required general science and biology courses, to say nothing of those sciences requiring more complicated and expensive laboratory equipment.

The cost of science laboratory facilities was outlined by Dr. John R. Ludington, of the United States Office of Education, during our hearings when he pointed out that—

A general science laboratory would run $6,000; a biology laboratory, $6,700; and physics labs tend to run about $9,600; chemistry laboratories a little higher—$12,600.

In addition to those figures, we have various items of student apparatus and teacher demonstration equipment, chemicals and consumable supplies.

These figures for a general science laboratory run about $1,200 to $4,300, depending upon the size and the desires of the school. A biology laboratory would run from about $3,200 to $8,200. A physics laboratory would run from $3,400 to $8,900; and a chemistry laboratory, $2,400 to $7,200.

The problem of the lack of adequate science facilities and equipment in many of the Nation's schools is further complicated by the most vitally important need of all—a shortage of science and mathematics teachers. This fact was underscored during the subcommittee hearings when it was pointed out that—

A number of factors contribute to the difficulties which school systems face in developing adequate programs of mathematics and science. However, let us consider the problem of the teacher. Certainly all of us would agree this is a prime factor. It applies in other fields, of course. But the shortage is considerably more severe in the fields of mathematics and science. Moreover, the preparation of those presently engaged in these fields is less adequate than in other subjects.

The competition for teachers qualified in mathematics and science is definitely more critical today than heretofore. Several States which have conducted studies of teacher supply in science and mathematics report that only about one-third of the science teachers are full-time teachers of science and two-thirds teach these subjects merely on a part-time basis. Information drawn from 32 States indicates that in 1958 less than half of both the science teachers and mathematics teachers were devoting full time to the subject. This situation is most common in small high schools.

There has been an alarming drop in the number of science teachers trained annually. In 1950, 9,096 qualified science teachers graduated from our colleges. In 1956, only 4,320 were graduated a decrease of more than 50 percent. A slight improvement over the latter figure was noted in 1957 when the number increased to around 5,000. Moreover, for a variety of reasons, of those graduates prepared to teach science only about 60 out of every 100 actually accept teaching positions. In contrast, more than 80 percent of those who prepare for elementary schoolteaching enter teaching immediately.

On the basis of these facts and additional evidence presented to our subcommittee it is my opinion that the provision in the proposed National Defense Education Act to provide Federal assistance to the States to strengthen science, mathematics, and modern foreign language instruction is urgently needed and fully warranted.

As outlined in the committee report on H. R. 13247:

This title authorizes grants to the States to assist over a period of 4 fiscal years in establishing and maintaining a 2-part program for strengthening science, mathematics, and modern foreign language instruction in public schools, both administered in accordance with a single State plan (as approved by the Commissioner of Education) for accomplishing the purposes of the program.

First, there is authorized the appropriation of $60 million for the fiscal year ending June 30, 1959, and for each of the three succeeding fiscal years for payments to State educational agencies for the acquisition of special equipment suitable for use in providing education in science, mathematics, and modern foreign languages in the public elementary, and secondary schools of the State, and for minor remodeling of laboratory or other space used for such equipment.

Secondly, there is authorized the appropriation of $5 million for each of the 4 years for payments to State educational agencies for the expansion or improvement of State supervision and related services in the fields of science, mathematics, and modern foreign language instruction, and for the administration of the State plan.

Statement by George J. Burger Before the Senate Committee on Finance

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, July 25, 1958

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by Mr. George J. Burger, vice president of the National Federation of Independent Business, before the Senate Finance Committee on July 16, 1958.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF GEORGE J. BURGER, VICE PRESIDENT, NATIONAL FEDERATION OF INDEPENDENT BUSINESS, BEFORE SENATE FINANCE COMMITTEE, JULY 16, 1958

I am George J. Burger vice president and Washington representative of the National Federation of Independent Business. I am appearing here solely for the membership of the federation.

We represent independent business and professional people in all vocations from all parts of the country. We have the largest directly supporting membership of any business organization in the country.

First of all, Mr. Chairman, I want to thank you and your committee for inviting me to appear and give testimony on the subject matter before your committee, and this confirms your letter to me of June 27, 1957.

Mr. Chairman, if time permitted I could build a case on the facts that would disclose rank discrimination in the excise-tax levy presently imposed on the stocks of tires and tubes in the hands of independent retailers that smells to the high heavens.

In my private capacity, and then again in my official capacity with the federation this past decade, we have appeared before committees requesting correction, beginning with February 6, 1942, before the House Small Business Committee. Then again, before the Committee on Ways and Means June 1947, February 20, 1951, October 1955, January 1956, November–December 1956, and January 7, 1958. Before the Senate Finance Committee July 6, 1950, March 1957, and the record will also disclose filed statements on this subject matter before the Senate Finance Committee. November 1957 before the Senate Small Business Committee.

It might be of interest to you, Mr. Chairman and members of the committee, for me to quote the colloquy that took place before the Senate Banking Committee on June 18, 1957, between Senator HOMER CAPEHART and Mr. Dan Throop Smith, of the Treasury Department. Now bear in mind, Mr. Chairman, that this subject matter was not before the Senate Banking Committee at the time, but hearings were being held on the Small Business Administration Act.

"Senator CAPEHART. Yes. I would like to ask Mr. Smith this question. It is a problem here that I wish would also get an answer for us on. This has to do with small business, and particularly with the tire retailers of the United States. As you know, when they ship tires they have to pay the excise tax on it, but when the manufacturer who owns his own retail stores sells it, he can put all of the tires he wishes to in the retail stores without paying tax on them. That seems to be unfair to me, and it seems to be placing a burden on the independent tire retailer which is not placed on the manufacturer who owns retail stores.

"Of course, you understand this not only applies to tires and tire manufacturers, but any manufacturer where it is a product subject to excise tax.

"Mr. SMITH. Surely.

"Senator CAPEHART. Where he has retail stores, you see.

"Mr. SMITH. Yes.

"Senator CAPEHART. It applies to many other items in addition to tires.

"Mr. SMITH. Yes.

"Senator CAPEHART. It is in the law and your position is that what I consider to be a discrimination is a part of the law?

"Mr. SMITH. That I am qiute sure of.

"Senator CAPEHART. And the only way to correct it is to correct the law?

"Mr. SMITH. That I am quite certain of.

"Senator CAPEHART. Thank you very much.

"Mr. Chairman, I would like to ask that the Secretary of the Treasury, or the Internal Revenue Department, I presume it is, give us a ruling that can be made a part of this record as to why the independent retailer of tires must pay the tax when he receives the tires, whereas the manufacturer can send all of the tires he wishes out to his retail stores scattered all over the United States, with many of them next door to the independent, and he does not have to pay the tax until he disposes of them. I would like to know whether or not it is an interpretation of the Internal Revenue Department that these independents must pay the tax, or whether it is a part of the law. At the moment I do not know.

"Mr. SMITH. I will be glad to comment on that now, because I do happen to be familiar with it.

"Senator CAPEHART. If you are familiar with it and care to answer, fine.

"Mr. SMITH. I think it is a completely unambigous interpretation of the law, because the law is imposed on sales.

"Senator CAPEHART. In other words, you are following the law?

"Mr. SMITH. Yes. There is nothing in the excise tax law which imposes a tax other than at the time of the sale. This was a subject which was considered in the Ways and Means Committee in the bill which was reported out by the Ways and Means Committee a matter of a few weeks ago now, when considerable consideration was given to this. I do not recall exactly how it was finally handled in the bill, but I remember one point that came up in our analysis of it in the Treasury Department was to the effect that credit terms typically given by the manufacturers to retailers were such that in point of fact the tax was due at least in many instances on the sales by the manufacturers through their own retail stores quicker than the tax was due from the independent retailers under the terms of credit that were offered; but I will be glad to get additional information for you."

So it is self-apparent that this discrimination has been a matter of record with many Members of the Congress, and no correction forthcoming.

In the report of the Subcommittee on Excise Taxes of the Committee of Ways and Means, December 31, 1956, on page 6, the report states:

"However, it is understood that only 3 tire manufacturers currently operate company-owned retail stores, and that quantities of tires marketed through these outlets represent only a very small percentage of the total volume."

Of course I have personal knowledge of the rubber tire industry, being an independent member of that industry for close to 50 years, and I know that the findings as reported above do not check with the record.

Early in 1957 the public relations department of Fuller & Smith & Ross, Inc., of Cleveland, Ohio, whose client was the Pennsylvania Tire Co., held a contest through Nation's independent tire dealers, and put the question: "What's wrong with the tire business?" Their report discloses: "Dealers cite company-owned stores as greatest evil in tire business." We had no part, direct or indirect, in developing this contest and I might say that with the reports coming in from independent tire retailers in metropolitan areas throughout this Nation, with no exceptions or omissions, they cite this as the ever increasing peril to their business future. Why? Because of the expanded operation of these manufacturers retail stores throughout the Nation. In fact, it was stated very recently at an annual meeting of the United States Rubber Co., in answer to a question from one of their stockholders as to whether they planned to go into the company-owned store field that they are giving consideration to the proposition.

The National Independent a publication devoted to the interests of independent tire sales and servicing dealers throughout the Nation recently made a survey on this discrimination, requesting their readers to advise them as to what, if any injury was accruing to them as a result of the discrimination in the imposition of the excise tax on their stocks of tires and tubes, and that of their main competitor—the manufacturers retail stores. The result of this national survey as disclosed by the National Independent, May 29, 1958, was, and I quote: "$4,500 frozen assets; that is the meaning of Federal excise-tax-collection method to average dealer who replied to our recent survey. It's a measure of the advantage this law gives to company stores. Our hope for correction is now with Senator BYRD, of Virginia, and his Senate finance group."

With the recent highway construction bill and the added taxes on tires and tubes this developed an even greater financial liability on the independent retailer from which the manufacturers retail stores are exempt.

Mr. Chairman, we are not asking for any reduction of taxes, but in view of the fact that the Government is primarily interested in the greatest tax income of all descriptions why does the Government close their eyes to this gravy train of additional taxes?

Finally, Mr. Chairman, these major companies owning and operating retail stores are in a far better financial position to carry the advance payment in excise tax than are the run-of-the-mill of independent retailers. It's beyond us to understand why the Government continues to play Lady Bountiful on such a deplorable situation and it is our hope and plea that your committee will recmend that adjustment be made on this tax levy discrimination.

It should be so ordered that wherever tires and tubes are sold to the consuming public the stocks of tires and tubes carried by that establishment should carry the tax levy in the same manner as applies to independent tire retailers.

Surely, after 16 years, let this plea in behalf of small business be finally resolved in correction.

Puerto Rico Constitution Day

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Friday, July 25, 1958

Mr. JACKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared regarding Puerto Rico's constitution day.

There being no objection the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR JACKSON

This date is doubly significant to the people of Puerto Rico. Exactly 60 years ago today the United States landed troops in the Spanish colony of Puerto Rico. And exactly 6 years ago today the Island of Puerto Rico became a "free associated state" of the United States—it became the Commonwealth of Puerto Rico.

While the people of the United States share with their fellow citizens in Puerto Rico an enthusiasm and respect for the achievements of the commonwealth, there is also much here of great significance to millions of other peoples in the world. Six years ago the United States granted to the people of Puerto Rico the form of government they had democratically chosen for themselves. That in itself has great meaning for the world today; but even more importantly, let us look at what Puerto Rico has done with its freedom.

In the years since commonwealth status was granted, Puerto Rico has embarked on an energetic program of development and growth, characteristically termed "Operation bootstrap." It was just that, too. By every legitimate device of encouragement and cooperation, the government of Puerto Rico has brought new industry to the island, has provided new jobs for the people of Puerto Rico, and has provided a better life for all.

It was not too many years ago that Puerto Rico was a shameful testimony to colonial neglect. Now the commonwealth has the next highest standard of living in Central America. Puerto Rico has induced a major program of capital investment and expenditure, but it has not done this at the expense of its people. Hand-in-hand with industrial expansion has come growth of educational and public health facilities. The total life of Puerto Rico's citizens has been attended to, not just the business and economic sector.

And this is probably the most important thing to note on this sixth Puerto Rico constitution day. Self-determination of colonial peoples can be achieved within the framework of democracy. Underdeveloped areas can be brought up by their own bootstraps without the dire consequences too often associated with investments by colonial powers.

Today we can certainly say that Puerto Rico provides clear evidence of the superiority of freedom, clear evidence that the democratic way of life remains one of this Nation's most important exports.

Ethical Standards in Government

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, July 25, 1958

Mr. NEUBERGER. Mr. President, one of the radio stations in this country which takes frank and open advantage of the right of FCC licensees to express editorial opinions on the air is station WMCA in New York City. Every week, WMCA broadcasts the outspoken and thoughtful editorial opinions of Mr. Nathan Straus.

Mr. Straus is a man of liberal views and of a sincere and broadminded concern for the issues of public policy which confront the people of the great metropolis during the course of each week's news developments. On Friday, July 11, Mr. Straus' thoughtful editorial broadcast was devoted to the current interest in the investigation of the episodes involving Mr. Sherman Adams, Mr. Bernard Goldfine, and certain regulatory agencies of our Government.

Unfortunately, the text of the entire broadcast would be too lengthy to insert in the CONGRESSIONAL RECORD under our rules. However, because Mr. Straus comments at length on certain remarks I have made on this issue, as well as on the proposals made by the Senator from Illinois [Mr. DOUGLAS] and the Senator from New York [Mr. JAVITS], along with his New York colleague in the House of Representatives [Mr. KEATING], I thought that Mr. Straus' text was of such interest that it should be brought to the attention of other Members of the Congress, and I therefore ask unanimous consent that excerpts from it be printed in the Appendix of the RECORD.

Mr. President, on an earlier date some of the issues of money and influence in politics which were brought to public attention again in the Adams-Goldfine case were also discussed by the very able and thoughtful commentator, Mr. Edward R. Murrow. Mr. Murrow devoted a part of his Columbia Broadcasting System radio commentary on June 25 to a discussion of the problem of campaign financing, including the proposal of President Theodore Roosevelt for Federal financing of essential campaign costs which I have been urging in the Senate.

I ask unanimous consent that this part of Mr. Murrow's broadcast be printed in the Appendix.

Finally, I also ask to have included an editorial from the Beaumont (Tex.) Journal of June 30, entitled "Sauce for the Gander" endorsing my proposal that Members of Congress be subject to the same rules of conflicts of interest as apply to executive officials.

There being no objection the matters were ordered to be printed in the RECORD, as follows:

EDITORIAL BROADCAST OVER STATION WMCA BY NATHAN STRAUS, JULY 11, 1958

Although this editor expects to omit the weekly WMCA editorials during the summer months, a matter of great public concern deserves immediate editorial comment. We refer, of course, to the Adams-Goldfine case.

Here is the kind of dramatic story that tickles the imagination. Few people like a sanctimonious egoist. It is hard to resist the temptation to be gleeful when a man who has spent much of his life in polishing his own halo, discovers that it has slipped and become a noose.

* * * * *

Sherman Adams, commonly referred to in Washington as Assistant President, has admitted to activities that are not only generally regarded as improper, but actions in all respects identical with those for which he has forced other Government officials to forfeit their jobs. Sherman Adams, who has ousted several high Government officials for acceptance of gifts and gratuities from men involved in cases before Federal Government agencies now admits that he himself has accepted such gifts and gratuities. Sherman Adams may have a pure heart, but he certainly does not have clean hands.

* * * * *

But there is still another aspect of the subcommittee hearings on the conduct of Sherman Adams. It has been admirably stated by Senator RICHARD NEUBERGER, Democrat, of Oregon. Senator NEUBERGER said:

"I believe it is time to place in perspective the episode involving Sherman Adams.

"Sherman Adams is the victim of a system under which the spending of large sums of money on politics and politicians is virtually taken for granted among substantial segments of our society. He may not have been an innocent victim. I do not condone his conduct. But I think we should be honest and realistic in appraising it.

"After all, it is not so long ago that the acceptance by a prominent politician of an $18,000 expense fund from real estate and oil operators was turned into a personal triumph over a nationally broadcast television program. Do the gifts to Sherman Adams, about which we have heard so much, add up to a fraction of $18,000?

"When Sherman Adams committed his errors of judgment in doing favors for his friend, the public is being left to infer that he did this because of Mr. Goldfine's vicuna coats and hotel suites. Yet is Sherman Adams any more indebted to Mr. Goldfine for gifts than a man who sits in the Senate or in a governor's chair is indebted to those who collected $100,000 from big-business men or from trade-union political-education funds to pay for his campaign expenses?

"Is Sherman Adams, with his $2,400 rug and $700 vicuna cloth coat more obligated to render unethical favors than is a Member of Congress who is dependent every few years on 20 times that amount from bankers, natural-gas and private-utility owners and distillery executives to finance his billboards and radio and TV shows? What is the difference between one gift and another?

"What is morality in government? Was it virtue for utility stockholders to contribute enormous sums to the Eisenhower campaigns, and then for the President's assistant, Sherman Adams, to call the SEC to postpone a crucial hearing in the Dixon-Yates case—but immorality for the same Sherman Adams to inquire from the SEC about the case of Mr. Goldfine, from whom he had received a $2,400 rug?

"Is it morality for oil and gas tycoons to stage great benefit dinners to collect hundreds of thousands of dollars for the campaigns of Members of Congress in distant States who will vote to lift Federal control from offshore oil deposits or from natural-gas prices—but immorality for Sherman Adams to sign a hotel bill to the account of his friend, Mr. Goldfine?"

WMCA heartily endorses the point of view expressed by Senator NEUBERGER. It is high time for Congress to adopt for itself a code of conduct identical with that by which it judges—and indeed, sentences in the court of public opinion—members of the executive branch of the Government.

Until the same code of ethics is applied to members of the executive branch as to members of the legislative branch, such investigations as the present one certainly smack of hypocrisy. Congressmen cannot well profess horror and shock at the discovery that a man in the executive branch of Government has accepted gifts and contributions. Hardly any Congressman has not been guilty of similar conduct—on a larger scale.

Some of the finest legislators in both the Senate and the House of Representatives have shown distaste for this strange difference in standards of conduct. In 1951, a subcommittee, headed by Senator PAUL DOUGLAS, Democrat, of Illinois, studied the subject, and made concrete recommenda-

tions to the Congress. Nothing came of the Douglas committee recommendations.

Within the week, Senator JACOB JAVITS and Representative KENNETH KEATING, Republicans, of New York, have introduced bills looking toward the establishment of a code of ethics for Congressmen. WMCA hopes that, at this session, action will be taken on these bills. But, judging by past experience, this hope is apt to be disappointed.

In studying the establishment of a code which would limit the apparently limitless freedom of members of the legislative branch to accept gifts, gratuities and favors, under the present custom, WMCA believes that Congress might well consider simultaneously whether the restrictions now imposed on members of the executive branch are not unduly severe. Specifically, the requirement that such an official dispose of all of his private investments in corporations which might have a conflict of interest with a public regulatory agency, seems unnecessary, extreme and unfair. The same purpose might be achieved, as others have pointed out, by requiring merely that every important official in the executive branch make periodic disclosure of all of his holdings in private corportions and other private business enterprise, as well as a detailed listing of all his sources of income.

The Congress has a responsibility to watch carefully over the administration of the agencies, departments and programs which it establishes. In carrying out this duty, a Congressional subcommittee may find it necessary to investigate the extent of improper influence, whether by the White House or others, over an agency in order to discover whether the agency is really "independent." But this important work of the Congress should be carried on—and can be carried on—without violence to the rights of citizens and without undermining the confidence of the public in Congressional procedure.

WMCA urges the following program. One, the congressional subcommittee investigating the Sherman Adams-Goldfine case should stop its circus antics and settle down to the business at hand, while scrupulously avoiding character assassination on the basis of unsupported hearsay evidence.

Two, full TV and radio coverage of the subcommittee hearings should be permitted—and even encouraged. It is highly educational procedure for the people of the country to be able to watch their Government at work. Moreover, attendance by sight and hearing, though not in the flesh, will enable the people to form an opinion as to the credibility of a witness.

Three, WMCA urges that Congress go forward immediately with a thoroughgoing examination of its own conduct, with early adoption of a code of ethics for its own members identical with the code imposed on members of the executive branch of the Government.

EDWARD R. MURROW WITH THE NEWS, CBS RADIO NETWORK, JUNE 25, 1958

This is news:

* * * * *

It is now becoming almost fashionable to say that the case of Sherman Adams will, after all, do some good. It will somehow focus attention on the receiving of gifts, and the exercising of influence. This may be true, for a short while. But there isn't much evidence that publicity produces probity.

It is at least worth noting that most of the members of Mr. Adams' own party who have been asking for his dismissal, are those who are up for election in the autumn. Those who do not face the possibility of being dismissed by the voters appear to take a more charitable view of Mr. Adams' actions. It would be possible to conclude that the definition of ethical conduct—the determination of what is prudent and imprudent—depends to a considerable extent upon whether the politician making the judgment is up for election or whether he isn't—a kind of timetable opinion.

The Democrats, of course, do not have to search their conscience, past speeches or actions. They can pose as the defenders of everything ethical, decent, and downright upright—no influence, no hostages, no gifts. This is particularly true if their memories are sufficiently short. The Democrats have received a political bonus in the Adams case, although, it's probably true to say that they would have preferred to have had it delayed for about a year, so that it would have helped them more in 1960. It is a harsh and unpleasant fact that our political system depends in large measure upon gifts and influence. If there should be removed from Washington all those politicians who have accepted gifts or exerted influence, the political population would be decimated. This is true, not because the men are venal, dishonest or unethical. It is true because of the system. Every candidate who accepts a campaign contribution is somehow beholden to the giver, whether it be a labor union, a public utility, a personal friend, or any group, organized or unorganized. These men once elected may show the utmost indifference to the interests of those who contributed to their campaign funds—some do—but they have nevertheless accepted a gift of value.

When a heavy campaign contributor to either party is named to a Cabinet post, or made Ambassador to a major foreign power, this, of course, is not a business transaction where a position is purchased for a price, but there is a certain resemblance.

The acceptance of campaign contributions must, to a certain extent, influence the politician and his vote. And the attempt by the politician to influence regulatory and other administrative agencies is inevitable—not because he has been bought, but because he knows the local situation and his political future may well be involved. The alternative to the exercise of this type of influence would be to have decisions in vast areas of government made exclusively by the burgeoning bureaucracy in Washington, without any influence being brought to bear by the representatives of the people who will be primarily affected by the decision.

Political campaigning becomes increasingly expensive. The demand for campaign gifts increases. The control of regulatory agencies in Washington over the affairs of persons and corporations also increases. The present system of political gifts can hardly be regarded as satisfactory. But a workable alternative is hard to come by. Perhaps the size of campaign contributions should be further reduced. Perhaps closer scrutiny of disguised corporation and labor union contributions would help.

It might even be possible to devise a method whereby national elections would be nationally financed, where all private contributions would be banned, and where the taxpayer would pay the whole of the cost. Theodore Roosevelt once played with this idea. But it would present enormous difficulties, and not alone in the field of allocation, administration, and policing. It could also raise a fundamental question of personal freedom. In some countries voting is compulsory. We have never done things that way, apparently believing that the individual has the right not to vote. About 40 percent of us generally don't vote in a national election. If political campaigns were to be financed at the public expense, then the 40 percent could really claim taxation without representation.

It ought to be possible to devise a better method for handling our affairs.

* * * * *

The American humorist, Finley Peter Dunne, was like Will Rogers in that he really knew his politics. Dunne once remarked that "a man who would expect to train lobsters to fly in a year is called a lunatic. But," he said, "a man that thinks men can be turned into angels by an election is a reformer, and that man remains at large."

Goodnight and good luck.

[From the Beaumont (TEX.) Journal of June 30, 1958]

SAUCE FOR THE GANDER

"Who is going to police the policeman?" This is the question Oregon's Democratic Senator RICHARD NEUBERGER keeps asking as he presses for passage of a measure that would make Members of Congress pass a law to police themselves.

Specifically, his bill would compel the Members of Congress and other high Government officials once a year to file a report on the sources and amounts of each item of income or gifts that exceed $100. The report would include speaking or writing fees and a statement of assets and liabilities and dealings in securities or commodities during the previous year.

Senator NEUBERGER makes no apologies for Presidential Assistant Sherman Adams. He knows the overcoat of publicity is a political windfall for his party this year. Yet he says the inconsistency between the rules which Congress, with a great show of righteousness applies to executive officials, and its failure to apply identical standards to its own Members, undoubtedly has reflected adversely on the reputation of Congress in the public mind.

The Oregonian's concern should be shared by more of his colleagues on both sides of the aisle in Congress. It should be shared by all American voters who gave them their seats. The men who make our laws and appropriate our tax money should be subject to the same scrutiny as those who serve in the executive branch of our Government.

Influence-peddling is no less of an evil for one than it is the other. It may never be entirely eliminated from our elective system of government, but it should be minimized as much as possible. Congress ought to see that it is.

Tribute to the Late Walter A. Johnson

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, July 25, 1958

Mr. THURMOND. Mr. President, the State of South Carolina has lost one of its most valuable and best loved citizens with the death of Walter A. Johnson, the athletic director at Presbyterian College, at Clinton, S. C.

Coach Johnson was much more than an athletic director. His name is known everywhere in South Carolina. His strong character, high ideals, and his genuine affection for his fellow man, influenced the lives of many thousands of South Carolinians. It can be truthfully said that he made South Carolina a better place in which to live.

Walter Johnson was a native of the great State of Minnesota, but he spent 43 of his 65 years in South Carolina, as head of the athletic department at Presbyterian College. During that time, Presbyterian College acquired a national reputation for the excellence of its athletic program. Walter Johnson believed

that every student should participate in some form of athletics. He believed in physical fitness, and his beliefs led to a broader appreciation of the values of athletics throughout the State.

He was a director of the South Carolina Boys' State, a brigadier general in the National Guard, and an honoree of the Fall of Fame of the National Association of Intercollegiate Athletics.

I ask unanimous consent that there be printed in the Appendix of the RECORD editorials from the Greenville News, of Greenville, S. C., and the State, of Columbia, S. C., relating to his death.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Greenville (S. C.) News of July 24, 1958]

WALTER A. JOHNSON

Some years ago the students of the University of South Carolina presented an award to Walter A. Johnson, coach and director of athletics at Presbyterian College in Clinton for many decades.

The presentation expressed appreciation for "an influence helpful to college sports far beyond the campus of the institution he directly serves."

That was a fitting recognition of Coach Johnson's service to athletics on his own campus, throughout the State and over this entire region.

But such was the character of the man who was the beloved dean of college coaches and athletic directors in our State that, long before the close of his colorful career, his helpful influence reached far beyond the field of sports.

Walter A. Johnson was an educator and a soldier, having attained the rank of brigadier general in the National Guard. He was a sportsman who sought to extend direct participation in some form of athletics to everyone possessed of the skill and desire and did as much as any one man ever did to broaden the appreciation of the best in athletics.

But his finest achievement was as a great human being, a friend to mankind, his personality as a Christian gentleman.

This State will long be in his debt.

[From the Columbia (S. C.) State of July 24, 1958]

WALTER JOHNSON

Death, coming quietly in the night, removed Walter Johnson from the scene yesterday, but the influence of his life will carry on for generations.

Coach Johnson spent 43 of his 65 years as head of the athletic department at Presbyterian College. The imprint he made there, and in many other South Carolina undertakings, makes his name synonymous with good sportsmanship, fair play, loyalty to Christian ideals, and strong character.

During his career he received many offers to go to larger and more lucrative fields, in political and business areas as well as in his chosen profession, but he declined them all to remain where his heart was.

He was selfless in his service to others, whether as coach or athletic director, as a brigadier general in the National Guard or director of South Carolina Boys State, as a neighbor or a friend. In his dealings with people he was guileless and sincere. He never magnified a fault; he never failed to emphasize a virtue. His enthusiasm was infectious, and often even electrifying.

South Carolina was fortunate that young "Swede" Johnson, an outstanding athlete in his own right, chose this State for his life's work. The monuments of his memory—and already there are several—will not outlive the fruits of his example and leadership.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, July 25, 1958

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Foreign Aid Flops Again," from the Fort Wayne News-Sentinel of July 19, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Fort Wayne (Ind.) News-Sentinel of July 19, 1958]

FOREIGN AID FLOPS AGAIN

(Editorial from the Chicago Tribune)

The first thing to note about the bloody revolt in Iraq is that, once again, we have before us an example of dismal miscalculation in Washington.

Once again we have a demonstration that the economic aid we have been scattering through the Middle and Near East in the hope of winning lasting friends has been wasted. Soon we may discover that our aid was worse than wasted, for the weapons that we sent to our supposed good friends under the title of military aid may be turned against us.

The latest available accounting of what our International Cooperation Administration has spent in the region from Egypt to Pakistan covers the period from April 1948 to March of this year.

It shows, to select a few examples, that our Government has obligated itself to pay Egypt $61 million and has actually given $41 million.

Iran did better. It has been promised 318 million and has actually received 273 million in the decade.

IRAQ GETS SHARE

Iraq has been regarded as a British responsibility but, even so, Iraq has been promised a total of 14 million and has received 12 million.

For Israel the corresponding figures are $291 and $282 million; for Jordan, 59 and 56 million; for Lebanon, 36 and 20 million; for the support of the Baghdad pact, we promised $12 million last year but so far have managed to hand over only $107,000.

We have pledged 370 million to Pakistan and paid 253 million. The corresponding figures for Turkey are 663 million and 579 million.

The grand total for the decade for the region described by the ICA as "Near East and south Asia" is nearly $3.2 billion of obligations and 2.7 billion of actual expenditures.

CAN'T BUY FRIENDS

For the first three quarters of the fiscal year that ended a few weeks ago the obligations assumed were $112 million and the payments 261 million. Possibly believers in the foreign aid nostrum will argue that the obligations assumed were materially less than in any of the other recent years, but the argument fails because the money actually spent includes gifts authorized in previous years and is hardly less than the recipients have become accustomed to getting.

A foreign policy founded upon buying friends with cash has failed. Egypt and Syria are now clear off the reservation. The government in Lebanon is in trouble. Iraq's government, assumed to be friendly, has been overthrown. The future of the Baghdad pact as a means of halting the southward spread of communism is, to say the least, a dark one.

Let those who have insisted all along that American taxpayers are getting their money's worth for the enormous burden of foreign aid they have been carrying explain, if they can, what went wrong. To the rest of us, the answer is obvious. What went wrong was a foregin policy based on a monstrous miscalculation of what can be bought with money.

Capital Punishment

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, July 25, 1958

Mr. NEUBERGER. Mr. President, in the July 17, 1958, issue of the Milwaukie Review, of Milwaukie, Oreg., appeared an eloquent and persuasive editorial against the institution which we know as capital punishment.

One of the most shocking and poignant statements in the editorial is that every person executed in Oregon for the last 21 years has been defended only by a court-appointed lawyer. In other words, the men put to death by the State in Oregon have been men who were too poor in purse to employ their own legal defense. Does this not tell us that the electric chair and the gas chamber seem to be reserved, in large measure, for those who are in poverty and without substantial financial backing?

The people of my State will vote November 4, 1958, whether or not they want to continue the death penalty as part of Oregon's penal system. I ask unanimous consent that this editorial from the Milwaukie Review, which has been written by one of the outstanding members of the Oregon State Senate, the Honorable Monroe Sweetland, of Clackamas County, be printed in the Appendix of the RECORD. Mr. Sweetland is editor of the Milwaukie Review.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Milwaukie (Oreg.) Review of July 17, 1958]

IF WHAT YOU WANT IS EXTERMINATION

"If what you want to do is exterminate, I can pick out 200 men in my custody who are far more dangerous to the public than the men in death row."

Thus spoke Richard McGee, chief of California's prison system, in testifying against capital punishment in Sacramento recently.

Between now and November 4th Oregonians will be deciding whether or not they will vote to remove the death penalty from Oregon's Constitution.

If Oregon joins the growing number of States and nations which have abolished the death penalty we will be doing the right thing on several counts:

1. The statistics and the record show clearly that the death penalty does not deter crime, but rather makes difficult the conviction of most persons accused of capital crimes.

2. Executions are almost exclusively reserved for the helpless, poor and racially

unpopular. Every person executed in Oregon for the last 21 years has been defended only by a court-appointed lawyer, being unable to employ his own. Other first-degree murderers escape the maximum penalty.

3. Those who commit murders, as a group, are not considered by penologists to be as unredeemable or as menacing to society as several other types of felons. ("Habitual criminals," etc.)

4. If our purpose is justice and redemption, to kill the accused removes the last chance to correct our errors. Last week in a southern State a convicted man, sentenced to death, was released when another confessed the murder. Last month an Oregon man was convicted of murder, and within 2 weeks the chief witness admitted she lied in the testimony which convicted him. These instances occur every year.

5. Killing under any pretext is contrary to all religious precept except among the most retributive and primitive religious sects.

When Oregon voters approve abolition of capital punishment, the maximum penalty, except for treason or a second killing while under sentence, will be life imprisonment, with strict limits on parole. We will join the States of Michigan, Minnesota, North Dakota, Delaware, Maine, Rhode Island, and Wisconsin and the soon-to-be State of Alaska. Most of the advanced nations have abolished it including Denmark, Sweden, Norway, Finland, Italy, Switzerland, and Belgium. The death penalty is finally in its last months in England, where only 150 years ago there were 200 crimes punishable by death.

It is difficult for people to be unemotional about capital punishment, but we hope that before they emote over the issue on November's ballot, that they will examine the facts. Then let the emoting be done on a basis of supportable fact, rather than hobgoblins of prejudice inherited from the dark past.

Nearly every prison warden, including that tough hombre, Warden Clarence Gladden of Oregon, oppose the death penalty. Those men know. We hope Oregon voters will strike the bloody relic from the Constitution. We will have better law enforcement and more accurate justice if we do.

A Vicious Bill

EXTENSION OF REMARKS
OF
HON. HENRY DWORSHAK
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Friday, July 25, 1958

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial on the so-called wilderness bill.

This editorial was written by Gideon Oppenheimer, publisher of the Caldwell Times, a daily newspaper published at Caldwell, Idaho.

I should like to call the attention of my colleagues in the Senate, through this editorial, to some of the unsavory features of this bill, which has been supported with many high-flown phrases and presented as the peak of conservation for the Nation.

This editorial points out the cold economic blight which the bill would bring to the State of Idaho, without bringing the results the proposers of this measure allegedly espouse, development of resources for the most benefit to the most people.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A VICIOUS BILL

The so-called wilderness bill, hearings on which open in Washington, D. C., next week, is a bill designed to deprive Idaho permanently of any hope for economic growth. It would freeze 65 percent of our area as a playground for the rest of the country.

Becoming the vacation spot for the Nation would not be uninviting. Florida and Nevada have done well as tourist spots and Maine would be permanently poverty-stricken if it were not for summer time tourst dollars.

However, the bill would not develop the recreational potential of our primitive areas. It would merely leave it as it is now—a playground for a few millionaires and inaccessible to the average Idahoan or visitor.

As Canyon County's Representative George L. Crookham, Jr., pointed out to the Times yesterday, even our most highly industrialized States at one time were wilderness.

A bill such as the Neuberger-Humphrey bill would rob the Gem State of any possibility of joining the progress of our sister States.

We have been lagging behind for too long. The wilderness bill would make certain we would never catch up.

Puerto Rico's Anniversary

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1958

Mr. MILLER of Nebraska. Mr. Speaker, I would like to take this occasion to express my congratulations and my best wishes to my fellow citizens of Puerto Rico on the occasion of this sixth anniversary of the act which elevated Puerto Rico to the status of a free commonwealth associated with the United States of America.

I want to congratulate the people of Puerto Rico on the advancements which have been made since that date of July 25, 1952.

I also want to congratulate my fellow citizens on the leadership of the Commonwealth—leaders like your Governor Muñoz-Marín and your Resident Commissioner FERNÓS-ISERN. I have always maintained that any nation or any state or any city can remain strong if it has wise political leadership, wise economic leadership, and wise spiritual leadership.

Mr. Speaker, it has been my privilege and pleasure to visit the island paradise of Puerto Rico on several different occasions. It is my hope that I will be able to visit the island again several times in the future.

I have followed with interest the new developments in Puerto Rico. I have found the people taking a greater and greater interest in their Government and in civic affairs. The Commonwealth has a good government, wisely investing the legislative power in a senate and house of representatives; executive power in the hands of a Governor who is elected by the people; and a good judiciary composed of a supreme court and a lower court system.

It is my belief the Commonwealth will continue to build for the good of all our fellow citizens who live there. The Commonwealth will develop an ever growing economy in the years that lie ahead.

Mr. Speaker, I am proud to have this opportunity to congratulate the fine American citizens of the great Commonwealth of Puerto Rico.

States Rights

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, July 25, 1958

Mr. THURMOND. Mr. President, in analyzing the recent vote of the House of Representatives in favor of H. R. 3, the so-called States rights bill, the Greenville News, of Greenville, S. C., pointed out that public sentiment in favor of restoring to the States their proper rights and powers is growing.

There can be no doubt that the people of the State of South Carolina are greatly concerned with the trend toward centralization of the Government at the expense of the sovereign States, and, ultimately, at the expense of every individual. I believe that this concern is growing throughout the Nation, as reflected by the recent vote of the House of Representatives, and I hope that the Senate will have an opportunity to cast a similarly favorable vote for H. R. 3 at this session.

I ask unanimous consent that the editorial from the Greenville News, entitled "Vote Shows Concern Over Court Trends," be printed in the Appendix of the RECORD, as it appeared in the News on July 24.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[For the Greenville (S. C.) News of July 24, 1958]

VOTE SHOWS CONCERN OVER COURT TRENDS

A vote of great significance for this country was the heavy majority—240 to 155—by which the House last week passed the Smith bill designed to curb the power of the United States Supreme Court to nullify State laws.

The final fate of this bill, of course, is still uncertain. It may not pass the Senate, and if it does it may run into a veto, since some administrative departments oppose it. But the vote reflects a steadily growing public sentiment that recent trends in Supreme Court decisions are threatening impairment of the proper rights and powers of the States in the regulation of affairs within their borders.

The House vote, in which many Republicans as well as Democrats, mainly southerners, supported the bill indicates strong approval of its principles in all sections of the country.

In recent years various Supreme Court decisions have been criticized by thoughtful

citizens of all sections, because of their trend toward making Federal law the exclusive power and nullifying State laws on the same subject.

In several instances the Court has ruled invalid State laws on various subjects on the grounds that by enacting nationwide laws the Congress has preempted those particular fields of law.

The most recent case was that of Steve Nelson in Pennsylvania, who was convicted of subversive activities in the State courts under State laws. The Supreme Court overthrew the conviction, saying that Federal laws superseded the State laws.

In another case, the Court held that State laws pertaining to the inspection of foods and drugs and establishing certain sanitary standards were invalid because the Federal Government had taken over this field through the Pure Food and Drug Act.

Yet, it has been freely admitted that the Federal Government does not have enough authority and enough personnel to fully protect the public in all of the States against impurities in the food they eat and the drugs they take.

The effect of these decisions is to prevent the States from protecting themselves in areas in which the Federal Government cannot or does not act. The trend established by these decisions could gradually eliminate all police and regulatory functions of the local governments.

There is more than a principle involved here, as important as the matter of States rights is. Also involved is the matter of practical administration. In many areas of regulating public service and preventing crime, local authority can be more effective than either State or Federal authority.

That is what Congress is trying to protect. The bill just passed by the House is intended to stop further encroachment of the court on such State and local authority. Members of Congress have denied that their intention in passing the legislation in question was to circumvent or replace State or local laws.

Thus, they spelled it out: * * * unless Congress, in passing a certain act, specifically says so, no Federal law shall be interpreted as superseding State laws on the same subject, so long as the State and Federal laws are not in direct conflict and the conflict cannot be reasonably reconciled.

In the cases in question, there were no points of conflict between State and Federal laws that could not be reconciled.

This bill is far from being an answer to the grave problem of the assumption of the lawmaking power on the part of the Federal courts. It may not even be given final approval.

But it is a step in the right direction, and the character of the vote indicates that concern over the usurpation of legislative and executive power by the Supreme Court in particular is beginning to be nationwide.

Conditions in the Middle East

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, July 25, 1958

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Let's Get Ground Rules Straight," from the Fort Wayne News-Sentinel of July 19, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET'S GET GROUND RULES STRAIGHT

What are we willing to fight for and against in the Middle East?

If, as could well happen, American blood is spilled in Lebanon or Iraq, what will American soldiers be dying for?

In our book, we can throw ideology out of this one. For, we are not fighting communism in the Middle East. We apparently are prepared to fight, rather, an emotional reaction on the part of the Arab world which transcends nationalism but has the same quality.

As the Wall Street Journal so aptly points out:

"Now it may be true that in one sense we are here opposing Moscow. But this is only because Moscow has shrewdly and opportunistically allied itself with the forces in the Middle East which we have chosen to oppose. In no sense is this a battle against communism as an ideology, as in Korea, a war against Communist imperial aggression.

"What we are struggling against in the Middle East is a rising tide of people's deep emotions. It is not, strictly speaking, nationalism, since the emotions involved are not localized by accepted national boundaries. It is not Nasserism, as it is often called, because it did not originate with Mr. Nasser nor will it disappear with Mr. Nasser. The best term is probably 'Pan-Arabism'."

And that pan-Arabism is compounded of pent-up feelings, sparked by centuries of colonialism, of the certainty on the part of the Arabs that they have been had by the British, the French, and, yes, the Americans.

This, it seems to us, is one instance where the Russians are in a position to speak our usual dialog. We would admit there is a difference. The Reds are speaking out of cynical hearts. In the past, when we have talked of saving the world for democracy or of working for the ultimate freedom of mankind, we have had the saving grace of being naive but honest.

And the tragedy is that this country, as usual, is following the pattern of the civilized world. We make our big move too late.

Recent history proves that if Hitler had been stopped when he marched into the Ruhr, World War II might never have been sparked. If Mussolini had been halted when he marched into Abyssinia, Fascism might have been stopped in its tracks.

If Japan had been brought to book when it first invaded China, Pearl Harbor would not be a day of infamy in this country's history.

And now we come to another big "if."

If the United States had not adopted its policy of 1956, when Britain, France and Israel were intent on putting the quietus on Nasser, American forces would not have been put ashore in Lebanon in 1958 and a dangerous prelude to world war III would have been avoided.

We have stumbled into an untenable position through a miserable series of mistakes in judgment and we're stuck with it.

There is evidence that the Iraq revolt—naturally exploited by the Soviet—stems from Britain's insistence on keeping a puppet king on the throne who was both unpopular and weak.

The United Nations insists that its inspection team did not find the evidence of infiltration into Lebanon by forces inimical to the present government. It further insists that its team of observers—numbering 135—is perfectly capable of doing the job we have assigned 5,000 Marines and 1,600 airborne troops.

And should the whole thing explode into global war, we would paraphrase a veteran phrasemaker by commenting.

Never will so many have done so little too late.

United States Ships Should Be Permitted To Use the Welland Canal Without Paying a Toll

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1958

Mrs. BOLTON. Mr. Speaker, the announcement that the Seaway Authority of Canada proposes to charge tolls for the use of the Welland Canal is a matter of great concern to citizens of Ohio and other Great Lakes States. Approximately 75 percent of the traffic passing through this canal is Great Lakes commerce.

For decades Canadian ships have freely enjoyed the use of three American locks at the Soo, where their own lock has virtually been retired, and all American channel passage rights in lakes waters. It would seem that our representatives in the toll discussions would be in a good position to insist that the Welland Canal be kept free of tolls. This is especially true since the United States is spending approximately five times as much in deepening the connecting channels as Canada spent in improving the Welland Canal.

I have written Mr. Lewis G. Castle, Administrator of the St. Lawrence Seaway Development Corporation, urging that everything possible be done to keep the Welland Canal free of tolls. Under leave to extend my remarks, I include in the RECORD my letter, together with editorials from the Cleveland News of June 20 and the Cleveland Plain Dealer of July 19:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., July 17, 1958.

Mr. LEWIS G. CASTLE,
Administrator, St. Lawrence Seaway Development Corp., Washington, D. C.

MY DEAR MR. CASTLE: The announcement that the seaway authority of Canada proposes to collect tolls for passage through the Welland Canal is a matter of great concern to citizens of Ohio since approximately 75 percent of the traffic passing through the Welland Canal is Great Lakes commerce.

It would appear that the United States negotiators lost an exceptionally fine opportunity in their negotiating with the Government of Canada in not insisting that the Welland Canal remain free of tolls inasmuch as we are spending about 5 times as much in deepening the connecting channels as Canada spent in deepening the Welland Canal.

It should also be pointed out that for decades, Canadian ships have freely enjoyed the use of 3 American locks at the Soo, where their own lock has virtually been retired, and all American channel rights in lake waters.

In case you have not seen it, I am enclosing a copy of an editorial which appeared in the Cleveland News on June 20.

Would you be good enough to advise me what action we may take in this matter. It is my understanding that the entire program of tolls is to be reviewed in Ottawa and Washington hearings on August 6. I urge that everything possible be done to keep the Welland Canal free of tolls.

Sincerely yours,

FRANCES P. BOLTON,
Member of Congress.

[From the Cleveland News of June 20, 1958]

TOLLS AIMED AT FREE LAKES

For more than 100 years, the United States and Canada have been good neighbors in the free use of navigable waters touching their shores.

This accord has been one of the great traditions of peace and commerce during that century.

No ships using the Great Lakes or its locks system have been charged tolls. No ships using the Canadian-owned Welland Canal as part of their lakes passage have been assessed.

This neighborliness has been a tribute to the excellent trade relations between the two countries.

Now Canada, in a surprising reversal of its long-standing position, has decided that, with the St. Lawrence seaway's debut, all vessels using the Welland Canal or any part thereof, no matter who flag they fly, will pay tolls.

Through its seaway agency, the Canadian Government asserts that this toll program must be instituted to pay for the capital cost of deepening the Welland, as well as for its operation and maintenance.

This disservice decision is especially painful. All Canadian ships for decades have freely enjoyed the use of three American locks at the Soo, where their own lock has virtually been retired, and all American channel passage rights in lakes waters.

Naturally we are reluctant to attach an interpretation of reprisal to this action, but it has the earmarks. Canada vigorously sought a policy of no tolls for the seaway against American wishes, since it expects to underwrite its share of the seaway development through the sale of public power, and now through the Welland fees.

The United States entered this compact with Canada for constructing the seaway as a cooperative project only with the understanding that seaway tolls would be agreed to, and set by both nations.

Canada's imposition of Welland tolls can hardly be considered less than punitive when its effect on American iron ore and steel companies, which have substantial mineral holdings in Labrador, is measured.

Unless Canada chooses to strain this spirit of open and free Great Lakes, it should give serious thought to reconsideration of this policy before the entire program of tolls is reviewed in Ottawa and Washington hearings August 6.

[From the Cleveland Plain Dealer of July 19, 1958]

BATTLE OVER TOLLS

The battle over tolls to be charged vessels using the St. Lawrence seaway has begun. Hearings are to be held in Ottawa and Washington August 6. Prospective shippers are concerned lest the tolls be so high as to discourage full use of the facility.

There is more than this at stake, however. The proposal of Canada to charge tolls for the use of the Welland Canal would actually penalize interlake shipping which is in no way related to the seaway.

Vice Adm. Lyndon Spencer, president of the Lake Carriers' Association, has called on the State Department to make an appeal to Canada to cancel the proposed tolls. He pointed out that the Welland Canal has been toll free since 1871, as are all other Great Lakes connecting channels. Moreover 75 percent of the traffic through the Welland Canal last year, amounting to 16 million tons, was not seaway traffic. It was traffic between ports on Lake Ontario and those of the other Great Lakes. The proposed tolls on this tonnage would amount to about 6 cents a ton of cargo delivered and would add to the cost of goods produced or consumed in the Great Lakes area.

Admiral Spencer's point is that Canada should pay for improvements to the Welland Canal, just as the United States will pay for improvements on its connecting channels, which are toll free.

We believe this point is well taken. It is a matter which should be settled before the hearings on the seaway tolls get under way.

Address by Postmaster General Arthur E. Summerfield at Simon Bolivar Stamp Ceremony

---

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1958

Mr. CHAMBERLAIN. Mr. Speaker, yesterday morning the Post Office Department dedicated a set of two stamps in its Champion of Liberty series honoring Simon Bolivar, the great South American patriot and leader.

In a ceremony held in the Postmaster General's reception room before a distinguished group of visitors, including the entire Latin American diplomatic corps and representatives of the Congress and the Government, Postmaster General Arthur E. Summerfield delivered an eloquent testimony to Simon Bolivar and his great contributions to the cause of freedom.

Mr. Speaker, under unanimous consent, I include Mr. Summerfield's remarks in the RECORD:

ADDRESS BY POSTMASTER GENERAL ARTHUR E. SUMMERFIELD AT SIMON BOLIVAR STAMP CEREMONY, WASHINGTON, D. C., JULY 24, 1958

The Champions of Liberty commemorative postage stamps being issued by the United States are focusing worldwide attention upon outstanding leaders and fighters for freedom.

Although these great benefactors of humanity lived in many different lands, their lives were always dedicated to militant leadership in mankind's eternal struggle for justice.

The first of these commemorative stamps was released in August 1957, in memory of Ramon Magsaysay, the late President of the Philippines, who devoted his exceptional bravery and unimpeachable integrity to the cause of freedom until his life ended so tragically after 50 short but memorable years.

President Eisenhower, Vice President NIXON, and I am sure also all these many distinguished guests assembled here today, join me and my colleagues in the Postal Service in a sense of gratification and of fulfilment, too, that the second issuance of these stamps is dedicated to Simon Bolivar.

Later this year the third set of Champions of Liberty stamps will pay tribute to Lajos Kossuth, the Hungarian patriot, and next February, the fourth will honor another famous South American fighter for freedom, Gen. Jose San Martin.

Simon Bolivar, who was affectionately acclaimed by the people he free as the Liberator, was born 175 years ago in Caracas, Venezuela, and died 47 years later near the village of Santa Marta, Colombia.

His was a short existence when measured by the ordinary life span. But the Liberator was not an ordinary man and his manifold deeds in behalf of Spanish-America's liberation are testaments to his greatness.

Simon Bolivar was far more than the leader of a revolutionary army; he was the father of the revolution that brought freedom to his people.

Simon Bolivar was only 22 years old when he made his famous vow in 1805 in Rome, swearing to dedicate himself to the cause of freedom.

To the fulfillment of that sacred oath, Simon Bolivar gave his material fortune, his tremendous strength of mind and body, and, in the end, his very life itself.

The Liberator's military exploits place him among the great captains of all times. At the age of 42, he had been in the field for 15 years and had directed nearly 500 battles over some 3 million square miles of territory. He had led his armies of barefoot heroes through the steamy boglands of the Magdalena Valley in his march to liberate Bogotá as well as over the towering ice-capped peaks of the Andes on numerous occasions, at altitudes up to 15,000 feet.

Early in 1829, the final victory was won and the lands which today comprise the Republics of Bolivia, Colombia, Ecuador, Peru, and Venezuela were free. Panama had, of her own will, also come under his protection.

As a man possessed of broad vision, objective political reality, and an unshakable conviction of the true causes and meaning of freedom, the Liberator also ranks high among the most farsighted statesmen of history.

His three outstanding documents were the Manifesto of Cartegena, the Jamaica Letter, and the Bolivar Constitution. In addition, his many speeches, proclamations, and vast amount of correspondence to people throughout the world mark him as one of history's clearest thinkers and writers, and the most articulate, colorful, and spontaneous orator of his day.

He lived in the 19th century, but his thoughts, his philosophy, and his conception of the need for Pan American Union and solidarity are of equal significance to all of us today nearly two centuries later.

His amazing prophetic Jamaica letter outlined the need for a union of all the Republics of America—not governmental—but rather of peoples united for mutual protection against encroachment of decadent political philosophies.

The liberator sincerely believed in freedom of speech and of the press and granted them to the fullest extent. He did not believe in force as a substitute for reason. In the Bolivar Constitution of 1819, he wrote:

"Nothing is so dangerous as permitting unlimited power to remain in the same citizen for a long period of time. That system of government is the most perfect which produces the greatest measure of happiness, social security and political stability for its people."

Simon Bolivar—the Liberator—fought to destroy tyranny. He believed it better to die for freedom than to live in slavery; that freedom and democracy go hand in hand but that democracy must balance the demands of liberty and those of stability within a free society to prevent the rise of anarchy.

Importantly, too, he believed that international problems can be best met by the free peoples of the world bound together in a common determination to seek all solutions

through peaceful negotiations, in an atmosphere of mutual understanding and trust.

It is most fitting and proper that so distinguished a man should be honored by the issuance of these United States Champion of Liberty commemorative postage stamps.

The likeness of Simon Bolivar reproduced on these beautiful stamps is based on a portrait painted by Ricardo Acevedo-Bernal which was kindly furnished the Post Office Department by the Embassy of Venezuela here in Washington. The three artist members of the Department's Citizens' Stamp Advisory Committee—Messrs. Arnbid Copeland, Ervine Metzl, and William Buckley—collaborated on the visual plan for the stamp which was so skillfully engraved and printed by the Bureau of Engraving and Printing.

These new stamps are being issued in both the 4-cent denomination for use on first-class mail in the United States as of August 1, 1958, and in the 8-cent denomination for international surface mail. We have authorized an initial printing of 120 million of the 4-cent denomination and 40 million of the 8-cent denomination. Tomorrow both these stamps will be on sale in the Nation's 36,605 post offices. Their widespread use throughout the world will reemphasize the importance that Simon Bolivar's life and deeds hold for all liberty-loving peoples.

It is now my pleasure to present autographed albums of these Simon Bolivar stamps to a group of distinguished persons.

"Seward's Folly" Looks Like a Wise Purchase 90 Years Later

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1958

Mr. BEAMER. Mr. Speaker, the voice of United States is heard in editorials and comments from newspaper publishers and editors. One such excellent expression is found in an editorial from the News-Herald, Marion, Ind., dated July 18, 1958, which I ask to have included under unanimous consent in the Appendix of the CONGRESSIONAL RECORD.

The editorial follows:

"SEWARD'S FOLLY" LOOKS LIKE A WISE PURCHASE 90 YEARS LATER

Credit for wisdom often comes late in life. Sometimes it comes long after death.

Such is very definitely true in the case of William Seward, Secretary of State in the Cabinets of Abraham Lincoln and Andrew Johnson.

Nearly 90 years ago, Secretary Seward engineered the purchase of Alaska from Russia. The total cost was less than $8 million. Alaska is 2½ times the size of Texas.

Pricewise, the United States paid less than 2 cents an acre for this fabulous land.

Seward's action was not popular. Politicians stormed and newspapers ranted. Several parsons preached sermons. Senators just getting into stride on the Lincoln myth, spoke strongly along the lines, "If Abe were living, this foolishness would never have been permitted."

Alaska was tagged "Seward's Folly," "Seward's Icebox," and other names unprintable in a family publication.

Time has vindicated William Seward. Even discounting the treasures already removed from Alaska's soil and streams, and the treasures still untapped, the old boy made a pretty shrewd deal.

If Alaska had remained in Russia's possession, who can imagine the fortifications and airfields that would have been built there since 1945?

Get your map and take a look at Alaska—and the short bomber distance from Alaska to the ring of cities constituting the United States of America's heart—Detroit, Chicago, Minneapolis, St. Paul, Denver, St. Louis, Kansas City, Indianapolis, Louisville, Pittsburgh, and Toledo.

Mr. Seward bought more wisely than he—much less his critics knew, or lived long enough to ever know.

Hon. James A. Farley

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1958

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Journal News of Nyack, N. Y., of July 19, 1958:

MISSED BOAT

The Democratic Party of the State, if it wants to turn to its advantage the very evident popularity of James A. Farley, needs only to give him the nomination for United States Senator. Apparently, for reasons best known to the party's present guidance, it doesn't want to, gets only lukewarm to the suggestion, and hopes the gentleman from Grassy Point will stop rounding up convention backing. It would appear from way down here in the southeast corner of the State it's a very vain hope; the Democrats don't have another candidate strong enough to head him off in popular support.

Popular support is where the Farley strength lies. We know him down here as a neighbor; it's startling, though, when you get the comments from other far corners of the State and points midway from men who know what their Democrat voters are thinking. Admittedly the present Democratic command is different from what it was in the days Farley strength was at its peak, yet Farley strength shows few indications of decline. His hold on old friends and on new ones is little short of amazing; political faith is of small consequence, it would appear.

That letter directed to the Republican organization in the county urging endorsement of Mr. Farley is little short of being unique. Can you imagine what would happen to a similar letter urging support of Thomas K. Finletter or Mayor Robert Wagner? If one had been written, it would either go into the circular file or be hooted down with laughter. The Republican organization took no action—but it thought well enough of the suggestion to let it be made public.

Nor would there be anything surprising if county Republican voters, in the course of the poll that is scheduled, were to register heavy support for Mr. Farley. He is a very favorite hometown son, a man of national prominence who refuses to shake the brickyard dust from his shoes. County Democrats have surely missed the boat by yards and yards and are in a most embarrassing spot; even if Mr. Farley were to miss out on the Democratic nomination, the county organization should have been beating the drum for him 5 minutes after he announced he was ready and willing as a candidate.

Republicans at the State level can turn things generally to their own advantage. If Democrats refuse Mr. Farley the nomination, then there's a broad avenue of attack not only on a weaker candidate but on the slight the party handed one of its lifetime stalwarts. If Mr. Farley is nominated and runs away from the rest of the ticket, as seems possible, the slim margin by which the Democrats took the State 4 years ago slides off the edge. Moreover, if that happens, the State Democratic organization is in for a reshuffle and the present leaders don't want that.

The amusing thing in the whole picture is the almost complete Democratic silence on the Senate nomination; the big brass is pretty much over a barrel and knows it, will have trouble getting out of its unpleasant position. Saving face, which is always a political necessity, is very difficult. Meanwhile, to make it more unpleasant, the Republicans sit back and laugh appreciatively.

The raised eyebrows on local support for Mr. Farley have been amusing, too. We had not heard it was necessary to be either Democrat or Republican to support a native son. It's very much a privilege to be able to back a native son who has risen to national prominence and there's no reason we know of it's necessary to swallow the whole kit and kaboodle. We might be more inclined that way if the party organization had shown any particular political talent.

We have an idea Bill Vines, county vice chairman for the Democrats, was wearing political hobbles he didn't quite relish when he said for the organization anent the Farley candidacy that he wasn't surprised by Republican support and that the Democrats have plenty of able candidates. Bill Vines doesn't make with lame political talk normally and that statement did limp badly, as he very well knew it did.

Maybe the Democratic organization figures it knows what its's doing and can come up with a more able candidate than Mr. Farley. No harm in thinking so; no harm in disagreeing, either. Mr. Farley himself is not above disagreeing with the party, something he did very clearly and concisely when he walked out on a third term for Roosevelt. He didn't renounce his Democratic allegiance, just stayed off in the background with a great many more party members who felt as he did. Possibly the same Democratic faction that plugged for the third and fourth terms is running the present show—but the voters have altered their viewpoint in the interim.

Somehow or other, though, we have an idea Mr. Farley will come up with the Democratic nomination, not from those in present control but from those political warhorses who know a good candidate when they see one and put him on the ticket. They're the ones who talk Mr. Farley's language.

Reuther Powerful Politician

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1958

Mr. HIESTAND. Mr. Speaker, it has been said that United Auto Workers' President Walter Reuther is 1 part labor leader and 9 parts politician. While correct in principle, this appraisal is conservative in proportions.

No pork chop laborite, he; wages, hours, and working conditions, matters of primary concern to other union men, are of little interest to this skilled political practitioner. A fair conclusion, shared by a number of Reuther's oppo-

nents within the labor movement, is that he is merely using the UAW and its highest office, to further his own political ideology.

The UAW springboard has long since sprung, launching him into the outer space of Michigan, California, Arizona, and national politics. In these busy days, he finds scant time to delve into the humdrum affairs of the auto workers. One can picture a lightning-fast entry into the office of the UAW treasurer, now and then, for funds with which to support some favored candidate, an equally lightning-quick exit, and back to the hustings.

A one-time admirer of Soviet Russia—"Carry on the fight for a Soviet America"—a full-time Socialist—"If fighting for a more equal and equitable distribution of the wealth of this country is Socialist, I stand guilty of being a Socialist"—Reuther has kibitized every national event of publicity value for the past 20 years, from his vantage point in the UAW. He has submitted to the general public, unsolicited "Reuther" plans for salvaging the stricken French liner, *Normandie* for producing 500 aircraft a day with surplus auto manufacturing machinery, for construction of a portable foxhole. If all of Reuther's plans were laid end to end, they would reach from the cloakroom of the United States Senate—where he has been known to hold press conferences—to the California Governor's mansion—a gleam in his twinkling eyes.

A man of many words, Reuther has made no secret of his ambitions. They have been delineated, in the first person, from thousands of platforms over a period of 2 decades.

We must remake the economy of this country—

He has said—

We can no longer afford to confine ourselves to bargaining over wages and working conditions. * * * We must seek a real voice in the making of fundamental economic decisions.

Reuther believes the time is here when labor must take over some of the functions of management and government. His idea is to compel management to accept the cooperation of labor, meaning Walter Reuther, in setting up production designs and schedules. He believes government should do the overall economic planning, and that government should lend a compassionate ear to the voice of organized labor, which is to say, Walter Reuther.

We have not forgotten that free-enterprise initiative did not meet the requirements of war, and it will not meet the requirements of peace—

Said Reuther in 1944—

We will permit free, private enterprise that degree of freedom necessary to make its maximum contribution in terms of employment; but if free, private enterprise fails to meet the requirements of our Nation * * * then government will not hesitate to take those steps necessary.

This ominous threat reveals the real Walter Reuther. Do not underestimate his means for making the threat a reality.

In the old days he toyed with the dream of a third party as a vehicle for his Socialist-Marxist political thinking. This idea was shelved after his tremendous success in the elections of 1948, but hangs like the sword of Damocles over the heads of many public officials, including governors and Members of Congress, who owe their position to Reuther support. These Reuther satellites must toe the line, or else.

The grand stategy for 1958 is to put more of these Reuther satellites in orbit, in the Senate, the House of Representatives, and in several governor's mansions, and thus to prepare for 1960, and the White House.

He cannot get away with it if the American people know and understand his motives. Instead of carrying on the fight for a Soviet America, let us carry on the fight for a free America.

Our Recreational Resources

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1958

Mr. AVERY. Mr. Speaker, the following is an editorial written by Mr. Bill Colvin, managing editor of the Manhattan, Kans., Mercury newspaper. Mr. Colvin's excellent comments concerning the Nation's recreational resources appeared in the newspaper on July 15, 1958. His observations are worthy of the attention of all Members of Congress. The editorial follows:

HOPE WE FIT IN

Congress is preparing to take a critical look at the Nation's recreational resources, with a feeling in mind that America neither has enough playroom nor is adequately preparing for unprecedented demands on its outdoor areas.

With facilities of our national parks and other Federal recreational facilities already strained to the breaking point, Congress at last has heeded the concern of various outdoor groups and has authorized a massive inventory job.

As an indication of what is happening in the way of visitor increases to these national playgrounds, Congressional Quarterly reports these examples:

"The United States Forest Service anticipates 66 million visitors to the national forests in 1962 and 82 million in 1968. It had only 6 million visitors in 1920, nearly 53 million in 1956. Its visitors total is expected to increase by nearly 1,400 percent in the 42-year period from 1926 to 1968.

"The National Park Service system was designed to handle 25 million visitors annually. It had 22 million in 1946, 59 million in 1957, expects 80 million by 1966. Its visitor total is expected to increase by nearly 400 percent in the 20-year period from 1946 to 1966.

"Other recreation areas report the same heavy use. The Army engineer recreation areas had an increase in visitors over a 7-year period from 16 million in 1950 to 60 million in 1957."

State parks, the report continues, are experiencing the same type of thing.

All say they are having heavy increases in numbers of fishermen, boat enthusiasts, bird watchers, wildlife photographers, hikers, and mountain climbers. Ninety-two million visited State parks in 1946 and by 1957 the total had climbed to 216 million.

Several obvious factors are accountable for these outpourings into our recreational facilities. Population increases naturally take care of much of the increase. But today incomes are higher, pensions are more substantial, it's easier to travel longer distances, weekends have stretched.

Paradoxically there are more persons traveling farther to see and do things while on the other hand the "at home" outdoor playgrounds are anything but suffering for use; in fact their visitor increases are comparable to the big national parks and forests.

What the future holds is pretty well told by recent trends but the problem of providing space is complicated by the diminishing areas available plus the skyrocketing costs of acquiring the playground sites that should be set aside and preserved.

The National Park Service, for example, declined in 1935 to acquire a stretch of seashore deemed natural for recreation and wildlife protection. Today the costs have soared to $110,000 a mile—and most has been bought and subdivided by private speculators.

Congress, now aware of the predicament, has authorized an unpredecented inventory. In establishing the mechanics of finding out what is happening to the quantity and quality of our outdoor playgrounds, the House committee stated:

"It is imperative that the outdoor-recreation resources be accorded the same recognition and consideration as all other resources essential to the economic and social welfare of the Nation. Outdoor-recreation resource use and development must be evaluated and carefully planned on a long-range basis.

"Our Nation can no longer afford the extravagance of the piecemeal planning, neglect, and indifference which has prevailed in the past."

Where does this area fit in this inventory to be taken by a new Federal commission?

A vast area of the prairie grasslands, we believe, is worthy of preserving into a national facility containing not only the natural beauties but also telling the story of the pioneers, the Plains Indians, etc.

It means also that local communites like ours must upgrade and increase their own recreational facilities. Not all the job can be done by the Federal Government, nor is every citizen satisfied by the big parks. The State, likewise, must keep the pace, too, with more outdoor playgrounds, and more visitor accommodations.

Federal cognizance of the problem is encouraging and thereby it should encourage similar, smaller-scale action at local and State levels or the situation will never be solved.

Tribute to Representative Charles O. Porter, of the Fourth Oregon Congressional District

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, July 25, 1958

Mr. NEUBERGER. Mr. President, reassuring editorial support and encouragement for Representative CHARLES O. PORTER, of the 4th Oregon district, have come from the largest newspaper published in that district, which is also his own hometown daily, the Eugene Register-Guard of Eugene, Creg.

In its issue of July 18, 1958, the Register-Guard, under the title of "Hero Everywhere Except Back Home?" strongly emphasizes that CHARLES O.

PORTER has firm backing and support in his home district for his efforts to champion the eternal cause of democracy among our sister nations of the continent to the south of us, Latin America.

I ask unanimous consent, Mr. President, that this editorial backing up Representative CHARLES O. PORTER be printed in the appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Eugene Register-Guard of July 18, 1958]

HERO EVERYWHERE EXCEPT BACK HOME?

CHARLIE PORTER, Congressman from this district, is winning editorial pats on the back from some of the Nation's most influential newspapers.

The New York Times and the Christian Science Monitor both have had nice things to say about CHARLIE since his reception in Venezuela as a champion of democratic ideals and an opponent of dictators.

Congressman PORTER'S popularity with Latin Americans also has been recognized in magazines of note, including Newsweek, Time, and U. S. News & World Report.

But now comes Salem's Capital Journal to observe that our CHARLIE is a hero known far and wide—a symbol of opposition in the United States to offcolor good neighbors, largely as the result of his tilting with Dictator Trujillo of the Dominican Republic. Yet, says the Salem paper, Oregon's Fourth District Representative in Congress "still isn't exactly a hero in his hometown. * * *"

The Capital Journal, noting that former Eugene attorney PORTER'S rise to international renown has been meteoric since he undertook to investigate the mysterious disappearance of a Eugene pilot in Trujillo's republic, suggests that his activities may bring about a complete reevaluation of United States foreign policy in respect to Central and South American nations. In milder terms, the Christian Science Monitor has pointed to a similar conclusion, suggesting that the United States State Department should be as forthright as CHARLIE in defining its position on dealing with dictators.

There's no doubt that Congressman PORTER is now one of Eugene's most widely known personalities. And despite the Capital Journal's view, there's little doubt that his energetic inquiries into the disappearance of pilot Gerald Murphy have won him many new friends here at home.

If there's any truth in the statement that CHARLIE isn't regarded entirely as a hero in this, his own hometown, it's because it's hard to believe he's taking the adulation that seriously himself. The Capital Journal forgets that PORTER convincingly proved himself popular throughout southwest Oregon by winning election to Congress 2 years ago in a race against the district's veteran representative, Harris Ellsworth, another fellow with a lot of friends and admirers.

The Capital Journal forgets that "a prophet is not without honor, save in his own country" most likely because the people back home still regard him as one of themselves, and, in a democracy, that's exactly as it should be.

Thirtieth Infantry Division Receives Commendation

EXTENSION OF REMARKS
OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1958

Mr. REECE of Tennessee. Mr. Speaker, it gives me a great deal of pleasure to introduce into the RECORD the commendation accompanying the award of the Croix de Guerre with palm by the French Government to the 30th Infantry Division at that division's recent 12th annual convention in Washington, D. C. The commendation was movingly delivered to the assembled members of the 30th Infantry Division Association at the principle convention banquet on the 11th of July 1958, by the distinguished Minister of France M. Robert Valeur.

There is no question but that the 30th Infantry Division which shed copious blood on French soil played an essential role in the liberation of France in World War II. As a former combat infantryman, it is particularly pleasing to me that the 30th Infantry Division which was made up in large part by citizens of the State of Tennessee was accorded this distinct honor by the Government of France. The fact that the honor has been bestowed some 14 years after the division's great campaign is particularly convincing evidence that the 30th Infantry Division merited the appraisal of General Eisenhower's personal historian as the outstanding division in the European theater of operations.

I see in this award more than mere appreciation by France for the efforts of one military unit. I think it can be accurately stated that this declaration was given by the Government of France as a living symbol of the great alliance that has always existed without interruption between the two great democracies since before the turn of the 19th century.

I cannot allow this occasion to pass without recording my high regard for the present government of Premier de Gaulle. I have long been an admirer of General de Gaulle and it is my honest belief, which is now being widely shared in this country, that the forceful and imaginative policies of this great man will not only bring France through a dangerous period, but will restore to her a large semblance of her former glory.

INTRODUCTION OF ROBERT VALEUR BY RALPH E. BECKER, PRESIDENT, 30TH INFANTRY DIVISION ASSOCIATION, JULY 11, 1958, BANQUET, 12TH ANNUAL REUNION
